NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 2ND, 1892.

DEATHS.

At the German Hospital, Yokohama, July 1st, WALTER SOLOMON MANTEN, aged 43 years. China Papers please copy.

At the German Naval Hospital, on June 26th, JONAS HONIGSBERGER, of New York, aged 46.

SUMMARY OF NEWS.

H. I. H. PRINCE ARISUGAWA TAKERHITO proceeded to Dzusli on Friday.

H. I. H. PRINCE KOMATSU left the capital on the 24th ultimo, to visit his villa at Numazu.

EARLY on the morning of the 27th ult. an incendiary fire occurred at Fujisawa, destroying eighteen houses.

H. E. MR. FRASER, the British Minister, was admitted to an Imperial audience on the 25th ult. at 10 a.m.

PRINCE ICHIJO SANETERU, who has been visiting Europe to accomplish his studies, will return home this month.

COUNT SOYERJIMA, ex-Minister of State for Home Affairs, will proceed to the country shortly for the benefit of his health.

H. E. THE MEXICAN MINISTER delivered a lecture relating to emigration at a meeting of the *Futsu gakkai* held on the 25th ult.

THE regular general meeting of shareholders of the Tokyo Stock Exchange will take place on

July 7th. The dividend for the past half-year is estimated at the rate of about 2 per cent. per annum.

MR. R. W. IRWIN, Hawaiian Minister, will leave Japan for home, about the middle of this month, on private business.

THEIR Imperial Majesties, the Emperor and Empress, will visit the residence of Marquis Nabeshima at Nagaiacho shortly.

THE people of Sapporo and Hakodate have petitioned for a visit from H. I. H. the Crown Prince to Hokkaido this year.

H. I. M. THE EMPEROR visited the Riding School at Naka-shibuya-mura, Tokyo, on the 28th ult., leaving the Palace at 8.30 a.m.

THE Directors of the Osaka Stock Exchange propose to declare a dividend for the past half-year at the rate of 16 per cent. per annum.

THE dividend of the Osaka Rice Exchange for the first half of this year is estimated at the rate of 18 yen per share of 100 yen, or 36 per cent. per annum.

DURING the absence of Mr. Hugh Fraser, British Minister, Mr. M. W. E. de Bunsen, Secretary of the British Legation, will take charge of affairs.

THEATRICAL performances will commence at the Minato Theatre, Yokohama, on July 1st by a party headed by Shikwan, Fukusuke, Dengoro, and other famous actors.

A STRONG shock of earthquake was felt at Nagoya on the night of the 23rd ult., the duration being 2 minutes. A slight oscillation was experienced at Gifu the same night.

THE marriage arranged between H. I. H. Prince Komatsu Yorihito and Lady Yaye, a daughter of Marquis Yamanouchi, ex-Chief of the Tosa clan, will take place on July 6th.

AN official telegram from Mr. Kumazaki, Japanese *Chargé d'Affaires* at Lyons, dated the 26th ult., states that the Italian Senate has passed a Bill for the abolition of the export duty on silk.

EARLY on the morning of the 22nd inst. flames burst out in a residence at Kajima-gun, Ishikawa Prefecture, and though the fire was confined to the building in which it originated one man was burnt to death.

THE monthly meeting of the Geographical Society took place on the 28th ult. at 7 p.m., in the rooms of the Society in Ginza, Tokyo, at which addresses were given by Messrs. Sakamoto Toshiatsu and Kato Masao.

ON the afternoon of the 22nd ult. an elementary school at Takasu in the province of Mino, Gifu Prefecture, collapsed; ten lads were seriously wounded and three killed, while several received slight injuries.

TELEGRAPHIC intelligence from Fukuoka, dated the 24th inst., announces that in consequence of the recent heavy rains the Yabe and Chikugo rivers have overflowed, carrying away a bridge and submerging several houses.

A MEETING of the Japan Sanitary Association was held at the Koseikan, Kyobashi, Tokyo, on the forenoon of the 25th ult., a numerous audience attending. Addresses were given by Mr. Goto Shimpei and Dr. Nagayo, Chairman of the Central Board of Health.

A CHARTER has been granted to the promoters of the Oni Railway, permitting them to construct a railroad between Oni and Tatakawa. They met at Oni on the 17th ult. to discuss matters in connection with the commencement

of the work. It is expected to be completed before the close of this year.

VISCOUNT ENOMOTO, Minister of State for Foreign Affairs, entertained Mr. Coombs, the American Representative, on the 24th ult. Among the distinguished guests present were Counts Matsukata, Goto, Oki, Viscount Takashima, and Mr. Kono, Ministers of State.—

DR. OKA, an Imperial Physician, who had been despatched to Kyoto to inquire into the physical condition of H. I. H. Prince Yamashina Akira, returned to Tokyo on the 23rd ult. He proceeded to the Palace the following day, and reported to H. I. M. the Emperor that the Prince has almost recovered his ordinary health.

A GENERAL assembly of the Oriental Society was held on the 27th ult. in the rooms of the Seamen's Aid Society in Shiba Park, Tokyo. Among those present were Prince Konoye, Viscount Matsudaira, and Messrs. Miura Yasushi, Hoshi Toru, Murata Tamotsu, Oi Kenaro, Kono Hironaka, Suyehiro Shigeyasu, Nabashi Tokugoro, Minoura Katsuto, Boku Yeiko, Miyake Yajiro, Shigeno Kanjiro, and Tatsuno Shuichiro.

A NUMBER of high officials of the Sanitary Bureau in the Home Department, and chief members of the Central Sanitary Association, gave a banquet on the 26th ult. at the Imperial Hotel for the purpose of bidding farewell to Dr. E. Baelz, a German professor in the Imperial University, who intends to leave for home shortly, and welcoming Dr. Kitazato and Goto Shimpei, who returned from Europe recently.

THE business in Imports continues to show an improvement, and dealers' opinions of future prospects are encouraging. English Yarn has been in fair demand, and about 1,000 bales have been taken, for which better rates have been paid, as much as 50 cents and \$1 higher for certain counts, but the improvement has not reached Bombay, which for the time are a drug in the market. In Grey goods and Fancy Cottons business has been small, though values are about the same. There have been further large sales of Woollens to arrive, and the market altogether may be described as in a fairly healthy condition. The Metal trade continues dull, and most kinds of Iron are extremely quiet, though there has been a little done in Sheets, and there are some inquiries for stock to arrive. The Kerosene trade is sound, and though buyers have ceased firing for the time, deliveries continue good, prices are unchanged and firm, and demand may be expected at any moment. There has been a good deal of Sugar sold at a considerable advance, and there are buyers still unsupplied. A cargo for this port has been lost by the wreck of the *Haiphong*, a "Douglas" steamer, which went on the rocks near Shimoda a few days ago, with 25,000 bags, mostly Formosa Brown. The Silk season closed on the 30th ult., and the market for new fibre opened at high figures, which have been pushed daily higher, rates being fully \$25 per picul more than those of a week ago, and holders are very strong. There is talk of damage through the late excessive moisture, but though these reports have always to be received with caution, there is reason to believe that there may be some truth in the statements put forth on this occasion, though the extent of the damage, if any, it is impossible for any one to estimate at this period. Nothing doing yet in Waste Silk, of which there are several thousand piculs left over. The Tea trade is unchanged—arrivals of second crop come in freely, there is a good demand, rates are firm for the leaf in request, and the stock is manageable. Exchange has fluctuated, and has not yet reached a further slight decline.

EDITORIAL NOTES.

THE NATIONAL UNION.

THE National Unionists—for that seems to be the appellation to designate the new party, the *Kokumin Kyokai*—held a social meeting on the 24th in the room of the Marine Disasters Aid Society in Shiba Sannai. The principal object of the meeting seems to have been the admission of Count Saigo and Viscount Shinagawa to the ranks of the Union. Mr. Watanabe Koki presided, and opened the proceedings by a brief speech, in which he expressed the pleasure felt by the members of the Union in welcoming two such distinguished associates. Count Saigo and Viscount Shinagawa both addressed the meeting. Count Saigo said:—

GENTLEMEN,—It gives me much pleasure to find myself among you at this friendly meeting. Viscount Shinagawa and myself, strongly approving of the objects of your Union, have resigned our official positions and made up our minds to join you. We shall work with you henceforth for better or for worse, in the interests of the national prosperity and the development of the people's resources. It is our earnest hope that you also will spare no effort to evolve wise plans and adopt useful measures in the cause of the country and in the cause of the people.

Viscount Shinagawa spoke as follows:—

GENTLEMEN—Count Saigo and I, approving of the motives that have led to the organization of this society, have determined to enter it, and for that purpose have resigned our official positions. We have not been guided in this matter by any sudden resolve. The matter has received our maturest reflection, and we therefore look forward to working with you, with the utmost energy, in the cause of our country and our countrymen. I may perhaps be permitted to call your attention to the fact that though Count Saigo comes from Satsuma, while I come from Choshu, we are both Japanese; and when there is question of serving our country, there is no difference between us. Looking back more than twenty years to the time of the Restoration, the early phases of which were not without bloodshed, I recall the fact that Count Saigo, who sits here in our midst to-day was one of that band of some fifty men who, under the leadership of the great Saigo Takamori, swore to give their lives for the good cause on the occasion of the Teradaya incident at Fushimi. Count Saigo did strong service then in the national interests, and I, at the same time, under the leadership of Kinsaka in Kyoto, was doing what little I could in the same cause. We were then each eighteen years of age, and since that time it has been our lot to hold official appointments for over twenty years, serving the State to the best of our ability. Now, however, we have resigned our official positions and enrolled ourselves in your ranks, to work with you for the promotion of the country's good and the development of the nation's prosperity. We have both agreed that should either of us prove unfaithful to the cause we have espoused, his life shall be forfeited to the other, and we now say that should we be found to obey the dictates of selfishness and to pursue our personal ambitions, we ask you to take our lives, and assure you that they shall be given to you freely. This we solemnly swear to you, and ask you to have faith in our sincerity.

Mr. Ooka Ikuzo replied briefly to these speeches, and addresses were subsequently delivered by four or five leading members of the National Union.

SCHOOL-TEACHERS AND BOOKSELLERS.

A FEW weeks ago a paragraph in the *Choya Shimbun* stated that certain large booksellers are in the habit of offering various inducements to the directors of schools and school-teachers, to recommend books published by them for adoption as text-books in the schools under their control. According to the *Choya*, in some cases money or presents are offered, in others expensive entertainments are given, at which the teachers are sumptuously treated. Attracted by these reports, the Department of Education inquired into the matter, and found that the abuses referred to actually existed. Consequently an order has been issued to the Governor of Hokkaido, and to the various Prefects, instructing them to deal severely with anyone found guilty of the practice alluded to. Local authorities are reminded that the law forbidding the acceptance of bribes by officials, passed three

years ago, has reference to school-teachers as well as to other Government servants, and that since in the case of those to whom the education of the youth of the country has been entrusted susceptibility to corruption is likely to lead to very serious evils, an example should be made of anyone found guilty of this evil practice.

The *Fiji Shimpō*, commenting on the issue of this order, expresses the opinion that it will not compass its end. Our contemporary maintains that so long as immense profits are to be obtained by booksellers from the patronage of the directors of schools, they will openly, or secretly or indirectly, take measures to secure such patronage. The best way of remedying the evil, the *Fiji* thinks, would be to abolish the practice of granting copyright to the authors of school text-books, and to allow such works to be printed and sold by all booksellers. This surely would be a most unjust measure, and would give rise to a still greater evil than the one complained of. To refuse copyright to the authors of text-books would mean that no writer of any ability would trouble himself to publish such works, and hence the Government would either have to revert to the abandoned, expensive, and unsatisfactory practice of preparing its own text-books, or would be obliged to make use of books of inferior quality.

What is wanted to remedy this and kindred evils is a higher tone of morality among school teachers and a readiness on the part of the Department of Education to pay better salaries than it now gives. It has been the experience of all governments that the only effectual way of preventing bribery is to pay their servants at a sufficiently high rate to make them independent of other sources of income. To forbid the acceptance of bribes has never restrained certain men from yielding to temptation when pressed by poverty. It may be a humiliating confession, but it is undeniable that the history of politics, all the world over, goes to show that the best way of insuring strict honesty is so to arrange the scale of remuneration that honesty proves, in the long run, the best policy. The remuneration which school teachers in Japan now receive, as has often been pointed out in these columns, is miserably inadequate. Men struggling to keep the wolf from the door will inevitably yield to the pecuniary inducements held out by a bookseller to recommend a certain text-book for adoption in a school. The sooner the Department of Education attacks this and corollary abuses at their root, the better will it be for the cause of education in this country.

ARTISTIC ANATOMY.

It is pleasant to see that the subject of anatomy has begun to receive serious attention at the hands of Japanese artists. Many of the best painters of early and late eras escaped gross anatomical errors by the wonderful accuracy of their observation. Hokusai, for instance, was often absolutely correct in his delineations of the human figure. But that can be said of him only where he confined himself to outlines: so soon as he began to fill in details, ludicrous exhibitions of ignorance resulted. His pictures of emaciated men and women or of skeletons, for example, are disfigured by anatomical blunders painfully glaring. The fact is that the education of the Japanese artist is and always has been very incomplete. Conventional tricks take the place of accurate information, and strength of line covers a multitude of faults which would not be tolerated in the work of a Western painter. Among artists of the conservative school there exists, to this day, a strong prejudice against studying after the fashion of the Occident. They are misled by an idea that anatomical investigation, for example, is apt to betray painters into the fault which of all others they avowedly eschew, the objective accuracy of the photograph. Yet, strange to say, the very men who hold this doctrine are willing to completely subordinate their individuality for the sake of acquiring some special trick of style or grace of composition, that has received the cachet of connoisseurs' approval. No artist is more con-

ventional than the Japanese of the recognised old school, yet none professes more profound contempt for the photographic picture. Of course this contradictory and irrational mood must be dispelled, and we are glad to observe that an effort in the right direction has been made by Mr. Taguchi Moichiro, who has just published a handsome volume called *Bijutsu-oyo-Kaidogaku*, or "The study of anatomy as applied to fine art." The book contains a series of excellently conceived plates—confined to the male figure—with clear and succinct letterpress, showing all the articulations, bones, sinews, and other details of the human body, in such a manner that their study ought to be easy. It cannot, indeed, be called an exhaustive treatise, but doubtless if the author receives encouragement, he will continue his valuable work. Even as it stands, however, the volume should be of immense service to art students. It will probably be a long time before drawing from living models comes to be practised in Japan. Few artists could afford to pay a model, and moreover, there is a well founded belief that much of the remarkable Japanese power of depicting bodies in motion is due to the fact that, instead of attempting to copy models in positions of simulated motion, the artist trusts to the impressions which he derives from objects actually moving. There is room to doubt which system gives the better results, but in the meanwhile Mr. Taguchi's book should of the greatest use.

THE NECESSITY OF FORMING A STRONG GOVERNMENT PARTY.

THE *Shogyo Zasshi* seldom publishes political articles, but on the plea of the great importance of the subject, it inserts in its last number an essay by Mr. Kito Gokujō on the formation of a Government party, of which we give the gist. The policy of the Government's keeping aloof from party politics, advocated by many, cannot answer if persevered in for any length of time. The existence of the Diet implies the existence of parties. In fact, it is difficult to see how any kind of Constitutional Government can work smoothly without the organisation of parties. Some 20 years ago political parties were held in supreme contempt in Japan, and to belong to one was considered by many to be a lowering of reputation. But since the opening of the Diet, it has been made abundantly clear that a well organised political party is capable of wielding enormous power in a nation's legislature. Certain inviolable rights have been bequeathed to the Diet by the Constitution. The Diet is the means of communication between the people and the Government. Petitions, representations, memorials, and the like must all be submitted to the Diet, and receive its approval before being forwarded to the Government. Constituencies are only now beginning to realise the amount of good and harm members of the Diet are capable of doing. Complaints are made as to the wildness of the Diet's proceedings, the extreme measures advocated, and the levity with which grave questions are discussed. But the persons loudest in protesting against the course which affairs have taken are, to a very great extent, responsible for that course. The fact is that the general public formed far too low an estimate of the capabilities of the instrument of Government recently called into existence. Business-men and staid politicians alike, for the most part, refused to offer themselves as candidates for election. They left the arena clear for the theorising upstarts whose ambition it was to figure conspicuously therein, and ridiculed the notion that the Diet would succeed in changing the course of events for better or for worse. These men now begin to perceive that the influence of the Diet is more formidable than they had supposed possible, and that something must be done to prevent it from working mischief. There is no ignoring the fact that in the Diet everything depends on majorities—so many heads, so much power. It matters little what the heads contain. No question is asked as to the elements that make up the unit. It is a unit, and that is all that is required. To have a number of these units always ready to vote as in-

structed involves organisation. The so-called Popular Party is undoubtedly well organised, and its members held together in the last session better than might have been expected, considering the heterogeneous elements of which the party is composed. The Government supporters in the Diet lack cohesive power. The bond which binds them is not sufficiently strong to induce them to act together, except on very special occasions. On a variety of minor questions they invariably divide, and victory is thus given to their opponents. They agree in opposing extreme measures, but the principles of their cohesion have the disadvantage of being general. The public-spiritedness and fairness which they advocate are bonds too elastic to bind a party together. As matters are now situated, the only resource the Government has for the defence of its views is suspension or dissolution. Neither of these is desirable, unless as a last resort. If proper steps were taken, there would be no difficulty in utilising the small pro-Government factions that now exist under various names for the formation of a strong party. The principles and policy of the party should be carefully explained to the constituencies, which would then be able to take an intelligent interest in political struggles. The carrying out of this plan would of course involve the dissolution of numerous small political combinations and the retirement into comparative obscurity of many who are now known as their chief promoters, but this surely is an insignificant matter compared with the permanent benefit to be obtained by the formation of a party capable of holding its own against the present Opposition. Some persons seem to think that it is late in the day for the formation of a new party; but there are many indications that such an organisation, were it formed, would meet with wide support. Moreover, the disintegration which has already set in in the ranks of the Opposition might be taken advantage of for winning the popular support which the latter has hitherto exclusively enjoyed. It is high time that those who have hitherto succoured the Government behind the scenes should show themselves in public, take command of the unwieldy vessel lately launched, nail their colours to its mast, and defend it against its foes. It is high time that the present confusion and want of method should be reduced to order, and that the nation should be taught that politics are not toys for children to amuse themselves with. Surely the duty of all true-hearted statesmen is to guide the destinies of the nation into right channels, to rescue the people from the evils to which they are now exposed. In a word, to refrain from entering the arena of conflict on the plea of the inutilty of political discussions, and to watch the current of events, all setting in a wrong direction, from a safe distance, can hardly be regarded as other than disloyalty and wickedness.

MEXICO.

MEXICAN affairs find an excellent exponent in the *Mexican Financier*, a weekly newspaper published in Spanish and English. The *Financier* is a journal of very high class so far as concerns typography, paper and general get up, and not only are its pages full of interesting and valuable information, but the style of the writing is eminently well-balanced and scholarly. It has reached its twentieth volume, but we speak of it as a new acquaintance, because, prior to Japan's treaty with Mexico and the arrival in Tokyo of the latter country's able and popular Representative, Mexican matters did not greatly interest folks in the remote Orient. But Mexico now occupies a considerable share of Japanese attention, first, as the one Western State that has hitherto consented to treat with this country on terms of equality, and secondly, as a possible field for Japanese labour and enterprise. With regard to the latter point, we find a suggestive item in a recent number of the *Financier*:-

"One of the undeveloped sources of wealth we have in Mexico is the planting of India-rubber trees," says Don Matias Romero, writing in the *India Rubber World*. "During my stay in Soconusco, in the state of Chiapas, near the boundary line with Guatemala, from 1873 to 1875, I had occasion to see thousands of wild rubber trees growing

near the coast. The value of these trees, which were wantonly destroyed even when young, in order to extract from them the juice which forms India-rubber, suggested to me the convenience of making a plantation, as I was sure they would soon be entirely exterminated, and I conceived the idea of starting one myself, and I bought to that end such land as I thought was suitable for that purpose. To make the plantation intelligently, I applied myself to study all I could about the culture of India-rubber published at that time, and within my reach, which was little and very unsatisfactory. After I had obtained such information as was available to me and I had planted 1,000 trees, I concluded to write the result of my studies, but principally of my experience, in the shape of an article, which was published in the *Mexican Financier*. A plantation of 100,000 trees," Mr. Romero estimates, "would cost in Soconusco, under the prices of land and labour which prevailed in 1873, which I think have not changed materially, as follows:-

Cost of 40 acres of land at 10 cents each	\$ 40.00
Cost of surveying same and securing title	45.00
Clearing the land	1,070.00
Sowing	98.00
Five weedings in six years at \$5.00 each	4,910.50
Total	\$7,053.50

The yearly product in juice of 100,000 trees would be, after the sixth or seventh year of planting, about six pounds per tree, or 600,000 pounds; less 5 per cent. lost in drying the juice to convert it into rubber, would be 254,000 pounds, which at 40 cents per pound would amount to \$101,600. Deducting from this the expenses above mentioned (\$7,053.50) there would be a balance of \$94,546.50. Suppose the cost of the plantation to be double, and the yield of the trees one-half of the amount estimated by me, the profit would yet be immense. The principal drawback is that in such districts as are suitable for India-rubber culture there is great scarcity or rather almost a total want of labour and that the climate is generally full of malaria, at least in so far as Mexico is concerned."

The *Financier* quotes Mulhall's recently compiled statistics with regard to the growth of American wealth and its comparison with the wealth of England. The tables are well worth reproduction:-

1888.	UNITED STATES.	GREAT BRITAIN.
Land	\$19,800,000,000	\$ 7,740,000,000
Cattle, etc.	1,680,000,000	2,270,000,000
Houses	14,350,000,000	12,110,000,000
Furniture	7,435,000,000	6,600,000,000
Railways	9,745,000,000	4,325,000,000
Ships	300,000,000	670,000,000
Merchandise	800,000,000	1,215,000,000
Bullion	1,140,000,000	620,000,000
Sundries	12,380,000,000	11,700,000,000
Total 1888	\$81,120,000,000	\$47,000,000,000
Total 1880	16,190,000,000	97,700,000,000
Increase	\$64,930,000,000	\$49,300,000,000
Per inhabitant, 1888	\$1,053	\$1,836
Per inhabitant, 1880	513	956
Increase	\$540	\$880
Increase per cent	104	93

The second table shows the annual earnings in the two countries:-

	UNITED STATES.	GREAT BRITAIN.
Agriculture	\$3,400,000,000	\$ 1,130,000,000
Mining	400,000,000	805,000,000
Manufactures	4,280,000,000	2,416,000,000
Domestic transport	1,155,000,000	565,000,000
House Rent	785,000,000	675,000,000
Commerce	160,000,000	370,000,000
Shipping	60,000,000	130,000,000
Banking	100,000,000	275,000,000
Professions	1,070,000,000	585,000,000
Totals	\$11,110,000,000	\$ 6,425,000,000
Per Inhabitant	\$195	\$267

THE JAPANESE EXHIBITION OF 1894.

THE Chambers of Commerce in the centre of Japan are agitating to have the next Japanese Industrial Exhibition held either at Kyoto or at Osaka. The Kyoto Chamber draws attention to the fact that 1894 being the eleven hundredth anniversary of the choice of Kyoto as a capital by the Emperor Kwammu, the city is sure to be crowded with visitors, and argues that this is a sufficient reason for holding the Exhibition at the Western capital. The Osaka folks contend that their city is most convenient of access from all parts of Japan, and hence that the Exhibition should be held there. The citizens of Tokyo are content to rely on precedent as sufficient to establish the superiority of their claim to those of the southerners. For many reasons it is little likely, we should say, that the location of the Exhibition will be changed.

THE RADICALS' PROVINCIAL TOUR.

At a general meeting held by the Radicals in the Party's office on the 24th ultimo, it was resolved to despatch delegates throughout the whole country for the purpose of preaching the *Yi-u-to's* creed. The programme is most extensive, every place of any importance in the empire being entered on the list of localities to be visited. Twenty-five leading Radicals have been chosen to perform this arduous task, and

most prominent among them being, Messrs. Hoshi Toru, Kono Hironaka, Sugita Sadaichi, Kudo Kokan, Kato Heishiro, Uyeiki Shicho, Yebara Soroku, Kataoka Kenkichi, and Yamada Toji. In the rules recently compiled and passed by the Party, it was laid down that the expenses of delegates thus despatched to the localities must be borne by the provinces which they visit. These twenty-five gentlemen will therefore conduct their political tour at the charges of the country.

INFANTICIDE.

A DISTRESSING case came before the Tokyo Provincial Court a week ago. The wife of one Takanashi Sagenji, residing in Honjo, gave birth to a child on April 3rd. The parents were poverty stricken, and the new arrival was anything but a welcome visitor. Prior to the birth they had talked the situation over, and had come to the conclusion, which others in similar circumstances have often reached, that a speedy death is better for a child than a life of want and distress. Therefore, regardless of consequences, they determined to quench the spark of life directly after birth. This resolution they carried into effect by squeezing the head of the infant till life was extinct. They then wrapped the body in oil paper and buried it beneath the house, where it was subsequently discovered by the police. Takanashi and his wife were sentenced to 12 years' imprisonment with hard labour. The sentence was made lighter than is usual in such cases, on account of the dire distress which provoked the commission of the crime.

It is perhaps not generally known that infanticide of the kind noticed above used to be much more prevalent in Japan than it now is. The Japanese term applied to the practice of destroying children who happened to be considered superfluous was *mabiku*, which signifies to thin out, being used to describe the process of weeding out such plants and trees as the soil is unable to nourish. In the Tokugawa era it was held by certain persons that only the strongest offspring deserved to be reared, and many were the parents who secretly destroyed infants whose existence was considered likely to check the growth and development of better specimens of humanity in the family, by absorbing a portion of the available nourishment which could ill be spared. The notion of these parents was that the rearing of one strong child is far preferable to bringing up two weak ones. They were not only believers in the doctrine that the fittest ought to survive, but they undertook to see that the fittest did actually survive. The notion that there is no object in preserving the lives of children who are likely to become a burden to themselves and their parents, prevailed in Japan in the 14th century, and probably earlier. When Kusunoki Masashige was about to take the field against Ashikaga Takauji, we find him addressing his son Masatsura in the following terms:-"I have heard it said that a lioness, when she has cubs, waits till they are three days old, and then, taking them to the top of a high hill, throws them down to the bottom. The cubs which are strong enough to climb the steep ascent unaided, she brings up as her children; the others, she allows to die. She makes use of this device to test the strength of her cubs. The present is a testing time with you, and it will be seen what you are made of." The sentiment was probably derived from the Chinese originally, who show a singular disregard for the lives of infants of the female sex, and who feel under no obligation to lengthen the lives of confirmed invalids by artificial means. Similar notions to those held by ancient Japanese prevailed in ancient Sparta. As population increases, and the struggle for existence becomes intenser, it is not unlikely that the world will no longer tolerate the prevailing practice of burdening the community with sickly children, and that to become mothers of large families will cease to be the highest ambition of the wisest of women. The feeling that the rules which govern the production of ordinary animals should be applied to the human species, has been common in all ages. The uselessness

of allowing the supply of human beings to exceed the available means of maintaining them in tolerable comfort is universally acknowledged. Our marriage laws, and our notions respecting the abstract value of human life, must undergo great changes to suit our ever-straitening resources. But we are verging on a great problem which cannot be discussed here. While not defending the act of the parents whose crime has formed the subject of these comments, we feel with the judge who passed a mitigated sentence thereon that the distress which could induce parents to commit such cruelty must have been very great, and, to go back a step further, it is certainly to be deplored that, owing to the existence of exacting conventionalities, parents should be driven to adopt such dreadful methods to rid themselves of a responsibility they feel totally unable to bear.

THE QUELPAET AFFAIR.

It will be remembered that according to a clause in the Treaty between Japan and Korea, Japanese were authorised to fish in the waters surrounding the island of Quelpaet from November last. The fish are extremely plentiful in that vicinity and the Japanese fishermen had some magnificent hauls. This excited the envy of the Korean residents, and led to the disturbances which have been reported in these columns from time to time. The Korean Government has communicated with the Japanese Foreign Office in reference to the affair, and has expressed the wish that the right granted by the clause in the Treaty be foregone by Japan, at any rate for the present. Korea promises to grant a *quid pro quo*, in some form that may be agreeable to Japan. The fisheries being a rich source of wealth, the Japanese are, naturally enough, not disposed to relinquish them. What the Korean authorities are not able to effect by diplomacy the inhabitants of Quelpaet are attempting to gain by force. On the 28th of last month, the islanders attacked the Japanese fishermen residing on the seashore and drove them from the island. This attack, according to the accounts which have reached Japan, was connived at by the local Korean authorities. The Japanese have despatched a man-of-war to Quelpaet, the *Maya Kan*, to inquire into the affair. The *Yiji* asserts that the Japanese Foreign Office has in its possession proofs that the repeated attacks on the Japanese have been undertaken with the connivance, if not at the instigation, of the Korean Central Authorities. On the return of the *Maya Kan*, according to the *Yiji Shimpō*, the matter will form the subject of special negotiations with Korea.

MR. M. B. HUISE'S COLLECTION.

The editor of the *Art Magazine* is an enthusiastic admirer of Japanese art. He has made a large collection of lacquer and metal work, and catalogued it according to a novel method. Instead of dividing the objects by schools and eras, he has grouped them so as to illustrate Japanese manners and customs. The catalogue is consequently an interesting essay on this country, its traditions, religious beliefs, and history. The collection appears to be now on view in London, for we read in the *St. James's Budget*:—"The general public does not often get the chance of seeing a good collection of Japanese lacquer and metal-work. As a rule such collections are in private houses and carefully locked up in cabinets. Consequently no small degree of interest attaches to Mr. Marcus B. Huish's exhibition now on view at 148, New Bond-street. Mr. Huish has selected his specimens with an artist's eye. The detailed ornament with which a Japanese workman loads a box-wood button or a metal knife-handle is abundantly illustrated; and it is difficult to look at Mr. Huish's beautiful specimens without recognizing the fact that in Japan many a workman must have been an artist. The greater portion of a year's work has in many instances been occupied in ornamenting a lacquered medicine-box. Two subjects of ornament will especially attract the visitor: one is the use of flower designs and the other is the mimicry of

men and animals. If both show equal technical skill, it is the imitation of flowers that displays the most perfect sense of art. The sunflower, and the leaf of the Japanese maple perhaps, afford the best examples; Mr. Huish says he can point to equally good specimens of the use of iris, wisteria, and convolvulus in decoration. It is interesting to trace, by means of a clever chronological arrangement, the evolution of these artistic designs. The exhibition includes specimens extending over several centuries; and they show a genius which was not subject, as in Europe, to periodical revival and depression. We imagine few visitors to the exhibition will go away without being grateful for this glimpse of Old Japan; and they will appreciate it all the more because of the aid Mr. Huish has given them in a daintily printed and pleasantly written little pamphlet."

MR. HEBER BISHOP.

CONCERNING Mr. Heber Bishop, the well known American collector, who lately passed through Japan en route for Peking, and who is expected to return to this country shortly, the Peking correspondent of the *North China Daily News* writes:—

We had the visit here lately of several millionaire American globe trotters, one of whom—Mr. Bishop—has bought a splendid collection of jade. He is quite a connoisseur in this subject. He intends, it is said, to bring out a handsomely illustrated work on jade and to limit the edition to 100 copies. The work will cost \$1,000,000 and the binding of each copy \$120. After presenting copies to the various Foreign Governments, crowned heads, and public libraries, the plates are to be destroyed. The work will thus become one of the rarest and most expensive books in existence.

We had heard of this book, but our contemporary's correspondent has added a figure to the total cost, which is estimated at a hundred thousand dollars, not a million. Mr. Bishop possesses incomparably the finest collection of jades in the world, and the volume illustrating it will be indeed unique. Another work of the same character is also in course of preparation. It is a book on Chinese porcelains, the illustrations taken from the splendid collection of Mr. Walters of Baltimore.

THE CARD SCANDAL.

THE *Yiji Shimpō* states that there is not the slightest doubt that the prominence which the card affair has assumed is attributable to the existence of rival factions. Among the employés of the Department of Justice, it is said that the Cabinet has resolved to take stringent measures for the suppression of partisanship in the ranks of officers of justice. The occurrences which are so much deplored by the country at large, the *Yiji* attributes to the independent status with which judges have been lately endowed. We fail to see the connection. The independence which has been granted to the bench relates to a position *vis-à-vis* other legislative bodies, but certainly does not release its members from the obligation to treat each other with dignity and respect, or from the duty of cultivating that *esprit de corps* which the successful discharge of their high functions imperatively demands.

THE "KAISHIN TO."

THE *Kaishin-to*, whose meeting on the 23rd instant was interrupted by *ryōshi*, re-assembled on the 26th, and being specially protected by the police, succeeded in delivering a good many caustic speeches. Mr. Tanaka Shozo and the poisonous emanations from the Ashio Copper mine were, of course, much in evidence, and so were the forty millions of Japanese whose wishes this iniquitous Government is supposed to be slighting by remaining in office. But the interest of these political gatherings is becoming infinitesimal. It is almost possible to predict with accuracy what each speaker will utter when he ascends the rostrum. The Opposition at present may be said to have only one plank in its platform, namely, the contention that as the Government failed to obtain the consent of the Diet to the appropriations for naval shipbuilding and a Steel Foundry, as well as to the Bill for transferring Prison Expenditures to the

charge of the Treasury, the Cabinet ought to resign. But to resign at the order of the majority in the Lower House would be frankly to inaugurate the system of party Government, and the Cabinet is resolved not to take any such step, while the *Kaishin-to* themselves, or at any rate their leader, Count Okuma, admits distinctly that the country is not ready for party Government. Under these circumstances, sober-minded persons may be pardoned if they consider that the issue now thrust into the foreground by the Opposition is not of an immediately practical character.

THE RADICALS AND THE NATIONALISTS.

THE Radicals held a meeting on the 26th instant in the *Kinki-kan*, and devoted themselves with great vehemence to attacking the new National Union, which they evidently regard as a formidable opponent. Mr. Nagano Toragoro preached a violent sermon against Count Saigō and Viscount Shinagawa, on the text of "the two head snakes," and Mr. Tatsuno Shuichiro, taking for his theme "the decapitation policy," had a great deal to say about Viscount Shinagawa's declaration that he and Count Saigō were prepared to stake their lives on their fidelity to the cause they had espoused. He denounced in strong terms the use of expressions such as those employed by Viscount Shinagawa when the latter spoke of the bloodshed at the Yamada-ro, twenty-five years ago, and of decapitation as a device to which politicians might properly resort to secure one another's constancy. Language of that nature, Mr. Tatsuno said, might be expected from Russian Nihilists or from the creatures of a despotic government, but was wholly unsuited to a free and constitutionally governed country like Japan. He urged Viscount Shinagawa to educate himself so as to become a fitting opponent of the Radical Party, and he did not hesitate to declare that the success of the official candidates in the late general elections had been achieved by recourse to "decapitation" methods. Other speakers adopted a similar tone, or varied it by repeating the somewhat hacknied appeal to the Cabinet to recognise the authority of the House of Representatives and resign *en masse*.

The speech of Mr. Tatsuno and other Radicals on the above occasion inspires a hope that they are really beginning to appreciate the spirit in which political controversies should be conducted. Viscount Shinagawa's language appears to us to have been indiscreetly chosen. It is not considered improper anywhere, though it may be counted a little extravagant, that a politician should declare himself ready to sacrifice his life in the cause he adopts. But there are ways of making the statement. In Viscount Shinagawa's speech the *nama-kubi* (freshly cut off head) was a great deal too much in evidence. The Viscount may have thought it necessary to utter words of strong import, so as to dispel all idea of half-hearted measures; but considering that he recently held the portfolio of Home Affairs, his language seemed to lack dignity and balance. On the other hand, these forms of expression are often used by Japanese in a figurative sense. Thus, in one of the articles which, a few days ago, led to the suspension of the *Yiyu*, the organ of the very Radicals who now avow themselves such sticklers for moderate language, we find this paragraph:—"As for us, we hold that instead of attacking the Government by vague arguments based on the morality of Confucianism, direct recourse must be had to the short sword (*tanto chokunin*) by appealing to the individual loyalty of our members and relying on the first article of the Imperial oath." We do not imagine that the *Yiyu* deliberately intended, when it published this paragraph, to preach recourse to lethal weapons: its "*tanto chokunin*" was probably penned only in the sense of "coming to close quarters." But the public may well be perplexed to divine how much must be taken literally and how much figuratively. At all events, Viscount Shinagawa might have advantageously exercised greater discretion, for, to say the least

of it, he put a weapon into the hands of his enemies. What we may be permitted to hope, however, is that since the Radicals are beginning so stoutly to condemn in their opponents everything savouring of methods at variance with the spirit of civilization and of constitutional institutions, they will practise what they preach by abolishing the *soshi*. We do not mean to suggest that they alone are responsible for the existence of these disgraceful nuisances, but we do mean to say that if the Radicals showed any really earnest desire to discountenance physical force in every form as a political weapon, the *soshi* would very soon disappear. It is impossible to avoid the reflection that whereas any indiscreet utterance on the part of a leading political opponent, which seems to point to violent methods, at once becomes the principal theme of Radical denunciation, not a single speech has ever been delivered by a Radical politician condemnatory of the *soshi* who for years have been disgracing Japanese politics and the Japanese nation by their lawless and barbarous procedure.

EARTHQUAKE INVESTIGATION.

The following appeared in Monday's *Official Gazette* :—

We hereby authorize the organization of the Earthquake Prevention Investigation Society (*Shinsai Yodo Chosa-kai*), and order the same to be duly promulgated.

(Imperial Sign-manual).

(Signatures of Minister President and Minister of State for Education).

IMPERIAL ORDINANCE No. 55.

Organization of the Earthquake Prevention Investigation Society.

Art. I.—The Earthquake Prevention Investigation Society shall be under the supervision of the Minister of State for Education, and shall investigate measures for the prevention of earthquake disasters, and the method of putting the same into operation.

Art. II.—The Earthquake Prevention Investigation Society shall be competent to compile all rules necessary for its procedure.

Art. III.—The Earthquake Prevention Investigation Society shall consist of the following officers :—

1 President; 1 Manager; 25 Members.

Art. IV.—The President shall be of *Chokunin* rank. Members shall be chosen by the Minister of State for Education from among specialists in Physics and Engineering, and shall be appointed by the Cabinet. The Manager shall be chosen by the President from among the Members, and shall be appointed by the Cabinet.

Art. V.—The Earthquake Prevention Investigation Society shall be competent to have Special Members should circumstances require them. The Special Members shall be selected by the Minister of State for Education and appointed by the Cabinet.

Art. VI.—The President shall have control of all business relating to the prevention of earthquake disasters.

Art. VII.—The Manager shall manage all business under the orders of the President.

Art. VIII.—Officials of the Earthquake Prevention Investigation Society shall be entitled to receive an allowance of not more than 300 yen each per annum. Provided, that when special duties of investigation are entrusted to a member and when he has displayed exceptional ability in discharging them, an allowance may be made to him apart from the above provision.

Art. IX.—The Earthquake Prevention Investigation Society shall have a fixed establishment of three clerks, selected from among the *employés* of the Educational Society, whose functions shall be to keep records of all proceedings under the direction of the superior officials and to attend to other business.

Art. X.—The President shall be competent to engage special *employés* should they be necessary for the purposes of an investigation.

It will be remembered that the Supplemental Budget, submitted to the Diet in the session just concluded, contained an appropriation of 42,062 yen for purposes of earthquake investigation, and that the item, having been originally struck out by the Lower House, was subsequently restored and passed at the instance of the Peers. From eight to nine thousand yen of that total will be required for salaries according

to the provisions of the above Ordinance, and doubtless a considerable outlay must be incurred at first on account of instruments. But with funds at their disposal, and an organization approved by Imperial Ordinance, the Seismologists of Japan will now be enabled to inaugurate investigations on a scale worthy not only of the great industry, ability, and enterprise already shown by them when working entirely on their own resources, but also of the unique opportunities offering in Japan for such investigations. We have often expressed the hope that the Government would see its way to do something of this kind.

KOREAN AFFAIRS.

Korean affairs are much talked of in Japan at present. Excitement was naturally caused by the recent intelligence of an attempt to blow up the Tai-won-Kun with dynamite, and everyone has been anxious to obtain some further news, but although the Foreign Office in Tokyo immediately telegraphed for particulars, nothing appears to have been yet received. The *Nippon* alleges, however, that before the receipt of the news about the King's father and the bombs, intelligence had reached Tokyo to the effect that the impetuosity from which Korea is said to have been suffering for some time, has now become greatly aggravated. The King is pledged to deliver a certain quantity of rice every year to the Tai-won-Kun, for the latter's maintenance, but during the past two years the old Prince has been obliged to go without his allowance, owing to the empty state of the Treasury. Moreover, the salaries of officials and of the soldiers are reported to have remained unpaid for some time, and the Government, unable to defray the expenses of certain students sent to study book-keeping in Osaka, was compelled to despatch a telegram to Mr. Oniwa Chobel, under whose care the students were, directing him to send them back at once. This serious want of money has produced much discontent, and the dynamite outrage is supposed to have been connected with the dissatisfaction. But all this is very vague. The *Nippon* adds that there are several unaccountable points connected with the recent news. Thus, the discovery of the dynamite was said to have been made on the 16th instant, and Mr. Kajiyama, the Japanese Representative in Seoul, despatched a telegram the following day. But it did not reach Tokyo till the morning of the 23rd. Again, though the Foreign Office at once asked for further news, no reply has yet been received. Finally, the *Fayayama Kan*, which was ordered to proceed to Korea, has gone to Yokohama. The *Nippon* does not understand these things. Neither do we.

POLICE NOTICE.

On the 25th ultimo the Chief of the Metropolitan Police issued the following notice :—

Whereas, of late men calling themselves *soshi* have been prowling about in various localities, and causing much annoyance by entering people's houses for the purpose of extorting money or violently urging political views, refusing to leave when desired to do so; and whereas, although numerous instances of this kind have occurred, the persons concerned often shrink from the trouble of lodging information, or are deterred by apprehension of future annoyance; and whereas, the abuse has become more prevalent in consequence, notice is hereby given that since there are provisions of law to meet such cases, any persons who are hereafter subjected to such annoyance or who observe others being subjected to it, should at once convey information to the nearest police station.

DEPARTURE OF MR. AND MRS. FRASER.

HIS MAJESTY'S MINISTER AND MRS. FRASER left Tokyo on Monday by the 1.10 p.m. train for Yokohama, where they embarked in the Canadian Pacific mail steamer *Empress of China*. A great number of people assembled at Shimbashi terminus to say farewell, among them being Count Goto, Minister of State for Communications; Viscount Enomoto, Minister of State for Foreign Affairs; Marquis Nabeshima, Grand Master of Ceremonies, and Marchioness Nabeshima; Mr. Sannomiya, Vice Grand Master of Ceremonies, and Madame Sannomiya; several

of the Empress' Ladies in Waiting, Count Kuroda, the Foreign Representative, *Chargé d'Affaires*, and other members of the *Corps Diplomatique*; Mr. Hayashi, Vice-Minister of State for Foreign Affairs, many Japanese officials, and almost the whole foreign community of Tokyo without distinction of nationality. Mr. Fraser proceeds to England on leave. Neither he nor Mrs. Fraser have enjoyed good health lately, and it is hoped that the voyage home and an interval of rest will prove beneficial. Mrs. Fraser's absence will make a serious difference to Society in Tokyo, as well as to the cause of charity, for whenever her health permitted her to entertain, the British Legation was the centre of the capital's hospitality, and at all times her efforts on behalf of every work of benevolence were untiring.

TOURISTS.

At the annual general meeting of the Club Hotel (Limited) shareholders, held on Monday week, the Chairman, referring to the unsatisfactory results of the Hotel's working during 1891, said :— "Last year, as all present know, was not a good one for hotels, visitors to Japan being less than for some years past. Whether that was due to influenza or not, I do not know and cannot tell, but there was a great falling off in the past year, but now there are signs of improvement, and especially during the last six months." This statement caused us some surprise, our own impression having previously been that last year had witnessed a considerable increase in the number of visitors coming to Japan. We have therefore obtained figures, and, as we anticipated, they do not bear out the Chairman's assertion :—

NUMBER OF PASSPORTS ISSUED TO FOREIGNERS BY THE TOKYO FOREIGN OFFICE.

1889	4,074 passports.
1890	4,826 passports.
1891	5,830 passports.

It appears, therefore, that so far from the number of visitors having been less in 1891 than in previous year, there was a very marked increase, the issue of passports exceeding that in 1890 by over a thousand. The cause of the Hotels' want of prosperity must be sought elsewhere.

THE SAPPORO SUGAR FACTORY.

SINCE Mr. Asaba, Director of the Sapporo Sugar Company, left Tokyo for Hokkaido, for the purpose of examining the books of the Company, on 21st April last, Mr. Tamura, Manager, Mr. Mukai, Accountant and other officers of the Company have succeeded in inducing the principal shareholders and creditors to agree to the following Settlement :—

1.—The 16,000 shares of the Company shall be changed into 33,333 shares. For that purpose each share shall be estimated at 15 yen instead of 31 yen; the remaining sum of 16 yen per share being regarded as lost by the shareholders.

2.—In increasing the number of shares as stated above, 16,000 of them shall be distributed among the original shareholders; and out of the remaining 17,333 shares, every creditor is requested to receive shares at 15 yen per share, in payment of the sum due to him.

3.—The remaining shares shall be sold to provide for the capital of the company.

4.—Shares handed to creditors in discharge of the Company's debts, shall, of course, carry the ordinary interest guaranteed by the Government.

The subsidy to the Company for last, as well as for the present year, is still in the hands of the Hokkaido Administrative Board, owing to the temporary suspension of the Company's business. But so soon as the work is recommenced, the subsidy will be handed to the Company, and it is expected that things will proceed satisfactorily once more.

THE GOVERNOR OF TOKYO.

THE *Mainichi Shimbun* has a paragraph which looks to us very like mischief-making. It is about Mr. Tomita, Governor of Tokyo. Mr. Tomita, says our contemporary, has done nothing remarkable since he was appointed Governor, but he is nevertheless much liked by the citizens. Now, however, the Government is about to remove him because he has not shown sufficient political zeal, and will give his post to Mr. Arita Yasukazu, Governor of Fukuoka,

who made himself conspicuous by interfering in the recent elections, and who supports a number of *soshi* for political purposes. There is a good deal more in the same strain, but it seems not worth re-producing. Apparently, however, Mr. Tomita has given some offence, for we read in the *Nippon* that a vote of want of confidence in him is about to be proposed in the City Assembly.

OSAKA WATER-WORKS.

It would seem as if Osaka were really likely to begin seriously the construction of the long expected Water-works. These works were, it may be remembered, designed by Major-General H. Spencer Palmer, R.E., some years ago. After much delay the execution of them was placed under the charge of Mr. B. Nofiri, Chief Engineer to the Osaka Fu. The original design was somewhat modified by Mr. Nofiri; the reason of the modification being that, after much difficulty, the Military Authorities were persuaded to give permission for a high level reservoir to be constructed on the Castle Hill. Water will gravitate from this reservoir to all parts of the town. The untimely death of Mr. Nofiri, at the beginning of the present year, interrupted the work just as it was about to begin in earnest, and there have been several months of delay in consequence. Only a little time ago Mr. T. Okino of the Naimusho, was appointed chief engineer, and associated with him was Mr. T. Yoshimura, well known as having successfully carried out the Nagasaki Water-works. It now seems as if the work would at last be actively taken in hand. The somewhat doubtful policy has been adopted of having the pipes cast at the arsenal in Osaka, doubtful—because a foundry has to be built and fitted specially for the work, and it is not very clear of what use the foundry will be after it has turned out the 16,000 or 20,000 tons of pipe needed for the Water-works. The source of water-supply for Osaka—the Yodogawa, a mile or two above the city—can scarcely be termed an ideal one, but it seems to be the only practical source and will afford a supply infinitely better than the wretched one there is at present. We only wish there was as good a prospect of an immediate beginning of work of a similar kind in Tokyo. The delay there in starting on this last mentioned work is inexplicable to us.

"THE REVUE FRANÇAISE."

French journalism in Japan has hitherto been of a somewhat fitful character. The French community is sufficiently large to have an organ of its own, and consciousness of this fact has led various enterprising men to start journals. But these ventures have been of necessity abandoned. In every case their fault was too ambitious conception. The French residents do not muster in sufficiently large numbers to support a daily journal. The British community have no less than eight daily newspapers; the American community has one—though we doubt whether our American friends will acknowledge the distinction; the Germans have their Asiatic Society, which, by the great excellence of its work, contributes materially to their reputation; but the French have hitherto had only the *Société de Langue Française*, an organization that serves many useful purposes, but can scarcely be regarded as entirely supplying the need we are considering. It is with much pleasure, therefore, that we notice the appearance of the *Revue Française du Japon*, a monthly publication brought out under the auspices of a Committee numbering men so distinguished as MM. Boissonade de Fontarabie; Fonque, French Professor at the Nobles' School; Giraud, French Professor at the Officers' College; Revilliod, Professor of French Law in the Imperial University; Sarazin, Attaché of the Foreign Office, together with Captain Harada, I.J.L.; Mr. Motono, Attaché of the Foreign Office; and Mr. Oumé, Professor in the Imperial University. The *Review* is of modest dimensions: the bulkiest number yet published only containing 40 pages. But its matter is all chosen with judgment, and we need scarcely say that with such a Committee of Publication the style leaves nothing to be desired. Political matters are avoided, as might have been expected, but in other directions we find

many interesting articles and items of intelligence. The publication of the *Review* commenced in January, and we may be permitted to hope that it has now secured sufficient support to place its permanent success beyond question. The statement of motives published by the Committee runs as follows:—

Il n'existe actuellement en l'Extrême-Orient aucun périodique imprimé en langue française et c'est à une situation aussi regrettable que nous avons désiré mettre un terme. La *Revue française du Japon*, entièrement rédigée en français, est destinée à combler cette lacune.

La *Revue* doit, tout d'abord, servir d'organe à la Société de Langue française fondée à l'Ōkyo en 1881, par l'insertion des comptes-rendus de ses séances et par la publication des conférences qui sont faites au siège de cette association. Nous espérons par ce moyen encourager le zèle des membres français et étrangers de la Société et en même temps gagner à celle-ci de nouveaux adhérents.

A ces comptes-rendus et à ces conférences nous ajouterons les articles que les collaborateurs de bonne volonté voudront bien nous adresser et dont ils seront libres de choisir le sujet (la politique exceptée).

Nous y joindrons les traductions de certains documents japonais qu'il nous semblera opportun de placer sous les yeux de nos lecteurs.

Nous voulons également, par l'œuvre que nous entreprenons, donner aux Membres japonais de la Société de Langue française et à ceux qui étudient cette langue des textes que les uns liront avec intérêt et que les autres, dont les connaissances sont moins avancées, pourront comparer utilement avec les traductions qui en auront paru dans les publications japonaises.

Nous voulons enfin, si nos ressources nous le permettent, faire un service gratuit de notre *Revue* aux Établissements littéraires et scientifiques, aux Salles publiques de lecture, aux Cercles de fonctionnaires et d'officiers, pour entretenir, parmi les personnes qui les fréquentent, la connaissance et l'étude de la langue française.

Nous faisons appel, pour mener à bien cette entreprise, à la bienveillance et au concours de tous ceux qui ont à cœur de maintenir son rang à la langue française et de contribuer à son développement au Japon.

MR. OI KENTARO AND THE "JIYU-TO."

THE long looked for separation between Mr. Oi Kentaro and the Radical Party has finally come. The thing was managed in a very friendly manner. On Tuesday, Mr. Oi addressed the following letter to the President of the *Jiyu-to*:—

SIR,—When a crisis approaches at home and abroad, and when the affairs of the nation become complicated and troublesome, even the indolent or the crippled are disposed to play an active part. In view of the conditions now existing, I feel myself stirred by every principle of patriotism to exert myself in any country's behalf. But if I follow the dictates of my own judgment, some collision with the policy of the *Jiyu-to* is inevitable. I have therefore become apprehensive lest my language or actions should incur the disapproval of the Party. We are at one as to our aim, the welfare of the nation. Therefore I desire to act in accordance with my own inclination in the interests of the country and of the cause of liberty, and having adopted this resolution I cannot pause to ponder over other matters. I thus find myself compelled to separate from political friends with whom, for many years, I have toiled in a common cause. I beg my well-beloved friend, the President of the *Jiyu-to*, to appreciate my humble desire and suffer me to organize a separate branch of the same Party. I tender my resignation from the *Jiyu-to* and await your favourable reply.

(Signed) OI KENTARO.

REPLY.

SIR,—In answer to your letter asking permission to resign your membership of the *Jiyu-to*, I desire to express my most sincere regret at being obliged to part with a political friend whom I have esteemed for years. But men must obey the dictates of their inclinations. I trust that you may long preserve your health and be able to work for the welfare of the country.

(Signed) President of the *Jiyu-to*.

THE POLITICAL SITUATION.

THE public is still kept on the tip-toe of expectation about the political situation. As an example of the journalistic paragraphs that foment the excitement, we may quote the following from the *Kokkai*:—"On Friday last Count Matsukata drove to the Cabinet, and at once proceeded to the Palace, where he is reported to have laid before the Emperor the result of consultations held in the Cabinet on various important matters relating to the political situation. At about 1.20 p.m. Count Ito, President of the Privy Council, visited the Cabinet, and, after a short interview with Count Matsukata, went to the Palace and had audience of the Emperor, remaining there until about 3 p.m. Meanwhile, Count Oki and Viscount Enomoto arrived at the Cabinet, and had a consultation with Count Matsukata. By and by the Minister President was again summoned before the

Sovereign, and presently he and Count Ito went home. It is said that the principal topics under consideration were the resignations of Count Saigo and Viscount Shinagawa, together with the policy of the Government in the immediate future. The resignations of the above two statesmen will probably be accepted in a day or two. Count Matsukata had been closeted with Count Ito early the same morning. It is reported that the Minister President went to talk over the result of certain Cabinet discussions as well as the views of the Camera statesmen. Count Matsukata visited Count Kuroda on his way home from Count Ito's."

It is understood that political affairs have not yet been fully settled. The question of the two vacant portfolios has led to some difference of opinion, and may possibly involve more serious consequences. As to the resignations of Count Saigo and Viscount Shinagawa, that event also has provoked much comment, not merely on account of the peculiar object of the two statesmen's retirement, but also because they openly associated themselves with the *Kokumin Kyokai* before their resignations had been officially accepted. It is true that the *Kokumin Kyokai* has not yet been definitely organized as a political party, and it is also true that no doubt can be entertained as to the acceptance of the two Privy Councillors' resignations. Nevertheless, it would certainly have been more circumspect to abstain from taking open part in the proceedings of the *Kokumin Kyokai*, until the fact of their retirement from the Privy Council had been officially announced. It is purely a technical point, but of course every point, however trivial, is eagerly seized upon by the opponents of the Government.

FIRES IN TOKYO.

THE spring of this year was unhappily distinguished by a number of somewhat serious conflagrations in Tokyo, but the record for 1891 is distinctly favourable. We read in the *Statistician* (*Tokai Shinshei*) that although 675 fires occurred in the capital during the year, the number of houses burned was only about one fourth of the number destroyed in the preceding year. The figures given by our contemporary are:—Godowns, 4; brick buildings, 5; houses plastered outside, 2; ordinary tiled houses, 483; houses roofed with copper, zinc, or tin, 134; shingled houses, 309; bark-roofed houses, 7; and houses thatched with reeds, 181. The total is 1,125, which shows that in more than half the conflagrations the fire was confined to the house where it originated. The value of these buildings alone, without their contents, is put at 509,349 yen, or 452 yen per house. Eight people lost their lives and 141 were injured.

The *Statistician* considers that the favourable record of 1891 is attributable to the gradual enforcement of the building regulations, and to the improved means now available for extinguishing fires. But it seems to us rather premature to attach much weight to either of these, in view of the fact that the fire annals of this year's spring were so peculiarly disastrous. The terrible conflagration in the Kanda district, and the repeated conflagrations in the Shiba district, will bring to a high figure the total for the current year. The scenes of these fires were markedly unfavourable for purposes of extinction, the whole area in each case being covered with shanty-like houses lining narrow streets. In such quarters the operation of the building regulations and the carrying out of the new scheme of city improvement—both of which reforms are possible in an efficient sense only after a conflagration has cleared the way for their enforcement—must produce excellent results, but in places where the city has undergone little change during the past decade, a fire under unfavourable circumstances as to wind and water-supply would effect just as much destruction as ever. In our opinion by far the most important factor in diminishing the number of fires and mitigating their disastrous effects, is the immense improvement that has taken place

Original from

during the *Meiji* era in the character of the buildings in the business quarter of the city. This area has gradually been converted into a city of fire-proof godowns. The expense must have been very great, but the comparative immunity from fires thus obtained is well worth the extra outlay. We do not know whether any statistics have been compiled from which the altered natures of the structures in Tokyo during the past twenty-five years could be deduced. If not, an effort might be made to compile them before it is too late.

THE BRIBERY AFFAIR.

For a moment much excitement was caused among the public by the charge which Mr. Inagaki Shimesu preferred in the House of Representatives on the last day of the session, and several journals complained that the action taken by the Special Committee appointed to investigate the matter had been superficial and unsatisfactory. It will be remembered, however, that the House itself required only 20 minutes to come to a decision in secret session. The resolve to hold a secret session was taken at 5 o'clock, and an hour's recess was then ordered, the House re-assembling at 6.10 p.m., and re-opening its ordinary session at 6.30 p.m. If the committee's inquiry was abortive, the same might have been said with still greater truth of the House's secret session. The reason of these lame results is now beginning to be apparent. For it seems, after all, that the question is reduced to a mere dispute as to accuracy between Mr. Inagaki and Mr. Kuga. The former says that the latter made him an offer of money; the latter denies that he did anything of the kind, and as there are no witnesses the truth is hard to ascertain. Mr. Okamoto, who was indirectly implicated in the charge by Mr. Inagaki, is equally positive in his denials. It is a singular fact, too, that whereas several members were at first said to have been similarly approached, not one of them has come forward, or been induced to give any testimony one way or the other. We read in the *Kokai* by which, as already mentioned in these columns, a very detailed account was given of alleged interviews between Messrs. Inagaki and Kuga—that since the matter had been reduced to a mere verbal dispute between the two, it was arranged to hold a meeting on the 27th instant, when Messrs. Inagaki, Kuga, and Okamoto should discuss the affair in the presence of the editors of all the leading journals of the capital. But before that date, Messrs. Inouye Kakugoro and Ito Kenkichi instituted proceedings in a libel suit against the *Kaishin Shimbun*, and it was consequently decided that as the result of the suit must dispel all doubts, no steps need be taken of a private character. There the matter rests, accordingly.

COUNT SAIGO AND VISCOUNT SHINAGAWA.

The resignations of Count Saigo and Viscount Shinagawa having now been officially accepted, their connection with the National Union ceases to be matter for surprise. Doubtless they had assured themselves from the outset that no difficulty would be made about allowing them to leave the Privy Council, but it would certainly have been more dignified to refrain from entering the political arena until all the formalities of resignation had been satisfied. Meanwhile, the National Union has not yet become an openly acknowledged political party. It continues to call itself merely a friendly association, although it has declared a programme which is distinctly political, and although it has now resolved to despatch members on a lecturing tour through the provinces. The names of the lecturers are not yet announced, but the list will doubtless be headed by Messrs. Sone, Furusho, Hayakawa, Ota, and so forth. For some reason, which we do not profess to understand, the most powerful speakers on the Government side, Messrs. Inouye Kakugoro and Takanashi Tetsu-shiro appear to be standing aloof from the National Union. It is difficult to conceive that these men could drift into the ranks of either the *Fiji-to* or the *Kaishin-to*, but their abstention from throwing in their lot with their hitherto acknowledged allies is perplexing. The lecturers

on the National side have announced their intention of paying their own expenses as they tour through the country, an announcement that will be much more welcome to their constituents than the plan pursued by the *Fiji-to*, namely, calling up in each locality to defray the expenses of the politician that visits it. Probably philosophers will contend that a nation benefits in the long run by being politically educated, however elaborate the process, but it often occurs to us that if all the time devoted by these various politicians to haranguing the people and by the people to listening to them, were employed in some cause more practically useful, things might go on in a happier and more prosperous fashion.

FOREIGN VISITORS.

The *Fiji Shimpō* makes the arrival of numerous visitors to Japan an occasion for reminding its readers that for many years it has been a steady advocate of mixed residence. It is not mere love of change, observes our contemporary, or a desire to write something out of the common that induces it to reiterate the importance of Japanese becoming more intimate with foreigners. Its views are based on principles which ought to be comprehensible to any person of ordinary intellectual capacity. It is universally acknowledged that there is a difference between the intelligence of town and country people, as the terms of reproach *inaka mono* and *inaka samurai* indicate. The quick wit of townfolk is owing to the numerous facilities for observation which a town furnishes. It is also the result of social intercourse. The wider the experience of the human mind the wiser it usually becomes. Hence the visits of Japanese to foreign countries are usually a fruitful source of intelligence. The number of Japanese who can go abroad must necessarily be very limited; consequently it is of immense importance that foreigners should settle in different parts of the country, and that the results of their influence should be felt by the whole nation. This the *Fiji* thinks to be absolutely essential to the general adoption of improved ways of doing things. At present, the disproportion between the town and the country in respect of the affiliation of the essential elements of western civilisation is very marked. Mixed residence would supply the country folks with the stimulus they need, and commerce and industry would soon feel the benefit of such a change, could it be effected. The delay in Treaty Revision involves the postponement of this urgent measure. But in the meantime, country folks should be encouraged to make all the use they can of the numerous foreigners who at this time of year flock to the country. Every year it is calculated these amount to some 3,000. The money they spend in the country is considerable. It is most desirable that they should go away with a good impression of Japan and its inhabitants. The *Fiji* impresses on its readers the importance of treating foreigners with kindness, of providing good accommodation, and the like. It is worthy of note that the *Fiji Shimpō* has never allowed itself to be borne along on the ever recurring waves of anti-foreign feeling. Its editor is deeply impressed with the benefits to be derived from foreign intercourse and never wearies of warning his countrymen against the danger of relapsing into that state of stagnation which characterised the ages when no stimulus was received from the contact of foreign enterprise.

THE AMERICAN BOARD MISSION'S MEDICAL WORK.

The Report of the American Board Mission's Work in Osaka, under the care of Dr. Wallace Taylor, M.D., shows that during the year 1891, the number of patients seen was 2,764, the number of consultations held, 13,750, and the number of operations performed, 337. Dr. Taylor, commenting on the year's record, says:—

While quite an amount of benevolent work is done, yet this work is very much less than our opportunities, and less than it should be. We are limited, however, by our ability. Arrangements have been made by which we hope to be able in the future to do more work in this line. There is a large class of day

labourers in Osaka who work for fifteen, twenty and some for thirty *sen* per day and have a family to support. They can pay their rent and live in a fairly comfortable style, compared with their class, while they are well. But if one of the family is taken severely ill and needs good care and treatment, or if any accident befalls them, they have no means laid by for such an emergency. Besides these there is a large number whose means of living are still more inadequate and precarious. When any of either of these classes are taken ill they content themselves with the cheap treatment of five or ten *sen* per day, if they can afford it, for medicine and no care. If this fails they *shimbo*. If their case requires it they are utterly unable to pay the cheap rates at the hospital of thirty or thirty-five *sen* per day for this class of patients. The consequence is they suffer and linger with neglect in their miserable homes. There is no adequate provision for sick poor in this country. We shall be glad to apply the funds that any may wish to contribute to meet the expenses of such patients.

The ominous-sounding word *shimbo*, which the Doctor employs, means nothing more than that the sick people make up their minds to suffer without aid. Want of means is not the only cause that drives them to this. There are still some of the old prejudices to be overcome. Speaking of patients suffering from ovarian tumour, the Doctor says:—

In these cases all the friends of the patient must be consulted, and even though the patient herself may be willing and even desirous for an operation, some *Oha san*, whose mind has not yet opened to the advancement of surgical skill, may object, and the patient be obliged to still continue carrying her burden and *shimbo*. Again, as the result of the *sodan* she is frequently told, "Oh you are growing old now, and you may as well wait and die with this *doku* as without it," and still the patient may not be over forty. The fact that an apparently quiescent abdominal tumor may rapidly take on or be the cause of pathological conditions that will speedily enlargeth life, is lost sight of. Three of the cases above referred to, that refused to submit to operation, resulted in that way during the year, without an effort being made to secure relief.

Another interesting remark contained in the Report is this:—

The kind of patients that seek relief at our hands has gradually been changing for the last few years. We see fewer of those suffering from the common and ordinary forms of disease than we did a few years ago, and a larger number of those who suffer from the severer and more complicated forms of disease. This is very readily accounted for, from the fact that there is an increasingly larger number of fairly qualified Japanese physicians now, than there were a few years previous, and these receive the patronage of the common and ordinary cases, while those who fail to be benefited by their family or neighbourhood doctors, more largely seek relief elsewhere. As the people become better acquainted with what medical (Western) science can do, there is a growing disposition, as it appears to us, to *shimbo* less, and make a wider effort to obtain help from those whom they reasonably suppose can give them aid.

CHOLERA.

APPREHENSIONS seem to be entertained in some quarters that Japan is likely to be visited by an epidemic of cholera this year. The dread is probably due, in the first place, to the knowledge that the terrible disease is raging in India, and in the second, to the circumstance that the country has enjoyed a comparatively long interval of immunity. The *Hochi Shimbun* points out that whereas last year there were 84 sporadic cases of cholera between January 1st and June 28th this year only some thirty cases were reported in the same interval. This record ought to indicate the absence of an epidemic, for it has hitherto been invariably the case that the advent of epidemic cholera is presaged by an unusually large number of sporadic cases in some locality. Nevertheless, the *Hochi* thinks that as the unwonted coolness of the spring and early summer this year is likely to be followed by sudden and trying heat, special precautions ought to be taken. We cannot say that we share this view.

PETITIONS TO PARLIAMENT.

Is a member of parliament bound to present to the House any petition, duly prepared for lawful purposes, which may be entrusted to him by any of his constituents? This curious question recently came up for hearing in the Lord Mayor's Court of London, and the result in thus given by the *St. James's Budget*:—"An action brought by Mr. A. Chaffers against Mr. H.

Hucks Gibbs and Sir Reginald Hanson, the City members of Parliament, was heard in the Lord Mayor's Court yesterday before Sir Charles Hall, the Recorder. Mr. Chaffers sought to recover £100 damages for the alleged omission by the defendants to present to the House of Commons a petition which he had drawn up. Mr. Chaffers declared that he, being a British subject and a Liveryman of the Wheelwrights' Company, and therefore entitled to petition Parliament, requested the defendants last January to present a petition to Parliament for the redress of grievances. The defendants, he said, refused to present the petition, whereby he had been deprived of his right. After hearing the arguments, the Recorder said: I am of opinion that no case has been made out against either of the defendants, and I enter judgment of nonsuit with costs."

SOCIETY FOR THE PROMOTION OF SERICULTURE.

THE Society recently formed for the promotion of sericulture (*Sanshi-shinko-kai*) appears to be growing into an important organization. The temporary offices of the Society are in Yamashiro-cho in the Kyobashi District of Tokyo, and at a meeting recently held there the following twelve gentlemen were elected Councillors:—Messrs. Kanmuchi Tomotsune, Kumagaye Magoroku, Yebara Soroku, Mizuchi Kan, Igarashi Rikisuke, Tatekawa Umpei, Uwomizu Itsuji, Tsuda Morihiko, Uyeda Seichiro, Ando Kiuka, Sasada Tsutomu, and Shiota Okuzo. The great majority of these are members of the House of Representatives, belonging to both the supporters and the opponents of the Government. These Councillors have decided to meet on the first and third Saturdays in every month, and have further adopted eight resolutions while we translate from the *Mainichi Shinbun*:—

- 1.—The Society shall be called the *Sanshi-shinko-kai*, and its objects shall be the improvement and development of sericulture.
- 2.—Tokyo shall be the headquarters of the Society, and its temporary office shall be at No. 4, Yamashiro-cho, Kyobashi District.
- 3.—All books and documents required for investigating questions of sericulture shall be collected at the office of the Society for the use of the members.
- 4.—Any one wishing to become a member must be introduced by a member, and must send to the office an application stating his name and address.
- 5.—The Society shall have 12 Councillors and 4 Business Managers.
- 6.—The term of service of the officers of the Society shall be one year, but they may be re-elected.
- 7.—There shall be a meeting of the Councillors twice a month, and a general meeting of the Society in October every year. But an emergency general meeting may be summoned in accordance with a resolution of the Council, or an application of at least one fifth of the members.
- 8.—The expenses of the Society shall be defrayed out of contributions by public-spirited men.

CONTEMPT OF OFFICIALS.

MR. NOMURA KUSUROKU, real or nominal editor of the *Nippon*, has been found guilty of an offence against the 141st Article of the Penal Code. In the *Nippon* of April 15th there appeared a very strong attack upon the Headman of the Iwase District of Fukushima Prefecture. That official, Mr. Kai Soji, was severely censured for his conduct in connection with the election of a member of the Prefectural Assembly. He was declared to be morally and intellectually unfit for his post; to have shown glaring partiality towards the *Ri-to* candidate and against the *Nin-to*; to have misinterpreted the law in a manner which even a three-year-old child would have avoided; and to have interfered indirectly by guile, intimidation, and falsehood. The case appears to have occupied a considerable time in hearing, but it was finally concluded on the 30th ultimo in the Tokyo Local Court. The Judges found that the offence was proved under the provisions of the 141st Article, and that the defendant consequently became liable to imprisonment with hard labour for a period of from one month to one year, and a fine of from 5 to 50 yen. In consideration of mitigating circumstances, however, the penalty was reduced by two degrees, and a sentence of twenty days' major imprisonment together with

a fine of 3 yen was pronounced. We do not pity Mr. Nomura. Officials are just as much entitled as any one else to protection against the abuse of scurrilous newspapers. This was a case lying entirely outside the pale of the severe Press Regulations. Mr. Nomura had a fair trial in a Court of Law, and it is to be hoped that his fate will suggest to other editors the necessity of exercising caution before they prefer sweeping accusations against any official.

THE AFFAIR IN SOUL.

TELEGRAMS have been received confirming recent intelligence of an attempt upon the life of the Tai-won-Kun, in Soul. A message sent to the Foreign Office by the Japanese Representative in the Korean capital, says that an explosive burst under the floor in the Prince's reception room. The substance employed was not dynamite, however, as originally stated, but ordinary Korean gunpowder. A quantity of this was packed into a wooden box, one foot square by six inches deep, and the box was placed in the mouth of a warming flue under the floor. Presumably reference is made to the *khang*, a kind of underground furnace having flues that constitute the basement to a house. These flues are of stone or wood—doubtless the former in the case of a person of such importance as the Tai-won-kun. Evidently a charge of powder placed in such a place, a kind of open gallery, would have either to be very large in quantity or to be tamped so as to impart the desired direction to its explosive energy. The Korean plotters do not appear to have understood these essentials. They simply put a comparatively small box of powder into the flue, and when it burst the explosive force naturally followed the line of least resistance and distributed itself harmlessly along the flue.

A correspondent of the *Yiji Shimpō* telegraphs an account differing from the above with respect to the chamber in which the explosion took place. It is said to have been under the floor of the Prince's bed-room, not his reception room, and the correspondent adds that another charge of powder was found similarly placed in the latter. It would further appear that the incident occurred at about 1 or 2 a.m. on the 16th, not on the 17th as previously stated. The fact was kept very quiet, and things have remained perfectly tranquil in Soul ever since.

ANGELS UNAWARES.

FOLKS that have entertained angels unawares and folks that have talked with sovereigns incognito, have always been favourite heroes with compilers of primers and writers of tales for children. There is a story of this nature now making the round of the press. It first appeared in the columns of the *Pall Mall Budget*, and it professes to be on account of a real meeting and conversation with the Emperor of Germany. Here it is:—

"I was walking the other day in the 'Grunewald' at Charlottenburg when it suddenly began to rain. The small pine trees afforded poor shelter, and I had already reconciled myself to getting wet through when I noticed a small shed. I entered and lighted a pipe. I heard hasty steps, and a minute later a young man entered in the greenish-grey uniform of the German foresters. He did not seem agreeably surprised at seeing me, but bowed politely, and sat down not far off. Presently he took a pipe, and searched his pocket in vain for a match. I offered him mine, and he lighted his pipe and in fluent English without the slightest trace of foreign accent:—

"Oh, you are English?"—"And so are you," I replied.

"Oh, no!" He laughed and seemed amused.

"Well, it is wonderful how the Germans acquire language!" I exclaimed.

"There is such a difference between our schools and yours."

"Yes, there is. You mean to say we don't learn anything, and you learn everything. But I prefer our schools, nevertheless."

"May I ask why?"—"Because we educate the character in our public schools and you don't. Two little nephews of mine are in a German school, a 'Gymnasium,' as you call it. Poor little beggars; they are kept like slaves."

"Oh, not quite," he remonstrated.

"Well, it's not far off. The object of the German schools seems to be to keep the boys in dependence, while we try to make them dependent."

The young forester kept silence. After a while he said: "There is going to be a change."—"Did he mean a change in the weather? I looked up to the sky and said: 'Yes, I hope the sun is coming out.' He smiled. 'I hope so, too. But I just thought of a change in our school system.'"

"You mean on account of that young man, the Emperor?"

"Yes, on account of that young man, the Emperor." He put a singular stress on these words.

"Well, he tries to do his best," said I. "He is a plucky young fellow, and I take great interest in his doings."

"A good many people do, but they only do it to criticise him."

"That does not matter. Certainly he has his faults. Some writer says every child is born with two horns, and he must wear them off before he becomes reasonable."

"And has he still his horns?"

"To a certain extent. In spite of that he is a wonderful man. Don't you think so?"

"I do not know."

"Just imagine what he has done. When he came to the throne he was a devoted follower of Bismarck, until he saw that Bismarck was nothing but an old tyrant. And then he sent him home, and tried to introduce reforms in every branch of public life. He introduced reforms in the schools, in the army, in social legislation."

"And therefore they call him unsteady?"

"So he is. He wants to do too much all at once. He thinks he knows everything better than any one else."

"Oh, no, he does not think so!"

"At least people say—"

"I am afraid people say a good deal. I think the Emperor would be glad if they left him alone."

"But that is only possible if he resigns."

"Resigns?" asked the young man, as if the very idea horrified him.

"Every statesman is naturally subject to criticism, and he must get used to that, too. I should advise the Emperor to read English papers as much as possible."

"Why?"

"In them he would hear a good deal of untruth about him but also a good deal of truth."—"Quite so. He reads them."

"They say he got wild the other day over *Punch*."

The young fellow laughed. "You mean that poem about Struwwelpeter? I should say the Emperor can stand things like that!"

"If he can't at present, he will by-and-by. I have no doubt he will turn out a great man—he has a sense of duty to God and men; he has energy, and if he only acquires a little modesty he is sure to succeed. That is to say—"

"The young man looked at me attentively:

"Well?"

"If his health does not prevent him!"

My companion suddenly rose. "Thank you," he said, "for your kind opinion. With God's help I will do the best for my people. I am the German Emperor myself." He took my hand and gave it a hearty shake. "If you happen to speak with your countrymen about me, tell them I like their straightforwardness. *Leben Sie wohl!*"

He put his gun on his back and walked off. When I recovered my astonishment I saw him walking on the road, upright as a pine-tree.

"That was the German Emperor! That simple, unaffected fellow! God bless him! And no one shall in future talk badly of him in my presence."

YOKOHAMA LITERARY SOCIETY.

A SPECIAL meeting of the Yokohama Literary Society was held on Friday evening, at the Van Schaick Hall, to "welcome home" its popular president Mr. J. T. Griffin, who has just returned from his annual visit to Europe. There was a gratifying attendance of members, who accorded Mr. Griffin a perfect and long-sustained ovation when he mounted the platform to introduce the programme. In a brief but characteristic speech, he said that he responded with much pleasure to the invitation of the society to attend the meeting. He had understood, however, that he was to occupy the position of their guest that evening, but it seemed that they wished him to resume the duties of his presidency at once.—(Hear, hear.) He had travelled over many lands and crossed many seas since he left Yokohama, but now that he was amongst them again his visit to Europe seemed but as a dream, and he felt that scarcely more than a fortnight had elapsed since he had bade them good-bye at one of their ordinary fortnightly meetings. He hoped that in their next winter session he would be able to give the society a paper upon his recent journeyings—(hear, hear)—but he would have to ask them for a little time in which to properly arrange his notes. Mr. Griffin concluded, amid applause, by thanking the society for the cordial and hearty welcome home which

had been given him. A nice programme of music and readings followed, the principal item being an extempore address by Prof. Ladd, of Yale University, upon "Psychology," a subject which, presenting as it does a wide field for interesting original research in its myriad departments, yet requires a more than ordinary method of condensation when introduced as an individual item in a literary entertainment given on a sultry night in July. Appended is the programme:—

- PART I.
1.—Duet Piano and Organ Overture... Pierrabras, von Schubert.
Miss Sale, Mr. Fenton.
2.—Lecture—Certain lines of research and discovery in Modern Psychology.....Prof. Ladd.
PART II.
1.—Piano Solo "La Gazelle" Richard Hoffman.....Miss L. Smith.
2.—Song "Spinning" Cowen.....Mrs. Gotch.
3.—Song "The Fire King" Klein.....Mr. F. S. Le.
4.—Song "The Masquerade" Michael Watson.....Miss Vincent.
5.—Song "The Erl King" Schubert.....Mrs. Herb.

MAJOR FUKUSHIMA.

It is now several months since the above-mentioned plucky equestrian set out on his ride from Berlin to Vladivostok. It will be remembered that he undertook to do the whole journey on the same horse. Serious doubts are entertained as to the animal's capability of travelling, day after day, during the hot season, and over badly kept roads. Telegraphic information has been received announcing the arrival of the Major in Kazan, a city lying 430 miles East of Moscow on June 6th. It is stated that both horse and rider were in perfect condition. Major Fukushima's rides averaged about 25 miles per day. He left St. Petersburg on April 7th. Between that city and Moscow, he rode over hard frozen snow, and the animal, from day to day showed no signs of fatigue, but in the journey on to Kazan fearfully muddy roads had to be passed, and the horse had a hard time of it. On June 6th it was estimated Major Fukushima had done about a fourth of the distance to be traversed. There is every probability, we should say, of his accomplishing the feat he has undertaken. His arrival in Japan will cause quite a sensation.

THE RADICALS AND ADMINISTRATIVE PROBLEMS.

THE problems which the Radicals have set before themselves for solution before the opening of the next session of the Diet, are of a tolerably comprehensive character. The *Tokyo Shimpō* gives the following list of them:—

- EDUCATIONAL DEPARTMENT.
1.—Is the present system of education suited to the people's standard of living?
2.—What methods ought to be pursued in establishing technical schools?
AGRICULTURAL AND COMMERCIAL DEPARTMENT.
1.—What method should be pursued in protecting marine industries with a view to their promotion?
2.—What are the relative advantages and disadvantages of public and private ownership of forests and moors?
3.—What commercial or industrial enterprises have progressed and what have declined since the Restoration, and what enterprises may be expected hereafter to flourish or otherwise?
4.—The methods of developing Sericulture?
5.—The methods of developing the Tea Industry?
6.—The methods of developing the Spinning Industry?
7.—The steps to be taken with regard to Bourses?
8.—What enterprises should be undertaken abroad?
9.—The methods to be pursued for establishing offices to inspect agricultural products in the localities?
10.—Among articles of natural production, which call for protection—as, for example, silk, tea, tobacco, sugar, hemp, indigo, rice, barley, rape-seed, and beans?
COMMUNICATIONS DEPARTMENT.
1.—What steps should be taken to reduce the freight on goods carried by protected steamship companies?
2.—What maritime routes should be opened in home and foreign waters?
3.—In what places should telegraphs be established?

A SUIT AGAINST MR. IWASAKI YANOSUKE.

A CHINAMAN, whose name is given in the vernacular press as Ching Mei-kyn, has instituted legal proceedings against Mr. Iwasaki Yanosuke, and Mr. Nabeshima Magorokuro for the recovery of 75,000 yen, lent to the latter on the security of the Hanjima coal mine, which was sold to Mr. Iwasaki after the loan was made. In the event of the yield of coal being in accordance with his expectations, Mr. Iwasaki, at the time of the purchase of the mine, promised to add the sum of 100,000 yen to the purchase money. This money has not yet been paid, and Mr. Ching maintains that since the sum of

75,000 yen was lent to Mr. Nabeshima on the security of the mine, which, without the lender's consent, was subsequently sold, the court should order that the amount due to him with interest be refunded out of the 100,000 yen promised by Mr. Iwasaki. The suit takes the form of a petition for the transference of rights. Mr. Hatoyama is representing Mr. Iwasaki in the case, which was opened on the 23rd ultimo.

LUCERNE.

THE commercial and industrial societies of Lucerne have organised a *Verkehrsbureau* (an Official Enquiry Office) which was opened on May 1st, at the beginning of the season, and which will remain permanently open all the year round. The municipal authorities, the administrations of the various railways, whose lines connect with Lucerne, which is the junction of so many interesting routes; the steamboat company of the Forest Cantons and Zoug Lakes, the bankers, and all those interested in the prosperity of Lucerne, have lent their support. The aim of this Office is to furnish trustworthy information to the multitude of foreigners who visit these parts, about the sights of the town, excursions on the Lake or in Central Switzerland, the arrivals and departures of trains, railroad connections, board in hotels and pensions, local taxation, &c., &c. General utility is the password of the Office, and no charge is made for information given or services rendered. The primary object is to assist visitors. Letters of inquiry are promptly and gratuitously answered.

THE GOVERNMENT AND THE OPPOSITION.

THE *Fiji Shimpō* repeats its wonted assertions as to the attitude and policy of the Government towards the Opposition. Our contemporary maintains that the feeling of enmity to the Administration is deep-seated, and that nothing but the greatest unity in the Cabinet and clearness of policy will enable it to tide over the difficulties of the situation. If the present Cabinet feel itself unequal to the task before it, it would be well for it to retire. If to surrender office to antagonists would prove too galling, let the alternative of handing over the reins of government to friends be adopted. From whatever point of view the situation is regarded, unity of purpose in the Cabinet is the one desideratum, which seems to the *Fiji* to be difficult of attainment.

MR. HOSHI TORU.

THE *Choya Shimbun* published the following paragraph:—"People who occupy high positions are generally conspicuous for the liberality of their subscriptions and contributions. It is so with Mr. Hoshi, President of the House of Representatives and leader of the *Fiyu-to*. Out of the four thousand yen which he receives annually, he gives one thousand to Count Itagaki, President of the Party to meet the latter's petty expenses, and he also contributes one thousand to the coffers of the Party. Thus he pays away one half of his salary. It is said that he agreed to discharge this obligation before he was elected to the post of President of the House." The *Hochi* evidently implies that the above disposition of Mr. Hoshi's stipend was a condition of his elections to the post of President. It is a curious notion, and we find some difficulty in crediting it.

THE ASIATIC SOCIETY.

THE Asiatic Society (*Toho-kokai*) held its second general meeting on the 27th ultimo in the rooms of the Society for Relieving Sufferers by Marine Disaster, in the Public Park, Shiba. Ninety-one members were present. A letter was read from Count Soyejima, the Vice-President, announcing his inability to attend through illness; explaining that the arrangements for establishing a school of the Russian language were not yet complete, prophesying useful results from the Society's labours, and suggesting that as the writer was not likely to be able to serve for any length of time as Vice-President, some one should be elected in his place. The chair was taken by Mr. Oi Kentaro, and the amended Rules of the Society were passed *nem. con.* A ballot for the post of President resulted in the

election of Count Soyejima, and Mr. Watanabe Kunitake was chosen as Principal Treasurer. Twenty-four Councillors were also elected.

THE RIGHT OF NAVAL OFFICERS TO RESIGN.

OUR readers doubtless remember the case of Mr. Hearson which excited so much interest in the East recently. We now read the following in a home exchange:—"Mr. Hearson's action against the Lords of the Admiralty became yesterday (May 19th) before the Court of Appeal. While an engineer in the Royal Navy he resigned his commission and, with permission, went to take an appointment in China. He was arrested and brought home, but released on *habeas corpus*, when he brought an action for damages, which was decided against him. After hearing arguments in support of his application for a new trial, the Master of the Rolls said Mr. Hearson was not entitled to resign without the permission of the Admiralty, and that, having done so, he was a deserter and ought not to have been released on *habeas corpus*. The appeal was dismissed with costs."

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.

THE following is extracted from the annual report of this company for 1891:—Fire Department—The losses by fire during the year have amounted to £871,332 13s. 4d., which includes all losses actually ascertained and paid, and a full estimate of all claims that had arisen prior to 31st December, 1891. The directors have, as usual, set aside one-third of the fire premiums received during the past year, as a provision against liability on the unexpired fire policies of 1891. In the Life Department 3,688 policies were issued during the year 1891, assuring, after deducting sums reinsured, £1,670,790, and producing new premiums to the amount of £63,287 14s. 3d., together with 367 bonds securing the sum of £20,628 1s. 0d. yearly of immediate annuities, and £1,085 yearly of survivorship annuities, and £433 4s. 6d. of deferred annuities, for which the company received the sum of £218,012 10s. 4d. by single payment, and £695 13s. 7d. by annual premium. The claims during the year, including 51 endowments, were 564 in number, under 689 policies; and the sums amount, with bonus additions, to £499,253 5s. 5d. The profit and loss account, including the unappropriated balance of £56,358 13s. 11d., brought forward from 1890, amounted to £223,374 16s. 4d. out of which a dividend of twenty shillings per share on 100,000 shares, one-half payable 2nd May and the other half 1st November, was declared, together with a bonus of ten shillings per share, leaving a balance of £58,374 16s. 4d. to be carried forward.

THE LOSS OF THE "HAIPHONG."

THE "Douglas" steamer *Haiphong*, with a cargo of sugar from Hongkong and Formosa for this port, has gone ashore near Shimoda. The *Yokosuka Maru*, which went to the scene of the disaster to render assistance, returned to Yokohama on the 30th ult., and brought into port the crew and captain of the steamer. They report that their vessel is wedged in upon the rocks, seven and a half miles south-east of Shimoda, and there is every possibility that with the first strong breeze she will go to pieces. The cargo and vessel are valued at \$200,000.

EVANGELICAL ASSOCIATION OF NORTH AMERICA.

THE sixth annual meeting of the foreign and native ministers of the Evangelical Association of North America began in Tokyo on Wednesday, the 29th June. Thirteen native pastors and five foreign missionaries were present at the opening exercises, which were conducted by Rev. F. W. Voegelé, the President of the Mission. It is expected that the daily sessions will continue at least until Saturday. The body meets in the school-rooms of the Evangelical Theological Seminary, at No. 49, Tsukiji. During the session, the native pastors will unitedly hold services at the various chapels of the Mission in the city. On Sunday, special union services will be held in the Krecker Memorial Church, in Tsukiji, beginning 9 a.m. The work of the

year gives the appearance of prosperity, and the workers all seem filled with intense interest in the work of the annual meeting.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.

At the sixty-seventh annual meeting of the Scottish Union and National Insurance Company held in Edinburgh, the directors' report for the year ending 31st December, 1891, was adopted. In the Life Department 1,133 policies were completed for £523,570 yielding £19,241 in new premiums, the claims including bonus additions amounted to £252,198 and the life funds, increased by the sum of £98,418 were £3,185,795 at the close of the year. The net fire premiums for the year were £311,332 and the losses paid and outstanding £189,888. The account showed a balance of £71,305, out of which the directors declared a dividend of 16 per cent. and a bonus of 1½ per cent.—£7,500 was added to reserve and a balance of £11,305 carried forward to next year.

THE INDEPENDENTS.

A MEETING of thirteen Independent members of the Lower House was held at the office of the Independents, Tameike, Akasaka, on the 26th ultimo, when it was decided that every day having a 1 or a 6 in its calendar number—as the 1st, 6th, 11th, and so forth—should be considered regular days for meeting, and that steps should be taken to conduct investigations of political and administrative problems. The Independents can scarcely hope to remain long in their present position. They will have to throw in their lot with either the Government or the Opposition ere long.

CHINA.

CONCERNING anti-foreign feeling in Szechuen, the Rev. W. M. Upcraft writes as follows in the *Chinese Recorder*—

Are the anti-foreign reports and rumours spreading? Our experience in Western Szechuen goes to prove that they are. The trouble is of a dual nature. There is the exaggerated, distorted report of what took place last year down the great river. The crowning of that long series of outrages by the sudden destruction of foreign property at Ichang made a profound impression at even this distant point. The tea-shops circulated their version of the affair, the people, ever credulous of the strange and exciting, believed, and suspicion was born of that belief. For the past few weeks we have been feeling a revival of that suspicion and our position in consequence has sometimes been unpleasant. There was a report of "baby eating"—the ghost that no one seems able to lay. It was cried on the street that the foreigners had bought a baby and eaten it. There was excitement, and it appeared to need only a few more favouring circumstances to develop a good-sized trouble, as the city was filled with military students, and this is the step taken by our enemies to ensure those circumstances. One evening at dusk a lad of sixteen came to the gate-keeper of our house and offered to sell a child to the foreigners, through him, for ten thousand cash, the money to be divided so as to give the gate-keeper a respectable bonus. The lad went off with the understanding that the child was to be brought the next morning. The gate-keeper then communicated with us; we informed the yamen, and in the morning when the child (a boy of seven years) was brought, we handed both him and his conductor over to the officials, it being their province to deal with such a case. They ill-used the boy to the yamen with sundry promises, discovered who his father was—a degraded member of the Ka-ti-hui (Ko-lao-hui) it is nearer the coast—gave him a beating, and finally issued a proclamation praising foreigners, and warning evil doers. This we trace to the reports of down-river outrages.

The other trouble is native, and perhaps the more serious. While on a journey north of this city, a few days since, we met with a company of men, who are carrying on a propaganda against foreigners and foreign things in general. There were said to be ten in the gang, and they claimed to be under the special protection of the Viceroy. Their plan is to go to large towns and markets, erect a stand, make a great show and noise, and one or two preach their crusade and sell books at this central stand, the rest disperse among the crowd and distribute their little books (which are sold at three cash) all through the place. The printed matter warns the people against foreigners, who are said to aim at the sovereignty of the empire, among other sinister designs. The people are warned against foreign calico, foreign rice, foreign opium and so on, at the same time they are exhorted to obey their parents (an instruction badly needed in those districts) and so on; thus the book can be called a "good book" and it sells readily. The first page says the publication is issued by an official of the second grade at the provincial capital,

but the men themselves were said to come from a city nearer to this place. They intend to go south and visit the provinces of Yunnan and Kweichow after a prolonged tour in Szechuen. The public preaching is of a fiery and direct kind; foreigners are held up to odium, much to the delight of the farmers and peasants who are ever ready for the strange and unnatural.

Perhaps we see things larger than they are, but all these rumours indicate a drift—but whither? The country districts are being infected, as witness the fact that a man who is an inquirer here, walked from a distant town to inquire into the truth of the rumours about us being spread around his native town, which does not lie on any main thoroughfare, being simply the centre of a farming district. To recognise facts does not indicate panic. The measures taken by the foreign community at Shanghai, Hankow, and elsewhere are wise; we pray they may be effectual in securing the desired end.

MR. RUDYARD KIPLING AND AMERICA.

MR. RUDYARD KIPLING has given dire offence to the Americans of San Francisco by accepting their hospitality and then criticising them. So they say at least, but inasmuch as we do not know of what hospitality he was the recipient or in what manner he repaid it, we can form no idea of the merits of the question. At all events a New York Club has blackballed the brilliant author, and people allege that the "piling" was due to his treatment of the San Franciscans. But it seems doubtful that New York should take up the cudgels on behalf of San Francisco. Kipling's account of the former city had quite enough salt in it to make the citizens wince, without anything additional from San Francisco. Be that as it may, here is the pleasant little parody which a certain New York writer has published of Kipling's ballad "East and West":—

There are men in the West, gentlemen, as good as God's raised,
With hearts as warm and hands as free, as ever poet praised:

Their salt is free to the stranger, as free as the wind that blows,
From out the warm Pacific, to melt the Sierra's snows.
Rudyard was there with his venal pen to raise the Yankee dust,

And he raised it with the Yankee's hair, eating the Yankee's crust
He ridiculed his host with the pen of a cad, in his charming British way.

And trampled his salt beneath his feet, at a dollar a line, they say.
Then up and spoke the 'Frisco men, "As our guest we were his guides.

To show him all we had to show, and he took it out of our hides;
He ate our salt and drank our cup, and all that we had was his.

Then he stabbed his hosts like a Ghazi; an Indian idea of it
We gladly bowed to the genius bright the British stranger had.

Nor dreamed that the brains of a genius were hid in the head of a cad.
But Kipling's gone from out our house, a raw, rough Rudyard he,

With the mouth of a bell, and the heart of hell, and the head of a gallow's tree;
For thirty pieces of silver the host was sold by the guest.

This may be the style of Hindostan, but 'tisn't the way of the West."
Rudyard again sailed over the sea, Kipling to Gotham came;

He'd quite forgot the 'Frisco lot, for India knows no shame.
He drank again the Yankee's cup, once more he ate his salt.

He asked a closer fellowship—but 'Frisco called a halt.
The message came. "Against his host he turned his ingrate pen!"

He is not fit at board to sit with Yankee gentlemen.
"But if he thinks the price was fair, when brethren wait to sup!"

Why, men of Gotham, turn him down when ye have called him up!"
The club men read the message brief, their ballots did the rest.

Rudyard no brother to them could be, though Kipling be their guest
They feast the writer, not the man, the brain and not the brawn.

There is no brotherhood 'twixt them and India's 'Jackal-spawn.'
Perhaps the stroke which manhood gave a blush of shame may raise

To Kipling's cheek, and bid him seek for honour first, then raise;
Perhaps he'll learn that in this West we scorn the venal pen,

And hold the man who stabs his host a bravo among men.
Lowell Arena. WOODYARD KINOLING.

SUICIDE OF A JUDGE.

It is probable that the rumour circulated in Tokyo on the 29th ultimo with reference to the suicide of the Prefect of Gifu, had its origin in a sad event which occurred on the 28th in the Kaisuiyoku, at Tomioka, in this Prefecture. Judge Yoshinari Shinnojo, of the Tokyo Local Court, had been suffering for a considerable

time from mental trouble, and under medical advice he proceeded to the sea-side at Tomioka for the purpose of recruiting his health. But on Tuesday last he cut his throat with a *kogatana*, and expired before medical aid could be obtained. A coroner's inquest held the following day found that he had taken his life in a fit of insanity.

KYORITSU JO GAKKO.

THE annual exhibition of the Kyoritsu Jo-gakko took place last evening at 212, Bluff, and proved a most decided success in every particular. In the vocal selections the graceful and natural actions of the children were particularly noticeable, while their voices harmonised with pleasing effect. The piece of the evening was the recitation by Miss Haru Kondo, entitled "Paul's defence before King Agrippa." The charming manner of its execution would have done honour to a far older and more experienced elocutionist. The various essays were also much appreciated by the large audience which had assembled, and particularly the Valedictory, which, though short, was to the point and gave sympathetic expression to the feelings which prompt one on such occasions. Programme:—

PRAYER.

Music—"Lift up your heads" Piano and Organ Duet from Handel. Misses Major and Miura.
Scripture Recitation.....Children.
Salutatory.....Miss Hyaku Suzuki.
Music—"Glorias on rope"—Round.....Children.
Recitation—"Only a Golden Coccus".....Miss Eugenie Gordon.
Music—"Winter"—Part Song from Gaul.....The School.
Essay—(Japanese)—Womanliness.....Miss Nobu Hayashi.
Music—Piano Solo—Christmas Pieces, No. 4 Mendelssohn.
Essay—"Flower of Words".....Miss Annie Urquhart.
Music—Theme from an Overture.....Miss Haru Kondo.
Essay—The Mighty Works of God.....Miss Toki Imai.
Music—"Poet and Peasant"—Piano Duet.....
Overture from Von Suppe.....Misses Major and Bewick.
Recitation—"Paul's Defence before King Agrippa".....Miss Haru Kondo.
Essay—(Japanese)—Address to Graduates. Miss Oto Okada.
Music—"Spring and Summer"—Part Songs from Gaul.
Essay—"The Student's Sanitarium".....Miss Kiro Mori.
Music—"Jesus High in Glory"—Hymn.....Children.
Recitation—"He Leadeth me" (adapted).....Miss Shika Ito.

Benediction.

MURDERED IN A RAILWAY CARRIAGE.

THE *Choya Shimbun* gives meagre particulars of a ghastly murder recently committed in a first-class railway carriage between the Kasana and Koyama stations. The victim was a merchant, who left Mito on a business visit to Tokyo, and was last seen alive at Kasana station. He had in his possession, at the time of leaving home, 1,500 yen, but when his dead body was discovered by the railway officials at Koyama station the money was all missing. Two travellers, who boarded the train at Kasana, are suspected of being the murderers.

THE EMPEROR'S VISIT TO COUNT GOTO.

THE *Official Gazette* announces that the Emperor will visit Count Goto's private residence at Takanawa on the 4th of July, and that the Empress will proceed thither on the 5th. In each case the departure from the Palace will be at 1 p.m., and the route chosen will be by Atarashi-bashi, along the Atago-shita-street, through Shiba Park by the back road, over Akabane Bridge, and along Mita-dori.

SETTLERS IN THE HOKKAIDO.

THE total number of families which settled in the Hokkaido last year is stated to have been 4,389, representing 15,164 persons—8,562 males and 6,602 females. This shows a decrease on the year 1890, but it has to be borne in mind that the *Tondenhei*, military settlers, who went to the Hokkaido last year were few compared with those in the previous year, so that, in point of fact, the number of ordinary emigrants was larger in 1891 than in 1890.

MR. KANEKO KENTARO.

HIS MAJESTY THE EMPEROR has been pleased to present a sum of one thousand yen to Mr. Kaneko Kentaro, chief Secretary of the House of Peers, who starts for Europe to-morrow to represent Japan at the Conference on International Law. The conference is to be held in

Zurich, not in Geneva, as previously stated in these columns, the former town having advanced the claim that 1892 is the five-hundredth anniversary of some great event—we are not sure what—in its history.

GARDEN PARTY IN TOKYO.

ON Monday afternoon the Vice-Minister of State for Foreign Affairs and Madame Hayashi entertained the members of the *Corps Diplomatique*, the leading foreign residents of Tokyo, and a number of Japanese officials at a garden party in the grounds of their official residence. The weather, unfortunately, was showery, but, as arrangements had been made for that contingency, the guests were enabled to remain under shelter while witnessing an exceptionally fine display of fencing by the leading experts of Tokyo.

THE DEMOCRATIC NOMINEES.

A TELEGRAM received in Tokyo on Saturday announces that Mr. Cleveland and Mr. Stevenson are the democratic nominees for President and Vice-President. Mr. Cleveland's nomination was expected, of course, but with regard to Mr. Stevenson we know nothing. It almost seems as though some mistake had been made in sending the message across the wires. The contest between the two Parties may now be expected to be of a very close character.

PASSPORTS.

THE Tokyo News Agency reports that a great number of applications for passports have of late been made to the Japanese Authorities on the plea of the applicants' ill-health, but that it has been decided not to grant any passport for a period longer than two weeks. We believe that the News Agency has been misinformed. No heroic departure of that nature is likely to be taken by the Japanese Government, at any rate without due notice.

NEW ORIENTAL BANK CORPORATION, LIMITED.

We are informed by the Manager of the New Oriental Bank Corporation, Limited, that he on Wednesday received the following telegram from London with regard to the Bank's position:—"Every probability of early re-construction. Welton's appointment (as Liquidator) postponed for a week."

THE PREFECT OF GIFU.

A RUMOUR, emanating from sources which we are unable to trace, was current on Wednesday in Tokyo to the effect that the Prefect of Gifu had committed suicide. From inquiries which we have instituted, we believe the statement to be entirely groundless.

EXPORT DUTY ON ITALIAN RAW SILK.

THE *Official Gazette* publishes a telegram received from Mr. Kumazaki, Japanese Consul in Rome, under date the 26th ultimo, to the effect that the Senate has passed a Bill for abolishing the export duty on raw silk.

MR. MITSUHASHI.

MR. MITSUHASHI NOBUKATA, Councillor of the Kanagawa *Kencho*, has received the additional appointment of Vice-Director of the Yokohama Temporary Harbour Works Office.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Ministerial question continues to absorb public attention. As we stated in our last weekly summary, the statesmen of the *Kuromaku* group—Counts Ito, Kuroda, Yamagata, and Oyama—have held several conferences at the residence of the Minister President of State, Count Matsukata. Some papers pretend to believe that the resignation of Count Saigo and Viscount Shinagawa, both Privy Councillors, and the filling up of vacancies at the Home Office and the Department of Justice, formed the sole topics of discussion at these meetings, and that nothing was said as to the advisability or inadvisability of reconstructing the Cabinet under a new Premier. But persons apparently

better informed report that the primary purpose of the conferences was to consider what can be done to secure the unity and strength of the Ministry, and that a change of Premier undoubtedly constituted a topic of discussion. The results of the conferences are not yet known; but from the fact that the Ministers of State were specially requested to assemble in the Cabinet office on Friday, it may be supposed that some definite plan had been agreed upon provisionally between the Minister President and the four *kuromaku* statesmen. We have to be especially prudent, however, in making forecasts of Ministerial changes at the present moment, for the question is complicated by the introduction of a novel and important factor into the situation, namely the organization of the National Union. No Cabinet can have much hope of passing its measures in the Diet, unless it is supported by the new party. It is an undoubted fact, as the *Choya Shimbun* observes, that there are in the Government and among the Camera statesmen two distinct factions, one advocating a strong and the other a moderate policy toward the Opposition. Count Yamagata, Viscount Shinagawa, Count Saigo, and several others are the recognized leaders of the strong faction, while the other faction is under the control of Counts Ito and Inouye. Not that these two sections are irreconcilably opposed to each other, or that their respective leaders are incapable of co-operation under certain conditions. Indeed they have hitherto worked together on all important occasions. But the creation of the National Union, with a definite programme, with leaders like Count Saigo and Viscount Shinagawa, and with a following of young ambitious politicians—the *Kokkai* calls them desperadoes, who will not brook any half-hearted policy toward the Opposition—the creation of such a party has greatly augmented the difficulty of organizing any Ministry calculated to meet the views of the different sections in the Government and the *Kuromaku* statesmen.

The conduct of Count Saigo and Viscount Shinagawa, with regard to the *Kokumin Kyokai*, has elicited different comments from different papers. The Opposition journals welcome them in their new career of party leaders. Those papers, however, express wonder at the partiality shown by the Authorities, for the two statesmen, while still Privy Councillors, have been suffered to attend the meeting of a political party and to deliver political speeches, while Count Okuma was compelled to resign on account of his interview with Count Itagaki. Not only the Opposition journals but the *Nichi Nichi Shimbun* and the *Tokyo Shimpō* strongly condemn the inconsiderate conduct of Count Saigo and Viscount Shinagawa. The *Choya Shimbun* alone defends their procedure, on the ground that the National Union, whatever it may eventually become, is at present a purely social institution, and that the speeches delivered by the two Privy Councillors were not political, being simply declarations of their resolve to serve the country to the best of their capacity. Viscount Shinagawa's speech is severely criticized by the press, on account of the crude and sanguinary character of the sentiments expressed by him. His solemn vow that his head and that of Count Saigo should be forfeited at any time, if they served the interests of any particular clan, is denounced as an incentive to assassination and murder. The papers, in order to ridicule the extravagance of such language, publish various caricatures of political assassinations purporting to be the results of the Viscount's speech.

A fortnight ago, it was believed in certain well informed circles that Count Matsukata had, through Mr. Kono, offered his seat to Count Ito, and that the latter had promised to consider the matter and consult the views of the other *Kuromaku* statesmen. If any change is now visible in the attitude of Count Ito, it may in some respects be owing to the step taken by Count Saigo and Viscount Shinagawa in openly associating themselves with the *Kokumin Kyokai* without previously consulting the opinions of the elder

statesmen. The two Privy Councillors are content to abide by their action, but there is no doubt that their precipitate conduct has not given pleasure to other statesmen, and certainly not to Count Ito. Their connection with the new party has imparted to the latter definite colour, and introduced, as we have said, an inconvenient factor into the situation. The *Kokumin Shimbun*, a journal noted for its opposition to Count Ito, declares that the President of the Privy Council now finds himself in a comparatively solitary position. His persistent refusal to come to the rescue of the country at important junctures has, according to our contemporaries, disgusted his followers, most of whom are consequently now found in the camp of his rival statesmen, those still ready to follow him through the thick and thin being confined to the ranks of his few immediate disciples such as Mr. Ito Miyoshi and others. The *Kokumin* recommends him to exert himself to recover his former influence, by taking some decisive step before it is too late. The *Choya Shimbun* also assures Count Ito that, if he is so inclined, Count Matsukata is willing to deliver the reins of government to him at any moment. The *Fiji Shimpō* repeats its advice to the elder statesmen to reconstruct the Cabinet. Its opinion, as already stated more than once, is that, unless those statesmen come forward at the present moment, their opportunity will be for ever gone. It strongly doubts, however, whether they are prepared to seize this unique opportunity. The vernacular press, generally speaking, urges the formation of a Cabinet by statesmen of the first order.

The Korean question has received a considerable amount of journalistic attention during the week. With regard to the occurrence of the 16th or 17th ult., the news of which reached this country a week later, no further particulars have been reported, except that the Korean Government, as well as the intended victim of the explosion, preserve the strictest silence on the subject, and that things are quiet in Seoul. The Tokyo papers persist in attaching great importance to the affair. The general belief among them is that the murderous plot was conceived by the courtiers of the Bin faction. It is understood that the latter are strongly opposed to Tai-won-Kun and his followers. The Rin party lean on the support of the Russians, while the other party are in league with the Chinese. Incidents like that of the 17th instant constitute, in the opinion of the metropolitan papers, a proof that the feud between the rival factions in the Korean Court has reached a desperate stage. It is consequently feared that an open rupture, possible at any moment, may bring into direct conflict the two neighbouring Powers which are believed to stand behind the contending factions. The first effect of the sense of an impending crisis in Korea has been to remind the organs of different parties of the absurdity of engaging heart and soul in political struggles, while the real interests of the Empire are in imminent danger of suffering abroad. Even hot blooded party organs like the *Hochi Shimbun* call upon the leading statesmen, both in and out of power, to abandon for a moment their party spirit and devote their attention to the solution of the Korean problem. Another *Kai-shin-to* organ, the *Yomiuri Shimbun*, advises some members of both Houses of the Diet to spend the summer in Korea and study the Korean question on the spot. As to the course which ought to be pursued by Japan, opinion differs on minor points, but the press is united in urging the Government to adopt a strong policy. A few journals of the *Nippon's* type would like to have a decidedly aggressive attitude assumed by Japan. Even the *Kokumin Shimbun*, though it does not go to that length, advocates the emigration of Japanese to Korea on a large scale, so that, whatever turn events may take, Japan shall have a preponderating influence over the destiny of the peninsular Kingdom.

The *Mainichi Shimbun* is the only paper that

takes the trouble to map out accurately the general course of policy to be followed by Japan in regard to Korea. Its idea is that Japan ought to combine with China and prevent Korea from falling a prey to Russia. At present Russia is supposed to be endeavouring to win the confidence of the Koreans by means of large promises and some actual aid, while China tries to maintain her sway in the little kingdom by threats and a show of force. But the overbearing conduct of China is calculated to push the Koreans into the out-stretched arms of Russia. Nothing can be more dangerous than persistence in such a short-sighted policy by China. Our contemporary recommends the Japanese Government to send to Peking a suitable Ambassador to persuade the Chinese Government to abandon its suicidal methods in Korea, and henceforth to coöperate with Japan for the preservation of the independence of the peninsula against the advances of any third Power. Formerly China had suspicions of sinister designs on Japan's part against Korea; but at present a better understanding exists between the two countries, and China's suspicions are now directed towards Russia. Consequently, the *Mainichi* thinks that the Statesmen in Peking would be inclined to listen favourably to proposals of coöperation coming from Japan.

There is a rumour that China secretly maintains a body of soldiers in Seoul under various civilian disguises. Many of the metropolitan papers write very wildly on this subject. The *Nichi Nichi Shimbun*, however, refuses to give credence to the widely received report. At all events, our contemporary is confident that not only the Foreign Office, but also the Departments of War and of the Navy, will take prompt measures to ascertain the truth of the rumour. Should the story prove true, Japan, we are told, will not be slow to guard her honour and dignity by appealing to the Tientsin treaty, and, in case of necessity, will not hesitate to assert her rights by force.

As to the gambling case, the existence of faction strife among the administrators of justice, which is the primary cause of the present trouble, continues to be severely commented upon by metropolitan papers of all sections. The *Nichi Nichi Shimbun* dwells upon the injurious results of such discussions among the officers of the law. Thus, in this instance, important cases are left unattended to merely for the purpose of satisfying the personal pique of certain influential Judges. Moreover, the incident has exposed to public view a most deplorable want of discipline among legal officials. The effect of the whole affair is calculated to lower the dignity of the Judiciary in the eyes of the Japanese as well as of foreign nations. The authorities, therefore, are earnestly implored to bring the matter to an end with the utmost expedition, and also to take strong measures for the eradication of the primary evil, namely, faction feuds.

A report of a change of *personnel* in the Governor of Tokyo has caused much excitement among the metropolitan journals. The extraordinary reason assigned by rumour for the change is that Mr. Tomita, the present occupant of that office, maintained an attitude of strict neutrality in the last general elections, and refused to act in unison with the Metropolitan Inspector-General of Police in the interests of official candidates. For his successor, the press mentions Mr. Yasuba, Governor of Fukuoka, who is supposed to have rendered signal service to the Cabinet in connection with the general elections. The Municipal Council is said to have decided to petition the Government for the continuance of Mr. Tomita in office. The *Kokkai* and the *Yomiuri Shimbun* rebuke the citizens of Tokyo for their indifference about the personality of their Governor. They are told to bring the pressure of their united voices to bear upon the Cabinet against the reported change.

While we see, on the one hand, unmistakable

signs of renewed activity among Buddhists, there are observable, on the other, numerous incidents which reveal a state of utter degradation in the ranks of the priests. The most important and scandalous of these incidents is the trouble that has arisen among the priests of the *Sodo* sect in connection with the election of the High Priest (*Kancho*) of their order. The unsuccessful party, after making repeated attempts during many months to oust the successful candidate, have at last appealed to a court of law, praying to have the election annulled on the ground of corruption. The *Nichi Nichi Shimbun*, writing upon this subject, deplores that a sect, hitherto noted for its freedom from internal dissensions and feuds, should be connected with the most scandalous affair witnessed in recent years even in the ranks of demoralized Buddhists. According to our contemporary's information, the faction strife in the *Sodo* sect dates from the creation, a few years ago, of a religious fund of considerable amount by contributions from the devout. The ambitious and the worldly among the priests now covet the right of control over this sum of money; and hence the last election of a *Kancho* was contested most keenly, both sides resorting to unscrupulous means to attain their object. The *Nichi Nichi* avows disbelief in any form of religion, and claims to be therefore all the better qualified to express an unbiased view about the position of the *Sodo* sect in particular and of Buddhism in general. The priests of the *Sodo* sect are told that their conduct ill becomes men of their sacred calling. Is it, asks our contemporary, a time for them to be engrossed by their personal worldly interests, when the sphere of their creed's influence is being vigorously invaded by the hostile religions of the West? They are advised to withdraw their legal suit and heal up the breach in a manner befitting their noble profession.

The *Kokkai*, in one of its leaderettes, pronounces the opinion that the late Saigō Takamori, Count Okuma Shigenobu, and Count Itagaki Taisuke, will have the honour of figuring in history as the three great men of the *Meiji* era—Saigō for his martial ability, Okuma for his intellectual resources, and Itagaki for his devotion to principles.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

It is a noticeable feature of the Japanese religious press, Buddhist as well as Christian, that much less space is devoted in this country to doctrinal exposition than in the West. This has already been a matter of comment by many with respect to the Christian press; but it is equally true of the Buddhist. There are a few conservative magazines of the latter cult in which one finds from time to time a lecture on the obscure and mystifying doctrines of the sacred books; but as a rule the entire press devotes itself to news, and to the discussion of topics of the day. Speculative or technical disquisitions do not seem to meet the wants of the people, if the contents of the press are any index of those wants. The topic of interest on all hands during the past month has been the debate in Parliament on the New Codes, and the statements there made as to the relation of Christianity to the social institutions of Japan. The opponents of the Codes evidently desired to utilize whatever antagonism might exist to Christianity, and endeavoured to represent its doctrines as subverting loyalty and filial piety, the two fundamental principles, if not of Japanese society, at least of that society as viewed by Shintoism and the conservatives. Unfortunately the answers they have received are quite inadequate, and it is a pity that some one competent to present a proper answer is not deputed to do so, for he is badly needed. The remarks called forth incidentally from a Buddhist magazine, defending Christianity from these misrepresentations, are worth recording as an instance of honesty and impartiality not common-place

in religious controversy. It is another example of what has been before adverted to here, that an intelligent Buddhist is capable of a true catholicism and tolerance which is very admirable. The Buddhists have begun to discuss a topic which it is strange they have not openly taken up before this time, their policy as to mixed residence. The natural disinclination of Buddhists to allow any further facilities for Christian propagandists, is doubtless one of the elements on which Mr. Oi and his followers count for the popularity of their campaign against mixed residence. But here also are to be found those who do not allow themselves to be carried away by prejudice, and it is to be hoped that their heaven will powerfully affect the rest. The unsolved problem of the month is still Mr. Kanamori. Professional courtesy or friendship or both have restrained the editors of the journals of his cult from making the comments on his retirement that one would naturally expect. But allusions in various journals indicate that the reasons for his withdrawal are still a mystery, and that, while no one openly impeaches his motives, many consider that there has been a backsliding.

The *Kiritukyo Shimbun* (Congregationalist) adverts briefly to the Code debate, Mr. Harada being the writer. One of the members quoted the sayings of Christ: "If any man come unto me and hate not his father and mother, etc., he cannot be my disciple;" "He that loveth father or mother more than me is not worthy of me;" and pointed to this as a very good reason why Western principles were unsuited to Japanese Society. Mr. Harada, entitling his article "Does Christianity destroy Morality?" proceeds to show that the Parliamentary debaters misunderstood the meaning of Christ's words. In the *Gokyo* (Methodist), the animus of those who attacked Christianity is, perhaps with policy, ascribed to their being members of the legal fraternity, and the three successive articles on the subject are entitled: "Religious Individualism;" "Are Lawyers to teach Hypocrisy?" "The Ignorance of Lawyers." In the first article the assertions of the debaters are recited, that the new Codes are founded on Christianity; that Christian customs are exactly the reverse of Japanese national customs; that Christianity preaches the equality of all men, in short, a rank individualism; that it ignores Japanese ideas of marriage and indirectly reflects on the Emperor. The answer is a denial that Christianity teaches disloyalty, and an explanation that it does not absolutely forbid one's having more than one wife, but merely declares that one wife and one husband is the best rule. In the second article, the assertions are taken up that this is a country of ancestor-reverence, that filial piety and respect for the living head of the family, as well as for the spirits, now watching us, of those that have passed away are destroyed by Christianity. The answer is that it does not teach disobedience or disloyalty; that the true destroyers of the virtues are the Buddhists, who constantly proclaim the unreality of this world and the duty of despising its affairs, and the professors at the Imperial University, who drink of the fountains of Huxley and Tyndall and become enemies of the inherited national principles. If the lawyers really are anxious for the safety of these principles, why are not such men expelled from the University? Christianity is opposed, it is true, to the worship of ancestors, but not to the reverence of ancestors; and the principle of filial piety by no means requires worship, but only reverence. In the third article the assertions are taken up that Christianity, with its doctrines of equality, abolishes all distinction between master and servant, father and son, and puts both on the same level. This the writer proceeds to deny.

In the *Bukkyo Koron* (a Buddhist journal started only this year, but already one of the leading magazines), we find the same subject treated under the title: "The Lawyers and Christianity." The lawyers say that the new Codes are founded on the Roman law and its system of individualism, and that Christianity holds

that respect for fathers and masters is inconsistent with love for Christ; so that the new Codes if adopted, will destroy loyalty and filial piety. But the lawyers are all wrong. We are not Christians; but we must say on behalf of Christianity, that we can find no authority in their books for the statements of the lawyers. The direct commands of the Bible are to respect fathers and masters; so that it is not true that Christianity would destroy loyalty and filial piety.

In the *Shukyo* (Unitarian) Mr. Minami, with some effort at rhetoric, takes up the same subject in an article entitled "Do Christians destroy morality?" "The spirits of our ancestors," say the lawyers, "are about us, protecting their families from harm." Do the learned lawyers then believe that the dead protect the living? Are they so buried in polytheism? Have they no philosophical attainments? "In Christian countries one man and one woman are the foundation of the home; there is no distinction between master and servant; respect for fathers means contempt of Christ." The first of these statements Mr. Minami concedes and defends; the others he denies outright.

All cults, as usual, complain of the lukewarmness in religious matters, and the failure of religion to have the influence that it should. The *Kiristukyo Shimbu* (Congregational) laments that the leading personages who belong to the Church do not show active interest in religious affairs. Some years ago we used to advocate the idea that each member should take upon himself the duty of bringing in one convert a year, and thus the whole nation would soon be won over. But this is now an idle dream. Politics are absorbing the enthusiasm of our best men. The *Gokyo* (Methodist) notes the backsliding of those who are converted abroad. When they go abroad they usually become Christians; but as soon as they return, their hearts grow cold and their faith disappears. One reason is that the unfavourable influences about them are so strong. The only way to remedy this is to revive and strengthen their faith, by surrounding them with strong Church influences. Let us put on more coal and keep the Christian atmosphere warm for them. The *Hansei Zasshi* (Buddhist Temperance) addresses itself to the older men, and wants them to have more courage and energy. The young men are becoming teachers and merchants, and everything depends on the old men. "Take courage; Buddha looks down upon you. Do not depend on yourselves; ask the help of your Saviour Buddha: Thee we adore, O Eternal Buddha." In *Gokoku* (Buddhist) appears a thoughtful article on "The Present Condition of Buddhism." Every religion, the writer asserts, should have its proper influence upon the politics, the education, and the literature of the country. How far may we say that Buddhism, in this respect, fulfills its functions? (1) In politics, the influence of Buddhism has become very small. The Constitution has given freedom of religious belief, and Buddhism no longer possesses official patronage; though we may look with confidence for some assistance from those members of Parliament who were formerly priests. (2) In education, too, it is not as in days of yore. There was a time when education was entirely in the hands of the priesthood. But education and religion have been separated. The books used in schools have no reference to the precepts of religion, and the youths are straying far from the principles of Buddhism. (3) In literature, the prospect is no better. In European countries we find Christianity dominating with its ideas the whole of each national literature. But in Japan literature is quite independent of Buddhism. Thus in three of the greatest features of national civilization we find Buddhist influence lacking. With more than one half the population as believers of our cult, we find its influence on our institutions practically wanting. The *Bukkyo Koron* adverts to Mr. Kanamori's entrance into politics, and laments the tendency of the times that steals so many good men away from religion. Mr. Kanamori, it admits, is a greater man than any that Buddhism has lost, but it is discourag-

ing to find that politics has such tempting prizes for priests and preachers. The *Fukuin Shimpō* (Presbyterian) writes upon "Religious Nervousness." There are persons, as we all know, who are afflicted with a nervous anxiety about their health,—valetudinarians, in short. They are constantly inquiring of others how they look, and whether they seem better; constantly wondering whether they are not worse; and constantly trying to gauge their condition. The result is that they never have time or energy to accomplish any real work. Such is the condition of the Church to-day. Whenever pastors meet, they are found inquiring: "Why is not our church prosperous? Why is the attendance so small? Why are the educated classes so indifferent? How can we revive religion?" Is this not a sort of religious valetudinarianism? But the *Fukuin Shimpō*, like everyone else, find it hard to practice what it preaches; for the very next number contains a valetudinarian article on "Religious Activity in May," noting that Kyushu is the only region in which there has been any notable improvement in the condition of the Church.

On social reform there is not overmuch to record. The *Kiristukyo Shimbu*, comparing the sentiments expressed by the two most recent Japanese critics, Sir Edwin Arnold and Rev. Mr. Barnett, notes that the latter praises the courtesy and kindness of the nation, but finds a lack of true religious piety, as well as practices of polygamy and prostitution which indicate a lack of chastity. In another number the same journal earnestly advocates the abolition of the system of licensed prostitution, as the impure spring which defiles the morals of society. The *Gokyo* wants a reform in the method of arranging marriages. Parents interfere too much, by choosing partners for their sons and daughters without consulting their wishes, and by requiring absolute obedience to this choice. Few marry persons of their own choice; and even when this happens, it is frequently because honour compels the marriage. In America, on the contrary, there is freedom of choice, and with good results. It is not that we want complete license of selection; but at least parents should interfere less than they do. In the *Dogaku* (Shingon Buddhist) on appeal is made to the higher classes to take the lead in social reform. The higher classes know what is right, and the lower classes will follow their example. But at present they seem at once to increase in knowledge and decrease in virtue. They lack the stimulus of religion. In the *Hansei Zasshi* (Buddhist Temperance) is an article on "The Use of Wine in the Hokkaido," lamenting the excessive employment of strong drink. Even at funerals one sees relatives, priests, and neighbours sitting around, some weeping, others laughing, drinking, and smoking. Buddhism forbids the use of wine, and yet the priests break this command at every religious ceremony. Those who go to the Hokkaido fall into these drinking ways, and the result is that workmen spend their hard earned wages on wine, and remain as poor as ever, while farmers are negligent in their cultivation and add nothing to the country's wealth. In the *Shukyo*, Mr. Kawano discusses "The Decay of Morality." He begins with the proposition that morality, as a coherent system, can exist only where society is organized, not where it is disorganized and formless. Hence he finds it quite natural that at the present time one should notice so many signs of a weak and inefficient morality. The nation has been deeply stirred by the advent of Western thought and manners. The evolution of a strong material civilization is rapidly going on; social ideas are disorganized, and it is impossible for some time to expect to see morality occupy its true place in the nation's activity.

In the *Shinri* (German) the chief article by a Japanese writer is by Mr. Maruyama upon the term *Botsuri-jo*, a difficult metaphysical term about which there has recently been some discussion among Japanese scholars. In the *Fukuin Kiristukyo Zasshi* (Universalist) the sub-

ject of "Cruelty to Animals" is again adverted to. A "Young Man" writes an open letter to Mr. Kanamori. "Are you not," he says, "the morning star of the religious world? Why, then, when religion needs you, do you give rein to your political zeal and become an officer of a political party? If the captain deserts the ship, what shall the crew do? Do you think that is possible at the same to lead in politics and in religion? It is impossible. We know not your motives for this step of yours; but we would gladly learn what has impelled you to forsake religion for politics." In the *Shukyo*, Mr. Ko Yeizo writes on "The Honson of Unitarians." Every man has somewhere a *honson*, or chief object of devotion, if we can only find it. What shall be the *honson* of Unitarians? Shall it be Jesus, Socrates, Buddha, Kant? No, none of these. It is the Only God-Almighty, the spring of charity and love, the fountain of justice.

In the *Gokoku* "Buddhism among the Youth of the Country" is the subject of an appeal to the faithful. In the old days, when priests had charge of education, the children learned something of religion; now-a-days they learn nothing. There is a little Shintoism in the text-books officially prepared, but that is all. The young think that temples are all very well for the old people or for funerals, but for themselves the temple has no attraction. If things go on in this way, what will be the condition of Buddhism in 30 years from now? The *Bukkyo* writes in the same strain, and advocates following the example of the Christians by founding schools. The same journal sets forth "Reasons why Soldiers should become Buddhists." When soldiers are unsupported by the enthusiasm of battle and the fervour of patriotic conflict, they are likely to give way to the weaknesses of human nature even more than other men. At such times there can be no better support than the doctrines of Buddha. Not to obey earthly passions—this is the principle inculcated by Buddhism, and the one most needed by soldiers. The *Bukkyo Koron* chronicles a disturbance at Kanazawa, occasioned by the remarks of a missionary and his Japanese assistants. Something was said which to the mind of some hearers reflected on the character of the Emperor, and the speaker was interrupted by some students of the Higher Middle School, so that the police were called in to restore order. One of the Japanese speakers was afterwards pursued by the offended individuals, and sought safety by a night-escape from town.

In the *Bukkyo Koron* appears an acute article on "The Important Questions for Buddhism?" These are said to be four: (1) What would be the effect of mixed residence on Buddhism? (2) How shall the youth best be trained in Buddhism? (3) What are the duties of Buddhism to the country? (4) How shall the system of sect-government best be reformed? As to (1), it is probably that when the country is thrown open to foreigners, the first to take advantage of the privileges will be, not merchants, but missionaries, and their zeal will lead to the further spread of Christian schools, this time taught by themselves. Thus will Christianity become stronger and stronger, and the result to Buddhism is plain to be seen. As to (2), some reform must be made in the style of preaching. The present methods are too conservative; they suit the old, but not the young. On the other topics, the writer is to continue in a later number. In *Gokoku* also the subject of mixed residence is taken up, this time with noteworthy moderation. "It is said that we must give mixed residence in exchange for Extraterritoriality. This means that the contact with new ideas is sure to affect more or less the old customs of the country. Now this would not be an unmixed evil. There are some good customs in the West which we should not be sorry to see supplant some of our unworthy ones. On the other hand, we must hold fast to all that is good in our existing practices, and resist the innovations of Western Customs. For this no support is better or surer than Buddhism. The revival of Buddhism is the only means of preserving our national individuality."

RAILWAY GAUGES.

WE observe that the question of gauge is again beginning to attract attention in Japan, in connection with the large scheme of railway extension now on the *tapis*. The Authorities have been much criticised for adopting the narrow gauge—though, of course, the choice was originally made in accordance with the advice of foreign experts—and platform orators do not hesitate to recommend the alteration of the present standard to that employed in England and America. Reading these remarks, one is led to suppose that the 4 ft. 8½ inch gauge possesses some special intrinsic merits which entitle it to be selected above all others. But the history of the manner in which this dimension was reached ought to dispel any such notion. GEORGE STEPHENSON, when he first built a railway at the Bedlington Iron Works in Northumberland, proposed that the width between the rails should be the same as that between the wheels of carts in the north of England, viz., 4 ft. 6 inches. Finding, however, that with this dimension there was difficulty in getting the necessary machinery into the locomotive, he added 2½ inches, and thus reached the magic 4' 8½" gauge which habit has now invested with so much respect. Everyone remembers the historic fight between STEPHENSON and his gauge on the North Western, and BRUNEL with his 7 ft. gauge on the Great Western. The difference—nearly 50 per cent.—was certainly something to fight about. The battle lasted half a century, and it was only on the 20th of last May that the Great Western completed the conversion of its gauge to 4' 8½", having been driven to make the change by the great inconvenience of a break of gauge. But throughout the long contest, theory failed to establish the supremacy of any particular dimension. In Ireland a compromise—5' 3"—between BRUNEL's figure and STEPHENSON's was adopted, and in India another battle began twenty years ago between the first dimension there adopted, 5' 6", and the metre gauge. A special consideration applied to India's case, inasmuch as the Government, having allowed the guaranteed companies to monopolise all the most lucrative districts, and finding itself compelled to undertake the work of construction in less promising regions, was naturally compelled to pay serious attention to the question of cost. In 1889, India, out of a total of about 13,500 miles of railway, had 5,000 miles on the metre (say 3' 3") gauge. From her experience we obtain a figure valuable for Japan's information. For some of the Indian lines, originally laid to the metre gauge, were subsequently changed to the 5' 6" gauge, and the cost of the operation was £2,700 per mile, or about \$17,000. This means that to alter Japan's 1,700 miles of 3' 6" gauge lines would involve an outlay of

about 25 million *yen*. In India the question was an alteration of some 70 per cent.—i.e. from 3' 3" to 5' 6"—but in Japan the alteration would be only 34 per cent.—i.e. from 3' 6" to 4' 8½". It is not open to doubt that the adoption of the 4' 8½" gauge twenty years ago would have been wiser for Japan than the figure she chose. The wider base would have given steadier running, and rolling stock could have been more easily procured as conforming to the more frequently used pattern. The 3' 6" gauge was chosen, apparently, on the advice of men of colonial experience. They considered that Japan's system should be detached, like that of New Zealand, where some 1,400 miles on the same gauge were already in operation, as were also considerable lengths in Queensland, South America, and other countries. But indeed the dimension approximates so closely to the metre gauge that Japan's lines may be classed with the many thousands of miles of the latter dimension. She is not in an exceptional position, and at any rate the time has quite gone by to alter that position. The operation would involve reconstruction of the whole of her rolling stock, changes at the stations, rebuilding of all the larger and more expensive girder bridges, shifting of girders in smaller bridges, re-boring of tunnels, and so forth. The expense is prohibitive, and the inconvenience involved during the long period occupied by the work would be very great. The gain, on the other hand, would be trifling. We hear a good deal said about increased width of vehicle, but this argument evidently has no application to passenger traffic, where lack of width can be compensated by adding length. And in Japan passenger traffic largely preponderates. The last report published by the Railway Bureau showed that, taking the average for three years, the passenger receipts per mile were about 80 per cent. of the total earnings. A very different state of affairs exists in America and England, where the proceeds from goods traffic represent from 60 to 70 per cent. of the whole receipts. So long, therefore, as present conditions prevail in Japan, economy in the haulage of goods is not a factor of such paramount importance as it is in Great Britain or the United States. The widest trucks on Japanese lines measure 6' 8"; in America and England the corresponding dimension is 8' and 8' 4" respectively. The difference—1' 4" in the former case and 1' 8" in the latter—becomes insignificant when we remember that the vehicles to which it applies bring in only one-fifth of the total revenue. Doubtless the point to which most importance is attached by the general public in this matter is that of speed. But within certain limits the speed attained on a railway is not dependent upon the gauge. Thus, on the lines north of London, with their 4' 8½" gauge, quite as great a speed is attained as was ever developed on BRUNEL's 7' gauge. Moreover,

high speed involves the building of first-class, heavy permanent way, as illustrated by England's 90 lbs. rails against Japan's 62 lbs., and the expense of construction is correspondingly great. A heavy outlay on the road necessarily tells upon the fares, and these would have to be still further increased if trains were driven at high speed, for fast running is greatly more expensive in proportion than slow. On the whole, it probably suits the Japanese better to travel cheaply at moderate speed, than to be charged high fares and be carried at a high velocity. We doubt whether a special daily train from Tokyo to Kobe, covering the distance in, say, 10 or 12 hours, at high fares, would attract any passengers. So far as the gauge is concerned, nothing prevents the running of such a train. The EMPEROR has frequently travelled from Tokyo to Yokohama in 32 or 33 minutes, which gives a speed of 33 miles an hour. At the time of the Otsu incident, HIS MAJESTY's train traversed the distance—329½ miles—between Tokyo and Kyoto in 14 hours 32 minutes, or 23 miles an hour for a continuous run, including stoppages. Again, when the Kobe-Kyoto line was opened in 1877, the EMPEROR's special train covered the distance, 47 miles, in 1 hour 35 minutes, or very nearly 30 miles an hour. These facts are sufficient to show that a fair speed, probably as high as is wanted in Japan, can be developed with the existing gauge. At all events, there is much to be said for broad and narrow gauges alike. To dogmatise on such a matter is only to show ignorance. The best men, having had experience of both, are to be found in different camps, but young engineers, who rely on mere theory, are apt to speak with a dangerous semblance of assurance and authority when they get on a platform.

TOKUGAWA LAWS AND THEIR ADMINISTRATION.

ONE of the objections to the New Codes constantly urged by barristers and others, is that they do violence to social customs, that they disturb the relations which have hitherto existed between various members of the body social. This charge, as stated by the opponents of the new laws, is vague and unsatisfactory, since it does not specify the social customs affected by the Codes. Many of the men who wish to postpone the operation of the Codes have expressed themselves again and again as dissatisfied with the legislation of the Tokugawa era, have pointed out its insufficiency and its many crudities, and recognise that the laws passed during the *Meiji* era have been almost without exception improvements on those which they replaced. There is no difference of opinion whatever between the two rival schools as to the defective state of certain Japanese laws and as to the in-

adequacy, as a basis of law, of the Confucian system of Ethics, on which, as we shall presently show, the Tokugawa system was founded. In order to demonstrate the desirability of introducing an entirely new system, we shall now proceed to consider what were the leading characteristics of the Tokugawa Laws, and what were the methods of administration common in those days. It is important to bear in mind that though few of the Tokugawa Laws are still in force, and though the old methods of administration have been abandoned, the notions on which the legal system of those days was founded still prevail, and there are scholars, even of the calibre of Mr. NAITO CHISO, who maintain that all attempts to weaken the hold which Confucian ideas have on the minds of the Japanese people are to be regarded as a retrograde movement bound sooner or later to lead to disastrous results. Such scholars assert that the smoothness with which the machinery of government worked in the TOKUGAWA era was solely owing to the ethical basis on which the laws enacted were known to rest, and the consequent mental satisfaction felt in submitting to them. Such methods as were employed by the TOKUGAWA Shoguns, argue this school of writers, have never been surpassed anywhere, if their merit is tested by the fruits they produced. Whether the TOKUGAWA régime, as a whole, was more productive of good than harm, is too wide a subject to be discussed in this article. But of the depth and extent of its influence on the whole of Japanese social life, no student of Japanese history entertains a doubt.

The two and a half centuries during which the Shogunate flourished, may be designated as the age of interference. The Government left no social region unexplored; the family circle was constantly under its surveillance, and trifling domestic quarrels were referred to it for settlement. The judges and magistrates of those days were preachers as well as legal administrators, and a perusal of such reports of law cases as are extant reveals the fact that the morality or immorality of actions, rather than their legality or illegality, was the chief subject of inquiry with the TOKUGAWA judge. The laws issued were of the vaguest description, savouring more of the character of moral precepts and exhortations than of laws. They were all based on the fundamental principle of Confucianism—the submission of the younger to the elder, of children to parents, wives to husbands, and so on. With the judge who administered these laws the relationship of the litigants determined the nature of the verdict. Individual rights, as such, were not recognised. In this system the body politic and the body social were rendered interdependent. Men's social acts were invariably controlled and guided so as to be made to subserve political ends. The law of subjection to superiors was enforced

with uniform rigidity throughout the empire, and all attempts to act in defiance of this law, even in cases where the offender was some obscure peasant, entailed the severest penalties. The harshness of the system did not appear to those who lived under it as it does to us. They were of opinion that it was but the carrying into practice of the precepts of Confucianism—that the law and its administrators were the champions of a code of morals to which all alike were bound to submit. The authority of this code was as little questioned by the Japanese subject of the TOKUGAWA era as the authority of the Bible is by the sincere and earnest Christian. Law and Morality were to the men of those days synonymous terms. TOKUGAWA legislators themselves saw no distinction between them.

In order to give our readers some idea of the character of these laws we have selected a few from a collection which has been published. As will be seen, many of them are of the vaguest description; others have reference to culture, education, social entertainments, or personal behaviour.

The following were promulgated in the various fiefs in 1615, a year before IYASU'S death:—

I.—Literature, war, archery, and horsemanship are to be the favourite pursuit of all soldiers.

II.—Wine, feasts, and licentiousness of all kinds are forbidden.

III.—Any soldier in the employ of a *daimyo* or a *shōmyō*, guilty of murder shall be banished from the *daimyate* where the offence was committed.

IV.—The *samurai* of all *daimyates* are to practice economy.

The subjoined are among the regulations passed between 1632 and 1634:—

I.—*Samurai* are to be careful to do nothing that is out of keeping with their social status.

II.—*Samurai* are forbidden to form cabals, to assist those formed, or to take part in suppressing them.

III.—*Samurai* are to cultivate filial piety and loyalty, to pay great attention to the laws of politeness and to avoid violating established customs.

IV.—*Samurai* are not allowed to possess a number of useless weapons. They are strictly forbidden to keep more things by them than they absolutely need. They are forbidden to sell things for the sake of obtaining a profit.

Acting on the notion that it was the duty of the State to enforce the practice of filial piety and loyalty to superiors, various laws and regulations were passed specifying the manner in which disputes between relations and masters and servants should be settled. A regulation drawn up for the use of judges states that, in all disputes between parents and children, the will of the parent, and in dissensions between masters and servants, the will of the master, should determine the decision of the judge.

The following laws were promulgated in 1655-7:—

I.—A parent's debts must be paid by his children, but children's debts need not be paid by parents unless the written consent of relations to the incurring of such debts be obtained.

II.—Any child who refuses to obey his parents, or who disobeys the town elders or members of the *gōnin gumi* (5 men guild), shall be arrested and imprisoned. The conduct of the child while in confinement shall be closely watched, and if there are proofs of great innate wickedness, the child will be disinherited. If such a child, after its release from prison, show any signs of enmity to its

parents on account of what has happened, it will be the duty of the whole village or town in which it resides to arrest it and to put it to death.

It was quite common in those days for children to be imprisoned for unfilial conduct. If they persisted in opposing a parent's wishes they were liable to be condemned to death. It was open to the parents to save their children from the extreme penalty of the law. In case this took place, the common practice was to hand the child over to the relations and the neighbours of its parents and allow them to beat it into submission to parental authority.

Among the laws issued by ITAKURA SUWO-NO-KAMI, the following are worth quoting, if only to show the rigid manner in which the principles alluded to above were put into practice:—

I.—In disputes between parents and children, when a child appeals to a court of law against its parent, it may be decided without going into the details of the case that the child is in the wrong. Even supposing that the faults of a parent are of a most aggravated character, for a child to make these faults the subject of public accusation is most unfilial. Even in the cases of persons who are not specially related to each other, the obligation of the young to submit themselves to the old is universally recognised. Death shall be the penalty incurred by the child who goes to law against its parent. Its life can only be saved by the intercession of its parent.

II.—The above law will hold good in the case of children who bring charges against their grandparents or uncles. A grandson, or a nephew, has only to consider what is the relationship which he bears to the one whom he accuses in order to see that he is in the wrong.

All laws were framed so as not to do violence to filial piety. Even in cases where laws had been broken, if it could be shown that the offence was committed out of regard for a parent it was overlooked. Children were never expected to furnish information to the authorities implicating their parents or other relatives. But they were allowed to testify to their innocence. ITAKURA SUWO-NO-KAMI gave it as his opinion that in cases where the suitors were equally right and it was difficult to determine in whose favour a verdict should be given, if, in the course of the trial, it leaked out that one of the suitors was unfilial, disloyal, or unkind, judgment should be given against him. "This," said ITAKURA, "may involve in some cases a departure from strict justice, but, since it preserves the feelings which ought to exist between relations, it promotes the welfare of the public."

To show how universal was the opinion that a man's duty to the State was to be made subservient to his duty to individuals, we may quote the case of the official examination of TOKUGAWA NARIAKI. When I KAMON found that the open opposition to foreign intercourse shown by this baron was likely to seriously interfere with the success of his negotiations with foreign Powers, relying on the testimony of two of NARIAKI'S retainers, KASUJIMA and KAYANEI, I prohibited NARIAKI from taking part in public affairs. This use of evidence extracted from retainers against their lord was considered at the time a most unwarrantable proceeding, and drew forth a strong protest from the Head of

the Finance Bureau, KIMURA KEIZO, who, however, paid dearly for his boldness, for he was subsequently degraded from office and sent to Kii.

It was one of the principles of the TOKUGAWA rule that legal decisions should not be made public. In the days of HIDE-TADA, a magistrate called SHIMADA YUYU, who had been administering justice for 20 years, purposed publishing a full account of the cases which had come before him. This was forbidden by the Shogun who acted on the advice of the *Goroju*, or Chief Councillors of State. The ground of the objection is worth recording. It was contended that since the verdict in each case must depend on the facts elicited, and since these facts cannot possibly coincide in any two cases, it would only lead to mistakes were the decisions of judges to be based on verdicts pronounced by others. The process of generalisation is one which the legal expert must use sparingly. Every case must be decided on its own special merits, and the power to detect those merits is one whose development would be seriously hindered were the habit of resting verdicts on precedents to become common. Such was the view of the legislators of the TOKUGAWA era. There is no denying that, whether owing to the method in which they were expected to administer justice or as the result of other influences, no era of Japanese history produced a finer set of judges than those who served the Bakufu. The written laws which guided their decisions were few, and such as existed were so loosely worded as to be capable of the most varied interpretation. In the majority of cases which came before the courts social custom, political considerations, and the current ethical code, rather than any written law bearing on the case *sub judice*, swayed the mind of the judge. The liberty granted to judges was seldom abused; for the reason that the choice of men to fill the post of magistrate or judge was in most cases very wise. If the administration of an officer of justice was on the whole deemed satisfactory, he was allowed to resort to such methods of defending the innocent against the penalties of an inadvertently violated law as fancy dictated. A girl called KIVO, who had killed her mother under the impression that she was killing a fiend, was brought before OOKA TADASUKE. In order to convince the public that the girl had committed no crime, TADASUKE made use of a popular superstition relating to transformation. "Evidently it is a beast in human form that has been killed," said the judge. "In my opinion KIVO's mother must have, somehow or other, been killed by a fox or a badger, and the animal must afterwards have assumed the mother's form. People who know nothing about such things will perhaps fancy that KIVO has killed her mother; but it is nothing of the kind. It is an evil spirit that she has killed, in fact,

the spirit of the animal that killed her mother; and so she has revenged her mother's death. If the corpse were left for twenty-four hours after death, I have no doubt it would assume the shape from which it transformed itself, namely, the shape of a fox or a badger. But if it were left and allowed thus to change, and KIVO and others were to see the change, their feelings would be harrowed thereby. KIVO would grieve to think that the one whom she had been serving as a parent was nothing more than an animal; and others would, when they heard of this, say:—'How are we to know that our parents are not transformed animals?' This being the case, it will be best for all parties that the creature be buried out of sight as soon as possible."

Were we asked to state in a few words what was the chief element of strength in the Bakufu Government, we should reply, the skill with which it used men. The genius of IYEYASU like that of HIDEYOSHI seemed to reveal itself most in the discernment of character and ability. This power was inherited by IYEMITSU and was handed down to subsequent generations, and the judicial appointments of the TOKUGAWA era constitute one among many good results of the exercise of that power. But that the Bakufu laws were grievously defective and in many ways entirely antagonistic to western notions of justice, admits of no doubt. They sacrificed the weak to the strong. They defended the old against the young, and treated woman as a nonentity. They did much to perpetuate the demerits as well as the merits of the Confucian system of ethics. The results of their influence are conspicuous on all sides to-day. And we must say that it is a surprise to us to find a school of barristers professing progressive principles yet arguing in favour of the retention of institutions and methods which modern Japan has outgrown.

COUNT MOLTKE AND RELIGION.

THE late Count VON MOLTKE, whose ways and views were generally so noncommittal, has left in his "Consoling Thoughts on this Earthly and the Assurance of the Eternal Life" a legacy to the members of his family, which the latter have not felt justified in withholding from the world. These thoughts as now published afford a new, and to many quite an unexpected, insight into the mind of the departed warrior, and we will therefore give the substance of his opinions as written down by him shortly before his death. Man, he says, is isolated from the rest of the world, limited by his body, the temporary abode of his soul. During sleep, perhaps a third of our existence, the body receives no commands of its master, yet the heart beats, respiration goes on, and our strength is renewed. Pain is the body's method of crying for

help, sickness shows that its vital powers have lost control of dead matter, and we are conscious that our vassal suffers. We must thus recognise the body as part of our being, though as something foreign to our real selves. Reason slowly develops, while memory assists and judgment increases. Age may appear dull; but a real darkening of reason, that bright spark of the divine, seems impossible. Even the maniac is perhaps only like the deaf who touches the proper keys of a piano out of tune: he himself is conscious of playing correctly; others, however, hear the sad discords. In its own sphere reason is a true sovereign and recognises no authority, not even ourselves. It cannot be forced to accept as false what it has recognised as true. *E pur si muove!* Man's reason may wander through the boundless space of the shining stars, or sink its plummet into the unfathomable depths of the minutest life: there are no boundaries anywhere, but everywhere there is law, the direct expression of the divine thought. Everywhere do the same causes produce the same effects. There is no anarchy, there is only law. The final cause of things, however, reason cannot apprehend; but it is nowhere at variance with the laws that govern all. Reason and the universe agree; both must have the same source. Though reason, misled by the imperfection of everything created, may go astray, yet truth is ever its goal. It comes into collision with many venerable traditions, and dislikes especially the miracle, "Faith's dearest child." It cannot be convinced that Omnipotence, to gain its ends, should in matters of detail require the abolition of the laws that govern nature eternally. Its doubts, however, are not directed against religion, but only against the form in which it is offered. Christianity has raised the world from barbarism to civilization, but was it the dogma which has brought us this and its attendant blessings? We can agree upon all things, but not upon things which transcend reason; and yet it was precisely these matters that were subjects of dispute from the destruction of the Arians down to the fires of the Inquisition. And what has been the result? The same difference of opinion. A dogma we may accept, as we receive the assurance of a true friend, without examination; but the kernel of all religions is the morality they inculcate, none more purely and exhaustively than Christianity. Yet there are people that shrug the shoulder and talk of dry morality and make the form in which morality appears the chief point of importance. It is to be feared that the zealot in the pulpit, who wishes to persuade where he cannot convince, drives the Christians out of the church. Should not every pious prayer, whether addressed to BUDDHA, ALLAH, or JEHOVAH, reach the same GOD, than whom there is no other? Reason and morality are not at variance, for

the good, in the end, is also the reasonable; but our conduct depends on our soul, its emotions and will, as well as on our previous actions. To the soul, and not to its vassals, has GOD given that two-edged sword of the free will, a gift that according to the Scriptures leads to our salvation or damnation. Yet there is the conscience, a safe adviser, independent of ourselves, with authority from GOD; an incorruptible judge, stricter than the laws of church or state, which tells us that every day ought to be holy to the LORD, and that to take even lawful interest from the needy is wrong; which, in a word, preaches morality in the breast of Christian, Jew, pagan, and savage. Disloyalty and lying, treachery and ingratitude are everywhere considered evil, and the ties that bind together parents, children, and relatives are everywhere held sacred. Belief in the total depravity of man is difficult, for, however obscured by savagery and error, the germ of good lies in every human breast. Is there a more convincing proof of the existence of GOD than this universal sense of right and wrong, the presence of moral and physical law in the world? Body and reason are subject to the soul, but often put in their special claims; and if in the perpetual struggle that thus results, the decisions of the troubled soul are not always in harmony with the voice of conscience, we hope that the LORD, who created us imperfect, does not demand of us that which is perfect. To keep in the right path is easy for the rich and fortunate, for temptation, to crime at least, does not approach him; for the starving, the uneducated, and the passionate, however, it is most difficult. On the last day, when guilt and innocence are weighed against each other, all this must fall heavily into the scales, and then mercy will be justice, two terms that usually exclude each other. Life cannot be its own end. After death, our individuality will no doubt continue. Reason will remain with us, and perhaps—doubtful gift—the remembrance of our earthly existence. Suppose we should thus be compelled to be our own judges, incorruptible and merciless? Our emotions will go with us, above all love. Friendships requires reciprocity, but we can love without being loved in turn. The scriptures tell us that we should love GOD, an invisible, incomprehensible being, which causes us sorrow and pain as well as pleasure and joy. How can this be done, then, except by obeying His laws and loving our fellow-mortals? PAUL, concludes Count von MOLTKE, tells us that when all else has passed away, love shall still endure, and therefore we may confidently hope to meet the love of a lenient Judge. Thus the Holy apostle, the weary warrior, and the venerable poet of *In Memoriam* seem to agree in the hope which

England's seer has so well expressed in the immortal lines:

O yet we trust that somehow good
Will be the final goal of ill,
To pang of nature, sins of will,
Defects of doubt, and taints of blood.
That nothing walks with aimless feet;
That not one life shall be destroyed,
Or cast as rubbish to the void,
When God hath made the pile complete.

REMINISCENCES.

PRAISE is certainly due to the Historical Society for its persistent and painstaking efforts to collect, and transmit to posterity, historical details that run the risk of being irrecoverably lost. At one of the Society's meetings held in 1890, attention was drawn to the fact that certain ex-officials, who had served under the Bakufu, were in possession of minute and valuable information bearing on the events of the closing days of the TOKUGAWA era, which information had never been published and it was agreed to be the duty of the Society to collect this information. A committee, consisting of five members, was appointed to hold conferences with such old men as were known to be versed in the special subjects referred to, and to publish the results of their inquiries. The answers given to the questions put by the committee are appearing in pamphlet form under the title of 舊事諸問錄 *Kyushi-Shimonroku*, "A record of Investigations of Ancient History," the first number of which was issued last August.

Among the information published in pamphlet VI., is an interesting account of the 1863 mission to Europe. It will be remembered that IKEDA CHIKUGO-NO-KAMI was the head of the mission, and that with him were associated KAWAZU IZU-NO-KAMI and Mr. KAWADA KI. Mr. KAWADA has furnished the Historical Society with an interesting account of the fortunes of the mission. We give the narrative as it stands, with the exception of transposing a few passages so as to make the events described follow in their proper sequence:—

"In order that you may understand why it was necessary to despatch an embassy to Europe to propose that the port of Kanagawa be closed, I must tell you that the country was in a great state of disturbance at the time. The nation was divided into three parties, consisting of (1) those who were in favour of opening certain places (Edo, Osaka, Niigata, and Hyogo) to foreigners; (2) those who advocated the total expulsion of Occidentals; and (3) those who steered a middle course. It was in order to pacify the last party that we were sent to Europe. They thought that great danger was to be apprehended from allowing foreigners to live so near the Shogun's capital. They were in favour of confining foreign trade to the outskirts of the empire. Hakodate and Nagasaki were the only ports they wished to see open. The proposal to close Kanagawa was first made

to the Foreign Representatives. They objected to take any action in such a serious affair. The French Minister advised the Shogun to communicate directly with Foreign Powers, by means of a special embassy. It was this action of the French Minister that led us subsequently to decide on negotiating with France, before approaching other Powers on the subject. I ought to mention here that a mission had been despatched to Europe in 1861, to propose that the opening of Edo, Osaka, Niigata, and Hyogo should be postponed for seven years. This proposal was met by the European Powers with a number of counter propositions. These did not obtain the approval of the Shogun, and negotiations on the subject ceased.

"The mission which I joined consisted of about 30 persons, most of whom were interpreters. Among these were SHODA SAMURO, NISHI KICHIJURO, TANABE TAIJI, SAITO JIRO TARO, YANO JIRO, MIYAKE SHIN, and MASADA KO. We started in December, 1863, just when the Shogun was about to set out for Kyoto. Our instructions were not to enter on the subject of the closing of Kanagawa too suddenly, but to lead up to it, after referring to other matters, the settlement of which was entrusted to us.

"We were well received, and handsomely entertained in Paris. The first business we settled with the French Minister for Foreign Affairs was the indemnity to be paid for the assassination of a French military officer, which was fixed at \$45,000. We then commenced to discuss the Shimonoseki affair. We contended that we had suffered more losses by the bombardment than the Europeans and Americans who took part in the fight, and hence we did not see why we should pay an indemnity.

"While this discussion was going on, Baron von SIEBOLD came to Paris, and offered his services as interpreter and mediator in our negotiations with Western Powers. His breast was covered with the orders he had received from various European Powers, and, pointing to these, he said: 'By these orders you will see that I am on intimate terms with all European States. I am quite willing to intercede for Japan.' At first we had our doubts about the wisdom of employing Baron SIEBOLD, but eventually we agreed to do so. Baron SIEBOLD explained to us that it was not the actual loss sustained that led European Powers to demand an indemnity: it was rather as an atonement for an insult offered to national flags. He further added that the practice of demanding indemnities from defeated powers was common in Europe. We saw no way out of the difficulty, and hence agreed to pay an indemnity of 100,000 dollars, which was afterwards increased. After consenting to this, we thought it a favourable time for introducing the subject of the closing of Kanagawa. We did it in the

following manner:—‘Our willingness to pay a large indemnity to you,’ we said, ‘shows you that it is the earnest desire of the Shogunate to be friendly. As friends we now wish to consult you about a difficulty in which we find ourselves. We are very anxious to open the country, but there is a strong party in favour of closing it, and the EMPEROR is on their side. How are we to deal with this party?’ To this the Minister replied that he was informed that the Shogun had large bodies of troops under his command, and that nothing was simpler than to enforce the general adoption of the policy which he had inaugurated. To this we rejoined that we were unable to resort to such extreme measures, and that we found it absolutely necessary to take some steps to pacify the anti-foreign party, and since the opening of Kanagawa, more than any other step, had excited great umbrage, we had come to propose that that port be closed and that trade should be confined to Hakodate and Nagasaki. The Minister replied:—‘You sent an embassy to us a few years ago, proposing that the opening of certain places be postponed seven years. We stated the conditions on which we agreed to allow this. You took no notice whatever of our proposals, and now you come with the proposition that one of the open ports shall be closed. England and Holland are preparing to send a fleet to your country to force negotiations. We will join them. You say the Shogun is anxious to be friendly. While he breaks his contracts, what proof have we of the sincerity of his professions? If you wish to avert war, then the only condition we will accept is the abolition of customs dues at Nagasaki and Hakodate.’ This condition we said could not be granted. After a long conversation between the French Minister and Baron Siebold, the demand for free trade at the Northern and Southern ports was abandoned. The Shimonoseki affair was reverted to and the French offered, in combination with other Powers, to keep the Straits open, if the Bakufu felt itself unequal to the task. To this we replied that those who had attacked foreign ships should be punished, and the Straits should be kept open; but that the carrying out of these measures would occupy some time. We were exhorted to keep our subjects in order, and reminded that this would cost us less than a war with foreign countries. With a view of helping us to do this the French offered to furnish us with ships at cost price, and to instruct naval cadets, if we would send them to France. We were informed that this offer was made by the special order of the EMPEROR himself. When we heard that the EMPEROR had interested himself in us, we at once accepted the offer, and YENOMOTO (the present Foreign Minister), who was then in Holland, and UCHIDA, were summoned to Paris to make arrangements for the pur-

chase of ships. The large French men-of-war then in use were all considered unsuitable for Japan, and new ships were ordered, the plans being furnished by YENOMOTO.

‘The French would not hear of the closing of Kanagawa, and we saw that it was useless to press the matter further. CHIKUGO-NO-KAMI decided that no better fortune could be anticipated in other States, and that, rather than expose his country’s weakness, he would do well to return to Japan and represent to the Shogun the impossibility of carrying out the proposed measure. The French advised us to try the other Powers, but we were convinced that no good could result from going farther, so we decided to return.

‘As I said before, we were treated very handsomely by the French. CHIKUGO-NO-KAMI, KAWAZU, and I all rode in separate carriages. An audience with the EMPEROR was granted to us. HIS MAJESTY received us in the Tuileries. By his side stood the Empress EUGENIE, and the Crown Prince. All the Ministers of State and their wives were in attendance. We wore the dress suit of that time. Three days after the audience we were invited to attend a review of the Imperial Body-Guard. On this occasion the EMPEROR, magnificently attired and mounted on a charger, looked like the monarch of a great empire. By his side rode the EMPRESS. As the troops were manoeuvring, suddenly my attention was attracted by the EMPRESS dashing off at a gallop down the lines. A soldier had been thrown from his horse, and she went to see whether he had been hurt. I could not but admire her tender-heartedness. After the review we attended a banquet, and in the evening went to an opera. We reached Japan in July, 1864.

‘The cost of our trip was very great. The sum of 500,000 *ryō* was appropriated for the purpose. We took 100,000 *ryō* in gold *ichibu* and the rest in the form of an order. In addition to this we took 100,000 *ryō* worth of presents for the various potentates of Europe. Those for France were presented, but the others were forwarded later.

‘When we reached Japan we found everything upside down. Confident that the failure of the mission would give umbrage to the Shogun, our first thought was to proceed to Kyoto and lay before the EMPEROR a statement representing the real situation. But we subsequently decided that it would never do to ignore the Shogun, as he was still in power. CHIKUGO-NO-KAMI was in a very excited state when we reached Yokohama. He had been brooding over the embarrassment of the position in which we found ourselves so much on the voyage that his nerves were strained to their very utmost, and KAWAZU and I were apprehensive of his committing some rash act. He was naturally impetuous and fiery, and brooked no opposition. The first order we received forbade our landing. We were command-

ed to send a written account of our negotiations, and to proceed to Hakodate. CHIKUGO-NO-KAMI was incensed by this treatment, and, disregarding the consequences, he mounted his horse and dashed off on the road to Edo. KAWAZU and I followed him on horseback, and after a hard ride overtook him at Namamugi. Here we encountered a messenger from the Shogun, who joined with us in endeavouring to persuade CHIKUGO-NO-KAMI to return to Yokohama. But our remonstrances only excited him more, and with drawn sword he left our presence and, leaping on his horse, set off at a wild pace for Edo. We followed and overtook our chief at his house. After conferring together we decided that the following morning we should go in person to the Shogun and explain the reason of the failure of the mission. In this expectation we all retired to rest. Early the next morning we were informed that we were in disgrace. The message we received was as follows:—‘*France sono ta ni tsukai to shite sashitsukawasare soro tokoro, sono gi ai togezu shite jimama ni kikoku soro dan, futodoki ni oboshimesu.*’ ‘You were sent to France and other countries for a special purpose. Without fulfilling that purpose you have taken upon yourselves to return to this country. Your conduct is regarded as improper.’

‘CHIKUGO-NO-KAMI was condemned to lose half his territory and was ordered to retire from public life. KAWAZU and I were both confined to our houses.

‘Before we left for Europe, INOUE KAWACHI-NO-KAMI told us that our visit would prove fruitless. We asked him whether in that case we had not better beg to be excused from undertaking the task. He said, ‘No. It is better that you should go and furnish proof to the nation that the course proposed is impracticable.’ When we returned we were informed that our punishment was only for the sake of keeping up appearances. But we ourselves did not regard it in that light. We thought it only proper.”

THE JAPAN SOCIETY.

THE Japan Society of London has now become a very vigorous body. The idea of forming such a society was most excellent. England has a very material interest in Japan, yet it is an undoubted fact that in no Western country does profounder ignorance prevail concerning Japanese affairs than in Great Britain. As to the causes of this ignorance there will probably be various opinions, but, for our own part, we believe that want of opportunity to learn is chiefly responsible. It is a far cry from London to Tokyo, and although individual Englishmen have done more than any other nationals to interpret the Japanese language and Japanese customs, history and traditions, so that the world in ge-

neral shall understand them, it must be admitted that ninety-nine out of every hundred subjects of HER GRACIOUS MAJESTY live in a state of complete nescience and indifference as to Japanese affairs, while, in a majority of cases, the more inquiring hundredth regards the country merely as a place where some quaint, pretty works of art are produced, and where a tourist may spend a very pleasant three weeks if he has time and money at his disposal. Japanese visiting England have been surprised, and, if the truth be told, not a little hurt, to find that a great deal of uncertainty exists as to the difference, geographical or ethnological, between Japan and China, and that for all practical purposes the two empires occupy the same niche in the insular Briton's mind. Occasionally *The Times* or the *Manchester Guardian* throws a ray of light across the darkness in connection with some subject of passing importance, but for the rest the great dailies and even the periodicals have no space in their columns for Japanese matters. Englishmen think of Japan, whenever they do chance to think of her, as a kind of antipodal curiosity calling for study only at the hands of leisurely specialists; and speak of her, whenever they do chance to speak of it, in kindly but supercilious diminutives. To induce them to regard her a little more seriously, no better device could have been adopted than to organize in London an association on the lines adopted by the Japan Society. The Society has been in existence only a few months, yet its list of members already contains a number of distinguished and influential names. The President is Viscount KAWASE, Japanese Representative in London; and the Vice-Presidents are Lord ARMSTRONG, Lord DE SAUMAREZ, Sir FREDERIC LEIGHTON, Sir JOHN LUBBOCK, and the Hon. P. LE POER TRENCH; and the Council consists of the following: Mr. D. ANDERSON (Chairman), Mr. F. T. PIGGOT (Vice-chairman), Mr. PAUL BEVAN (Treasurer), Mr. JOHN MOGFORD (Librarian and Curator), Messrs. A. DIOSY and DAIGORO GO (Hon. Secretary), and Messrs. A. H. CHURCH, HYDE CLARKE, FRANK DILLON, ALFRED EAST, F. ELGAR, G. C. HAITE, W. S. HALL, P. B. HARBOTTLE, ERNEST HART, CHARLES HOLME, M. B. HUIH, G. W. LEITNER, A. LASENBY LIBERTY, N. OKOSHI, PERCIVAL OSBORN, J. S. PHENÉ, J. P. REID, F. A. SATOW, R. PHENÉ SPIERS, J. M. SWAN, and H. SEYMOUR TROWER. In addition to the above there are many other members, the total being 175, including such men as Messrs. ALMA-TADEMA, J. L. BOWES, F. DRESSER, W. GOWLAND, Sir W. H. B. FOLKES, M. E. GRIGSBY, Sir S. J. TREVOR LAWRENCE, JUSTIN MCCARTHY, T. P. O'CONNOR, Sir W. G. PEARCE, Sir E. T. REED, E. M. SATOW, ALFRED PARSONS, and so forth. It is more than gratifying to find that within a very brief space of time

the projectors of the Society have been able to secure such wide and valuable co-operation, and to establish the enterprise on a basis so promising. Two excellent papers have already been read, one on *Jujutsu*—a peculiar system of self-defence and gymnastics—by Mr. T. SHIDACHI, and one on the uses of Bamboo in Japan, by Mr. CHARLES HOLME. The Society is also promised essays by Mrs. ERNEST HART, on "Some Japanese Industrial Art Workers," and by Mr. W. GOWLAND on "The Naturalistic Art of Japan." Very wisely the Society does not tie itself down to periodical meetings at fixed intervals. The members are left to choose their own day for reading such papers as they may desire to contribute, the only condition being that they are requested to give early notice to the Hon. Secretaries, so as to enable the Council to arrange the programme for the sessions. The annual general meeting was fixed for the third week in June, and the first annual dinner was to take place on the same day. We think it scarcely possible to over-rate the useful effects that this Society is calculated to produce. It cannot fail to rouse a gradual and general interest in Japanese affairs, and to educate among the influential classes in England a more or less accurate knowledge of this country's real condition, and of the grounds upon which she bases her claim to be admitted on equal terms to the comity of nations. Japan has now a united band of 175 friends in London, who will seek by speech and pen to dispel the numerous delusions existing with reference to her, and whose union will be in itself a public evidence that she deserves more consideration than is usually bestowed upon her.

RAILWAY COUNCIL.

IMPERIAL ORDINANCE.

We, hereby, sanction the Rules of the Railway Council, and order the same to be duly promulgated. (Imperial Sign-Manual.)

(Great Seal.)

Dated the 20th day of the 6th month of 25th year of Meiji.

(Countersigned)

Count MATSUKATA MASAYOSHI,
Minister President of State and Minister
of State for Home Affairs.

IMPERIAL ORDINANCE No. 51.

RULES OF THE RAILWAY COUNCIL (*Tetsudo Kaigi*.)

Art. I.—The Railway Council shall be superintended by the Minister of State for Home Affairs, and at his instance, the following matters shall be discussed:—

1. Matters enumerated in Art. 15 of Regulations relating to the Construction of Railways.
2. Estimate of expenditure for the construction of railways.
3. Methods and processes of purchasing railways constructed by private companies.
4. Matters relating to railway time tables, and the rates of freight.
5. All matters relating to the regulations for traffic, and for railway police, except such as concern engineering works.
6. Any matters the Minister of State for Home Affairs may suggest.

Art. II.—The Railway Council may address the Ministers of State concerned, on any subject connected with railways.

Art. III.—For the better conduct of its business, the Railway Council may compile rules, and ob-

tain the approval thereof of the Ministers of State for Home Affairs.

Art. IV.—The Railway Council shall consist of a President, 20 ordinary members, and a certain number of special members.

Four high officials from the Home Department or Railway Bureau, two from the War Department or General Staff, and one from every other Department of State, shall be made members of the Council.

Art. V.—The President of the Council shall be of *Chokunin* rank.

Members or special members to be appointed from among high officials shall be nominated by the Minister of State for such Department. The other members shall be nominated by the Minister of State for Home Affairs, and after Imperial sanction has been obtained, they shall be appointed by the Cabinet.

The term of service for members shall be three years; but they may be re-elected.

Art. VI.—The President, in accordance with the rules of debate, shall preside over the deliberations of the Council and shall notify its resolution to the Minister of State for Home Affairs, or to the other Ministers of State concerned.

Art. VII.—When the President is prevented from discharging his duties owing to circumstances, a member of the Council, nominated by him, may represent him.

Art. VIII.—A Manager shall be attached to the Railway Council. He shall be of *Sonin* rank.

The Manager shall discharge his duties under the orders of the President.

Art. IX.—Neither the President, Special Members, or Manager shall receive any salary. Provided that those who hold no other office from which they derive salaries, may receive an allowance of not more than 500 yen per annum each.

Art. X.—There shall be clerks in the Railway Council.

They shall report the proceedings of the meetings and discharge miscellaneous duties under the orders of the President and the Manager.

The clerks shall be appointed from among employees of the Home Department or the Railway Bureau.

PUBLIC WORKS COUNCIL.

IMPERIAL ORDINANCE.

We hereby sanction the Rules relating to the Public Works Council, and order the same to be duly promulgated.

(Imperial Sign-Manual.)
(Great Seal.)

(Dated) the 20th day of the 6th month of 25th year of Meiji.

(Countersigned)

Count MATSUKATA MASAYOSHI,
Minister President of State and Minister
of State for Home Affairs.

IMPERIAL ORDINANCE No. 52.

RULES RELATING TO THE PUBLIC WORKS COUNCIL (*Doboku-kai*.)

Art. I.—The Public Works Council shall be superintended by the Minister of State for Home Affairs, and, at his instance, matters relating to the improvement of rivers, of roads, of harbours, and other important public works shall be discussed, and the Council shall be competent to express its opinion on these subjects.

Art. II.—The Public Works Council may address the Ministers of State concerned with reference to any question of Public Works.

Art. III.—For the better conduct of its business the Public Works Council may compile rules, and obtain the sanction thereof of the Minister of State for Home Affairs.

Art. IV.—The Public Works Council shall consist of a President, 20 ordinary members, and certain special members.

Three high officials from the Home Department or Railway Bureau; two from the War Department or General Staff; two from the Department of Agriculture and Commerce, and one each from the Department of the Navy, the Department of Communications, and the professors of the University, shall be made members of the Council.

Art. V.—The President of the Council shall be of *chokunin* rank. Ordinary and special members of the Council, to be appointed from high officials, shall be nominated by the Minister of State for each Department, and other members of the Council shall be nominated by the Minister of State for Home Affairs. After the Imperial sanction has been obtained, they shall be appointed by the Cabinet.

The term of service for members of the Council shall be three years, but they may be re-elected.

Art. VI.—The President shall preside over the deliberations of the Council in accordance with the rules of debate, and shall notify its resolutions to the Minister of State for Home Affairs and to any other Minister of State concerned.

Art. VII.—When the President is prevented from discharging his duty owing to untoward circumstances, a member of the Committee, nominated by him, shall represent him.

Art. VIII.—A manager shall be attached to the Public Works Council. He shall be of *sonin* rank. The manager shall discharge his duties under the orders of the President.

Art. IX.—Neither the President, ordinary or special members of the Council, or the manager shall receive any salary. Provided that members who hold no other office from which they derive salaries, may receive an allowance of not more than 500 *yen* per annum each.

Art. X.—There shall be clerks in the Public Works Council; they shall report the proceedings of the meetings, and discharge miscellaneous duties under the orders of the President and the Manager.

The clerks shall be appointed from among *em-ployés* in the Department of Home Affairs.

PARCELS POST.

IMPERIAL ORDINANCE.

We hereby sanction the laws relating to the postage, insurance, indemnity, size, weight, and registration of parcels to be sent by post, and order the same to be duly promulgated.

(Imperial Sign Manual.)

(Great Seal.)

(Dated) 27th day of the 6th month of 25th year of *Meiji*.

(Countersigned)

COUNT MATSUGATA MASAYOSHI,

Minister President of State.

COUNT GOTO SHOJIRO,

Minister of State for Communications.

IMPERIAL ORDINANCE No. 57.

Art. I.—Fees for postal parcels will be determined by weight and by the distance between the office from whence they are despatched and that which delivers them to the addressees, in accordance with the appended table.

Art. II.—Any parcel delivered outside a postal district will be charged an additional fee, according to its weight, as follows:—

600 <i>momme</i> and under	2 <i>sen</i> .
Over 600 <i>momme</i> , and not more than 1 <i>kan</i>	4 <i>sen</i> .
Over 1 <i>kan</i> and not more than 1 <i>kan</i> 500 <i>momme</i>	6 <i>sen</i> .

Art. III.—No parcel must exceed the following dimensions:—length, 2 feet, breadth, 2 feet, diameter, 2 feet; and must not exceed 1 *kan* 500 *momme* in weight (12½ lbs.).

Art. IV.—The value of any registered parcel must not exceed 150 *yen*.

Art. V.—The premium for the insurance of registered parcels will be 7 *sen* for one *yen* declared value, and 1 *sen* for every *yen* additional, over and above that value.

Art. VI.—The amount paid as indemnity for damage to an ordinary parcel will be 10 *sen* per 100 *momme* of weight. If only a portion is damaged the indemnity will be estimated accordingly.

Art. VII.—The amount paid as indemnity for damage to a registered parcel will be the full registered value. If only a portion is damaged the indemnity will be estimated accordingly.

ADDITIONAL RULES.

Art. VIII.—Post offices which despatch or deliver parcels will be notified by the Minister of State for Communications, from time to time, of any alterations in the rules of management, fees, etc.

THE OSAKA COMMERCIAL SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I venture to enclose the programme of an entertainment that reflects great credit upon the ability of the students of the Osaka Commercial School, where the *Mail* is daily read, marked, learned and inwardly digested. Unfortunately, I arrived too late to hear the first part of the programme, but I have been informed that in No. 12 on the programme a widow in her "weeds" was represented, and I have no doubt that her distress and the imperial bounty were faithfully portrayed.

Brutus was speaking when my friend and I arrived; we followed the citizens who carried Caesar's bier. Caesar's vesture was wounded to a considerable extent, and when we marked the quantity of red ink that did duty for gore we were sure that he died game. The speech of Anthony II. was remarkably good. He stirred up the citizens to mutiny and rage. In Part II., No. 5, both Alexander and the Robber entered fully into the spirit of their parts. The dramatic effect was increased by the guards in uniform with fixed bayonets, who dragged in the robber clothed only in a *robe de nuit* with a straw rope for an *obi*. Alexander was gorgeous in buttons, gold lace covering his breast, and a crown resplendent with pendants of prizes won in athletic contests. In Part II., No. 9, the father of a family of boys, after struggling under a moustache and wrestling with a huge cigar, bestowed his diamond ring upon the noblest son who had saved his "dearest foe" from the bank of a frightful abyss. No. 13 was a Japanese farce acted in costume and character to the life, but in the English language.

I have attended many meetings of English Clubs where foreigners read, recited, and sang, and students sat and listened, looking very solemn meanwhile, and pretending to understand; but this one was thoroughly Japanese in origin, training, and management, and reflects great credit upon the students and their teachers, especially the Principal Mr. Naruse and Mr. Takashima.

The students of Tokyo should look to their laurels, or they may find that they have been left behind in the race for oratorical success and ability by the merchants' sons of Osaka. Let Rome beware of Venice, Athens of Corinth.

Yours truly,

Osaka, June 25th, 1892.

DISCHARGED SEAMEN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Ever since the United States Consular Agency was withdrawn from this port, the American whaling ships have considered Hakodate a free dumping ground for their useless men. It seems that during the passage from San Francisco the Captain finds out how many useless men he has on board, and during the few days he lies here manages to rid his ship of them. Not a year goes by but American sailors are left behind at this port, with the consequence that the few foreign residents have to subscribe to get

them away to Yokohama, where they are more likely to find employment. The Japanese Authorities telegraph to the United States Consul at Yokohama, but the answer is always the same, "The United States Consul can do nothing for them!" Lately the *W. H. Meyer* left four men here, but before she sailed the Captain shipped four good Japanese sailors in their place. Now, if the Captain can do this, I think the Japanese Authorities ought to have seen that the Captain left some means with the men, or local Authorities, to enable them to get to another port. I consider the way men are left here from American whalers is blot a on the escutcheon of the great and glorious country called America.

Yours truly,

Hakodate, 21st June.

OLD SAILOR.

SEAMEN LEFT AT HAKODATE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I noticed, in reading your paper of last Monday, the correspondence signed by "Old Sailor" in regard to seamen left at Hakodate by the whaling ship *W. H. Meyer*. Your correspondent is evidently misinformed as to this particular case, the true facts of which are as follow:—The seamen were not left by the captain as stated, but left the ship of their own accord. The ship lay there seven days while the captain tried to catch the men. The reasons for our leaving were, bad officers and food. The men were told by the captain that they were the best men he had, being what are called deep-water sailors, while the others were greenhands who had never been to sea before. Trusting that your will publish this,

I remain,

ONE OF THEM.

Yokohama, June 30th, 1892.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 27th, an "Old Sailor" does the Captain of the *W. H. Meyer* a great injustice. The four men left behind here were deserters from the vessel. The master did all possible to get them back. After waiting two days for the Police to bring in the men, without result, the Master had to ship other men at great expense and inconvenience.

Yours truly,

HENSON & CO.

Hakodate, June 29th, 1892.

"CHINA COAST TALES."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Some time ago, the lady who veils her identity under the name of "Lise Boelm" published two stories in the *North China Herald*. The first was called "Fortuna"; the second, "Peter Wong's Revenge." These are not included in her *China Coast Tales*, which only contains two new stories entitled respectively "Dobson's Daughters," and "Of the Noble Army." Neither, I believe, has appeared previously. I do not know whether they, also, were offered to your contemporary for publication in its columns; but if they were, can only congratulate the editor upon the good sense and good taste which prompted his rejection of them. "Dobson's Daughter" deals with the seamy side of bachelor life in the East. The plot is simplicity itself. Matthew Dobson, a tea-merchant in Foochow, suddenly starts the ladies resident at that port by bringing into their midst a young girl, whom he introduces as his daughter, and who has hitherto been brought up in England under the impression that her mother was a Princess (!) The girl is of course an Eurasian, and the circumstances of her parentage are discussed by the ladies of Foochow with a candour that leaves nothing whatever to the imagination. In course of time she makes two discoveries: one, that her mother was not a Princess, and the other that she did not die in Sacha's infancy as the girl had been taught to believe—having been, in fact, bundled out of Dobson's house just before the arrival of her daughter. It is not necessary to follow out the plot of this remarkable story. Suffice it to say that the heroine is a mass of laziness and selfishness, the Foochow ladies are a pack of vulgar shrews—in one scene a hostess boxes one of her guests' ears in the drawing-room after dinner—and "Lise Boelm" herself is a person of strangely questionable taste. It is difficult to conceive what attraction such a topic as concubinage can have for a lady of education and refinement. "Of the Noble Army," is a caricature of missionaries. Yungkiang is of course Ningpo, which stands upon the river Yung, and Dr. Masters, who is living with his sixth wife, is intended for the late Dr. Loid. I do not deny that there may be mis-

sionaries in China and elsewhere who are ignorant, dishonest, self-seeking, worldly, and insincere. A more detestable set of persons than Miss Evans, Mrs. Simpson, and Mrs. Masters, it would be difficult to find anywhere. Does "Lise Boehm" put them forward as types of the missionary body—say in Ningpo? Does she wish us to understand that it is persons of this sort in whose hands the evangelization of China lies, and lies exclusively? Because, if so, I tell her in plain terms that what she affirms is false. "No attempt," she says, "has been made to caricature individuals, but rather to portray types of ordinary occurrence." These, then, constitute the rule. The "ordinary" missionary lady is an idle, greedy woman, spiteful, narrow, and, of course, unpardonably ugly. Well, I do not believe it; and I protest against the prejudices which can induce a writer, endowed with something, at any rate, of the penman's craft, to put forward so grave and ill-natured a misrepresentation. Nor is this the only fault I have to find. In this story again, we are confronted with the author's *penchant* for things not of good report. Again the ladies talk among themselves about matters they had better leave alone. In this case, the immorality of the Commissioner of Customs is seasoned by the additional fact that he has "a charming wife and growing up family at home,"—a state of things which so shocks the medical-missionary's wife that she writes to the injured lady and tells her all about it. This sort of thing imports a decided unsavouriness to the whole story. And there is an incident on page 74 which is more offensive still. I can only hope that when next "Lise Boehm" appears in print she will exercise greater discrimination in her choice of subjects, and show rather more delicacy in handling them.

Your obedient servant,

P. Q.

FILIAL PIETY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One of the darkest clouds on the horizon at the present moment, in looking out over the wider problems with which this country has inevitably to deal, beyond the singing barriers of petty interests and party divisions, is the terrible misconception that has won a foremost place in men's minds, concerning that first great duty of man and woman alike, filial piety.

Some there are who assert that Old Japan could boast her saints and heroes, beyond all others in this matter, and that, with the loosening of old ties and the destroying of time honoured customs, this filial piety, which in very truth is the main-spring of wholesome, happy national life, must inevitably be swamped and lost; and that in consequence every new principle, or new doctrine, is to be feared for this reason, mainly as an instrument in such destruction, and proportionately detested.

Such thinkers assert, that the spread of the Christian Religion must affect the same unfortunate result, and must on that ground alone be treated as an enemy to the best advance of the nation.

Some, unfortunately for Japan, foreign observers, utterly ignorant of the true state of affairs, are content to flatter the vanity and the lower susceptibilities of the people by fulsome admiration of what they have imagined for themselves and set up as the standards of the country, utterly careless that the poor lying counterfeit they admire is a hideous idol, daily devouring the souls and bodies of its miserable victims and hopelessly barring the way to any progress.

Are there none able to follow a deeper reasoning, and strong and brave enough to put their fingers on the very "heart and pulse" of the disorder?

Where are the "brave hearts and true" who have so far opened the wider realms of thought and life to their country?

Is Japan to stand proudly in the foremost rank in Science, in Arts, in Learning, and so soon as the very commonest question of morality is concerned to sink below the possible esteem of any civilized nation without one voice raised to assert a better way? without one leader to guide or support her struggling children? Let us for a moment consider the grounds of this matter. Is it in truth "obedience" to an honoured law which is typified in old Japanese Custom? Is the bearing of children to parents and teachers, resulting from the usual methods of Japanese education, all that men could desire, all that bears good promise for the future citizens and leaders of their country? Filial piety has presented many and various results in different countries and in different ages. Foreign histories show us at one time the child willingly devoured by the fox without a cry of pain, the willing maiden led by her sorrowing father to the sacrificial altar—the child, compelled by the very highest law and principle of its being to an obedience entailing sorrow and sacrifice even on

those to whom a lesser, yet equally sacred obedience, was rightly due.

It is impossible to do more at this moment than call to mind some few such typical acts. I would chiefly ask the Japanese to consider whether in every such of the countless instances one might cite, there is not involved an ennobling, a purifying of those who offer and fulfil such sacrifices. It is the giving up of a lower will to follow the dictates of a higher will: it is the conforming of an imperfect, faulty, earthly character to the perfect selflessness of the spiritual character: in the last instance quoted it is the setting forth of the higher duties and pains involved in any real appreciation of perfect obedience.

I need not dwell at length on the many instances in Japanese legends and histories of filial devotion. They are familiar to all earnest lovers of their country. I ask only that they should be considered in reference to that spiritual character of sacrifice which I have endeavoured to point out. Let the Japanese turn their attention mainly to the problems of to-day: in the firm belief that it is only by wise, farseeing conduct in regard to such problems that their perplexed country may ever attain that honour and respect among men and nations that we all desire for her.

This duty of obedience thus necessarily involves a higher standard in those who carry out its precepts: and is to be a main factor in the growth of the people.

For the sake of a clearer understanding let me examine such instances as above quoted, the obedience of the child, of the maiden, the act of obedience to the highest law: the noblest of which man's nature is capable.

1.—*The child.* It is evident to anyone who can claim to be a thinker, in any sense of the word, that obedience must be voluntary, that it must be the obedience of a reasonable being: and that it should achieve some desirable self-conquest. Can anyone glance at the present state of education in Japan and say that this is the habit and mind of faith?

On all sides it is the child that asserts its miserable self-will, and asserts it triumphantly in spite of parents or master. The babe directs the goings of its poor, burden-bearing elder—the child follows uncontrolled each leading of its natural cravings, the boy governs the school, so far as there is any government at all, and the man starts in life with respect for no authority because he has never learnt to respect himself. This is no result of Christian training: this is no result of wise and wholesome law.

2.—*The Maiden.* Alas and alas, for the women of the country are entering the bitter waters of affliction. While smooth-speaking poets, forgetting the eminent privilege of the poet to be the speaker and foreteller of truth, and so the saviour of his times, laud the perfection they ignorantly admire, we, who know, who sorrow for this country's worst degradation, are yet powerless to rouse the spirit of the people to see and perceive and to cast away such bitter masquerades and amend their ways.

Instead of the father-offering all that is dearest and nearest, his utter best, his highest treasure in sign of sorrow for misdeeds, and of humble recognition of a nobler will; instead of a maiden, holy, pure, freely foregoing life and all that life could offer, in loving desire to carry out the best impulse of her father's heart, constraining not only herself but him to such high ideal, what do we find? It is shame and sorrow even to look this matter in the face.

"The perfect woman-wife" of Japan must be a something to which the very knowledge or perception of purity or honour is unknown: a chattel, a mere bit of goods in her owner's hands, she is passed from father to so-called husband, or from one to another without her own will; without her own cognisance, she is called upon to sacrifice, at the bidding of another, her very crown and privilege of womanhood; she is to make herself that which for ever blots out all prospect of true womanliness; which debases those who demand and those who allow; and by that act she is to win the honour due to filial piety? *Filial*—what sense of father-hood or son hood or daughter-hood exists in such a nation? Has that maiden ever known the meaning of the word "mother"? Is she ever to know of it in her own life? I ask every honest Japanese to refute me if he can. I ask every one of that noble-hearted minority which has realised a happier standard, whether that result was not found by breaking, and only by breaking, with Japanese custom and tradition.

3.—*The obedience to a Superior and Divine Will.* Sooner or later Japan must recognize that it is only the obedience of a self-respecting and self-responsible nature to the dictates of its highest spiritual indwelling conscience, as the Christian

has it, to the promptings of the spirit of God Himself, which is worthy of the name; which can restrain the wild passions of humanity and breathe a solemn self-restraint over the tumultuous storms and ragings of man's lower nature. In her power of such recognition and acceptance lies the only hope for any permanent development, or indeed of any national existence.

With such recognition, already found here and there in the case of individuals, comes the first possibility of the creation of family and national life. What then is that highest obedience? Obedience to the constraining and compelling of the spirit over the body—of will over desire—of self-forgetfulness over self-love, of the Man over the evil in man. In conclusion, I have only to lay before all such as love their country, this problem: What power can so restrain and master your own lower nature, what power can transform hate into love, impurity to purity, dishonour to honour, that which walks in the paths of deceit to that which can perceive and live the truth, but that same power of the despised Nazarene, which has once in time shone forth in splendour, that shall outlast all ages, in perfect obedience of perfect manhood on the outstretched arms of the cross.

Your obedient servant,
June 29th, 1892.

X.

CRICKET.

THE CLUB V. THE FLEET.

This match, twelve aside, was played on Saturday, and was remarkable in the first innings on both sides for the smallness of the scores—Club 41, Fleet 48. The Club, however, woke up in the second innings, and at the fall of the sixth wicket, with 94 chalked up, elected to close the innings and give the visitors another show. There was no time, however, to get in all the men of the Fleet, but they, like their opponents, did much better in their second innings, having scored 54 for the loss of three wickets, Taylor 20 not out, De Ro-beck 11 not out. Following are the scores:—

The report just issued by Sir Frederick Abel and Mr. Redwood on the passage of petroleum through the Suez Canal sounds a timely note of warning. It is the opinion of these experts that the traffic as now carried on does not constitute a serious danger to other shipping in the Canal. Nor could the embankments fail to suffer considerably if one of the great tank steamers blew up. The shareholders are interested, therefore, in introducing such reforms as will place matters in a safer condition. It is admitted by the report that this can be done, partly by remodelling the construction of tank steamers but still more by subjecting them to stringent regulations during their passage through the canal. Another safeguard would be to so mark every vessel freighted with petroleum in bulk as to denote the dangerous nature of her cargo. This precaution would warn other ships to give the marked craft as side a berth as possible, thus diminishing to some extent the risk of collision. If a tank steamer were run into during the hot season, oil would speedily cover all the adjacent water, and being at high temperature, its ignition would be almost certain. A good deal is to be said, therefore, for the recommendation of the two experts, that the floating magazines should be protected after dark by strong booms—*L. and C. Express.*

CLUB HOTEL, LIMITED.

The adjourned annual meeting of shareholders of the Club Hotel, Limited, was held at No. 5, Bund, on Monday evening. There were present—Mr. D. FRASER, in the chair, Messrs. W. F. Richards, T. J. Morris, A. Allcock, T. Abbey, J. W. Hall, Geo. Blakeway, de Micheaux, J. McDonald, Ph. von Hemert, R. A. Wylie, W. R. Bennett, S. Cocking, T. W. Best, R. Ward, H. M. Arnold, C. V. Arnould, Wilson Walker, A. Hearne (Manager), T. H. Brower, and H. A. Schreuten (secretary).

The CHAIRMAN announced that the meeting was called for the election of directors and auditor, business that had been adjourned from the annual general meeting of shareholders held last week.

Mr. C. V. ARNOULD said that he would propose that four directors be elected, bringing up the number on the directorate to seven. He would nominate for the office, Messrs. D. Fraser, H. M. Arnold, T. H. Brower, and J. Johnstone.

Mr. BROWER—Mr. Johnstone declines to serve. Mr. ARNOULD—Then I propose in his stead Mr. Bennett.

Mr. BENNETT—No, no.

Mr. ARNOULD—I propose, in the place of Mr. Johnstone, Mr. Bennett.—(Hear, hear.)

The CHAIRMAN—I am afraid that it is not law ful for this meeting to elect four directors; it is called for the purpose of transacting the business left over from the preceding meeting—that is for electing three directors and an auditor. To elect four directors would require a special resolution, so I think your motion is not permissible.

Mr. ARNOULD—But we are called to elect directors, not one, or two, or three.

The CHAIRMAN—Well, I should like to hear what the meeting has to say on the matter.

Mr. ARNOULD quoted Rule No. 69 in support of his motion.

Mr. COCKING said that he thought that there could be no other way of interpreting their laws, otherwise than had the Chairman's ruling, and in support thereof quoted Clause 52, which said that the general meeting was called to pass the balance sheet, the election of directors, who retired by rotation or resigned, and, according to Clause 59, any other business which might be brought before them. He argued that the meeting had been adjourned for the purpose of selecting three suitable directors, and that it was not in order to elect more, nor raise the directorate to seven in place of six.

Mr. ARNOULD—I am still at issue, there are no directions as to how many directors we are to elect.

Mr. COCKING—We are to elect directors in the place of those who retire by rotation.

Mr. C. V. ARNOULD—In Rule 52 you will find that we have power to increase the number of directors from time to time.

Mr. ALLCOCK—Are we to understand, Mr. Cocking, that you object to the directorate being increased?

Mr. COCKING—Oh, no, I have no objection to that, but I say that it might be done in a proper manner. In order to increase the directorate it is necessary to call an extraordinary meeting.

Several shareholders dissented to this definition, but Mr. Cocking said he was certain a seven days' notice of such a motion as Mr. Arnould's must be given.

Mr. ARNOULD—Well, we had better have legal opinion.

Mr. COCKING said that his objection would be supported by the Hongkong ordinances.

Mr. ARNOULD—But this is not new business.

Mr. COCKING—It must be, we are only here to elect three directors.

Several voices—"No; directors."

The CHAIRMAN read the notice calling the meeting, adding that there was nothing about retiring directors in it.

Mr. BROWER—The question is whether we shall increase the number of directors or not.

The CHAIRMAN—It seems to me that there is no number of directors specified in this notice of meeting, therefore I think it is quite legal to elect any number of them.—(Hear, hear.) I rule that the motion is in order. I think the best plan would be for us to proceed by voting for the election of directors singly, and I hope that the meeting will specially be good enough to leave my name out till the very last.

Mr. COCKING—I beg leave to propose Mr. R. Ward.

Mr. J. W. HALL—I will second him.

Mr. BROWER—In place of whom?

Mr. COCKING—In place of nobody.—(Laughter.)

Mr. WYLIE seconded Mr. Arnould's motion.

Mr. BXT asked whether Mr. Arnould would prefer to put up his names one by one?

Mr. ARNOULD—I propose them *en bloc*.

Mr. SCHREUTEN—They are Mr. D. Fraser, Mr.

T. H. Brower, Mr. W. Walker, and Mr. H. M. Arnould.

Mr. COCKING—Then I propose Messrs. Fraser, Brower, Walker, and Ward.

Mr. C. V. ARNOULD—Will the Chairman (Mr. Fraser) serve?

The CHAIRMAN—Yes.—(Hear, hear.)

Mr. ARNOULD—Then I withdraw my brother's name.

The CHAIRMAN—Then if there is no other proposition before the meeting, I will put Mr. Cocking's motion to the meeting.—Carried unanimously.

The CHAIRMAN—The next business is the election of an auditor, Mr. O. Keil declines to serve us longer.

Mr. COCKING—I propose Mr. Ure for the position.

Mr. C. V. ARNOULD—Before proceeding with the business of electing an auditor, I should like to hear Mr. O. Keil's reasons for declining to serve again.

The CHAIRMAN—Mr. Keil is not present.

Mr. BROWER—Do any of the Directors know Mr. O. Keil's reasons for declining to serve again?

The CHAIRMAN—No, I don't know his objections. But I believe he objected to the way in which the accounts were kept, they were not kept according to his ideas, and, as he did not have his way about them, he preferred not to audit them.

Mr. BROWER—Can any pressure be put upon Mr. Keil, in order to induce him to take the position again?

The CHAIRMAN—He told me positively that he would not serve again.

Mr. BEST—I would second Mr. Ure.

Mr. BROWER—Well, under these circumstances, that is on the condition that Mr. O. Keil has definitely refused to act as auditor of our accounts, I will second Mr. Ure.

Mr. SCHREUTEN—Mr. Best proposes and Mr. Brower seconds the appointment of the Mr. Ure as our auditor.—Carried unanimously.

The CHAIRMAN—This concludes the business, gentlemen.

Mr. ALLCOCK—I beg to propose a hearty vote of thanks to the chairman of the late board of directors of the Club Hotel, Limited, and I hope next year the new board will have a better report for us than has been presented this year.—(Hear, hear.)

Mr. McDONALD—I beg leave to second.—Carried unanimously.

ELI PERKINS ON AMERICA AND JAPAN.

Eli Perkins, who has been travelling through Japan during the past few weeks, visiting Kobe, Kyoto, and Osaka on his way to and from Shanghai, is now resting for a few days in the Grand Hotel, Yokohama. Our representative called upon him on Friday, and, much to his regret, found the genial humorist stretched on his back, suffering acute agony from a malady akin to muscular rheumatism. This did not prevent him from extending a welcoming hand, however, to a fellow journalist, and, with a cheery smile, he bade us feel at home and turn on the torrent of queries which pressmen are popularly supposed to keep in readiness to spray over any unlucky individual who may fall within their particular sphere of motion. The usual stereotyped phrases were quickly exchanged, and Eli and his guest readily plunged into the midst of real business *katoba*. As a late comer from the land of the Stars and Stripes, and the question of the Presidential nomination being of course uppermost in the minds of the local community, it was only natural that conversation should soon be running strongly along that channel. When Eli Perkins was asked about the recent nomination of President Harrison over Mr. Blaine he said:—

"It was the culmination of a great fight. The Republican Party had two heads. The rightful head was the President in the White House; but Mr. Blaine, like the late Shogun, had built up a constituency seemingly stronger than the Mikado's. Blaine's power depended upon public popularity. He had no personal following. He was not in touch with any of the leaders. They all worshipped him from afar, but Blaine took no man into his confidence. Even Clarkson and Senator Platt were not in Blaine's confidence. Blaine was uncertain. When Clarkson went to Washington to see him, Blaine dodged, and went to New York and spent a day with the Damrosch baby. This, when the leaders of his party were waiting for him. Blaine actually tired out his friends. Everybody knows that Harrison is a positive man. He never avoids any issue. He never conceals a thought. His friends always know where to find him. When Blaine resigned his Secretaryship, it meant open war, but his friends were not positive. They were not organized. Their ardour was damped. In

fact Blaine wet the powder of his own men. They made no organized fight, and Harrison went in with a rush."

"And what of Blaine's future?"

Well, Blaine, great as he was, is dead. He has gone like Clay and Scott and Greeley. He has no political future. He will retire to Augusta. He had it is his power twice, by a positive commitment, to be President. He hesitated both times and is lost."

"How about his policy of reciprocity?"

"It will go right on. Harrison was always behind reciprocity. That is, he believes in free trade with young Republics where wages are high. But he does not believe in free trade with China, where labour is 5 cents per day. Not with England, France, and Germany where wages are half as high as in America. Carpenters, blacksmiths, cabinet makers, potters, and painters get three dollars a day in America. It would not do to have free trade with Japan and China where such labourers work for 50 cents a day. It is different with the South American Republics. Their wages are always as high as ours."

But it was when we tackled Eli upon more purely local subjects that he became really interesting—from a resident's point of view of course. It was with no little trepidation that we put the question—How about Japanese silk and tea?—and it is with greater trepidation that we give his oracular reply.

"They will always go to America free. I mean the raw silk. We can never make silk, tea, coffee, or rubber. So they will always come free. Our tariff is on things which we can make ourselves, and against any nation where wages are lower than ours. We will always buy twice as much of Japan as we sell her. What can we sell Japan? Possibly a little cotton, some flour, and some cheap cotton cloth. Japan will always supply us with her silks, teas, bronzes, and porcelain."

"What of China?" was naturally a corollary question.

"I have just come from China. She is going backward. Japan is coming forward. There are only two cotton factories in all China, and they do not pay. Japan is putting in thousands of looms and spindles. She has railroads, a superb postal service, and perfect light houses. Japan has put woman on an equality with man, she has licensed Christianity, established colleges and seminaries and adopted a cosmopolitan dress."

"And the people of Japan—how do you find them?"—was the next despairing query.

"Always happy. Always temperate. Always thrifty. The reformation commenced at the head with the Emperor, when, with his wife by his side, he rode into Tokyo in an English brougham. I notice some women still blacken their teeth, and some tattoo their arms and grease their hair, but it is among the lower orders. What Japan wants is a better foot-gear. These flip-flop sandals should go. They handicap progress. No soldier could fight in such foot gear. You are a nation in stocking feet. Put on good boots or shoes. A pair of good boots makes a man brave and valiant. With these flip-flop sandals you can neither fight nor run."

As we said good-bye we sorrowfully thought of Hamlet, Prince of Denmark, more particularly of his famous remark—"There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy." Even "cute American humorists, when they come to spy out the fair land of Japan, do sometimes rush in where angels fear to tread and make a "mess" of it generally.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

An outdoor meeting of the above mentioned Society was held at Meguro, near Tokyo, on Saturday, June 26th. The weather was very fine and the attendance was good. Meguro is well suited for the place of meeting of a society such as the Photographic Society and, as a consequence, some members appeared on the scene quite early in the morning, and some remained till late in the evening.

The rendezvous for lunch was Uchidaya, a tea-house with a fine garden and good rooms, which is near the celebrated temple.

The number of small cameras, hand and otherwise, was greater than at any other meeting, and many members appeared armed with their small instruments, who had not taken part in outdoor meetings before. This is highly encouraging. There was a want expressed by many of those present for a convenient portable dark tent in which plates might be changed. It is to be hoped that some of the skilful photographic apparatus makers now in this country will see that this want is not felt for long. On the whole the meeting was a great success.

MARINE COURT OF INQUIRY.

THE LOSS OF THE "IZUMO MARU."—PENDING.

Some weeks ago, the Marine Inquiry Office held an examination into the circumstances connected with the loss of the *Isumo Maru*, commanded by Captain Minamide, which was wrecked off the coast of Korea on the 5th April last. The following judgment has just been delivered:—

[TRANSLATION.]

The present case refers to the loss of the *Isumo Maru*, iron screw steamer, of 446.47 registered tonnage, and of 73 horse-power, the property of the Nippon Yusen Kaisha, which was wrecked near Shonan Island, on the south coast of Korea, on the 5th April, 1892, while Minamide Oshi, *shiooku* of Wakayama Prefecture, was in command. The facts elicited at the inquiry were as follows:—The *Isumo Maru* left Chemulpo at 2 p.m. on the 3rd April for Fusan. About 4 a.m. on the following day the sky suddenly became overcast, and a strong south wind began to blow, causing the ship to roll heavily. Towards evening the wind veered to the west, while its force lessened, but the sky continued overcast and the sea became enveloped in a thick mist, blotting everything out of sight. At 9.15 p.m. between Sylvia Islands and Pinnacle Rock the position of the ship was adjusted, and the course was changed to south, steering towards Race Point. After that, regardless of current or wind, the Captain calculated that with the steam pressure under which the ship was then being propelled, the vessel would reach Race Point about 1 a.m. on the 5th April. Previous to that hour, however, Race Point should have been observable on the port bow. About 12.30 a.m. the Captain suddenly noticed some broken white waves immediately in front of his vessel. He at once ordered the man at the wheel to put it hard a-port, and the engineers to reverse engines at full speed. But these tactics were of no avail, and the ship's bows ran aground. Thereupon the engines were stopped and the depth of the surrounding sea was sounded. Eight feet of water were found at the bow, but the lead did not touch bottom aft. In the engine-room, as well as aft, there was no leakage of water, but at the bows it quickly reached two feet in depth. The Captain imagined that the rock on which the ship rested was some hidden obstruction off Race Point. As the bows were still jammed on the rock he believed the vessel would not sink at once, though it would eventually, and he consequently ordered out the life-boats and distributed life belts. At this time the ship was rolling so much that the sailors could obey orders only with difficulty and the lowering of the life-boats was delayed. One, on the port side, was lowered, but it was partially damaged and quickly filled with water, and the passengers were unwilling to enter it. While other boats were lowering the bows suddenly slid off the rock, and the steamer began to founder. Soon afterwards she disappeared beneath the waves. It was then about 12.40 a.m. The damaged life boat was still floating in the neighbourhood of the wreck and three sailors swam to it. Ishizaki Iwazo, one of the passengers, the Captain, as well as seven others were swimming or floating near it, and they were rescued by the men who had scrambled into the life-boat first. The other 28 passengers and 26 officers and sailors were lost. Upon this evidence, the Court makes the following finding:—The Captain implicitly believed that he could reach Race Point at 1 a.m. on the 5th April, by steam power alone against the stormy winds and rough waters, in a thick mist and darkness. He therefore did not take any notice of the direction of the current and wind; and thus the ship went aground and sank. This indicates gross mismanagement on the part of the Captain in the discharge of his duty. After the ship was aground, though he gave every necessary order to rescue the lives of those in his charge, the rolling of the ship was so great, and the bows left the rock so suddenly that there were no means of rescue. In accordance with the 22nd clause of the 10th Article of Regulations relating to Certificates for Captains, Mates, and Engineers on board Steamships, the certificate possessed by Minamide Oshi is suspended for 2 years from this day.

(Signed) ITO ISABURO, Chief-examiner.
YOKOI TOKIYASU, } Assistants.
IWASAKI KANICHI, }

(Dated) 29th June, 1892.

The above judgment is approved, and is to be enforced immediately.

(Signed) Count GOTO SHUJIRO,
Minister of State for Communication.

(Dated) 29th June, 1892.

CHRIST CHURCH BAZAAR.

The most fashionable local event of the present summer—Christ Church Bazaar—passed off with great éclat on Wednesday, when for the nonce, the plain, square, and ugly interior of the Public Hall, was converted into a veritable land of enchantment, wherein angels, who are popularly supposed to be destitute of even the smallest tokens of the current coin of the realm or even cash balance at any Bank, might have ventured with impunity, but which men, with the least notions of economy, greatly feared to tread. Great expectations had been formed of this bazaar, and of course, as ladies were the controlling and directing genius of the affair, they were exceeded on every hand. The half dozen well loaded stalls were almost hidden by the wealth of foliage, flowers, and drapery which were lavishly employed in their adornment, and so supplemented the charms of the goods on sale and enhanced the varied attractions of the fair bevy of youthful assistants which every matron had called to her aid. It would have been difficult under ordinary circumstances to have resisted the subtle fascination which each daintily frocked saleswoman had so readily at command for the financial undoing of customers, but amid this picturesque and becoming setting their powers of extracting dollars from reluctant possessors—and even chits, for the omniscient chitbook was of course present—were multiplied, and nobody long entertained the idea of resisting their entreaties to buy—business was consequently brisk, buyers content and stall holders glad.

The Flower-stall occupied the position of honour in the centre of the hall, and a very lovely collection of floral gems were exhibited under its spacious canopy, ferns and foliage plants also bulking largely among them. This was in charge of Mrs. F. S. James, assisted by Mrs. Bremner, Mrs. Kewick, Mrs. W. B. Waller, Miss E. Burdett Leach, Miss Palmer, Miss K. Palmer, Miss Parkes, and Mrs. G. E. Buchanan Dunlop. In the corners of the room, upon entering from the vestibule, were a Lucky-well and a Gipsy tent. The first mentioned was managed by Mrs. J. Ramsay Parsons and Mrs. Tripler, who had for assistants Miss E. Burdett Leach and Miss Laura Smith. This was a very popular institution and was patronised by nearly everybody, who, one and all, seemed to derive unlimited satisfaction from their drawings. Miss von Hement was the presiding oracle of fate in the Gipsy's tent, and she received clever assistance from Mrs. Frank Gillett and Madame Lafaye de Mischeaux, who appeared adepts in the mystic arts of astrology. At opposite corners of the building were the Children's Refreshment stall and a Fancy stall. The little one's wants were attended to by Mrs. J. A. Fraser, assisted by Mrs. R. Home Cook, Mrs. Dudley, Mrs. A. C. Read, Mrs. Steele, and Mrs. Till. The Fancy stall was in charge of Mrs. Rickett, whose labours were lightened by Mrs. Herbert Fearon, Mrs. J. Cole Hartland, Miss Laura Varum, Miss Rickett, Miss Alice Rickett, and Miss Wheeler. A nicely arranged stall was that which Mrs. Irwine directed. It was devoted to the work executed by the ladies of the congregation. The rector's popular wife was assisted by Mrs. Holyoake Box, Mrs. Brearley, Mrs. Eldridge, Mrs. W. F. Mitchell, Mrs. St. John, Miss Bourne, Miss Violet Brent, Miss Hattie Hitchcock, Miss Rice, and Miss Laura Smith. At the exactly opposite side of the hall was situated the Toy-stall, which was under the energetic superintendence of Mrs. Moss, Mrs. Bond, Mrs. Brinkworth, and Miss Moss. It was dressed in pink and white, harmonising most excellently with Mrs. Rickett's stall, who had draped her's in green and white. These were all the stalls in the hall proper, but the floor had been raised so that the auditorium, platform, and proscenium were all on one level. The space between the front of the stage and the green-room, commonly known as "the wings," was converted into an ante-room, with lounges and settees placed under drooping palms, affording a most cosy retreat for five o'clock tea, or other light refreshment. At the back of this was placed the Refreshment-stall, where wearied and fagged out humanity were regaled with many dainties of a light and palatable order, suited to the heat of the day. This stall was in charge of Mrs. Whittall, whose assistants were Mrs. Bayne, Mrs. Dodds, Miss Eldridge, Miss Fanny Eldridge, Miss Grigor, Miss Nina Smith, and Miss R. Temple Willcox.

There were several extraneous means of obtaining fun without too long an attendance at the stalls, and perhaps the jolliest, from a juvenile and masculine point of view, was the Aunt Sally conducted by the men of H.M.S. *Pallas*. By the kind permission of Admiral the Hon. Sir E. Fremantle, K.C.B., C.M.G., Captain McQuhae, R.N., and officers of H.M.S. *Imperieuse*, the Band of the

Fagship was in attendance, and by their capital programme of music added greatly to the enjoyment of the function.

Towards the close of the evening the remnants on the stalls were submitted to public auction by Mr. W. Bourne, and bidding ruled brisk and prices fairly high, while the fun was fast and hilarious. Among the decorations which excited more than general interest was the enormous skeleton crab belonging to Mr. E. J. Moss, and in close proximity to it were the two large sawfish proboscis in the possession of the same gentleman. The takings we understand were extremely satisfactory amounting in the aggregate, after all expenses were met, to a clear profit of \$1,000 which will be devoted to several much needed improvements to the fabric of Christ Church.

IN THE YOKOHAMA CHIHIO SAIBANSHO.

Before Judge Ono and the Assistant Judge.

MOURILYAN, HEIMANN AND CO. V. THE GOVERNOR OF KANAGAWA KEN.

THE KEROSENE OIL CASE.

The second hearing of the above case was resumed on the 14th April, in the Yokohama Chihio Saibansho.

Mr. Mitsuhashi, for defendant, and Mr. Okamura, for plaintiff, were the Counsel engaged.

Counsel for Defendant—Before proceeding with the case I wish to correct a misstatement made by plaintiffs, and I also wish to ascertain a fact. Counsel for the plaintiffs stated that in requesting the delivery of kerosene the plaintiffs handed document "C" to the purchaser, in accordance with Art. 11 of Regulations relating to the Storage of Explosives, and the purchaser then presented the said document to the officer at the storehouse. But such is not the case. The provision in Art. 11 is for the delivery of goods to the depositor only, and is therefore not applicable to the purchaser. Such has always been plaintiffs' custom.

The Judge—By document "C" in Art. 11, do you mean the delivery order which the owner of the goods hands to the purchaser?

Counsel for Defendant—Yes, but it is not presented by the purchaser.

The Judge—Then do you mean that when the deposited kerosene is delivered, the original owner alone shall present the order?

Counsel for Defendant—Yes, quite so. Document "C" in Art. 11 must be prepared by the owner, and he only presents the same to the officer. Therefore the statement made by plaintiffs at the last hearing was incorrect, and I wish to correct it. I wish also to ask a question of plaintiffs. At the first hearing I thought plaintiffs stated that the present suit concerned only those thousands of cases recently lost, and that there had been no wrong deliveries before or after the present suit; that is to say, all other cases had been properly delivered. I wish to ascertain whether that was so?

Counsel for Plaintiffs—I did not say that all deliveries, excepting the one concerned in the present suit, had been properly made. But the facts can be ascertained at plaintiffs' office.

Counsel for Defendant—I have another question to ask concerning a statement made at the previous hearing. Upon comparing figures, I find that the number of kerosene cases stated by plaintiffs is different from that given by the Kencho. Have plaintiffs any books which show the exact number of cases lost?

Counsel for Plaintiffs—Of course we have books whereby to check the number of lost cases, but they are not in Court, so I am unable to give you a positive answer.

Counsel for Defendant—I have a request to make. The present suit is a demand for an indemnity for the wrongful delivery of kerosene. But to establish the amount of such indemnity the plaintiffs must produce documents proving the exact number of cases lost, and the defendant, on the other hand, must also produce documents to disprove any statements made by plaintiffs. Such a process is very complicated, therefore, the defendant ventures to ask the Court, first, to ascertain whether the Governor wrongfully delivered the goods or not, and if that be proved, then to proceed to assess the amount of indemnity. If, on the other hand, the Governor is found to have properly delivered the goods, then the question of an indemnity need not be discussed at all.

The Judge—Since the wrongful delivery of any article in this suit has not yet been ascertained, the case cannot be separated thus.

Counsel for Defendant—I consider it would be more convenient to determine whether the Governor did wrongfully deliver the kerosene or not, and if

that be decided then to consider the number of cases thus delivered.

The Judge—What do the plaintiffs say to the proposition?

Counsel for Plaintiffs—There appears to be no inconvenience in acting thus, and as the amount of indemnity is a very important point in the suit, and so long as the proofs relating to the amount are allowed to be brought forth in the present hearing, there is no disagreement on the plaintiffs' side.

The Assistant Judge—We can settle whether the Governor wrongfully delivered the goods or not to day; but is there no disagreement on the part of defendant as to the number of cases alleged to have been lost?

Counsel for Defendant—Of course there is a disagreement. But I wish to put that question aside now, and proceed with the issue as to the Governor being responsible or not.

The Assistant Judge—Is there no objection on plaintiffs' part to proceeding with that part of the case first?

Counsel for Plaintiff—No. As the production of documents relating to the amount of indemnity is a very important point, I shall have no objection to the Court proceeding, if those documents are allowed to be brought out during the present hearing.

The Judge (to Counsel for Defendant)—Do you mean that those 43,400 cases of kerosene oil delivered to Akew, the Chinaman, were not a wrongful delivery, and that therefore the Governor has no responsibility, nor need pay plaintiffs any indemnity?

Counsel for Defendant—That is so. I fail to see that there was a wrongful delivery, although those cases of kerosene were handed to Akew, as I stated previously.

The Judge—Then do you mean that they were delivered to Akew by the proper process?

Counsel for Defendant—Yes. There was no wrongful delivery at all.

The Assistant Judge—The defendant has just now asked the Court to divide the case into two. But as the question relating to the number of times at which those cases were delivered is still undecided, will it not render the issue vague if the responsibility of the delivery is separated from the number of deliveries?

Counsel for Defendant—No. If the Court first determines whether the Governor is responsible or not; and, if that question is settled in favour of the Governor, then there will be no necessity to estimate the number of cases thus delivered.

The Assistant Judge—By the term determining the Governor's responsibility, do you mean whether the Governor wrongfully delivered those cases by his own negligence or not?

Counsel for Defendant—Yes.

The Assistant Judge—Is there no objection on the plaintiffs' side?

Counsel for Plaintiffs—None, so long as the evidence relating to the estimate is allowed to be brought forward, as I stated before.

The Assistant Judge—Does the defendant know which delivery was considered wrongful by the plaintiffs?

Counsel for Defendant—I don't know the exact number of lost cases, but I know the portions which they refer to. But if the application for delivery, expressly provided for in Art. 11 of the Regulations, be proved to be genuine, there will be no wrongful delivery in a single instance.

The Judge—I remember that at the close of the last hearing the defendant promised plaintiffs to investigate the actual quantity of kerosene oil cases received by him, the defendant. The present request of defendant, therefore, seems somewhat contrary to the previous arrangement.

Counsel for Defendant—The defendant has carefully inquired into this subject, according to promise, but the numbers given by plaintiffs do not coincide with those of defendant. It is owing to the great difficulty in deciding this point that I request the Court to determine whether the Governor is responsible for the loss or not, first of all.

The Court adjourned for a short time, and upon the Judges resuming their seats.

The Judge said—The Court considers it necessary to enquire more fully into the facts of the case, therefore the request of the defendant is not granted, and the examination into the number of lost cases shall continue.

Counsel for Plaintiffs—Then I wish to ask the defendant whether he has ascertained the quantity of oil delivered to Akew?

Counsel for Defendant—I have examined into this matter, but the documents were so confused that the exact quantity of oil delivered to Akew could not be ascertained.

Counsel for Plaintiffs—I did not ask you to enquire into the quantity or number of lost cases, but to investigate and produce the document relating to them, i.e. the applications and receipts.

Counsel for Defendant—Books and other documents must be produced by the plaintiffs.

The Judge—Then the plaintiffs may ask questions of the defendant.

Counsel for Plaintiffs—The first question is—Did the defendant receive 64,523 cases of kerosene oil, which was imported per *Hilaria* on the 6th August, 1888?

Counsel for Defendant—We received some Kerosene oil cases, but the number of them differs.

The Judge—If the defendant is unable to present documents in which the difference of received numbers are stated, he may state that difference verbally.

Counsel for Defendant—It is difficult to collect all the documents relating to it.

Counsel for Plaintiffs—If the defendant presents the receipts and the orders for delivery, the whole thing will be made clear. It will cause some inconvenience if the defendant says that he cannot answer the question unless by making further enquiry. Everything would be made clear if those documents in the Kencho were brought here. What documents the plaintiff possesses are but copied from the documents in the Kencho, therefore there can be no trouble in presenting the original.

The Judge—Cannot the defendant produce such documents?

Counsel for Defendant—At the Kencho those documents are regarded as so much waste-paper, so they are incomplete.

The Judge—Do you mean then that you are unable to present them?

Counsel for Defendant—No.

Counsel for Plaintiffs—If the defendant has no receipts the applications alone will be sufficient, and I hope the defendant will produce them.

The Judge—To what vessels do the documents you want relate?

The Plaintiff—They are the *Hilaria*, *Enos Soule*, *Abbie S. Hart*, *Felipse*, *Anglo-American*, *Milverton*, and *Calyppo*.

The Judge—Do the plaintiffs know the date of the arrival of those vessels which imported the kerosene, which they allege was lost subsequently?

Counsel for Plaintiffs—Yes. The *Hilaria* arrived on the 6th August, 1888; the *Enos Soule* on the 2nd November, 1889; the *Abbie S. Hart* on the 17th December, 1889; the *Eclipse* about the 9th June, 1890; the *Anglo-American* on the 19th May, 1890, and the *Calyppo* on the 14th February, 1891. If the defendant produced the applications the person in whose name the oil was demanded back can be ascertained.

The Judge—Then the plaintiffs must state the reasons for the request.

Counsel for Plaintiffs—In every application for the delivery of oil, if there is attached the signature of a proper member of the firm the application is valid, but no such name is affixed except that of a Chinaman, who has no such power, and the application is void, and any kerosene released upon it must be considered wrongfully delivered. It is to ascertain this fact, of proper or improper signature, that I request the production of those applications. As those documents are in the Kencho, I request the defendant to produce them. The reason of my stating this is that the plaintiffs always presented these documents to the Kencho, and as the receipts were returned to the officials at the time of the delivery of the goods the plaintiffs have now no such documents in hand.

The Judge—What answer does the defendant propose to make?

Counsel for the Defendant—The defendant may bring such documents forth to support his case, but at present I refuse to produce them.

The Judge—By which clause in Art. 336 of the Code of Civil Procedure do plaintiffs request defendant to produce those documents?

Counsel for Plaintiffs—By the express provisions of Article 335.

The Judge—The Code of Civil Procedure, Art. 335 only provides that a party to a suit may demand the presentation of documents which are in the hands of his opponent to support his case. But the same does not provide any obligation to comply with the request. The provisions of Art. 336, however, would oblige defendant to produce them. But by Art. 335 no such request need be granted by the defendant, therefore he may or may not produce them, just as he pleases. Plaintiffs must now proceed with any further questions relating to the facts of the case.

Counsel for Plaintiffs—Does the defendant know the number of cases imported by the *Hilaria*, and was there any signature on the application for deposit?

Counsel for Defendant—I do not remember the exact number of cases at present, but the signature on the application was "Edwards."

Counsel for Plaintiff—When the receipt was given, was it addressed to the firm or to an employé of the firm?

Counsel for Defendant—It was addressed to the firm.

Counsel for Plaintiffs—Who signed the application for deposit of cases imported per *Enos Soule*? Counsel for Defendant—Edwards and Akew.

The Judge—Were those signatures on one document?

Counsel for Defendant—No, separately on three documents.

The Judge—What were those three documents?

Counsel for Defendant—Two were signed by Edwards and the third by Akew.

Counsel for Plaintiffs—Was the address the same?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Did you receive any kerosene oil imported per "Abbie S. Hart"?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Who signed the application?

Counsel for Defendant—Edwards and Akew. There were four documents, and three of them were signed by Akew.

Counsel for Plaintiffs—Was the receipt also addressed to the firm?

Counsel for Defendant—Yes. On all those applications the name of the firm was stamped, under which Edwards' or Akew's name was signed.

Counsel for Plaintiffs—Did you receive any kerosene oil imported per *Eclipse*?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Who signed the application?

Counsel for Defendant—There was only one document, and it was signed by Akew under the stamp of the firm.

Counsel for Plaintiffs—Did you receive any kerosene oil imported per *Anglo American*?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Was the signature on the application that of Edwards also?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Did you receive any kerosene imported per *Milverton*?

Counsel for Defendant—Yes.

Counsel for Plaintiffs—Who signed the application?

Counsel for Defendant—Akew. There were five applications.

Counsel for Plaintiffs—Were all those applications stamped with the name of the firm?

Counsel for Defendant—Yes. They were all the same.

Counsel for Plaintiffs—Were the receipts addressed to the firm.

Counsel for Defendant—Yes, they were all addressed to the firm.

Counsel for Plaintiffs—Can you inform me what were the signatures on the delivery orders?

Counsel for Defendant—If asked minutely I may not be able to answer you, but I will answer as well as I remember. I cannot, however, inform you of the number of cases deposited.

Counsel for Plaintiffs—Whose name or names were generally attached to the order?

Counsel for Defendant—Generally Edwards, Paterson, Akew, Aking, Shin, Ketchin, and Alai.

Counsel for Plaintiffs—Delivery orders issued after the kerosene imported per *Anglo-American* were, I believe, signed by pen. Were there any orders signed in pencil?

Counsel for Defendant—I cannot answer you for certain, but I believe they were all signed by pen. There may be one or two signed in pencil, but they are so few that I do not remember any.

The Judge—You can give no definite answer?

Counsel for Defendant—Not just now.

Counsel for Plaintiffs—What kind of ink was generally used in signing those orders?

Counsel for Defendant—They were generally written with foreign ink.

Counsel for Plaintiffs—Were there generally more signatures than Edwards and Akew on those orders?

Counsel for Defendant—Yes.

Counsel for Plaintiffs proceeded to ask several questions as to certain delivery orders, which the plaintiffs had copied at the Kencho.

Counsel for Defendant—Questions relating to those delivery orders cannot be answered with any certainty, as some of the documents are still in the Kencho, and possibly some of the dates and the exact number of cases delivered could not be ascertained.

Counsel for Plaintiffs—I hope you will ascertain them.

The Judge—Can the defendant make such an investigation?

Counsel for Defendant—Even if they could be ascertained such unimportant matters can have, I think, very little weight in deciding this case.

Counsel for Plaintiff—I do not think so. I therefore must ask the defendant to make an investigation. I only wish to know the number of cases

brought by the *Anglo-American* and three other ships.

The Judge—Does the defendant intend not to answer the questions, owing to his inability to make a thorough investigation?

Counsel for Defendant—I do not intend to answer them.

Counsel for Plaintiffs—Do you mean to say that you refuse to answer them, or do you deny the correctness of our dates and the number of cases, as given by us?

Counsel for Defendant—They are certainly incorrect.

Counsel for Plaintiffs—Then I must ask the Court for permission to call a witness. He is a foreigner, and as he is busily engaged he will not be able to appear until the afternoon. Will the Judges allow him to appear then?

The Judge—If counsel for plaintiffs wishes to call witnesses he may do so, but the case has not yet advanced far enough to allow of witnesses to be called.

Counsel for Plaintiffs—If the defendant acknowledges our documents with the number of cases deposited, and the respective dates, I shall not require to call any witnesses, but if not, I shall have to produce evidence to vouch for the accuracy of our statements. (To Counsel for Defendant)—Do you not know that in the trading usages of Yokohama no Chinaman employed in any foreign establishment is empowered to draw up orders or contracts by himself as representing the firm?

Counsel for Defendant—Of course the defendant is not only unaware that such a custom exists, but, on the contrary, we can call evidence to prove that the custom is quite the other way about.

Counsel for Plaintiffs—I must then ask leave to call witnesses, to prove that the documents which we possess were copied at the Kencho; and also that, according to the trading usages of Yokohama, no Chinaman employed by a foreign firm has the right to represent such firm.

The Judge—You may call such witnesses. Counsel for Defendant—If so, then the defendant also wishes to call witnesses to prove that no such usages are recognized.

The Judge—Who are your witnesses? Counsel for Defendant—I must notify them afterwards.

The Judge—Very well. As it is 12 o'clock, the Court will adjourn till 2 p.m.

When the sitting was resumed in the afternoon, Counsel for Plaintiffs said—I wish to know whether the defendant acknowledges whether 35,241 cases of kerosene oil, imported per *Anglo-American*, were received by him?

Counsel for Defendant—The exact number cannot be ascertained until a full investigation is made, but according to the application presented by the plaintiffs the number of cases was put down as 57,525.

Counsel for Plaintiffs—Has the defendant possession of a receipt for the 35,200 cases which he mentioned this morning?

Counsel for Defendant—That cannot be answered here.

Counsel for Plaintiffs—Does he acknowledge the 86,000 cases of kerosene, imported per *Milerton*, were deposited?

Counsel for Defendant—Again the numbers differ. In the applications, besides an application for 86,000 cases, there were four other applications viz., for 410, 170, 90, and 453 cases respectively.

Counsel for Plaintiffs—Was the number of cases imported per *Calyssa* 60,000?

Counsel for Defendant—Again the amount is wrong. There were, besides these 60,000 cases, applications for 350; 70; 343; 290; 240; and 140 cases.

Mr. John Middleton, of 22, Settlement, Yokohama, was then put upon the witness stand.

Counsel for Plaintiffs—What is the nature of your business in Yokohama?

Witness—I am a general importer and exporter. Counsel for Plaintiffs—Do you import kerosene oil?

Witness—Yes, but only in small quantities.

Counsel for Plaintiffs—When you imported any considerable quantity of kerosene oil how did you store it?

Witness—After it had passed through the Customs, I prepared an application to store it in the Kencho's warehouse.

Counsel for Plaintiffs—When it was stored did you always get a receipt?

Witness—Yes.

Counsel for Plaintiffs—By what process was the oil delivered?

Witness—By presenting a delivery order.

Counsel for Plaintiffs—Who signed those delivery orders?

Witness—I, myself, or some one properly representing me.

Counsel for Plaintiffs—Was such a representative always duly and properly empowered?

Witness—Yes. One person was appointed to always represent me in general affairs.

Counsel for Plaintiffs—Was such an appointment made verbally or by a written document?

Witness—A power of attorney was handed to him, but sometimes it was done verbally. Whenever such a representative is appointed the formal process is gone through in the presence of a solicitor.

Counsel for Plaintiffs—Does the person who signed the original application sign the delivery order also?

Witness—Not always; for a firm's representative does not always remain in the office.

Counsel for Plaintiffs—Can anyone sign the delivery order, or only the proprietor and his representative?

Witness—No one, except those who hold a power of attorney.

Counsel for Plaintiffs—What process is gone through when kerosene is to be deposited?

Witness—It is always the same. When a representative signs the application, he signs the firm's name first, and under that writes his signature.

Counsel for Plaintiffs—In the application, the phrase "by the request of the undersigned only the goods shall be delivered," etc. is expressed. It looks as if no one else could demand delivery. Has any person who has not signed the original document obtained deposited goods by signing the delivery order?

Witness—I do not remember for certain, but I think anyone who was duly appointed as a firm's representative might sign the document.

Counsel for Plaintiffs—Do you employ any Chinamen in your office?

Witness—Yes.

Counsel for Plaintiffs—Did you ever allow any of those Chinamen to sign a delivery order?

Witness—No; a power of attorney was never given to any Chinaman, so he has no power to sign.

Counsel for Plaintiffs—Then to Europeans alone you give your power of attorney?

Witness—Only Europeans or Americans, who receive my power of attorney, may sign the delivery order.

Counsel for Plaintiffs—Is it not an acknowledged custom in Yokohama never to commission a Chinaman to represent a firm?

Witness—Yes, I think it is the custom among foreign firms not to allow any Chinaman to represent them.

Counsel for Plaintiffs—In issuing a delivery order do you always stamp the seal of your company or firm upon it? Or, have you ever lent your seal to have documents stamped for you elsewhere? Did you ever receive from bond any quantity of kerosene simply by stamping the firm's seal on the document and without attaching any signature?

Witness—Sometimes. But then such a delivery order was drawn up by some one who was authorized to do so.

Counsel for Defendant—I wish to put some questions to the witness. Witness told us that he does not import kerosene in any large quantity. What percentage of your whole business is in kerosene?

Witness—My firm only imports kerosene every now and then. Generally this portion of our business is managed by the Chinamen employed in the office.

The Judge—That answer was not required. It is only necessary to state how much kerosene you imported annually, and what is its total value.

Witness—That I cannot answer at once, but I can ascertain from the books in my office.

The Judge—Cannot you give us a rough estimate?

Witness—I cannot give you the value of the oil, but the amount imported is, roughly, about 60,000 cases in two years.

Counsel for Defendant—How long have you been engaged in the kerosene trade?

Witness—About 10 years.

Counsel for Defendant—What quantity of kerosene have you imported during those 10 years? Is it your special business?

Witness—I cannot tell you how much I have imported, altogether. The Kerosene trade is not my special business, but only a subsidiary affair.

Counsel for Defendant—When the deposited oil was to be delivered back to you did you always present receipts with your delivery orders, in accordance with the Regulations?

Witness—Yes, always.

Counsel for Defendant—If your firm always appointed a representative, signing *per pro.*, you must have used at least two kinds of delivery orders. Were there any in which the signatures of both the proprietor and the representative were written?

Witness—Yes, there were many such.

Counsel for Defendant—Could you tell me in what particular form or way they were signed?

Witness—There are 4 different kinds, viz.—Middleton and Co., M. & Co., pp. G. W. Middleton; M. & Co. pr. G. W. Middleton atty.; Middleton & Co. pr. G. W. M.

Counsel for Defendant—By what method do you generally inform the public that you have appointed a person to act as representative for the firm?

Witness—I always inform my bank of his name, but I never notified the fact to anybody else.

Counsel for Defendant—Do any of the Chinese in your employ represent your firm in dealing with Japanese?

Witness—Never. But those Chinamen are of course authorized to transact the business of the firm.

Counsel for Defendant—All the answers you have given to our questions are simply the customs of your own firm, and not a general or acknowledged usage, are they not?

Witness—Except that portion relating to the signature of Chinamen, they are the customs of our own firm.

Mr. Chickshank, 35, Settlement, was then called as a witness.

Counsel for Plaintiffs—How many Chinamen have you in your office?

Witness—There are several and Ki-ching is at the head of them.

Counsel for Plaintiffs—Are Akew, Alai, Akin and other Chinamen under him?

Witness—Yes.

Counsel for Plaintiffs—What do they do?

Witness—Principally book-keeping and weighing tea.

Counsel for Plaintiff—Are those Chinese sometimes commissioned to manage your kerosene business?

Witness—Yes. But they only carry kerosene cases from the ship to the shore, or deliver the cases when they are sold; and then some European or American from the office always superintends them.

Counsel for Plaintiffs—Are they sometimes commissioned to sign kerosene delivery orders?

Witness—Never. We do not give them such authority.

Counsel for Plaintiffs—But do you know of no case in which any Chinese signed your delivery order, and received the kerosene?

Witness—What they did while I was absent from Yokohama I don't know. I have not known a single instance of such a thing myself.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., May 28th.

We are exercised in mind and body about this time by many things. Certainly there is physical exercise enough, for every Boston man who is in a hurry, will not wait to ride. If he does, he may wait all the afternoon for the raising of the blockade—the jam of street cars, horse and electric, that stops the way. This may not be of especial interest to the world at large, but it may serve to warn the absent and travelling Bostonian to be on his guard when he returns. A countryman was heard to exclaim, "By sixty! This beats anything! I've seen yet—'lectric cars er-runnin' like lightning in some streets, wander ther people aint all killed, an' jest er-stand-in' still in other streets. Give me ther kentry. It's ther safest!"

The "burning question of the hour" to politicians is, "Will Blaine run?" Under his signature appears occasionally a disclaimer to the effect that he is out of the race for the presidential nomination, and the next day this is contradicted and the country is assured that he will accept the nomination, if tendered to him. There was reason to suppose that the Harrison following was somewhat disturbed by the possibility that Blaine may be a candidate. The Democrat party is also in the dumps whenever Blaine's name comes up prominently as that of the candidate, for they realize, as do his opponents in the Republican ranks, that Blaine has great strength. It has been declared often by politicians who ought to know, that if Blaine does become a candidate, he will "carry the country." The fact that Blaine was unsuccessful in 1884 by a few votes, and that he lost the election through the ringwump defection, an element neither Republican nor Democrat, aroused the sympathy of the people. All along the line—both lines—the fight thickens. The state conventions have all been held, the delegates have been chosen, and now in a few weeks the national conventions will be held, and the question, "Blaine or not Blaine" will be settled. If Blaine be not nominated, it may be taken for granted that

will be the last of Blaine politically. According to some minds, Blaine has been always a disquieting element, and it is now time to lift him up or set him down "for good." The Republican leaders declare that there is no doubt that Harrison will receive the nomination.

The most disastrous flood since the breaking away of the dam at Johnstown in New York, a few years ago, has laid in waste a part of the city of Sioux City, on or near the confluence of the Floyd and the Missouri rivers, in the state of Iowa. It is reported that one hundred persons have been drowned. More than eight thousand persons were driven from their homes. The damage to property is estimated at two million dollars. Hundreds of houses were swept away, and thousands of cattle in stock yards were drowned and sent adrift in the Missouri. Near St. Louis four hundred square miles are covered by water, and fifteen hundred persons are homeless. The overflowing of the waters is felt all along the Missouri, from Sioux City down, and the loss, all told, is beyond estimate. Every year the "water problem" becomes more difficult of solution, both in the Missouri and the Mississippi valleys. The Government has made enormous appropriations, especially for the curbing of the Mississippi, but every year the river changes its bed and channel and, like an insatiable monster, "swallows up," and encroaches more and more on the land.

There is seldom a time when there is not a conflict between capital and labour in this country, but it is not often that a "strike" of such dimensions as the one now in progress disturbs the country. The granite workers, labourers in granite quarries, throughout New England and elsewhere, demanded higher wages, and not getting it, stopped work. The number of men idle "on strike" is said to be a hundred thousand, and daily increasing. It has already interfered with building operations, and is likely to result in great damage to builders, for already the supply of granite is cut off. A builder makes a contract to erect a building within a certain time, and is held responsible if he fails to complete the structure in the time specified. Builders of granite structures must now wait for a supply of material. The capitalists, thus far, refuse to accede to the demands of the strikers. The strike is spreading over the country and the various labour organizations are ordering their men to stop work. The workers on the Grant monument, and those employed on the Capitol at Albany, have joined the strikers, and in many other places work is abandoned. Thus, from the refusal of one firm in New England to advance wages a few cents a day, has come one of the greatest strikes the country has seen, and one that promises to be much more extensive before it is settled, interfering with all factors that enter into the construction of buildings.

The census bureau has issued a bulletin showing that the number of dwellings in the United States in 1880 was 8,955,812, and in 1890 was 11,483,318. The average number of persons to a dwelling in 1880 was 5.60, and in 1890, 5.45. In the North Atlantic region in 1880 there were 5.97 persons to a dwelling, and in 1890, 5.87. Massachusetts, Rhode Island, and New York have the largest number of persons to a dwelling, the number averaging more than six.

In 1880 the national debt amounted to about thirty dollars for every inhabitant in the United States. In 1890 it had been reduced to about fourteen dollars to every inhabitant. In the decade the national debt was reduced one hundred million dollars a year. Never before was a public debt paid off so rapidly. Meanwhile, however, the aggregate of state and local debts has increased, and the total is greater than the national debt. Yet it has not increased so rapidly as the population. Accordingly, the state and local debt has decreased from twenty-two dollars for each inhabitant in 1880, to eighteen dollars for each person in 1890. The state and territory debts are for the most part, small. The state debts amount to less than one-third of the debts of cities. Only one state or territory, Utah, has no debt.

In 1890, a tax was paid to the United States on more than eighty-eight million gallons of distilled spirits, and a duty was paid on a million gallons more imported. In the same year, an internal revenue tax was paid on \$74 million gallons of malt liquors, and an import duty on three million gallons more imported, making about six quarts of distilled spirit for every man, woman and child in the United States, and fourteen gallons of malt liquor for every man, woman, and child.

We are at peace with Italy again. Baron Fava, Minister to this country from Italy, and who was recalled at the time of the New Orleans affair, has returned to Washington. He was met in the harbour of New York by some of his countrymen and welcomed. He has called at the White House,

seen the Secretary of State, and shaken hands all around. The Baron informed the President that the Sovereign of Italy, the Italian government, and all the people were much pleased with the amicable settlement of all difficulties, and hoped ever to remain on a friendly footing. Italy will now come to the World's Fair with a large and varied exhibit.

Memorial Day, a day set apart to decorate the graves of soldiers who fell in the War of the Rebellion, and to eulogize the services and sacrifices of the soldiers, comes on thirtieth of this month. General Horace Porter, who is collecting funds for the completion of the Grant monument in New York, announces that all of the \$300,000 except \$46,000 has been collected, and that the remainder will be subscribed, probably on or before Memorial Day.

T. Jefferson Coolidge, the new minister to France, has at last received his credentials in spite of the foolish objection of some of the members of Congress, and was given a "Farewell banquet" on May 24th at the Algonquin Club house in this city, at which were present many of the prominent men of Boston.

Later advices from the flooded district show that one county in Tennessee is under water, and that the water has destroyed 225,000 acres of corn, 300,000 acres of wheat, and 200,000 acres of cotton. The water is still rising, and it is believed that a million acres will be flooded.

About this time of the year the game of football is at its height. Colleges are closing up their "curriculums," and the students have more time (they appear to have all the time at any time) to give to sports. A gentleman from England, just arrived, happened to get into a railway train where were young men in various stages of wear or dilapidation. Some of them had one eye and some had none; clothing was torn, and in some cases showed signs of a bloody conflict; some had arms and legs in splints and bandages, all proclaiming the fact to a stranger that some terrible accident had befallen them. The Englishman, interested and sympathetic, asked where the accident occurred. He was greeted with "roars of laughter." It was merely a foot-ball eleven returning home after the "game."

The Rocky Mountain Cyclone has just appeared with this editorial announcement:—"We begin the publication of the *Cyclone* with some phew difficulties in the way. The type phounder phrom whom we bought the outfit phor this orphus phailed to supply ephs or cays and it will be phour or phive weex bephore we can get any. We don't ligue the idea ov this cind ov spelling, but mistax will happen in the best regulated phamillies and tpi the es and the exes and the qus hold out we shall ceep the *Cyclone* whirling aphter a phasion till the sorts arrive. Its no joque to us; it's a serious aphtair."

JAPANESE CHARACTERISTICS.

By PROFESSOR C. G. KNOTT, D.Sc., F.R.S.E.

(READ AT MEETINGS OF THE SCOTTISH GEOGRAPHICAL SOCIETY AT EDINBURGH, GLASGOW, DUNDEE, AND ABERDEEN IN FEBRUARY AND MARCH, 1892.)

To describe the characteristics of an alien race is a difficult task. There is apt to be a lack of perspective in the delineation, a want of balance in the coloring. What is novel to the observer is exaggerated unduly; and, in the straining after contrast, the representation degenerates not seldom into a caricature. In regard to Japan this is particularly true. The visitor who speeds through the country as one noon wax and wanes talks of Japanese ways of life and habits of thought with a certainty and an assurance which the resident of ten years' standing cannot attain to. The more we mix with this most interesting of Oriental peoples, the less we seem to know of them, the more difficult we find it to hit off their characteristics in a few brief sentences. The following paper is an attempt to give the impressions gathered during eight years' experience of Japanese life. If the result be only to correct certain exaggerated views that have wide currency, I shall feel that the paper has accomplished one good end. It will be noticed that nothing technical has been enlarged upon. For example, I have considered only the significance of the artistic feeling in its relations to every-day life, and have left untouched the art itself. In brief, the characteristics here spoken of refer almost entirely to the national character, intellectual, moral, and emotional, as it now exists, and as it has been developed in its historic setting. A short historic introduction does not seem out of place.

The Empire of Japan, like the Kingdom of Scotland, is inhabited by two distinct races speaking distinct languages. Of these the Ainus is the older, and must, from lack of earlier historic information,

be regarded as the primitive or indigenous race. The Japanese were invaders, although in their own mythology there is no distinct recognition of this fact, which must have happened before the national memory had awakened. The evidence that the Ainus occupied the land is three-fold. First of all, Ainus, at present found no further south than the Island of Yezo, have within historic times lived in the north of the main island. Then, secondly, Von Schrenck has shown, in his great work on *Amur Land*, that all over the north eastern parts of Asia numberless isolated tribes live, each speaking a different language. These are the fragments of earlier races, which have gradually been pushed into the holes and corners of this old-world region by the pressure of younger and stronger races surging ever eastwards. The Ainus is one of these remnants; and it is possible that the struggle between the Ainus and Japanese may have begun when both races inhabited the continent. That the old cave-dwellers and shell-heap architects of Japan were really the Ainus we have no evidence at all. Nor have we evidence that they were not—except that no Ainus lives in a cave now, and that in certain Ainus myths we have mention of dwarfs. Finally, we have the remarkable evidence, first brought forward by Professor Chamberlain, that many Japanese place names are of Ainus origin.

So familiar is this explanation of place-names to us English-speaking residents of a once Celtic country that we might easily fail to see the full significance of its application to the Ainus-Japanese problem. We know from history that the pure Celt was our predecessor in this land; and long before philology had birth many names were recognised as Celtic and understood in their Celtic sense. But until within the last few years, it had never entered the Japanese imagination that he was originally an alien to the soil on which he stood. Was he not with all his kin the direct descendant of the divine beings Izanagi and Izanami, from whom also by ordinary generation the whole Japanese archipelago was produced? The first human Emperor of Japan—the great Jimmu Tenno—was he not only four generations removed from the Sun-goddess, herself a child of the august pair of deities just mentioned? True, the better-educated Japanese of to-day ignore the legends of the gods, and are content to begin with Jimmu Tenno himself. Still, the fact remains that there is no distinct suggestion in these myths of the race having ever occupied other territory than the islands of Japan. All names in Japan are therefore presumably of Japanese origin, except in such regions, possibly, as are known to have been inhabited by the Ainus.

Now, in making this search after Ainus-derived names, Professor Chamberlain could get absolutely no assistance from the Japanese themselves. Every place-name in Japan is represented by a combination of Chinese characters as ideographs. Beyond the significance of these the Japanese cannot get. Ask him what the name meant originally. He will point to the characters, quite heedless of the probability, in some cases the absolute certainty, that the name existed as such long before the introduction of letters, long before a Japanese eye had gazed on an ideograph. To illustrate the process, and at the same time to show how misleading Japanese philological methods are, take a concrete example.

Back in the darkness of the unlettered past an Ainus community is settled by the banks of a stream. This by way of distinction they call *Tonai*, or "stream with the lake." Japanese strangers come in among them, few at first, no doubt, and perhaps friendly enough. Gradually, however, the superiority of the new comers tells, and the Ainus reluctantly seeks other haunts. But the name *Tonai* stays behind in the slightly disguised Japanese form *Tonami*. Centuries slip past until civilisation and letters come hand-in-hand from China. The Japanese schoolmaster is now abroad, and every name of importance must be cast in a Chinese mould. The priest and soothsayer lend their aid, and evolve a pleasing combination of lucky ideographs, phonetically identical with *Tonami*. In its written form, and to the Japanese eye, the name means "hares in a row;" how such a title could come to be applied to an insignificant village may be left to the ingenuities to solve. Other examples might be given; but I shall content myself with two. *Tsushima*, the island which lies between Korea and Japan, is represented by two characters meaning "opposite horses." Professor Chamberlain regards it as a Japanese corruption of the Ainus *tuima* "distant." The Japanese always introduces the *s* sound between *t* and *u*, and dislike certain diphthongs—hence from *tu i ma* comes *tsu-shi ma*. The Rev. Mr. Bachelor, following up this theory, has given a most plausible derivation of *Fuji-san*, the peerless mountain of Japan and one of the most frequent objects in pictorial decoration. It rises, an almost perfect

cone, to a height of 12,400 feet above the sea. It is a dormant volcano, hardly extinct. The Japanese write its name "the mountain of wealth." But there is an Ainu word *Euchi*, which in a Japanese mouth would almost certainly become *Fuji*, and which means the Goddess of Fire—a very appropriate name indeed for a lofty burning mountain.

Our first conclusion then is, that the Japanese are not aboriginal on the soil they now possess. Like ourselves, they passed over from a large continent to a small island, and there, in partial isolation, they began to develop their national characteristics. Exactly where they came from we know not; exactly what other race they are most nearly akin to is a problem still awaiting solution. The language is structurally similar to the Korean and Manchurian languages; but it is entirely dissimilar to the literary Chinese. It abounds in Chinese derivations, as our English does in Latin. But it was no mere borrowing that gave the Japanese their literary language—it was absorption, assimilation.

The Japanese, as we are all aware, have often been characterised as the most imitative of peoples. In this connection the imitative faculty is mentioned in rather a deprecatory way, as if we of the West were so very original. Nevertheless, historically, Japan has not been a greater borrower from her neighbours than were our barbarian ancestors, when they got their religion from Judæa, their philosophy from Greece, and their law from Rome. Civilisation came to the Japanese in the wake of the Buddhist missionaries, somewhere about the year 600 A.D. This was the first great event in their national development. Till then they were warlike savages, skilled possibly in the making of a rude pottery, but utterly unlettered. The *Kojiki*, or "Records of Ancient Matters," containing the legends of the gods and the so-called histories of the earlier Emperors, was not written till 712 A.D.; and, although there may be much truth in the traditions that were embodied in that first record, it is impossible to give credence to dates and events earlier than the 5th century. The conquest of Korea by the warrior Empress Jingō in 200 A.D. is altogether fabulous, although there is no reason to doubt that a queen of that name existed. There is ample evidence that in these early centuries there was no distinct political unity amongst the various Japanese clans. It was only about the eighth century that a centralised government began to be formed. The Emperor or Son of Heaven (*O Tenshi Sama*), as he is styled to this day, was theoretically absolute. But practically he very soon became a puppet in the hands of some powerful noblemen, who ruled the country in his name. From the eleventh to the sixteenth century there was a continual struggle for supremacy between the more powerful clans; and just at the time of the discovery of the country by the Portuguese (1542 A.D.) Japan was in a state of chaos.

And now came the second great event of Japanese history—the consolidation of the empire through the successive labours of three great men, Nobunaga, Hideyoshi, and Ieyasu. The second of these, Hideyoshi, has been called the Napoleon of Japan. He reduced the country to complete subjection, always of course in the name of his Most Sacred Majesty the Son of Heaven, and brought his brilliant career to a fitting climax by his conquest of Korea in 1598. On his death, Tokugawa Ieyasu promptly seized the reins of government, quelled the insubordination of the other barons, partly by able generalship, partly by astute diplomacy, and received from the Imperial Court of Kyoto the historic title of *Shogun* or Generalissimo. He established his own court at Yedo (now Tokyo), which thenceforth became the real capital of Japan. Ieyasu gave to Japan its final form of feudalism, which, perfected by his grandson Iemitsu, lasted down to the year 1868. In almost perfect isolation, and free from internal troubles of any magnitude, the people of Japan lived for two and a half centuries, evolving their exquisite art and their elaborate etiquette.

There is always a profound relation between a nation's history and a nation's character, and to appreciate the one we must know something of the other. Now Japan is unique among nations as regards certain periods of her life-history. Small wonder then that she is unique in regard to certain of her characteristics. Let us try to imagine the peculiar condition of affairs at the time when Ieyasu and Iemitsu determined on a policy of isolation. Under Hideyoshi the military genius of the people had risen to its high water mark. Ieyasu had no sooner established himself as *Shogun* than he issued a decree of expulsion against the Portuguese and other European missionaries. This was carried largely into effect in 1614, and under Iemitsu Japan entered upon her policy of rigorous seclusion, Nagasaki being the only port at which slight contact with the outer world was maintained.

Thus, at the beginning of her two and a half centuries of isolation, Japan had proved herself victorious in the East, and able to cope with the powers of the West. She, so to speak, retired from the strife of nations with the victor's wreath upon her brow.

Conjoin to this the peculiar features of her feudalism—filial piety and fealty carried sometimes to extravagant lengths—and we have much that throws light on the Japanese character.

Do we not here find at once a perfect explanation of that self-reliance, self-sufficiency, or "conceit," which many visitors to the Land of the Rising Sun have marvelled upon? It would indeed be a matter of surprise if the Japanese did not possess this "canty conceit of their selves," which is certainly not a monopoly of the Orient. It is one of the traits which go to the making of a great nation. It usually betokens independence of character; and we do not need to go very long in Japan before we have ample evidence that down to the lowest ranks the Japanese do indeed possess this valuable quality. There is no real servility in all their politeness; there is not, or at least there was not till recently, any of that spirit which is the essence of "snobbery." The reason of this is not far to seek. It is to be found in that 250 years' training in Ieyasu's school of feudalism. The broad characteristics of Japan's later feudalism may be described in a few sentences. The *Mikado*, too sacred to be gazed upon by the public eye, was theoretically absolute. The *Shogun's* attitude towards the *Mikado* was one of reverential homage; his duty was to strengthen the imperial supremacy. Theoretically on an equality with the *Shogun*, but practically under him, were the *Daimyo*, or territorial barons. These farmed out their territories to their *Samurai* vassals in return for military service. In the larger *daimyates*, sub-infeudation existed, the more powerful *Samurai* having their own vassals or *Samurai* of lower degree. The *Daimyo* and his *Samurai* lived in a walled town, the artisans and merchants living outside the walls, and the agriculturist further afield. These last-named classes of society were collectively called *Heimin*, and formed practically a caste distinct from the *Samurai*. It is very important to bear in mind this broad distinction between the *Samurai* and the *Heimin*. Their codes of conduct and of honour, their ideas of life, and their religious notions were essentially different. The difference lingers to this day, so that the ordinary globe-trotter, who does little else than witness the out-door life of the present day representatives of the *Heimin* class, can get no true idea of the feelings and life of the upper million. He may never meet a real lady of Japan at all, and he may meet the descendant of the *Samurai* only as an official. In the older days *Samurai* and *Heimin*—indeed, the various orders of these—dressed after a different fashion, and only the *Samurai* had the privilege of swaggering about with two swords in his belt. In the code of laws known as the *Legacy of Ieyasu* it is written—"The girded sword is the living soul of a *Samurai*." Each of the great *Daimyo* was obliged to spend half his time at the court in Yedo, and half his time at his country fief. The *Shogun's* capital was, indeed, the scene of a continual coming and going of barons and their retainers. Everything was matter of the strictest etiquette, this being the mode by which Ieyasu and his successors controlled the power of the stronger *Daimyo*, and prevented intrigue and coalition against the central government. The smaller *Daimyo* again—for there was a most elaborate classification of these—were compelled to change their provinces frequently. Ostensibly instituted to obviate misgovernment, this policy really prevented these *Daimyo* from acquiring strong local influence. The aim of the Tokugawa *Shogun* was, in fact, identical with that of William the Conqueror, who broke the decentralising tendency of feudalism by giving his barons scattered territories in different counties. But, in addition to this systematising the military form of government, Ieyasu, by precept and by example, inculcated two great principles of conduct. The first was reverence and respect to parents and superiors—in a word, fealty and filial piety. The second was courtesy and consideration to inferiors. To the cultivation of these social and domestic virtues the Japanese owe much of that claim which delights the traveller of our day. Amidst the peace and seclusion enjoyed under the Tokugawa rule, Japan became, as one recent writer puts it, the land of gentle manners and fantastic arts.

But there is another side to this picture. With the exception of the *Samurai* of highest rank, who found ample scope for their energies in administering their lord's affairs, these sworded gentry of old Japan had no suitable field for their faculties. To become an artisan, or worse, a de-

spicable tradesman, was out of the question. A few, in certain parts of the country, turned their attention to agriculture. But the vast multitude were simply retainers with little or nothing to do but garrison their lord's castle or town, take part in some petty quarrel or strut about with swords in belt. The support of this idle, conceited class became a greater and greater drain upon the country's resources, and heavily and more heavily were the *Heimin* taxed. Then, as the centuries grew older, low class *Samurai*, owing allegiance to no lord, and ready to swear temporary allegiance to any master who might desire their services, swarmed all over the country. These were the *Ronin*. Turbulent fellows many of them were, ready to use their sword at the slightest insult.

Thus the noblest energies of these *Samurai* degenerated for lack of employment. Japanese privateers had once scoured the Chinese seas, and had established commercial relations with Siam. The base-born Hideyoshi had trained an army that had conquered Korea. But this doughty spirit of enterprise gradually decayed as the Tokugawa régime drifted to its doom.

It was a strange combination of circumstances that culminated in the abolition of the *Shogunate* in 1868. The strong rule of the earlier Tokugawas gave free scope for a leisured, though limited, class of *literati* to spring up. The Princes of Mito, themselves closely allied to the ruling *Shogun*, were conspicuous patrons of learning. A revival of all things Japanese followed; Japanese was cultivated instead of the pure Chinese classic; the primitive religion, Shinto, came into partial favour; and it gradually dawned upon the mind that the *Shogunate*, though established for centuries, was not the original form of government. With the ever weakening power of the Tokugawa, certain of the more powerful clans began to assert themselves. The arrival of foreign fleets brought complications, which were made the best use of by these enemies to the Tokugawa rule, who thenceforth posed as the supporters of the Emperor's supremacy. The anti-foreign spirit was skillfully taken advantage of; the *Shogun's* treaty-making was denounced; and finally the *Shogun* himself was deposed. But no sooner was the Emperor established as the real ruler of Japan than his counsellors had to follow the same path of foreign policy entered upon by the *Shogunate*. Many of the lower class *Samurai*, full of the anti-foreign spirit, must have been astounded at this *volte face*. Hard, indeed, was the fate of many of these when, with the revolution or so-called restoration, feudalism went by the board, and they were left masterless, homeless, shiftless. The higher-class *Samurai* could look pretty well after themselves: they are the statesmen, the politicians, the lawyers, the officials of to-day, and constitute the intellectual backbone of the country. A lower grade finds employment as policeman; but many of them who call to mind the romantic days of old, when the sword was their soul, must sigh after the good old times.

How much true patriotism actuated the hearts of the men of Satsuma, Choshu, and Tosa, who led the revolution, is a difficult question to answer. The Satsuma Rebellion of 1877, under the veteran general Saigō, has an ugly look from this point of view. No doubt the rebels argued themselves into loyal subjects, who wished but to emancipate their sacred Emperor from the hands of self-seeking courtiers. We fancy, however, that clan jealousy and personal ambition were potent mainsprings of the movement that broke the *Shogun's* power. To go back a thousand years for reasons to support a political revolution is surely reading history backwards. It was indeed with no clear apprehension of the issues involved that the Satsuma and Choshu clans combined against the Tokugawa. In its subsequent policy, however, the *Sat-cho* combination, as it is called, is worthy of commendation. The leaders realised that they must give up their Orientalism or die a national death. Perseveringly have they pushed themselves, and drawn their country after them, into the moulds of our Western civilisation. Sage Orientalists shook their heads and prophesied a speedy relapse after a frantic spurt. Rather ambitious schemes were no doubt tried, only to be relinquished, but, broadly speaking, Japan has gone on steadily in the assimilation of nineteenth century wisdom. Money has doubtless been squandered at the expense of the tax payer; but, on the whole, the farmer is better off than he was under the old feudalism. "Fickle Japan" are words that have often been sneeringly uttered. But wherein is the fickleness of a spirit that tries new things because the old are insufficient, that tries to replace the stupid by the wise? For two and a half centuries Japan had lived a stagnant life, sufficient to have reduced any nation to a condition of effeminacy. Yet, out of a revolution of blood and thunder, she has sprung into a new and stronger life. She has sought to make her own those elements of

¹ In a wide sense the territorial barons were also *Samurai*, but its convenient and usual to restrict the term to the military vassal class.

material civilisation which had developed in Europe during her period of stagnancy. She has striven to assimilate in less than a generation what we of the West have in muddled ways taken generations to evolve. Naturally she paid most attention to those features of our civilisation which had no counterpart in her own. Naturally, too, she over-estimated those, and occasionally mistook the shell for the kernel. Nevertheless, judged by the ordinary conceptions of the meaning of civilisation, Japan has been phenomenal in her progress.

Now, there are two extreme views that have been taken regarding this unique education of a nation. The one is, that the Japanese are essentially imitators, losing their once national characteristics in their eagerness to take rank with Occidental peoples. The other is, that this acquisition is purely superficial, simply a veneering, while the great heart of the nation is unaffected in its Orientalism. The truth lies midway between these extremes, as it ought to do if the Japanese have any of the elements that make a strong nation. A policy which brings outlying parts of the empire into close association by means of well-regulated railways and steamships cannot but awaken the slumbering commercial energies of a people. The imperial gift of a Representative Parliament—a thing hitherto unknown to Asia—must foster a lively interest in public affairs. The national activities are turned into new directions; patriotism has some chance of becoming a reality. And even down to the lower ranks the accidentals of our Western civilisation penetrate in curious ways. Within the last ten years shoemakers, tailors, butchers, and sellers of woollen stuffs have established themselves in every street. The butcher's establishment is a curiosity. Below is the shop proper, recognisable afar by its row of keen hungry dogs; above is a restaurant where the *sof-disant* "western meal" can be enjoyed. A western epicure would probably starve rather than partake, by the aid of chopsticks, of the flavourless stew of coarsely chopped hash which is served up with rice *ad libitum*. Yet such beef has an evident claim for the petty official who has not been abroad, or who cannot afford the well cooked viands of a superior restaurant unattached to a butcher's shop. We have here, indeed, a very good illustration of the imitation practised by the Japanese. The imitation—even when it is simply the making of spurious labels for Bass's ale, Stock or Pilsener beer—is not pure, is not perfect. It has a genuine Japanese flavour, a subtle something which marks it off from the thing imitated. The ordinary traveller, who stays perhaps two months in the country, and chiefly at the treaty ports, being ignorant of what is really Japanese, ignores this native essence in a custom or regulation ostensibly borrowed from the foreign West. In political and governmental spheres we find much that is certainly modelled after English, French, or German methods, but there is more that is of distinctly native origin. For example, we see in their police system a reflection of the French method. Yet before the restoration Yedo was controlled by a most efficient organisation of *gendarmes* and watchmen; and there is no doubt that many of the methods used then still survive. In the feudal days, when a retainer went out of the gate of his lord's *yashiki* or town residence, he left his *fuda*, or wooden ticket with name inscribed, in the hands of the gate-keeper. The University is now situated in one of the largest of these old *yashiki*, and each student who goes out of the compound must leave his *fuda* in the hands of the gate keeper, just like the *Samurai* of old. There are many such links between the present and the past—many evidences of a strong continuity underlying all the innovations that this era has brought.

The introduction of Western materialistic ideals into the national life of Japan has been attended with one undoubted evil. The old Confucian basis of morals and ethics has been rudely shaken—the old etiquette is losing its power. This is particularly noticeable amongst the descendants of the old *Samurai*, who have grown up unrestrained by the gentle but inexorable etiquette of the Tokugawa feudalism. Obedience and reverence to parents and guardians, allegiance to their lord, loyalty to the Emperor—such was the *Samurai's* creed. But when his lord has been deprived of feudal power, when his immediate duties have been annulled, what can the average *Samurai* do but sink into a life of inactivity and semi-starvation? His sons, compelled to attend school, speedily out distance their fossil parent in knowledge and learning. The more ambitious flock to Tokyo, full of disdain for the old plodding ways and the paltry ceremonial life their fathers had led. Beyond the influence of the parental roof, devoid of much of the early training that had been the heritage of every *Samurai*, scoffing at the old religious and caring nothing for the new, he begins to develop himself, undisciplined and vain. Such are the *Sushi*, who form

at this moment a dangerous factor in the political life of Japan. Within the last five years one minister of State has been assassinated, and another has been maimed for life. The very recent conflict between the Government and the House of Representatives has accentuated the strained condition of things. The Emperor was obliged to dissolve the House, which refused, out of mere opposition to the Government, to sanction the grant for relief of the earthquake sufferers. For this Imperial act the ministers of State are now in daily danger of their lives. By a very peculiar logic the Japanese distinguishes between the Emperor and the Government which has been chosen by the Emperor. His loyalty to the Emperor is ostensibly of the highest order, for reasons which are not a little grotesque. Has not Japan the oldest dynasty in the world? True, on paper; but what of the directness of succession, the critical historian asks? And was not Japan always loyal to her Emperor? A strange loyalty indeed which allowed the *Shogun* in the middle ages to do very much as he liked. He deposed one *Mikado* and elected another, a mere infant of days. He decided whether the son of a *Mikado* should succeed, or whether the successor should be chosen from some collateral branch. Theoretically, the present Emperor is a direct descendant of Jimmu Tenno; his true descent is concealed in a tangle of adoptions.

In a limited sense the old dictum of Ieyasu was true:—"The girded sword was the soul of the *Samurai*," and many of them have not discovered a substitute for the soul they lost when the edict to disarm went forth.

Here I speak only of the lower *Samurai* class, and only of a certain proportion of these. For there is a great deal in-breeding and in-blood, and it is doubtful if a more perfect gentleman than a descendant of a blue blooded *Samurai* family walks this earth. Amongst the University professors, for example, there are some ideal men, honourable to the core; but they are old enough to have been trained in the old school of morals. One of them as I had aided in the defence of Wakamatsu, the last castle that stood out for the vanquished *Shogun* in 1868. His mother died two years ago, and was followed to her grave by a retinue that would have done honour to a *Daimyo*. This lady was a beautiful type of high *Samurai* womanhood. Trained as a girl in the "three obediences"—obedience when unmarried to parents, obedience when married to husband and husband's parents, obedience when widowed to sons—she became in her old age the honoured head of a family well known in the arts of peace and war. And there are many such to this day in Japan—gentle mannered, kindly and thoughtful, womanly in the best sense of the word, and yet possessed by a fearless *Samurai* spirit that will undergo any trial, any act of self abnegation, even voluntary death, in the interests of husband and family. In old Japan—romantic in retrospect whatever it was in reality—the *Samurai* women were taught the use of the sword, they were drilled to act as guardians of the castle, should the necessity arise. In troubled times each lady carried with her a small dagger for defence or for suicide. But in all this nothing was done or intended to be done for self, but only for her husband, for her children, for the honour of her husband's house. The whole duty of women is summed up in the words—obedience and self-renunciation. It is, I believe, because of the cultivation of this spirit of self-sacrifice that we find in Japanese woman so many of those characteristics which we commonly associate with pure Christian sentiment. In the treatise known as the "Greater Learning for Women" (*Onna Daiyaku*) it is laid down in unequivocal language that a girl's destiny is to wed, that a girl's duty is to absorb herself into her husband's home. If she does not please her husband and her husband's immediate kin, she has failed in her duty. Whatever the hardships of her lot, whatever the difficulties she has to meet, she must always maintain a cheerful countenance in the presence of her lord. Should she have occasion to remonstrate with him for unreasonable or dishonourable action, it must be done with composed mien and gentle voice—that most excellent thing in woman.

These womanly traits, cultivated to perfection in the *Samurai* classes and their present-day representatives, also exist more or less in the descendants of the lower *Samurai* classes. In the still lower ranks of life, when the wife has often, so to speak, to put her hand to the plough, there is less convention, less indoor existence. When we consider, again, the girls that compose the waiting class in inns and tea-houses we meet with a different code of conduct altogether. In one particular, however, these are at one with their nobler compatriots. They must act so as to please—in this case, of course, the guests. The charms of the Japanese waitress have been described by some recent writers in a most extravagant vein, and I ven-

ture to think much of the so-called charm depends upon the novelty of the situation. The foreign tourist alights at an inn; several healthy-faced damsels collect on the verandah near, and with low obeisance cry aloud in strained accents, which some think musical, *O irashai, O irashai*, which simply means "please enter," although certain bookmakers would translate it "the honourable entrance is solicited." A little later the weary traveller, stretched on the mats of his own room, thinks he would like his bath made ready. So he claps his hands; and up from the dingy corners of the huge kitchen there ascends a chorus of voices, of ready quality, yelling *Heo*. This exclamation also serves throughout any delivery of orders much the same purpose as our familiar "Yes's'r," "Yes'm." As he leaves, the guest's ears are almost deafened by the high falsetto intoning of the words, *Okueri nasai, O kueri nasai*—"please come again, please come again." Here again, of course, a so-called Oriental flavour might be given by translating the phrase "the honourable return is implored." These happy-faced waitresses form a bright picture in sunny Japan. From their innate desire to please they will laugh and giggle when they are expected to, even at the most miserable of jokes. But it is easy to see that they bear towards the strange, blundering, foreign traveller a very different attitude from that which they assume towards a Japanese guest. Amusement and novelty excite her as much as they excite him. Ignorant, in general, of the etiquette of inn life, he takes liberties, to which she, with quick witted ingenuity, responds by simply making fun of him. The experienced traveller, to whom the ways of the Japanese are familiar, finds the manners and the service of the inn satisfactory enough, but far from romantic. Similarly, the fair waitresses get no extra amusement from him, and treat him just as they would one of their own countrymen, with quiet respect and placid mien. When not perturbed by what must seem to her to be simply foreign vulgarity, the waiting-maid of Japan performs her duty quietly, faithfully, and unobtrusively. It is too true, however, that near the open ports, and in regions overrun by the globe trotter with his inevitable camera and dry plates, there is a marked deterioration in the manners of the lower class Japanese. It is mournful to have to confess that the traveller is himself to blame for this.

And the same holds for the servant class generally. A distinct line must be drawn between the servants of the Japanese themselves and the servants of the foreign residents. They belong to different guilds or cliques. A servant in a Japanese house is one of the family, and identifies himself with the best interests of the family. Those, however, who enter foreign service are usually engaged for very definite duties and at a comparatively high wage, out of which they find themselves in everything except the room they occupy. In the open ports the servants are to a great extent self-seeking and even dishonest; but in Tokyo, and in districts where only foreigners in Japanese employment can live, they compare most favourably with the same class in other lands. If their foreign master and mistress treat them with the courtesy which Ieyasu counselled all superiors to show towards inferiors, and, furthermore, do not lose their dignity in loud scolding and bullying, Japanese servants become a treasure. They will see to it that no rogue of a tradesman overcharges for goods. They will enter heart and soul into the interests of the household. If guests are being entertained—and in Japan the guest is almost a sacred being—they will make preparations with extraordinary zeal, and will as zealously bring things back to their normal condition after the guests are sped. The peculiar graces of Japanese politeness show themselves here as in higher ranks. Gentleness of manner and total absence of brusquerie are its fundamental characteristics. To these graces, which permeate more or less the whole social atmosphere, must be ascribed the lack of rough boisterousness in foreign children born and brought up in Japan. The boys are high-spirited without being rough, the girls are merry-souled and full of frolic without being spiteful or "screamy."

As Sir Rutherford Alcock long ago said, "Japan is a very paradise of babies." Lashed securely to the back of an older brother or sister, many an infant of weeks or months makes early acquaintance with the street, the sunshine, and the play. Or it may be the mother herself, behind whose head the little pate wobbles from side to side and the dark slit eyes gleam. Possibly the baby sleeps; but still the mother's voice goes crooning some lullaby as she shuffles along the path or lends a hand to push her husband's cart. In the well-to-do classes, the very young children seldom appear beyond the garden precincts, and the bigger children are not allowed to play in the street.

Then, in the house, with its soft matted floor and its space quite innocent of any furniture, what a perfect arena for the infantile manoeuvres of the rolling bit of humanity "that cannot gang its love." No fear of ugly blows from corners of sofas, tables, chairs, or stools; and for the toddler's bairn no forbidden ornaments to finger, no breakables to bring him into disfavour with the household deities.

Toy-shops are surely a mark of a high civilisation. There they are in every Japanese street, displaying their tempting stores in piled-up tiers upon the floor, unprotected by any plate-glass window. Prices range from 1 *sen*—less than 3d.—up perhaps to 10 *sen*, which is about fourpence. Miniature guns, swords, bows and arrows, workman's tools, models of domestic utensils, dolls, and everything the heart of child-loving man can devise, are therein quantity. And they are a child-loving race, the *Mikado's* subjects. In our opinion, indeed, they rather spoil their children; yet so mingled with this child-worship is the instilling from earliest years of Confucian wisdom that the evil results do not ensue which would almost inevitably follow if our children were trained up on the same lines. There is a subtle influence, surely, in their very forms of address, brothers and sisters even affixing the *san* as they call out to one another. *San* corresponds to our Mr. or Mrs. or Miss, and except in addressing servants of the very lowest rank, is used invariably. It is usual also to prefix the honorific "O" when addressing a girl—for example, *O Kiku-san* (Miss Chrysanthemum), *O Ume-san* (Miss Plum Blossom). Boys do not get this "O"; and their names are not chosen from the beautiful in nature, as so many girl's names are. They may be taken from the strong in nature, as, for example, *Tora san* (Master Tiger). In the better-educated classes, however, a combination of Chinese characters is chosen, with some lucky significance. Naming after relatives is not common, and, as it is against the law for a Japanese to have a middle name, the necessary distinction is not unusually effected by inventing a new name or modifying an old one. This is very easily done with the practically infinite number of Chinese characters at their disposal.

Glance again at the games, many of which are very similar to, if not identical with, our own. In spinning tops and flying kites the boys excel, while nothing can compare with the dainty and frolicsome grace of the girls playing battledore and shuttlecock or bouncing their balls. The battledore is of wood, and the tap-tap, mingled with merry laughter, is heard all along the streets at the great festive time of the New Year. Frequently a blithe damsel challenges a male friend to a bout, and he almost invariably comes off second best, as the black charcoal streaks on his face—one for every miss—sufficiently betoken. It is during the New Year's week that kites hover above in thousands, kites of all forms—square, circular, man-like, or like a great hawk pursuing.

These two sports are not confined to lads and lasses, but are indulged in by the older people also, who never seem to lose their fondness for play. There are cards, however, and a kind of chess, and that most complicated of games Go, to absorb the mental faculties of the cleverest.

The third day of the third month is the Girl's Festival, and this is held by all classes from nobles to coolies. In the better classes little effigies of the *Mikado* and his wife and the court nobility—all in the ancient, stiff, and not artistic robes of state ceremonial—are exposed to gaze, and with these and other dolls the girls have a happy time. The Boy's Festival is on the fifth day of the fifth month, when from a bamboo pole, surmounting every house where a boy is, a long paper carp flies. The head of the fish is tied to the pole, while the body balloons and fluctuates in the breeze. The motions are startlingly life-like. The carp, which races up rapids and leaps up waterfalls, is regarded as a symbol of the indomitable spirit of man overcoming all obstacles.

From oldest to youngest they are a holiday-loving people. For a bright abandon, without boisterousness, a Japanese crowd *en fête* can hardly be surpassed. This side of the national life has been dwelt upon by nearly all writers on Japan; so much so, that many who derive their information from books must have a very lopsided conception of what a Japanese is. It is with such scenes in his eye that one admirer of the people writes, "They have the nature rather of birds or butterflies than of ordinary human beings." Well might the earnest-minded Japanese say, "Preserve us from our self-appointed champions!" One cannot but feel a great pity and a strong sympathy for a nation that is terribly in earnest and yet is held up to the wide world as more bird-

like than human. We might do worse, indeed, than strive to imitate the Japanese in this power of casting from them the cares of life for a season and entering with childlike zest into the universal merriment of an hour. The Japanese dearly loves a joke and has not yet lost that faculty of laughter, over the decay of which the *Spectator* recently mourned. As Shakespeare has it—

"A merry heart goes all the day;
Your sad tires in a mile-a."

A more hopeful augury Japan could hardly find.

There is, however, one curious mode of festal enjoyment for which it is impossible to get up any enthusiasm. Novelty may give interest and amusement at first; but this soon wears off. I fancy some trait of barbarism lingers in all nations. And in the discordant tom-tomming, whistling, and chanting which accompany certain forms of festival dance we must confess that the Japanese touch closely on the savage. Generally, too, it is a religious fête in connection with some temple. A juggernaut like car passes along the street, carrying the effigy of some deity and a band of so-called musicians. Or it is in the temple-court itself, where a permanent stage or platform is adorned by a positing figure, probably masked, treading out a complicated measure to the rhythmic noises of the orchestra. These *Matsuri* or fêtes are of course only of interest to the common people. The higher classes take their enjoyment of similar character on rare occasions by witnessing the classic *No* dance. This combines a histrionic representation of some legend or tale of heroism with the most extraordinary musical *obligato* that can be imagined. In stiff garb and stately mien the chief actors glide through their monotonous chant, broken by fitful caterwaulings, shrieks, whistles, and drum-beatings from four or five solemnities in the background. The acting is impressive, though conventional and somewhat stilted. The vocal and instrumental accompaniment strongly suggests Milton's "hell-hounds" "singing a hideous peal." This particular kind of music that embellishes the *No* performance is the genuine Japanese classical music. Occasionally, as in realistic representations of storms and battles, it is powerful and appropriate. It is distinctly Wagnerian in the position it assigns to the human voice amongst the other instruments; and this is a characteristic which runs through all the styles cultivated by Japanese musicians. Of these there are several schools, which never overlap. For instance; the Chinese musical school, as it is developed in Japan, is peculiar in the high pitch in which the leading female voice chants the libretto. There is melody in the airs and timeliness in the instrumental *ensemble* of fiddle, guitars, and flutes. But there is no harmony in our sense of the term. Each piece is very long and wearisome in its apparently endless repetitions.

The most interesting school of music is, however, that which cultivates the higher class of popular music. The important instrument is the *Koto*, a kind of six foot zither of thirteen strings. In an orchestra there may be two *koto*, a *samisen* (or three-stringed guitar), and a *shakuhachi*, which in form suggests a flageolet, in sound a wheezy flutesop of a damaged organ. This last-named instrument is said to be very difficult to play; would that it were impossible! The performer must never take a desired note purely, but must approach it by a short-lived quarter tone and leave it with a gasp. The scales on which Japanese popular music is based are similar to some of the old Greek and mediæval church scales. Many of the cadences have a flavour suggestive of Scottish airs in the Dorian mode. In the tuning of the *koto* five notes are given to the octave, which may be represented as intervals by the tonic sol-fa notes *s t d m f*. But by pressing any string beyond the bridge the corresponding note may be lifted in pitch a semitone or even a tone, and, as this is being done constantly by the *koto* player, we have no right to conclude that the Japanese scale has only five notes to the octave. Any simple western air can be played by a good *koto*-player in as correct intonation as is given by the piano. On the other hand, the pressure notes on the *koto* give to Japanese airs a peculiar flavour which cannot be imitated on our piano, and can only partially be produced on the violin. The peculiarity might be termed a pitch-swell, and can be easily given by a voice gliding up a semitone and down again, all in one second of time.

Like painters, ivory-carvers, workers in bronze, and other artists, musicians form a distinct and largely hereditary professional class. The sword-girt *Samurai* of old engaged them to add to the brilliancy and variety of his festive evenings. And there still exists a disposition on the part of those of *Samurai* descent to look down upon the art, although, under the influence of the foreign spirit, some few are beginning to cultivate their faculties

in the Government Musical Academy. The fact that Japanese girls can, when trained, sing our music in good tune, and can learn at the same time both the western violin and the Japanese *koto*, shows that there is no fundamental disparity between their scales and ours. It does not seem, however, that Japanese music speaks to the proud *Samurai* ear any more distinctly than it does to the arrogant European ear. Fully they listen through a long piece of variations upon an air, but their interest is excited only when the words sung or recited appeal to them. One of the most interesting of musical experiences is to see a Japanese audience sitting enthralled at the famous *Heike monogatari*, the ballad history of the struggle between the Heike and Genji, or Taira and Minamoto clans, in the 12th century. This great struggle for supremacy may be likened to the Wars of the Roses. It is a tale of wild and fierce fightings, and ends with the complete extermination of the Heike or Taira clan. In the final battle at Dan-no-ura, near Shimonoseki, a terrible slaughter takes place, and the tragedy reaches its climax as the widow of Kiyomori, the late Taira Chief, leaps into the sea with Aoioku-Tenmō, the child Mikado of five years, in her arms. As the minstrel chants through the wild lay to the still wilder accompaniment of his guitar-like *Biwa*, the attention of the listener becomes tenser and tenser. The men with immovable features stoically suppress their deep emotion. The women find relief in silent weeping. They come, indeed, prepared for this emotional dissipation with a good supply of handkerchiefs in their satchels. In the hands of a master the *Satsuma Biwa* is undoubtedly a most appropriate instrument for accompanying those heroic lays of Old Japan. Its chief peculiarity is the high frets, which enable the performer, with great effect, to produce those pitch-swells or intervals in continuous motion that have already been referred to.

But by far the most popular instrument amongst the lower classes of Japan is the *Samisen*. The professional singing girls or *geisha* are proficient on it; and the strolling minstrel, the descendant of the once outcast *Eta*, makes its twangy tones audible in every street. It is never used as a solo instrument, but always accompanies either singing or dancing. The singing is really recitative, and the dancing is posturing, sometimes very effective and even impressive—but, after the novelty has worn off, excessively wearisome to the foreign ear and eye.

In brief the Japanese are, musically, sadly to be reckoned, and we are not surprised that the high-minded *Samurai* should despise the art. Historically, music and dancing received their great impetus at times of effeminacy and corruption, and to this day *geisha* performances are usually associated with frivolity and dissipation. In former days, when convivial gatherings were ungaced by the presence of the *Samurai* ladies, the necessary feminine element was supplied by the witty, accomplished, well-mannered, and fascinating *geisha*. These were the halcyon days for the professional singing-girls. But with the changed times the ladies of the upper million are beginning to take upon themselves the duties of entertainers as well as ministering angels. The *geisha*, being no longer in demand for high-toned socials, has consequently lost status. This no one can deplore, unless he belongs to that soulless sect of scientific investigators who deplore the impossibility of seeing a good cannibal feast in these days of Church Missions.

The whole question of the social position of woman in Japan is now of surpassing importance. I have touched on the broad features of the old etiquette which kept the wife completely in the background. This etiquette still holds under conditions which are purely Japanese. For example, when dressed in native costume the husband will precede the wife. But when decked out in Western robes the wife will be graciously permitted to enter a room in front of her husband. Truly in Japan the woman has no rights; she has only the great privilege of being allowed to please the man. In spite of the indications that a new dawn is breaking, it is significant that no woman can be present as a spectator in either House of Parliament when the Diet is in session. The time is one of extraordinary transition, unexampled in the history of a civilised nation. The rising generation of girls have a delicate problem before them. To preserve continuity in the passage from a condition of virtual bondage to one of comparative liberty, and to retain throughout those womanly qualities that are their special charm—this is their problem. The man of *Samurai* descent has his problem too; and it is no light one. With all his courteousness and high honour the old *Samurai* had a *hauteur* about him, a disdain for the common arts of life, a spirit of revenge, which are out of sympathy with the social movements of the age. To eradicate these will be no easy matter. To the turbulent *Sōshi*, and to the constitutionally appointed House of Re-

* This use of the honorific by a people whose womanhood is still in a condition of virtual bondage, warns us against placing too much confidence in forms of expression as an index to feeling. Compare our own "your humble servant."

representatives alike, some of these old-world sentiments cling. To take the life of a prominent man is no crime in the eyes of many of his political foes. The spirit of the *vandetta* still lingers, unfortunately, as witness the crowd of worshippers who continue to burn their incense at the tomb of the assassin of Viscount Mori, the late Minister for Education. So near is the nation to its feudal times that the Japanese do not have that feeling which we have for the value of a life. A man is murdered—yes, very pitiable, they say, but what matters it—*shikata ga nai*—it cannot be helped—there is no use crying over spilled milk. In the recent very narrow escape of the Czarewicz at the hands of a momentarily-frenzied constable Japan got a very significant lesson, from which it is to be hoped she will profit. It is easy for people to be wise after the event and to blame the Government for not strongly suppressing the lower class newspapers, which had been indulging in a fierce Russophobia. But it is hardly possible for us to think ourselves into the position of the Japanese. Foreign residents in Japan do not know all the outs and ins of political life in a country whose press is under a censorship that in this land would rouse the very walls to mutiny. They never know all the plots and intrigues that are nipped in the bud by sudden and severe methods. They cannot appreciate the feelings of resentment that the *Sat cho* combination rouses in many a truly patriotic breast. Theoretically the Government went by the board in 1868; yet after all it has practically been a replacement of the Tokugawa by the generals of Satsuma and the statesmen of Choshu. The more thoughtful minds feel little confidence in the sincerity of the statesmen whose clasp has put the helm of the State into their hands. At the same time they have no confidence in the ability of any of the political agitators outside of the Government. Many of them looked with foreboding at the new constitution, with its House of Representatives and House of Peers. The country, they felt, was not fit to govern itself. Recent events have to some extent borne out this view. In its second session the House of Representatives proved so stubborn and pig-headed that the only course the Emperor could pursue was to dissolve it. When we call to mind the storms and tribulations through which our own Parliamentary system struggled to its present imperfect condition, we need not be astonished at what has happened in Japan. To criticise is easy, to scoff at the temporary failure of a grand experiment is easy too; but the critic and scoffer should see to it that there is no obstructive beam in his own eye.

The Japanese themselves recognise that they are in a middle. This truth a native religious paper lately made the text of a call to repentance. After pointing out the misfortunes and calamities of the past year—the burning of the Houses of Parliament, the deaths of Prince Sanjo and Prince Kuni, the attack on the Czarewicz at Otsu, the great earthquake in the centre of Japan, and (most ominous of all) the sudden extinction of the lamps at Ise Temple—this journal thus continues:—

"There are persons who would chaff and say that the fires resulted from carelessness, the deaths from influenza, the Otsu attack from a disordered mind, the earthquake from a law of nature, and so on. Such remarks we may expect to hear from professors at the University or from other shallow persons who have swallowed the spittle of the foreigner. But the true reason for these things is this. There is the mind of the Universe, there is the mind of Gods or Buddhas, and there is the mind of Man. These are not many but one. The first is all-present, the second all-pure, the third an impure mixture. The last is spirit buried under human dust, the second is pure spirit, the first is without substance. The Gods and Buddhas teach us beforehand our fortunes and misfortunes. Now, to-day all is confusion and disorder in Japanese society. Religious people, newspapers, even the jolly story-tellers are quarrelling. Poets and novelists sharpen their nails to scratch each other. The whole nation is a struggling chaos. What are the earthquakes and other physical phenomena but the reflex result of this great commotion? The fault is with ourselves. Our minds are dark; this is the significance of the extinguishing of the lights at Ise; and thus have all these events their meaning. It is for us to reform our ways and gradually to achieve, by patient individual effort, that happiness for which we are fitted."

Whatever may be thought of this sermon, the style of which is not altogether unfamiliar to us, there is little doubt that Japan is forsaking the once well-trodden ways of the gods. It is usual to speak of the Japanese having two religions—namely, Shintoism and Buddhism. In proper parlance, however, Shintoism is hardly worthy of the name of a religion, and now the struggle for

supremacy is between Buddhism and Christianity. A few years ago Christianity, which had so far received its impulse almost entirely from foreign missionaries, entered upon a new phase. Certain young ardent spirits of Christian leanings and high culture determined to give shape to a national Christianity. They were not to be bound by the dogmas of any Western sect, dogmas which so often reflect the historic struggles through which that sect has passed. Such a movement, pushed by men of education and of good descent, might well make the Buddhist priests tremble for the future. Notwithstanding the prevalence of Buddhist shrines and Buddhist sects, it is doubtful how far true Buddhist doctrines have influenced the heart of the nation. With the rise of the Tokugawa power, a new philosophic influence was introduced from China, and intellectually Japan forsook the Buddhist paths, and adopted the pantheistic philosophy of Shintu. This *Tei-shu* system retained its sway in spite of the revival of pure Shinto, which at its best only affected a small number of the educated class. Under it the *Samurai* life was moulded, and the great *Samurai* creed of fealty for the man and obedience for the woman took final shape. The bulk of the nation, however, remained Buddhist, their Buddhism being elastic enough to absorb such Confucian teachings as reached them, or such traditions as had lingered through the centuries. Indeed, the popular notions regarding the lower regions, presided over by Ema Sama, are more suggestive of Dante than of Gautama. It must be noted also that there never was, nor now is, an antagonism other than priestly between the bald, meaningless, because archaic, Shinto rites and the elaborate and more spiritual forms and creeds of Buddhism. A low class Japanese will mutter his prayers as reverently—or as irreverently—at a Buddhist shrine as at a Shinto shrine. The streams of pilgrims that every summer ascend the high hills to perform their vows have no dogmas to irritate their placid souls. Special reasons may make them pay a visit to the shrine of some special deity or hero, but that in no way prevents them worshipping at any other important shrine they may chance to pass. Most tolerant is the workaday faith of the average Japanese. Then again, the educated Japanese of to-day, who is not Christian, is usually Agnostic of the purest Gaius type. One function of the priests, both Shinto and Buddhist, is to officiate at important ceremonies, such as funerals or the naming of children; and it simplifies matters greatly for a non-Christian Japanese to belong to the sect whose temple lies nearest to his abode. If he has changed his residence several times, he may thus belong to several distinct sects, and the collector of each will call round at his house at regular intervals for his donation. Such social duties obviously add to the stability of the traditional religions and rituals.

Japanese Buddhism, it may be mentioned, is widely divergent from its Indian prototypes. There are numerous sects, which denounce each other as heterodox, very much after the fashion of our sects of Christendom. These differ on points of doctrine and practice, but outside the priestly circles no real interest is taken in their disputes. The sacred books have never been translated into Japanese.

Shintoism, on the other hand, has no books, no dogmas, no moral code. Its precept is, Do as you like, only obey the Emperor. It is essentially homage to the Japanese spirit of the past, homage to the gods, to the former *Mikados*, and to the names of heroes of old. Its rites are intimately bound up with certain court ceremonials. Of these rites purification by water is one of the most important. I have heard it stated by an intelligent Japanese that, though Buddhism brought letters and the arts, Shintoism is the source of that cleanliness which is so characteristic of the nation.

Probably no people on earth understand better the art of taking a bath; and certainly none enjoy it more. A Japanese hot bath in a Japanese bath tub is a luxury of which those who have experience only of zinc or marble baths can have no conception. Every respectable house has its own private bath, while in every town and village there are public baths for the vast multitude, to disport themselves in. Then, there are numerous spas with natural hot springs, usually sulphurous and medicinal. The unconcern with which a Japanese will take a bath in full publicity, if the conditions of the place require it, has often struck a foreign traveller unpleasantly. In his haste he has said, or at any rate thought, "What immodesty!" and has similarly animadverted upon the promiscuous bathing of men, women, and children in the districts where present-day police regulations have not been enforced. But here, as in many other cases, we should not judge of a custom from our point of view. In the present instance cleanliness

is the object sought, and the etiquette of the bath-room, or of the bath, if there is no room, differs from the etiquette of the parlour. With us the attitude of waiters is only permitted when the music is sounding. In somewhat similar wise it is with the Japanese. When the necessary operations of washing or doing other work require it, to strip becomes a duty. On the other hand, a Japanese woman would seem to appear *décolletée*; to her eye our ball-rooms are an astonishment, and exposure of the person for display is incomprehensible. Which race is the more conventionally modest I leave others to decide to their own satisfaction.

The external details of Japanese life have been incidentally touched upon, only in so far as they seem to throw a further light upon the deep spring of the Japanese character. In general, the daily customs reflect the daintiness and æsthetic grace which enter so largely into the life of the people, but not always. For example, a Japanese meal is served daintily, very daintily, but there is a certain lack of grace in the manner of its consumption. Without napery of any description, without knives and forks, without spoons, with only a few lacquer bowls and porcelain cups set neatly on a raised tray—such is the preparation for a Japanese meal. It has an æsthetic beauty all its own.

Familiar to all of us is the position Japan takes in regard to art; even the semi-spirious specimens which are now manufactured for the foreign market are sufficiently æsthetic to arrest attention. But what strikes the resident more, the longer he sojourns in the Land of the Rising Sun, is the display of true æsthetic feeling in small things even more than in great things. An ordinary crockery shop is simply a treasure-house of bowls, cups, and plates of dainty form and delicate pattern. In such you can buy a real work of art for a few *sen*—a single plate, perchance, which Kraits could have apostrophised as a "thing of beauty" and "a joy for ever."

The exquisite droop of a branch over a wall will arrest the attention of your *betto* (groom) or *fiuri-kisha* runner. The very chimney sweep will get ecstatic over a vase with a single spray of plum-blossoms set in it. And their whole method of exchanging presents—how graceful, how full of delicate feeling, how æsthetic in the very act! Even a present of fish assumes, in Japanese hands, a positive attractiveness. In a shallow oblong wooden pail, half-full of water and lined with green leaves, splash the live fish, in all the beauty of life. A delicately embroidered square of crape or satin is used to cover the tray on which any gift is laid, and, be it eggs or a roll of silk, it is equally delightful to the eye. The etiquette of present giving on special occasions is very strict, and, where the circle of acquaintances is large, the lady of the house has no easy task to perform. A large share of her time is taken up in selecting and despatching pretty or useful gifts. In the feudal days it was more honourable to receive a gift of money than a set fee for any service rendered; and in this custom we readily find one explanation of the unbusiness-like character of the average Japanese. But, in spite of the rigid requirements of etiquette in the giving of presents on special occasions, the Japanese delight in exchanging gifts at all possible times. Birthdays are not held in particular honour in this respect; "unbirthday presents," as Humpty Dumpty would call them, bulk far more largely in the social horizon of the race. In their shop signs too, the lines of beauty lie embodied. A Chinese ideograph is a work of art; it is a decoration as well as a word picture. It delights the eye of the foreigner, even although he be ignorant of its meaning. As one writer has said, "Whatever these people fashion, from the toy of an hour to the triumphs of all time, is touched by a taste unknown elsewhere."

Take another artistic characteristic, which has not been so much noticed as it deserves—I mean landscape gardening. Of this the Japanese is a perfect master. To the eye that has become educated to the irregular symmetry and restful beauty of a Japanese garden there is a garish vulgarity in our flower-beds, with their regular rows of rainbow colours. Also, is not the Japanese conception of a garden as a retreat for calm enjoyment far superior to ours? In the great majority of cases we have our front garden conspicuously displayed, while the back garden is devoted to peas and cabbages, clothes' ropes, and such like. It is quite otherwise with the Japanese. When you call at his house, you enter by what has all the characteristics to us of a back door. You are then led to the guest-chamber, which lies at the other side of the house, with its verandah opening upon a perfect fairy land of a garden. There you sit and smoke the pipe and sip the tea of friendship in easy desultory chat upon things in general. The host may suggest a stroll in the garden, which, though no larger than a five's-court, will nevertheless repay careful inspection. Every bush is set with a meaning;

* See a recent paper by Rev. Dr. Knox, *A Japanese Philosopher*, in the *Trans. of Asiatic Soc. of Japan* 1891.

* *Japan Mail*, January 2nd, 1892.

every stone has a significance. The fundamental idea of a Japanese garden is a place for summer enjoyment of a leisurely character—as one poet puts it, “a place to stroll in when aroused from sleep.” Hence a garden must look cool; and this is best effected by having a pond in it. Should the nature of the ground not permit of water being introduced, then it is very usual to suggest the idea of water by suitable arrangements. A little bridge crossing a pebbly bed, a flat stretch of sand or bare earth to suggest a lake, are very common tricks, and the delusion is further aided by the grouping of hills, rocks, and shrubs. The effect of a Japanese garden is one of delicious restfulness. One simply looks and enjoys, and is never tempted pluck a flower. Flowers indeed are subsidiary to the general effect, and never crowded together. In their right place flowers, nevertheless, are intensely admired by the Japanese; but it is an eye-worship, not a nose-worship. At the time of the cherry blossoms, when the leafless trees are covered with the delicate pink-white petals, and the whole air is filled with the subtle perfume, the Japanese men out in *gala* costume to the parks and gardens to enjoy the beauty of the scene. And so on through the year; in May when the *Wistaria* hangs its pendulous heads over the ponds at Kameido, in June when the *Iris* unfolds its chalcids in the garden of Horikiri, in August when the *Lotus* lifts its globular flower above the broad leaves that float in the muddy waters of the moat, and in November when the *Chrysanthemum* is the cynosure of every eye, all Tokyo gathers to gaze. The *Camellia* blooms steadily, and we think beautifully, for several months in spring and early summer, but it is not admired by the Japanese. It is considered unlucky; its blossom falls off whole in a way that reminds them of a decapitated head.

In this connection, also, we should not omit a reference to the exquisite beauty of their castles and moats. A drive along the esplanades that sweep round the broad moats of Yedo Castle is a succession of fine effects, especially charming in moonlight. The massive walls, where huge stones of varied size and shape fit with an accuracy that needs not mortar, rise in noble curves above the limpid surface, while over their broad tops spread the long branches of the pine trees which find their root in the earthy rampart behind. Truly the Japanese understand, as no living race does, the beauty of form.

The exquisite grace of the Japanese dress has been dwelt on by all writers. It seems fitted, in a peculiar way, to emphasise the good points of the being it adorns. A man who looks very ordinary, not to say ugly, in European costume, is transformed when he dons the unofficial robes of an old *Samurai*. It gives him a fine nobility of bearing and manliness of mien. Still more striking is the effect of dress upon a Japanese lady. In her own exquisite and delicately tinted garments she is the personification of beauty and grace, of perfect manner and high breeding. Decked out in Parisian robes of finest quality and make she becomes *gauché*, plain-looking, a thing to pity. It is very extraordinary that the adoption of European costume seems to scatter to the winds the very rudiments of true taste in the Japanese. The woollen shops are full of knitted caps and slawls, the red, green, and yellow stripes of which are something to wonder at. This cannot be explained as a result of imitation, for no European or American outside a hallequinade or circus would dare wear such dreadful combinations of colours. It looks almost as if the Japanese had derived their own practice of colour-blending from an elaborate code prepared by some æsthetic genius of old—let us say a gift from the gods. What the code does not cover they must decide upon their own erring responsibility. And oh how erring! for, whatever be the explanation, there is no doubt that in new directions calling for application of fundamental æsthetic principles the Japanese errs in a very extraordinary manner.

Perhaps the weakest side of the Japanese nature, intellectually as well as æsthetically, is this failure to get at principles. But after all, is not this exactly the weakness of humanity generally? It is only aggravated or made more apparent in the Japanese because of their peculiar circumstances. In the rapid and unexampled transition through which, in these thirty years, they have passed, the best powers of the people have been strained over and over again. Particularly true is it of them that their destiny seems too great for them. Empire though they call their country, they have not attained to anything like an imperial conception of national life. Side by side with the steam-engine, the telegraph, and the telephone, there exists in the mind of the half-educated masses a mediæval regard for omens, lucky days, charms, and superstitions. The nineteenth century rubs shoulders with the fourteenth. Loyalty to the Imperial house is based on the fiction of a divine descent. When the fiction

appears in its true colours, as it must do ere long, what will happen to the loyalty? The better educated Japanese of to-day may laugh in English at the folly of the idea; but to him at such in his own language would be as much as to say—Write me down a traitor. In the cultured classes also we find a lack of many of the evidences of an all-round intellectual vigour. Only in one direction, that of pure and applied science, have they made any real progress. In former days they added nothing of value to the philosophy which was simply borrowed from China. In these days they take no deep interest in the philosophy of the West. In purely Japanese or Chinese literature nothing has been done of late which can compare with the masterpieces of a remote past. Modern journalism and modern thought have together developed literary styles which must be sickening to the eye of the old world scholar. It is extraordinary to note how youthful are the editors and essayists that would fain lead opinion in Japan. In the circumstances of the case this is perhaps unavoidable, and it is an evil which time will doubtless cure. There is ample evidence that the Japanese literary man is very utilitarian in his views, and the modern mind of the nation has not yet awakened to the full significance of literature as such. Fiction and poetry are at a very low ebb. Poetry, indeed, as recognised by the Japanese, is an archaic art, so it is small wonder that the present era cannot produce one true poet. With our poetry they have no sympathy. Of the many University professors, all of whom know English or French or German well, I have met not one to whom Shakespeare meant anything. Novels they read for the plot, so that Wilkie Collins cheers where Thackeray bores. In law they have, with the assistance of distinguished foreign jurists, drawn up admirable codes. But there is still to be trained a bench and a bar able to apply and develop these. Japan has not yet produced a true historian. Even the most recent historical studies by the Japanese themselves are vitiated by the lack of judgment. All is tainted by certain preconceived opinions, by what might almost be termed superstitions. Some of these have been already touched upon—for example, the fictitious basis of the national loyalty, the unbroken succession from Jimmu Temo, the supposed facts concerning that semi-mythical Emperor himself. At present the mind of the nation is not fitted to take in the truth that the early “Emperors” were only chiefs of the strongest clan, and that down to the days of Ieyasu, Japan was the arena of clan struggles for supremacy. But one of the most extraordinary superstitions is that the Tokugawa régime was the period of retrogression in civilisation and the arts. It is amazing to find educated and otherwise sensible men maintaining that “in the beginning of the eighth century the people enjoyed security of life and property,” and had reached a higher level of civilisation than they attained to in the eighteenth century. Compare with this statement these facts—letters had been comparatively recently introduced, and slavery was still widespread and continued for many centuries later.

In scientific lines the Japanese have shown a distinct aptitude. They are quick at the “up-tak,” and facile in reproducing the knowledge gained. Here their wonderful memory stands them in good stead. It is perhaps a little too soon to look for the existence of a really original scientific thinker. Yet men might be named who have already made their mark, and whose investigations are known to all who are interested in the subject. In engineering and other practical developments of science they must, however, be content for many years to come to follow the experience of the West.

Foreign residents not unfrequently lose their patience over what seems to be Japanese perversity. The Japanese, in fact, have habits of thought and methods of doing which to us appear complete inversions of the natural. Their very modes of expression are, so to speak, topsy-turvy. A prolonged residence in Japan is, indeed, a splendid training in patience. For the Japanese are never in a hurry and rarely in a flurry, and like all Orientals they are perfect masters in the art of loafing. But undoubtedly the most irritating quality of the average Japanese is his shifty-shallying tendency, his lack of any true business-like faculty. With the exception of a very few important firms in Tokyo, it is rare that work undertaken is executed in the time promised. The ordinary vendor will waste hours in bargaining before he condescends to come down to a fair price. It is all done in the best of humour, and usually in full expectation of the final compromise. If the buyer accepts the first named price his money will be taken, but his character as a simpleton will be established.

Now, it is not for the love of the filthy lucre that the shopman or pedlar thus systematically over-

rates his merchandise. It is simply from an innate delight in bargaining. For there is no sordidness as yet in the Japanese soul—none of that hunger after, and belief in, the almighty dollar, which is the growing curse of commercial peoples. Possibly the worship of gold is inseparable from the accumulation of material wealth and the fostering of the spirit of commerce. Sad if it be so, for hardly then, will the Japanese, as he becomes commercial and business-like, escape the taint of mammon. And there is the more danger of this because of his tendency to exaggerate the material benefits of civilisation, and to depreciate the elevating, spiritualising influences that leaven the people of the West.

And yet our civilisation, although it has evolved a high, moral, and spiritual type that is unknown in Japan, has also produced a low, brutal type that is rarely encountered there. It may fairly be questioned if the average moral tone of the Japanese is markedly, if at all lower than that of Europe or America. From the very nature of the case such averages are difficult to make. Consider, for example, drunkenness. Except at New Year, flower festivals, and certain national holidays, an intoxicated man is very rarely seen in the streets. It has been whispered indeed, by the Japanese themselves, that there is a great deal of nightly boozing in palace and in cot. But on this and on other questions of social morality it is impossible for a foreigner to speak with any authority. He simply does not know. From the absence of any strong public opinion against the indulgences of mankind he is apt to draw the too hasty conclusion that morally Japan falls far short of the average level reached by us. But then what of the other side of the question? How do we as moral agents strike the Japanese? Were it not—I say it deliberately—were it not for the example of the missionary bodies, Greek, Roman, and Protestant, a native of Japan would, from his own observation of European and American life and manners in the East, have difficulty in finding evidence of a superior moral tone. To return, however, to our text, one thing is certain; into the inner heart of this sunny people, the foreign eye has never penetrated. Friendly, very friendly are the Japanese with whom, in his day's work, the foreign resident mingles—pleasant, very pleasant is their intercourse. But there is no real intimacy, no heart to heart converse, no chumming together. In his Japanese friend's house the foreigner is an honoured guest. The deep springs of Japanese family life are hid from his view. Slight indications there may be occasionally that, though all is smiling, all is not smooth. Now and again social earthquakes occur in which a wife possibly is divorced for a mere caprice, but this is rare in the better ranks of society. To the stranger the good-humoured affability of a Japanese may often seem to be the outcome of a frank and confiding nature. But for keeping his own counsel there is not his superior on earth. Rarely does his countenance display the inner feeling of the soul. It is inscrutable. If not expressionless in repose, it is smiling. Then, his very politeness may compel him to hide a disagreeable truth, or at the utmost to express it in very indirect language. His native tongue, with its elaborate impersonal forms of address, and even of command, reflects the whole social sentiments of the people. It abounds in double negatives, in honorifics to the person addressed, in deprecatory phrases concerning self or self's belongings. To behave so as not to grieve others, to keep personal cares in the background, and to sympathise with others in their joys, are rules of conduct that find many curious illustrations and are sometimes strangely misunderstood by the foreigner. But there might be no end to such reflections. In a broad sense, the Japanese are like ourselves, very human. They are probably more callous to suffering and less susceptible to pain, and are not so overweighed with the responsibilities of life. But after a prolonged residence in the country, when the novelty has faded, and only a few characteristics retain their pristine freshness, the impression remains on the mind that to the Japanese, as to ourselves, life is grave. Their history abounds in tragic tales of heroism. The tragic still is, and, let us hope, the heroic too.

The Marquis Maha Yotha, the new Siamese Minister to London, is already well known in this capital from his previous connection with the Siamese Legation here. He is also accredited to Holland, Belgium, and the United States, and his Excellency will probably go to the Continent next month to present his credentials. It is uncertain when he will proceed to America, especially as there is some idea of appointing another separate Minister to represent Siam at Washington.—*London and Other Express.*

A big match was played at the Bay Tree, St. Swinburn's Lane, on the 21st March, when seventy-five players of the Ludgate Circus Chess Club played a like number of the young but strong Metropolitan Club. The former scored 38½ against the latter's 30½. We believe that a still larger number of players have met at a match between the East and West of Scotland a few years ago.

A branch of the New Oriental Bank Corporation has been opened in Paris, under the charge of Mr. L. G. Adams, manager, and Mr. J. R. Bruce, sub-manager, the agency hitherto conducted by Messrs. J. R. Bruce and Co. being discontinued. As soon as the necessary alterations are completed, the offices will be removed from No. 25, Avenue de l'Opéra, to No. 8, Place de la Bourse.—*London and China Express.*

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, June 24th.
 The platform of the Democrats promises the repeal of the McKinley law and demands the revision of the tariff in the direction of free raw material and a reduction of the duty on manufactured goods.

London, June 25th.
 The borough elections begin on the 4th July. The Chicago Convention nominated Mr. Cleveland.

 The House of Lords has passed the Irish Education Bill.
 The Duke of York has assumed command of the cruiser *Melampus*.

London, June 27th.
 At an electoral meeting in the City of Chester a missile was thrown at Mr. Gladstone which struck him in the eye. The effect of the blow compelled Mr. Gladstone to return to Hawarden, where is confined to his room.

London, June 28th.
 The Sultan of Morocco has yielded to the British demands.

The Scottish Home-rule Society has refused to support Mr. Gladstone at the elections since Home-rule for Scotland was not included in his programme.

London, June 29th.
 Mr. Gladstone has recovered from the assault at Chester.

Parliament has dissolved.
 The first meeting of the new Parliament is fixed for August 4th.

[FROM THE "SINGAPORE FREE PRESS."]

London, June 8th.
 The Emperor of Russia has visited the Emperor William at Kiel; their Majesties dined together and the toasts were of a most cordial nature. The Czar has been made an Admiral of the German Navy. His Majesty has returned to Copenhagen.

There have been great Russophile demonstrations at Nancy at the opening of the gymnastic fêtes. President Carnot was present and the Grand Duke Constantine was also an unexpected visitor; the presence of the latter is regarded as of the highest political importance. The French Press are jubilant at the visit and considers that it nullifies the importance of the meeting of the two Emperors at Kiel.

London, June 11th.
 The Government have withdrawn the Irish Local Self-Government Bill.

London, June 13th.
 After three days anxious debate the Italian Chamber of Deputies has granted the Premier's demand, and voted a six months' supply.

London, June 14th.
 It is reported that the British East Africa Company intends to abandon Uganda, as their funds are exhausted. *The Times*, in a leading article, urges Lord Salisbury, for the sake of England's honour, to intervene and prevent others from taking Uganda.

London, June 15th.
 All the European Governments, except Russia, have accepted the invitation to send delegates to the International Monetary Conference.

London, June 16th.
 The election manifesto issued by the Parnellites declares that their party sought for peace, but the McCarthyites having refused, there must be war to the knife.

The efforts made for a reconciliation between the Emperor of Germany and Prince Bismarck have failed.

[FROM THE "PIMANO GAZETTE."]

London, June 7th.
 A thunder cloud which burst over the oil region in Pennsylvania partly swamped two towns; the lightning fired the mineral oil, which spreading for miles, caused the death of three hundred and fifty persons.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Treasure, \$89,000.00.

REPORTS.

The Japanese steamer *Omi Maru*, Captain H. Devenish, reports:—Left Otaru the 21st June at noon; had light to moderate winds and rainy weather. Arrived at Hakodate the 22nd at 8 a.m. and left the 23rd at noon; had light wind and fine weather times fogg. Arrived at Oginohama the 24th at noon and left at 2 p.m.; had light wind and fine weather. Arrived at Yokohama the 25th June at 4.17 p.m.

The Japanese steamer *Sundai Maru*, Captain Tipple, reports:—Left Kobe the 24th June at noon; passed Oshima at 9.15 p.m. and Rock Island at 9.30 p.m. on the 25th; had gentle breeze with variable winds to Rock Island; thence to port moderate S.S.W. wind and fine clear weather throughout the passage. Arrived at Yokohama the 25th June at 6.40 p.m.

The Japanese steamer *Hiogo Maru*, Captain Pender, reports:—Left Kobe the 26th June at noon and arrived at Yokohama the 27th June at 7 p.m.; had light to gentle S.E. breeze and fine weather throughout the passage.

The Japanese steamer *Takasago Maru*, Captain Arai, reports:—Left Hakodate the 26th June at 8 a.m.; had moderate to strong S.W. winds and moderate sea with overcast and cloudy weather with occasional fog, rain, and very strong current against us from Inubuye, which was passed at 11.30 p.m. on the 27th. Arrived at Yokohama the 28th June at 1.10 p.m.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Otaru the 24th June at noon and arrived at Hakodate the 25th at 8.30 a.m.; had fresh head wind and sea most of the way, with fine clear weather. Left Hakodate the 26th at noon and arrived at Oginohama the 27th at 1 p.m.; had moderate winds from the south with thick fog and rainy weather. Left Oginohama on the same day at 3.10 p.m. and arrived at Yokohama the 28th June at 8.40 p.m.; had moderate S.W. winds and heavy head swell with overcast showery weather all the way.

The Japanese steamer *Mikie Maru*, Captain MacMillan, reports:—Left Kobe the 27th June at 5.30 p.m.; had light southerly winds to Oshima with heavy rain; from Oshima to Rock Island fine weather; from Sagami to port thick foggy weather. Arrived at Yokohama the 29th June at 7.30 a.m.

The American steamer *City of Peking*, Captain Seale, reports:—Left Hongkong the 25th June at 1 p.m.; had light winds and fine weather through-

entire passage. Time, 5 days, 6 hours, and 26 minutes.

The Japanese steamer *Omi Maru*, Captain H. Devenish, reports:—Left Kobe the 29th June at noon; had light variable winds and fine weather; passed Oshima the 30th at 1 a.m.; passed Rock Island at 4 p.m. Arrived at Yokohama at 10 p.m.

The Japanese steamer *Nigata Maru*, Captain Fukui, reports:—Left Yokohama the 30th June at 5.30 p.m. and arrived at Yokohama the 1st July at 1.30 p.m.; had fine weather all the way.

The American steamer *City of Rio de Janeiro*, Captain Cavarly, reports:—Left San Francisco the 14th June at 4.15 p.m.; first five days had strong westerly winds with heavy head sea, since have had moderate weather, overcast, and thick fogs a good part of the time; on the 27th, lat. 43.29 North, long. 164.59 East, passed a ship hull painted lead colour, steering east. Arrived at Yokohama the 1st July at 4.35 p.m. Passage, 16 days, 6 hours, and 52 minutes.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 24th June at 11.30 a.m.; had light winds and foggy weather to Nagasaki, where arrived the 26th at 4 a.m. and left at 5 p.m. Arriving at Shimomoseki the 27th at 6 a.m. and left at 11 a.m.; had light winds and fog throughout the Inland Sea. Arriving at Kobe the 28th at 2 p.m. and left the 30th at noon. Arrived at Yokohama the 1st July at 11 p.m.; had fine weather throughout the passage.

The Japanese steamer *Wakunoura Maru*, Captain Thompson, reports:—Left Otaru the 27th June at noon; had light southerly winds and fine weather to Hakodate, arriving the 28th at 8.53 a.m. and left the 29th at noon; had light S. and S.W. winds to Oginohama, arriving the 30th at 0.5 p.m. and left at 3.5 p.m.; thence to port light variable winds and fine weather. Arriving at Yokohama the 1st July at 7.30 p.m.

Triomphante (12), French flagship, Captain De la Noe, 16th June,—Nagasaki via ports 4th June.

LATEST COMMERCIAL.

IMPORTS.

The market again shows symptoms of an improvement in business and dealers seem to think that its volume will gradually increase during the next few months, now that the bulk of the Produce requirements has been got through. In Cotton Yarn there has been more demand for English Spinnings, and an advance has been paid on

quotations ruling a week ago for Single Yarns, whilst for Two-folds, and especially the Fine counts, prices are 50 cents to \$1 per picul higher. Some bays have, however, not participated in the demand, and quotations are almost nominal. In Grey Cottons the business has been small with prices easier, and in Fancy Cottons sales have been on a very moderate scale without much change in prices, but in Woollens further large sales for arrival have been reported in Mouseline de Laine and to a moderate extent in Italian Cloths. Sales for the week comprise about 1,000 bales English Yarn, 5,000 pieces gth. Shirtings, 1,000 pieces T-Cloths, 250 pieces White Shirtings, 400 pieces Turkey Red, 300 pieces Velvets, 100 pieces Cotton Italians, 4,000 pieces Victoria Lawns, 300 pieces Prints, 350 pieces Silk-faced Satins, 2,000 pieces Italian Cloths, and 20,000 pieces Mouseline de Laine.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8½ lb, 38½ yds, 39 inches	\$1.55 to 2.15
Grey Shirtings—9 lb, 38½ yds, 45 inches	1.85 to 2.50
T. Cloth—7½ lb, 24 yds, 32 inches	1.30 to 1.50
Indigo Shirtings—12 yds, 41 inches	1.30 to 1.55
Prints—Assorted, 41 yds, 30 inches	1.50 to 2.00
Cotton—Italians and Satinets Black, 32 inches	0.13 to 0.15
Velvets—Black, 55 yds, 42 inches	5.60 to 6.60
Victoria Lawns, 12 yds, 32 inches	0.55 to 0.70
Taffetas—12 yds, 41 inches	1.15 to 2.25
Turkey Red—1.15 to 2.15, 24½ yds, 30 inches	1.15 to 1.20
Turkey Red—2.4 to 2.8 lb, 24½ yds, 30 inches	1.25 to 1.35
Turkey Red—2.12 to 3 lb, 24½ yds, 30 inches	1.40 to 1.50
Turkey Red—3.4 to 3.8 lb, 24½ yds, 30 inches	1.55 to 1.65
Turkey Red—4 to 4.8 lb, 24½ yds, 30 inches	1.80 to 2.05

WOOLLENS.

	PER YARD.
Flannel—30 yds, 32 inches	\$0.23 to 0.38
Italian Cloth, 30 yds, 32 inches	0.25 to 0.28

No. 10/14, Bombay	50.00 to 60.00

METALS.

Some little doing in Sheets, with a few enquiries for goods to arrive, but the market generally is dull and lifeless. Wire Nails are especially neglected, and quotations for all descriptions of Iron are more or less nominal.

	PER PICUL.
Flat Bars, 4 inch	\$4.85 to 5.90
Flat Bars, 1 inch	2.95 to 3.00
Round and square up to 4 inch	2.85 to 3.00
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.95 to 3.15
Sheet Iron	3.35 to 3.60
Galvanized Iron sheets	5.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Fin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Market unchanged and firm. Buyers have apparently supplied their present wants, but deliveries are good, and probably we shall see further sales at an early date.

QUOTATIONS.

Chester	\$1.54 to 1.65
Connet	1.57 to 1.66
Devos	1.52 to 1.55
Russian Anchor	1.54 to 1.55
Russian Moon	1.50 to 1.52

SUGAR.

Considerable business at a smart advance in prices and many thousand bags have changed hands. The wreck of the *Haiphong*, off Shimoda, seems to have worked a wonderful change in this market, buyers rushing in to secure some of the stock on hand.

	PER PICUL.
Brown Takao	\$1.20 to 1.30
Brown Daibang	1.30 to 1.40
Brown Indona	3.40 to 3.50
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was dated the 23rd ultimo; since that date, up to last night, settlements on this market are 424 piculs, divided thus:—*Filatures*, 200 piculs; *Re reels*, 100 piculs; *Kukeda*, 85 piculs; *Oshu*, 39 piculs. Direct shipments have been 40 piculs, so that the total business for the week amounts to 464 piculs, and with this the season 1891/1892 is closed.

New Crop.—The above settlement figures include about 300 piculs of new silk, which have been eagerly taken by buyers at gradually increasing prices.

The market was opened on the night of the 23rd by the purchase of 10 bales true *Koshu Filatures*, at \$650 per picul, and this parcel was shipped per *Belgic*. Since then buyers have entered the market, pushing prices up from day to day. The principal demand has been for the so called *Shinshu Filatures*, which indeed are reeled in *Shinshu* province, but made from alien and mixed *Cocoons*. These have advanced fully \$25 per picul from opening price, and holders profess to be very strong at \$10 above our quotations.

The first purchase in new *Re-reels* was looked on the 25th, when *Tortoise-chop* was settled at \$630. A further parcel just to hand is held for \$650, \$640 being refused with scorn. Other very good, serviceable *Re-reels* have found buyers at \$620.

We have nothing fresh to say as to the estimate, expressed in our last, about the production of Japan during the season, which commences to-day. As the month advances, we shall see our way clearer upon this point. At present the weather is very favourable, and there is no reason to suppose that any further damage will be done.

Quotations in our list below are all for new silk. In old staple, some business has been done, chiefly in *Kukeda* and *Hamatsuki* at about previous rates. For these there is not much competition, while for new silks there are many buyers and not enough silk in the market to go round.

There have been three shipping opportunities since we last wrote. The American mail on the 25th June, steamer *Belgic*, carried 50 bales for New York; the English mail *Ancona*, on the 25th ult., carried 56 bales for Europe, the Canadian mail, *Empress of China*, on the 27th, took 51 bales for New York. These shipments bring the total for the season up to 50,138 piculs against 34,294 piculs last season and 35,967 to the 30th June, 1890.

Hanks.—One or two small parcels of *Hachaji* have come in, but proved poor and common. The silk is spongy and of full size. Sellers ask \$450 without finding a buyer.

Filatures.—Some business done in old silk, fine size, for Europe on the basis of last quotations. In new staple, we have seen an excited market, and prices have been pushed up fully \$25 upon the opening. Holders ask yet more and the probability is that they will get what they ask. Practically the market is cleared of new silk and fresh arrivals, when they come to hand, will command still higher prices.

Re-reels.—The market was opened on the 25th ultimo by a purchase of *Tortoise-chop* at \$630. Fresh arrivals of the same chop are held for \$650. Other kinds have been settled from \$620 to \$630, useful silk, although running full in size. Some old *Re-reels*, very common, have been done at from \$480 to \$520.

Kukeda.—The business done has been in old silk and the purchases have all been for Europe. The prices paid have been about \$500 for very medium stock.

Oshu.—Some few parcels have been sent home to Europe on consignment for native account.

WASTE SILK.

The only transaction has been 30 bales of common *Filature Kibiso*, old fibre, at \$75 per picul. Beyond this nothing has been done, and the season is finished.

One parcel of *New Joshi Noshi* is said to have arrived, being of the ordinary mixed quality common to early arrivals. Holders are said to ask \$65 for it, but the goods at the price do not seem to tempt buyers.

No samples of Pierced Cocoons are yet in the market, although some are expected in the course of a few days.

There has been only one shipment during the week, by the English mail *Aucana*, which vessel carried 35 bales for Marseilles and 27 bales for Trieste. This departure brings the total export for the season, closing last night, up to 35,386 piculs, against 32,325 last year and 29,752 piculs at the 30th June, 1890.

All quotations withdrawn until some business is done in new fibre.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmisgivable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
 2. "First class Workmanship."
 3. Moderate Prices.
 4. Greatest obtainable power for weight and space occupied.
 5. Quickness in raising steam.
 6. High rates of speed guaranteed.
 7. Absence of noise and vibration.
- We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition with all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

1y.

SANTAL-MIDY

The pure Essence of Santal obtained by Midy's process from the best Mysore wood.

SANTAL-MIDY entirely different from the santal oil of the Indian Bazaars, is superior to Copaiba, Cubeb, or injections, and free from all bad smell or other inconveniences.

SANTAL-MIDY cures all derangements of the urinary organs in either sex in 48 hours.

SANTAL-MIDY is contained in small round Capsules, each of which bears the name..... MIDY in black letters, without which none are genuine.

SANTAL-MIDY Beware of imitations, all other Capsules or mixtures contain impurities, resins, oils &c. and are worse than useless.

SANTAL-MIDY is sold by all druggists and medicine dealers throughout the world.

PARIS, 8, RUE VIVIERE, 8

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untempered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters B O S are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

B O S

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

B O S Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

B O S is sold in square white bottles, labelled and capped, the quality being verified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in the special blends of B O S.

Correspondence invited from Firms who desire to handle our Whiskies.

PEASE, SON, & CO., LEITH, SCOTLAND.

English Addresses—LONDON & DARLINGTON—DURHAM. Established 1808.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 9TH, 1892.

MARRIAGE.

On the evening of June 30th, at the residence of the officiating clergyman, Okayama, before Hon. E. J. Smithers, U.S. Consul, by the Rev. J. H. Petree, the Rev. Schuyler S. White to Miss Ida Augusta McLennan; both members of the American Board Mission.

On the 9th inst. by W. Filliston, Esq., U.S. Consul-General, and afterwards by the Rev. E. Hampneys Irvine, M.A., Christ Church, ELIZABETH HEATRICE, 2nd daughter of the late F. C. Webb, M.D., F.R.S.P., of London, to AUGUSTUS WELLINGTON, and son of A. W. Payne, Esq., of New York.

SUMMARY OF NEWS.

THE Emperor visited Count Goto at his private residence on the 4th instant.

H.I.H. PRINCE ARISUGAWA TAKEHITO left Shinagawa on the 1st inst. for Kiushu.

MR. MURATA, Japanese Consul-General at Fusan, left for his post on the 5th inst.

THE graduation ceremony of the Imperial University will take place on the 10th inst. at 10 a.m.

THE Botanical Garden of the Imperial University was visited by 1,112 persons during last month.

THE leading residents of Kochi intend to construct a railroad between Kochi and Ino in the Prefecture.

A FIRST class Meteorological Observatory has been opened at Tadotsu in the Tadotsu District of Kagawa Prefecture.

VICE-ADMIRAL VISCOUNT KABAYAMA, Minister of State for the Navy, has been decorated by the French Government.

DURING the night of the 26th ult. an alarming fire occurred at Tomikimura, Hasaha-gun, Ishi-

kawa Prefecture, destroying 107 houses, 3 temples, a post office, a police station, and a village office.

DURING last month 165,584 passengers left Shimbashi Railway Station, by whom yen 39,114.94 was paid for tickets.

THE various Government offices in Tokyo will be opened at 8 a.m., and closed at 12, noon, from the 11th inst. up to 10th October.

A SEVERE rainfall was experienced in Kyoto on the 28th ult., causing several rivers to overflow. Two children are reported missing.

VISCOUNT ENOMOTO, Minister of State, and Mr. Hayashi, Vice-Minister for Foreign Affairs, have been permitted by the Decoration Board to wear decorations conferred on them by the Czar.

THE dividend of the Tokyo Tramway Company for the first-half of this year is estimated at the rate of 10 per cent. per annum; that of the Tosegawa Shipping Company, Tokyo, at 5 per cent.

THE Directors of the Osaka Electric Light Company and the Oni Rice Exchange propose to declare dividends for the first half of this year at the rates of 10 per cent. and 17 per cent. per annum respectively.

THE returns of visitors to the Imperial Museum in Ueno Park, Tokyo, for June were:—4,064 adults, 139 children, and 294 students; and to the Zoological Garden:—9,921 adults, 817 children, and 265 students.

THE number of visitors admitted to the Tokyo Library during last month was 6,575 (5,667 ordinary and 608 special visitors), by whom 42,849 books (2,750 foreign and 40,095 Chinese and Japanese works) were inspected.

THE marriage of H.I.H. Prince Komatsu Yorihito and Lady Yamaneuchi Yaye took place on the 6th inst. The Prince and Princess paid their respects to Their Imperial Majesties the Emperor and Empress the same day.

THE dividends of the Yokohama Bank, the 74th National Bank, and the 2nd National Bank, Yokohama, for the past half-year are estimated respectively at the following rates:—3 per cent., 11 per cent., and 16 per cent. per annum.

THE Commander-in-Chief of the French Squadron on the Asiatic Station, paid his respects on the 30th ult. to Their Imperial Highnesses Princes Arisugawa, Komatsu, Fushimi, Kitashirakawa and Kanin at their respective residences.

CAPTAINS TANG SHI CHANG, of the *Chih Yuen*, and Ling Yea Keh, of the *Wei Yuen*, Chinese cruisers, recently at Yokohama, called on the afternoon of the 1st inst. on the Governor of Kanagawa and the Superintendent of the Yokohama Customs House at their respective offices; afterwards they visited the Chinese Consulate.

DURING the month of April last the total number of spindles at work in 33 Cotton Mills throughout the Empire was 325,280, and the quantity of cotton used was 1,026,925 *kwamme* (one *kwamme* = 84 lbs.), from which 868,345 *kwamme* of thread were obtained. Coal consumed in the mills during the month amounted to 15,825,780 pounds.

MR. W. SIMPSON, an American, now staying at the Grand Hotel, was relieved of his gold watch, valued at over 300 yen on the 29th ult., while witnessing the wrestling performances at Kumocho, Yokohama. The Japanese Police Authorities were informed of the occurrence, and

after a diligent search they were able to restore the watch to its owner the following day. The police state that the watch was discovered in the hands of a Chinaman living at No. 189, Settlement, who explained that he had bought it from a Japanese for the small sum of 8 yen.

THE presentation of certificates to graduates of the Kogyo Gakko, Kanda, Tokyo, took place on the 4th inst. in presence of a large party of distinguished guests. During the course of the proceedings a congratulatory address was read by Count Oki, Minister of State for Education, and an address was given by Mr. Kawase Hideharu, to which the representative of the graduates replied.

THE suit raised by Messrs. Mourilyan, Heilmann & Co., Yokohama, against Mr. Utsumi, Governor of Kanagawa, for the recovery of kerosene oil, alleged to have been wrongfully delivered by the latter to an unauthorised Chinaman by whom it was subsequently misappropriated, has been decided in the Yokohama Local Court in favour of the defendant. The plaintiffs have appealed in the Tokyo Court of Appeal against the decision.

THE Import trade continues healthy generally, and a further improvement can be recorded in Yarns at better rates, the sales of last week having increased by about 30 per cent. for English spinnings, and a few lots of Bomblays have also been taken. The rice crop having been planted out under favourable conditions, and the present weather being everything that could be desired, country dealers ought shortly to be turning their attention to supplies for the Autumn trade, as the agricultural outlook is of the kind to encourage the replenishment of stocks in the interior, which in many places are known to be exceedingly low. For Piece-goods there is considerable enquiry. At present prices are somewhat low, but the stocks are not heavy, and prices are more than likely to take an upward turn as the Autumn approaches. Metals, as usual in July, are very quiet, and quotations may be called nominal. Kerosene is very firm, and in view of no arrivals and a not excessive stock, dealers will certainly have to pay more before they pay less than recent rates. All Sugars have hardened, and though no great amount of business has been done during the week, buyers appear anxious to secure parcels, fearing a further rise on a diminishing stock. The Silk trade is not yet in full swing by a long way, and though some handsome new fibre has come in, the parcels are still small, while the prices asked are very high. Notwithstanding the latter condition, however, competition has been keen in certain quarters, and there is every appearance at present of current rates being maintained, and even advanced if the reports in regard to the Italian crop turn out to be correct. So far as can be seen, the reported damage to this season's Silk crop will be a smaller factor than the method of its preparation in the value of the total out-turn, for the advice so often tendered by experts in respect to evenness has already in certain cases shown signs of being disregarded. Settlements for Tea, which in the earlier part of the season were considerably below those of last year, have crept up till they have assumed the dimensions of a year ago at date, namely, 12½ million pounds. Some buyers now begin to pause—though the trade is still brisk—and full rates have to be paid for good leaf, which is gradually getting scarcer as the season advances, the bulk of that on offer being second crop. Exchange has further declined during the week, though at present there appears to be a check upon the downward course of silver.

EDITORIAL NOTES.

THE EMPEROR'S VISIT TO COUNT GOTO.

The Emperor's visit to the private residence of Count Goto at Shinagawa took place on Monday. His Majesty has now signified his intention of conferring a similar honour on Marquis Nabeshima, Grand Master of Ceremonies. The Imperial visit to the residence of the Marquis will take place on the 9th instant at 1 p.m., and will be followed by a visit from the Empress on the next day at the same hour. The Marquis will have the pleasure of receiving the Sovereign in his new house in Nagatacho. The house was in process of building for three years and its completion took place very recently. It is an imposing and spacious edifice of brick and stone, and it occupies one of the most admirable sites in Tokyo, commanding an extensive view of the city and the sea on the north and of Shinagawa and Fujiyama on the south and west. The architectural beauties of the place are not remarkable. Rumour says that romantic adherence to the designs of a deceased architect, who would doubtless himself have introduced some modifications had he lived to carry out the work, is responsible for certain peculiarities which do not appeal to everybody's taste. Nevertheless the house as it stands is one of the most imposing private residences in Tokyo.

Vernacular journals say that the Emperor left the Palace at 1.15 p.m. on Monday to proceed to the private residence of H.E. Count Goto at Shinagawa. His Majesty was accompanied by Marquis Tokudaiji, Grand Chamberlain, Viscount Hijikata, Minister of the Imperial Household, Viscount Sugi, Grand Master of Ceremonies to the Empress, and many other high officials of the Palace. The Imperial party, proceeding by the route previously announced, reached the house of the Minister of State for Communications at 1.50 p.m. Count and Countess Goto and others receiving His Majesty within the gates. The Emperor was at once conducted to a tent erected in a grove of plum trees. Close by was a Throne Room, furnished in European style, the floor covered with thick velvet carpet and the chairs and tables with brocade. This room opened into a waiting salon, which was in Japanese style. Everywhere huge blocks of ice, enclosing various kinds of flowers, had been placed to cool the air. Among the guests were their Imperial Highnesses Princes Arisugawa, Komatsu (senior and junior), Kitashirakawa, and Kusunoki, all the Ministers of State, Count Ito, Marquis Nabeshima, Count Higashikuni, Marquis Hachisuka, Count Kuroda, several Privy Counsellors and members of the Diet, the total number being over 300. Soon after his arrival, the Emperor gave audience to Count and Countess Goto and all their family, sons, daughters, grandsons, and granddaughters. Various arrangements had been made for the amusement of the Imperial Party. A *No* dance was the first performance. It was danced by Umewaka and other well known experts, on a beautifully decorated stage. This commenced at a little after 3 o'clock and lasted until nearly six, when His Majesty dined, the Princes of the Blood and various distinguished personages, to the number of about forty, being of the party. After dinner a display of legerdemain was given by Shoichi, and subsequently the celebrated *Koshakushi* Joyen recited a tale of the Nagashino campaign. After dark the branches of all the trees in the spacious grounds surrounding the house were illuminated by thousands of lanterns and electric lights, and myriads of fire-flies were released on the banks of the lake. The scene is said to have been very beautiful. The Emperor left at 9 p.m.

THE UNITED JAPANESE CHAMBERS OF COMMERCE.

Our readers are aware that a meeting of the various Chambers of Commerce of the Kwansei has been held in Osaka, and that a draft of rules for the United Chambers has been submitted for consideration. We read in the *Shogyo Shimpo* that the draft was to be considered on the 2nd instant by delegates

from the Kobe, Otsu, Osaka, Sakai and Kyoto Chambers. The rules are given as follow by our contemporary:—

RULES OF THE UNITED CHAMBERS OF COMMERCE.

- 1.—This Association shall be called the United Chambers of Commerce Association (*Shogyo Kwaigi-sho Rengo-Kai*).
- 2.—This Association shall consist of members representing the United Chambers.
- 3.—The purpose of the Association shall be to investigate all business connected with Chambers of Commerce, and submit the results of its investigations.
- 4.—The decisions arrived at by the Association shall not be binding on the several Chambers forming the union.
- 5.—The Association shall not publish any opinions in its own name or engage in any design.
- 6.—Each Chamber belonging to the union shall choose two of its members and send them to represent it in the union.
- 8.—Two Managers shall be chosen to look after the business of the Association. Their term of service shall be one year, and in the event of a Manager's post not being filled, or of his absence, a suitable substitute shall be appointed from among the officials of the Chamber to which he belongs.
- 9.—The meetings shall be regular and emergency. The regular meetings shall take place in September of every year, the emergency meetings shall be held in accordance with a requisition from the five Chambers of the union.
- 10.—The place of each regular meeting shall be fixed at the regular meeting the year before and the place of an emergency meeting shall be indicated to the Managers by the projectors.
- 11.—Drafts of bills to be submitted to a meeting shall be sent to the Managers four weeks, at least, before the day of meeting, accompanied by documents of explanation and reference, and the Managers shall take steps to lay them before the various Chambers three weeks, at least, previously to the day of meeting.
- 12.—Bills not complying with the provisions of the preceding article cannot be submitted to a meeting unless they have the approval of three of the United Chambers.
- 13.—The rules of Debate shall be separately determined.
- 14.—The expenses of the Association shall be borne by the various Chambers.

FREIGHT TO CHICAGO.

The *Nichi Nichi Shimbun* has a strongly worded paragraph on the subject of the freight to be charged for transport of goods from this country to the Chicago Exhibition. It was originally promised, we read, that exceptionally favourable rates would be given to intending exhibitors, but according to the programme now announced, the charge per ton from Yokohama to Chicago is to be \$16 (gold), whereas the charge under ordinary circumstances is only \$14. It is true that the former charge is to include the return of the goods to Yokohama within one year, if not sold there. But inasmuch as every exhibitor hopes to get rid of his exhibits on the other side, and will bring back nothing unless the price offered for it involves heavy sacrifice, the carrying companies stand to do a very pretty business. The rate proposed for the double journey is a reduction of only 43 per cent. on the full charge each way. That means that unless the sale in Chicago aggregate less than 43 per cent. of the total exhibits, the carrying companies will be making no reduction whatever; and that if the sales pass 43 per cent., the companies will receive higher freight than they would receive under ordinary circumstances. The *Nichi Nichi* says that, so far from affording facilities to exhibitors, such charges would be simply a device to exploit them in connection with the Exhibition. But surely there must be some misunderstanding. It is inconceivable that the Steamship and Railway Companies should have framed such a tariff.

A REMARKABLE MANIFESTO.

MR. OT KENTARO, the leader of the anti-mixed-residence party, possesses undoubtedly some elements of greatness. He knows how to seize an opportunity, and that knowledge carries a man far towards success. He has just issued a manifesto which will repay our readers' perusal as emanating from certainly one of the most resolute, reckless, and outspoken of Japanese Radicals:—

MR. OT KENTARO'S MANIFESTO.

For many years, obedient to the motto "suffer first and be happy afterwards," I have made common political cause with the people of the Eastern Provinces (*Kwantō*). The time has at last come when a great national problem has to be determined

once and finally. But unfortunately, at this vital juncture, almost every one of our so-called statesmen is found to possess only narrow and limited ability. All alike hasten to grasp some present advantage. In their short sighted eyes, the future looks as vast and obscure as a great ocean. They discover no way of reaching the other side of the wide expanse of water. What will be the fate of the nation should no spirited man arise at this crisis? After long meditation I have conceived a design concerning which I desire to address my old friends and associates, spirited men of the East. Should I be so fortunate as to obtain their approval, I will then proclaim my purpose throughout the empire and collect all who sympathize with our views. We shall then stand outside the Government and the Diet, and shall organize a powerful association to discuss the vital problems of the nation. Since a constitutional form of Government was established, we have indeed our Cabinet and our Diet, but men of spirit cannot rest content with these things, or wait quietly while the nation declines and falls, as must be the result unless the great problems now pressing for solution receive adequate attention. Spirited men of the East, it is time for you to stand forth.

Apparently the policy hitherto adopted by the Popular Party has been to reject every Bill presented by the Government, the intention being to paralyse the Administration and compel those in power to resign their positions. On the other hand, the apparent programme of the Government is to stand their ground in the face of all opposition, and in the event of the Popular Party maintaining its present attitude, to put forth their whole power with the object of keeping the administration in the hands of the clans. If this be a correct estimate of the attitudes of both sides, the collision between the Government and the Diet will continue from year to year, and the affairs of the nation must be neglected in the interval. Even though able men should appear upon the stage, they could accomplish nothing under such circumstances. On the other hand, consider the present condition of the world. The time for a terrible international collision in Europe is coming nearer every year, and the day when that collision occurs will also be a day of confusion for Oriental nations. The completion of the great Siberian Railway, too, is approaching, and the difficulties of Japan's struggle for independent existence will be inconceivably augmented. It would seem, in short, that an epoch some five or six years hence must be the most important in the history of Japan's independence. If an interval of such value is to be wasted in collisions between the Government and the Diet, problems of vital national importance will be neglected, and we shall find ourselves helpless when the moment of danger is at hand. Surely, then, the time has come for patriots to stand forth on behalf of the country's welfare.

The present situation of the empire may be compared with that of a family the head of which, abandoned to profligacy, devotes himself entirely to women and wine, and takes no thought to rule his family, while his wife and servants, exasperated by his dissipation, also neglect the house and pay no attention to the education of the children. So the moment of bankruptcy inevitably approaches. When the master of the house is profligate, the wife and servants must rule in his stead, or ruin will be the result. Neither the Government nor the Diet is wanting in patriotism. How is it then that neither the one nor the other grieves at the decline of the national power, and is content to fritter away valuable moments in the adoption of a time-serving policy? We cannot approve, nay are totally opposed to, the Government's persistent tenure of administrative power, in defiance of the popular will. But, on the other hand, we cannot possibly approve the policy of the Popular Party. Let us consider the matter for an instant. Has not the Popular Party declared that it has no confidence in the present Government? Hence, like the wife of a profligate householder, the Popular Party must take upon itself the duty of solving national problems. But the Government consists of men who, being only human, naturally say, "if the Popular Party attacks us by evil stratagems, we too shall resort to similar stratagems for our defence." The one side may continue to reject the Bills of the other, but the latter is all the more stubbornly pledged not to give up the administrative power. If the Popular Party desire to obtain that power, it must resort to brute force, for powers obtained by war are surrendered only on compulsion. To outsiders all this presents the appearance of sacrificing the welfare of the nation to individual ambition. The Popular Party, neglecting matters of State, confines itself to simply declaring that the Government has forfeited credit by its corruption, and that all Government Bills must consequently be rejected, even though some of them be good and

calculated to promote the welfare of the country. Five or six years may quickly pass in this fruitless quarrel, and meanwhile what is accomplished for the saving of the nation? What will be posterity's criticism of the Popular Party? Are its members without any sense of shame? Should the empire fall while the Government and the Popular Party fight, the responsibility will rest on both, which ever be in the right. Thinking of these things, I am filled with apprehension.

The responsibilities devolving upon us members of the Popular Party are indeed heavy. We have to consider the great problem of how to save the country. If we neglect that duty, posterity will regard us as we regard the wife and servants of the profligate householder. It behoves us carefully to consider our position. When the four walls of a beleaguered city are completely guarded, the garrison remains within and is not easily defeated. But if one wall be left unguarded so that the garrison can escape, the capture of the place becomes comparatively easy. Does not the Popular Party attack the Government according to the former plan? If the enemy is closely besieged they fight bravely within their walls. To save themselves they ultimately resort to the dissolution of the Diet. In that event, should the Government be victorious in the elections, well and good. But if it lose, if it find itself again confronted by a hostile majority in the House, it will ultimately resign as the Popular Party desires. Such resignation, however, merely signifies that a former Cabinet comes into office, clan statesmen retaining administrative sway all the while. With such a prospect in view, it is impossible to tell how long must elapse before the real aim of the Popular Party can be attained. If, while year after year is frittered away in these political disputes, the great problems of domestic policy are neglected and measures for securing the country's independence deferred, upon whom will the responsibility devolve? In the ranks of the *Fiyu to* are many patriots who have sacrificed themselves for the welfare of the nation. If a Party thus possessing the confidence of the people be unable to reform abuses or to save national problems from being buried away in a struggle with the Government, so that not even a clause of the Law of Elections can be amended, and the empire hears nothing but a story of perpetual collision with the Administration, posterity, so far from approving, will utterly condemn us.

To achieve any noteworthy deed in the world, a man must educate his own strength first, and then make his essay on sound lines. Is the Popular Party strong enough at present to undertake the great responsibilities of the State, or are its plans good enough to save the nation? I do not believe that it possesses any such strength. Though more than one half of the members of the House of Representatives belong to the Popular Party, I cannot think that their ability or experience are sufficient to warrant their being entrusted with those great responsibilities at once. If a man wishes to save another from drowning, he must jump into the water himself. So it is with a nation. To rescue a nation fast sinking in an abyss, the rescuer must plunge into the abyss. If the policy of the present Government be condemned, and if it appear that the nation is in danger, let spirited men be aroused who love the land and are ready to sacrifice themselves in its behalf. The men who accomplished great deeds at the time of the Restoration do not now give serious thought to the condition of the nation. They are content to have achieved that one great act. But does the Popular Party entertain any such great design or is it inspired by any such resolution? What can be more fatuous than to organize a number of feeble-minded Representatives, and seek by the clatter of their tongues to obtain the administrative power? The form of government has been changed to constitutional, but it is only a nominal change. Its actual working does not differ from the fashions transmitted from feudal times. We were foolishly misled when we imagined, that, in obedience to Western precedents, the Cabinet would resign if defeated in the Diet. To effect a great national reform men must sacrifice themselves. They must collect spirited fellow thinkers who are ready to act in concert with them, and brave enough to push forward with their full force even to the gate of death. Why should any devote themselves to the paltry object of gaining a victory in the House, merely to tickle the fancy of feeble members who care but little for their country? Such a line of conduct is analogous with that of panders who stand outside brothels to inveigle profligate passers by. Unless the strength of the Party be put forth and unless great works be accomplished now, when will either the one or the other be possible. Reason is reason, whether it be proclaimed by one voice or by ten thousand. But the views of thousands are easy to put into practice, whereas the views of a solitary individual, however just, are virtually powerless. It is so in interna-

tional negotiations. The country that commands a large fleet and a numerous army can always get what it wants. Truly it is lamentable that our once powerful Radical Party should have degenerated into a spiritless and helpless band of politicians. Is it not plain that the evils of the day are mainly due to the false fancy that by means of such feeble minded persons a great national reform can be accomplished? In feudal days it used to be said that the eight provinces of Kwan-to were strong enough to fight against the world. The old-time proverb is not less true to-day under a constitutional government. For the eight Kwan-to provinces are situated in the middle of the empire, and are the centre of politics. Moreover, they abound with spirited and heroic men. No undertaking, however great, if prompted by them has failed to succeed. If the men of the Kwan-to unite to undertake a noble enterprise and, gathering together all the men of spirit throughout the empire, discuss with them national problems and set themselves resolutely to solve constitutional questions, advising the Government how to govern and the people how to determine the policy of the nation, our aims will be achieved and our attitude towards foreign countries fixed. Men of Kwan-to, it is your duty to labour for the welfare of the country. The nation is sick, and in the outer world a great crisis is impending. When we look northwards we see,

A vast limitless waste,
Where human shadow never falls;
Nor in the bitter frost-bound air
Is any sound heard, save the crack
Of ice that drifts in sullen mass
On streams unbeaten by the ear.

If we do not apply some strong remedy to the growing disease, what will be the fate of the empire, what the destiny of the nations of the Orient? What indeed!

It appears to us that constitutional methods are much too slow for Mr. Oi Kenjiro. He has always had faith in muscle, and he returns to his old belief. The Manifesto is purposely obscure, but it can bear only one construction. It is an invitation to all the truculent persons in the empire to band themselves together for the purpose of imposing their will on the Government and on the people. Revolution under the guise of reform: an ancient story. Mr. Oi thinks that the time has come for such an essay. We should rather say that the time has passed.

THE EXCURSION TRAIN TO NIKKO.

THE first excursion train over a considerable distance of railway ever run in Japan was tried by the Nippon Railway Company last Sunday, over the portion of their lines between Tokyo and Nikko—92 miles, and although the enterprise was carried out in a rather curious fashion, when looked at from a Western point of view and usage, it has met with every success. The train was to be run if 300 tickets were applied for by the 29th ult.; applications however for over 500 were received by that date; and on Sunday morning the platform at the Ueno Station presented a bustling appearance, when 521 pleasure-seekers, mostly of the middle classes, dressed in their holiday garments, assembled at the point of departure. Sixteen large carriages were provided, and the accommodation was ample. The train drawn by one engine left Ueno punctually at 5 o'clock, the appointed time; and at Utsunomiya another engine was coupled on to assist in hauling over the steeper gradient of the remaining 26 miles. Though some 15 minutes late, the excursionists were brought into Nikko without any mishap. The return special came back in due time carrying about 400 passengers who appeared to have enjoyed the trip well. Nikko presented a busy aspect during the day; jinrikisha men, guides, and tea houses doing a thriving business.

It is stated in the vernacular papers that the applications for excursion tickets to Nikko being numerous, the Railway Company has decided to run cheap trains periodically. The Company announces that those who applied within the fixed period, and did not obtain tickets for the train of the 3rd inst., will be allowed to travel at still further reduced rates on Sunday the 10th. Are we to understand by this that on the 10th passengers will be travelling at different rates according to the time at which they applied for tickets? And, in case of the applications for tickets again exceeding the number the company decides to issue, are the

applicants to be remunerated for waiting till the following week by being furnished with tickets at reduced rates? If the number of applicants reaches a few thousands, as is not impossible, and the Company only accommodates 400 passengers each Sunday, some, instead of waiting a week may have to wait a fortnight or three weeks, and, according to the principle on which the Company now acts, they should receive double or treble remuneration for waiting. Thus the logical outcome may be that after a while the Company, to be consistent, will have to carry passengers for nothing. There is no reason whatever for demanding a written application for excursion tickets. If the Company wishes to make a success of these trains it should be prepared to put on two engines and as many carriages as are required, within reasonable limits. The inhabitants of Nikko are anticipating rich profits from this new departure, and have already commenced to make preparations for the accommodation of an increased number of visitors by the erection of booths, and the like.

THE INDEPENDENTS.

ONE would imagine that the "Independents" might by this time have made up their minds to enter some political camp, but it appears, on the contrary, that they are more than ever resolved to maintain their attitude of so-called neutrality. The five local associations which constitute the nucleus of the Independents, namely, the *Genyo-sha* of Fukuoka, the *Yeshin-sha* of Ishikawa, the *Dosei-kai* of Saga, the *Aikoku Koshin-sha* of Aichi, and the *Kyuyusha* of Niigata, have renewed the bonds that held them together during the last session, and resolved to continue standing aloof from both the *Ri-to* and the *Min-to*. These politicians hold the balance of power. Whichever side they join will at once find itself master of the situation.

THE DOSHISHA HOSPITAL.

THE Sixth Annual Report of the Doshisha Mission Hospital and Training School for Nurses in Kyoto is now published. The Medical Director and Surgeon is Mr. J. C. Berry, M.D., and there are three American ladies connected with the work, Miss H. E. Fraser acting as Superintendent of Nurses and Hospital Matron. The record for the year shown 200 in-patients, 7,199 out-patients, and 6,078 visits to out-patients. There is nothing special to note in this branch, the work being much the same in quantity and kind as that usually performed by the medical section of the American Board Mission. Referring to charity work, however, the Report contains a paragraph which ought to be quoted:—

It is with especial pleasure that we can record a largely increased charity work done during the year, and especially since January. In our last report attention was called to our needs in this direction, and to the necessity of further support in order to supplement the best influence of the Institution, and its legitimate work as a Christian hospital, by largely increasing our labours among the poor. The timely "thank offering" of three hundred dollars from Mrs. Buxton, supplemented by fifty dollars from Mr. and Mrs. Smithers, and the continued use of medical fees from private patients, enabled us at once to plan for a charity work of about six hundred dollars for the present calendar year. Tickets were prepared and placed in the hands of all the churches in this region, regardless of their denominational distinctions, while our plans were explained to the Kyoto census-police and their co-operation solicited. This they were glad to afford and our charity work is now averaging about eighty dollars a month. As at this rate even the funds we had would soon be exhausted, a circular was prepared soliciting from a few foreign residents and business firms to whom it was privately sent, contributions for this special feature of our work. But three among the hundred or more addressed responded, affording fresh illustration of the fact that the co-operation of foreign residents in support of the free service of mission hospitals in Japan is not generally realized. This is in striking contrast with the experience in China where, I am told, business firms and private individuals generally contribute to the support of the charity work of the mission hospitals. This, I am sure, is not due to any lack of generosity on the part of foreign residents. On the contrary, expressions of interest in other needs of less humanitarian significance show exceptional liberality. Perhaps the responsibility lies rather with the managers of mission hospitals themselves in not more frequently and publicly making known the needs of the work, and thus identifying foreign charities with its support. In Japan there is much suffering among the sick poor, and those coming in contact therewith feel a growing need for general effort for its relief. One hundred dollars, gold, will sustain a Free Bed for a year. Should any one feel disposed to assist in this work, such aid, small or great, will be gratefully received and carefully employed.

No immoral disease, no incurable case, and none but the actually needy, are admitted as charity patients. The story of the work done at Ogaki is very interesting. Immediately on receipt of the news of the earthquake, Dr. Berry organized a corps of physicians and nurses to proceed to the devastated regions, and he gives us the following account of what occurred:—

As soon as information of the great calamity of October 18th was received, a passport was applied for, by telegram, for permis-

son to take a corps of physicians and nurses to that region. On its receipt two days later we started with a full supply of medicines, surgical appliances, dressings, etc., Dr. Buckley taking full care of the Hospital in our absence. President Kozaki preceded us by a day, and arranged as far as possible for our coming. We were cordially received by government officials, and entered upon service at once. We were soon joined by Dr. Kawamoto of Kobe, and later by Rev. Mr. Clark, of our Mission and by four of our Doshisha College students. A large room in a school-house, one of the very few buildings remaining in the city that could be safely occupied, was assigned us for service: school desks, placed together and covered with mats, served as tables; the large yard in front as a waiting room; while straw mat pavilions made admirable hospital wards. Here the Corps, numbering twelve members, and including, besides those named, Messrs. Hori and Nakamura (physicians) and Nurses Tomita, Satō and Satō, worked nobly and harmoniously during the term of service until relieved, November 8th, by Japanese surgeons who had, in the mean time, come into the district in large numbers and who ardently labored in the work of relief. Dr. Inoko of the Kyōto Govt. Hospital and his staff occupied rooms adjoining us, while the University Second Hospital Relief Corps and the Kyōto Med. Ass. Co-operators joined us making, finally, four surgical clinics in operation. The brief service was heavy and the injuries treated were of exceptional severity. Fractures, dislocations and flesh wounds predominated. These latter were especially numerous, and, in some cases, fatal, having, in most cases, received no attention, were in a filthy and dangerous condition. Kindness and sympathy characterized the attention of the well to the injured,—the latter being brought on litters in such numbers that by ten o'clock in the morning the common clinic yard, and the street in front of the building, would be well filled with the sick and their friends. The patient submission of the injured, their courage in suffering and their confidence in and appreciation of the service rendered, contributed much toward sustaining the members of the five different Corps in the difficult performance of their work. Especially touching was the gratitude of a woman eighty-one years old. She had sustained a severe injury of the shoulder and, in spite of the attention of four physicians, had suffered unrelieved for five days. She was easily helped and when, two days later, she came to have the bandages renewed, so profound was her gratitude that, standing aside where she could see us at work, she bowed her head and lifted her hands in profound worship. My feelings may be imagined as I hastened to her side, took her little wrinkled hands in mine and told her that I was but a man sent with others by our common Father to give her and her people aid,—a Father who had loved her and kept her all those eighty-one years and even through the dangers of the earthquake. Let her and her people praise God.

Earth vibrations continued during the time of the service, as many as sixty-six being recorded in one day at the meteorological station at Gifu, but they did not interrupt the work of our Corps, though at night they sometimes sent us hastily into the yard. It was a somewhat novel experience to conduct surgical work when, in the midst of an operation, patient, surgeon and nurse would find themselves shaken and separated from each other by the strong earth vibrations, while among the less injured patients and friends there would be a general scramble for the door. It was our desire to leave Dr. Kawamoto in charge of the work, and to keep open the hospital for some months, making weekly visits thereto, but the desire of the officers of the Red Cross Society and of the Kyōto Medical Association to take up and carry on the work, rendered it advisable to early withdraw and commit the work to their care. The day after we were relieved, however, a letter was sent from the Prefectural Government, twelve miles away, conveying assurances of the Governor's appreciation of the work and requesting the Corps to continue its service.

One of the most valuable sections of this excellent institution is the school of sick nurses, now under the charge of Miss Helen E. Fraser, of Toronto, a graduate of the Bellevue Hospital Nurses' School. Thirty-seven nurses have graduated at the Doshisha Hospital, and with regard to their capacities Miss Fraser writes:—

In have frequently been asked the question: "How do the Japanese compare with the American women as regards efficiency in the nursing profession?" I can only say that I was surprised to find how favourably they compared with them. Of course there are differences among them, just as there are among nurses at home; and at present many of them come from among the more lowly walks in life and are not educated women, although a certain amount of education in the way of reading, etc., is necessary for admission to the mission. But we remember that the first nursing training schools were first started in America, and how it is only within recent years that better educated women have been turning their attention to nursing as a profession; and so we hope gradually to raise the standard here. This need in general education is even now met by the curriculum, those nurses most deficient receiving special instruction in reading and writing in the Chinese character, so that at the end of two years they are much more proficient than when they come to us. The students also receive much more didactic instruction than is usually given in American training schools, thus supplementing the practical training which is necessarily limited in a small hospital. And in one respect they have an advantage over the nurses in most of the schools at home in that a thorough religious training is combined with that of nursing. There is a very strong Christian influence in the school, and although most of those who apply for admission are professing Christians, we have received some who are not, and so far none have left without accepting Christianity. As a rule I have found the nurses bright and intelligent, and very eager to learn. They are also deft with their fingers, and quick to imitate anything they have seen. As far as I have been able to observe, their services are very acceptable to the patients. More than once I have been told by our patients who had been in other hospitals and who spoke from experience, what a difference there was between our nurses and the ordinary Japanese nurse; how much more kindly they were treated by the nurses here, and how much more thoughtful and sympathetic they were; and as they are known as Christian nurses, they may thus, even though unconsciously, bring glory to the cause of Christ, by the contrast of their conduct with that of others.

Instruction is given to the nurses free of charge, but they support themselves, or are supported by friends, while in the school, thirty-six dollars, silver, being sufficient to support a nurse for a year. At present we have twenty pupils. We are disposed to think that the eulogistic patients referred to by Miss Fraser were just a little too complimentary; for although we entertain no doubt that the training of nurses by the Doshisha is on a par with the admirable work done by that mission in every branch, our own experience of the nurses trained in Tokyo hospitals makes us doubt very much whether they really show the inferiority mentioned by the Osaka patients. Certainly we cannot conceive nurses more helpful, cheerful, kindly and competent than they show themselves. In cases of severe illness, where the sufferer cannot be removed to hospital, these nurses are absolutely invaluable. The only trouble is that their num-

bers are very limited, and one can never be sure that an application to a hospital will find a nurse available.

At the conclusion of the Report we find the following interesting medical note:—

Koch's tuberculin, of which so much was expected when preparing our last report, I have abandoned in the treatment of pulmonary phthisis, the results in some cases showing it to possess, even when used with the utmost care and in small doses, alarming capabilities for harm. Some of our cases, steadily growing worse under its influence, began to improve when the tuberculin was abandoned and a different line of treatment pursued. During the year, as previously, I have practiced, in some cases with gratifying results, intra-pulmonary injections, the long needle made especially for this purpose conveying the medicine directly to the pulmonary cavity. The object aimed at, both by injection and by treatment, has been to favour fibrous hardening of diseased lung tissue. I have recently, in the case of a cavity communicating with the bronchus, alternated these injections with the new germicide, the peroxide hydrogen, with encouraging result. About 25 per cent of all the deaths in Japan are due to tuberculous disease.

The treatment of Sakkei (Epidemic Multiple Nephritis) has continued satisfactory during the last year as to merit notice in this report. Not a case of death from this disease has occurred in my practice now for five years, though, during this time, our large Doshisha College has passed through two epidemics (one severe) of this affection, and cases have been brought into the hospital in the last stages of the disease ("shōshin" commencing heart paralysis) and from which the Japanese physicians predicted certain death. The treatment pursued is, in general, soda salicylate combined with spirits, ether, nitrate, and potash acetate if the kidneys are inactive, with strophanthine if the heart is weak, and with sodium bromide if laboured breathing and rapid heart beat show that "shōshin" is beginning. With these remedies, and with the avoidance of rice from the dietary, and with a change in certain chronic cases, from the plain to a modern style of diet, I now approach the treatment of Sakkei confident of success.

I am not aware that this combination of treatment, with the prominence given to sodium bromide in "shōshin" is employed by others than myself and a few of my medical friends to whom I have spoken of my experience. I therefore give it notice, in this Report.

THE "KAISHIN-TO'S" POLITICAL TOURISTS.

THE country is to have a feast of political lectures during the next four months. We have explained how the Radicals and National Unionists have chosen members to proceed to the various localities, and we now read in the *Yomiuri Shimbun* that the *Kaishin-to* are also making arrangements to stamp the land. The various prefectures of the Kwanto are to be visited by Messrs. Kato Masanosuke and Asaka Katsutaka; the northern districts, as well as Ishikawa, Toyama and Niigata, by Messrs. Shimada Saburo and Hatano Denzaburo; Tokushima and Hyogo by Messrs. Ozaki Yukio and Minoura Katsuto; the prefectures of Tohoku by Messrs. Hatoyama Kazuo and Ogawa Michizo; and other important localities by Messrs. Inugai Ki, Koizuka Ryo and Tanaka Shozo. The political education of the rustics should proceed apace under such able tuition.

PATENT RIGHTS IN JAPAN.

WE publish elsewhere a full translation of the judgments and pleadings in certain cases brought by British and German inventors to compel the Japanese Minister of State for Agriculture and Commerce to grant them patents under the Japanese Patents Regulations. Over and over again during the past three years the hopelessness of any foreigners attempting to obtain these rights in Japan, and the reasons which induce the Japanese Government to abstain from taking the steps necessarily preliminary to extending the provisions of its Patent Laws to foreigners, have been explained in these columns. The difficulty is another of the many inconveniences to be placed to the score of extraterritorial jurisdiction. But despite our explanations, and despite the very easily comprehended character of the question, an idea still lingers in some minds that it ought to be possible for foreigners to patent their inventions in Japan, and Messrs. Siemens and Halske have expended some money in an attempt to establish the idea. Considering that Mr. Mond's case had been carried, twelve months previously, through all the possible stages of trial, and that the Supreme Court finally endorsed the judgments of the lower tribunals against Mr. Mond, it seems that the application of Messrs. Siemens and Halske need never have been presented. But the Counsel for the inventors apparently thought it worth while to test once more the cardinal question whether, in the absence of any express provision to the contrary, foreigners are not entitled to enjoy the same privilege as Japanese under the Patent Laws of this country. We never had any doubt on the subject ourselves, and we believe that foreign legal opinion is equally clear. At all events we know of one instance which occurred in 1890. A British

firm wrote to an English barrister in Japan, asking him to apply for a patent for a certain invention, and enclosing a thousand dollars to pay costs. The barrister, after looking into the subject, concluded that the application must be unsuccessful and returned the thousand dollars. Messrs. Mond, Siemens and Halske, however, chose to put the matter to final tests, and while regretting their failure, we may be permitted to hope that their experience will save other people from similarly fruitless trouble and expenditure. In this hope we publish the full pleadings and judgments, though, in effect, it should suffice to note that the decision of the Minister of State for Agriculture and Commerce bears out our frequently stated proposition, namely, that without special international arrangement the provisions of the Japanese Patent Laws cannot be extended to foreign subjects or citizens.

JOSHI GAKUIN.

At three o'clock, Friday afternoon, July 1st, in the new chapel at 33, Kami Ni-Bancho, Tokyo, the programme, as appended below, was opened by a chorus of twenty-five girls, efficiently trained by the music teacher, Miss Murray. While the entire programme reflected great credit on the faithfulness and ability of the teachers, two or three items deserve special mention and two or three features of the exercises are worthy of note. It was somewhat novel to hear all the choruses rendered by so many young voices, without accompaniment from any musical instrument. The reading of the essays in the Japanese language was certainly inspiring and hopeful. The rapid falsetto tone, with its peculiarly monotonous nasal characteristics, usually heard in the reading of Japanese in public, is fast passing away. It is no longer necessarily a sign of great scholarship to use such an unnatural monotone. The English essay by Miss Sumi Mochizuki was considered by many the climax of the programme. The young lady's paper,—"Causes of Failure"—filled with good, practical thought, was read in a perfectly self-possessed manner, with a clear voice, distinct enunciation, and earnestness most commendable. The exhibition of practical work under the industrial system, which is now taught regularly to all the classes, was highly appreciated by the visitors. The third storey was well filled with useful and valuable garments of every description, but not one was for sale—all belonged to the scholars respectively who had made them. The graduates numbered six from the Academic department, one as a Kindergarten teacher, three from the Special Japanese and five from the Collegiate English and Japanese departments. Dr. William Imbrie had been happily chosen to deliver a brief address to the graduates. His fifteen minutes talk to the young ladies was full of valuable and suggestive bristling thought:—

PROGRAMME.	
Chorus.—The Heavens are telling.....	Haydn.
PRAYER.	
Japanese Essay.....	Miss Yamaguchi.
Essay.....	Miss Mochizuki.
Piano Solo.—Opus. 49. No. 3.....	Beethoven.
Japanese Essay.....	Miss Okada.
Japanese Essay.....	Sumi Tsuboi.
Chorus.—Blessing, Power, Glory.....	Spohr.
Essay.....	Causes of Failure.
Japanese Essay.....	Sumi Mochizuki.
Piano Duet.—Les Pêcheurs de Perles.....	Raff.
Essay.....	Balance Wheels.
Japanese Essay.....	Miss Takiguchi.
Chorus.—The Huntmaster.....	Kücken.
* Farewell song.....	
* This song was composed by Miss Mika Takiguchi—one of the graduating class—in Japanese and sung to ancient Japanese music.	
Address to the Graduates.....	Rev. Wm. Imbrie, D.D.
Chorus.—Thou wilt keep Him.....	Lesson.
Benediction.	

MARINE PRODUCTS.

It is stated that the Estimates for next year will include a sum of 120,000 yen for the development of enterprises in connection with Marine products. The Peers, at the instance of Mr. Murata Tamotsu, presented a Representation to the Government last session, urging the

necessity of encouraging such enterprises, and investigations conducted by the Department of Agriculture and Commerce indicate the above sum as a suitable appropriation for the first year. The object chiefly contemplated is the encouragement of deep-sea fishing. It is expected that subsidies will be granted to the Marine Products Association and to similar bodies throughout the empire, and that the industry will receive a considerable impetus from a little aid prudently given.

THE "AJIYA" AND ITS HEROES.

THE *Ajiya*, which, among other things, poses as a teacher of morality, deprecates the tendency of Japan's present public men to sacrifice national good to personal ambition. Every statesman prides himself on the skill with which he plays one party against another, and makes or mars political combinations to suit his own purpose. Few are willing to subserve personal interests to the cause of the country. Yet patriots of that stamp are not entirely wanting. Our contemporary is pleased to be able to pick out the names of five statesmen who belong to the category. They are Count Katsu, Count Soyeyima, Count Sasaki, Viscount Torio, and Viscount Tani. Whether these happily distinguished noblemen are capable of assuming the reins of Government, our contemporary does not pretend to know. Indeed, it rather doubts their capacity in that direction. But their disinterested devotion to the public good, and their singular sincerity of purpose, deservedly mark them out, in the *Ajiya's* opinion, as the most hopeful and healthy political factors in Japan, to-day. The Tokyo periodical reviews at some length, the character and position of each of these five men, beginning with Viscount Tani. At the time of the great Salsuma Rebellion the Viscount's name first began to be known. He succeeded in successfully checking the northward progress of the rebels, owing doubtless in a large measure to the natural strength of the Castle of Kumamoto which his forces occupied; to the absence of effective artillery in the rebel camp, and to the presence in his army of able officers, Viscount Kabayama, the present Minister of the Navy, being one of them. But a great deal must also be ascribed to the qualities of the General himself. He enjoyed the respect and confidence of all under his command. The purity of his character is strongly illustrated by the fact that, when several years afterwards he was leader of the Nationalists of Tosa, the numerous wrong deeds of the latter were never in any respect laid to his charge. His singleness of purpose and his public spirit are abundantly proved, not only by the manner in which, after recommending the radical reform of certain abuses, he left the Ito Cabinet, but also by his action in connection with the question of Treaty Revision. He now wields vast influence in the House of Peers. Men say that he is deficient in the art of statecraft; but our contemporary entertains doubts as to the correctness of that view. He cannot, however, be altogether acquitted of the charge of sometimes aiming at theatrical effect. But, all things considered, he must be counted an eminently virtuous man in an age like the present.

Viscount Torio is specially distinguished for the versatility of his intellect. He never showed much capacity in active warfare; but he exercised considerable influence in the Department of War during the early years of its existence. He studied Buddhism, and soon mastered the fundamental principles of that religion, in a manner that astonished the professional exponents of the faith. Similarly his proficiency in Chinese and classical Japanese is said to be wonderful, considering the comparatively small attention given by him to the study of those subjects. Free from dissimulation of all kinds, straightforward and fearless, he has many enemies, but he attaches not the smallest moment to the idle talk of the public about his doings, as he has unbounded confidence in the purity of his motives. He seldom shows strong dislike of others and is ever ready to hold out his hand to his worst traducers. The very keen-

ness of his intellect, combined with his egotism, honest and sincere though that be, disqualifies him as a successful leader of men.

Count Sasaki is less known than either of the two Viscounts. It is not understood that he has ever rendered conspicuous service to the State. But that he is a man of no ordinary capacity is apparent from the fact that the *Meiji-kai*, an association for the dissemination of the principles of patriotism and Shintoism, originally created by him, is steadily growing in influence and power. It is reported that, on one occasion, having received a commission to put down a political disturbance, he solemnly performed with his family the ceremony of *misu-sakasuki*, (exchange of cups of water), which the *samurai* of former days were always in the habit of doing on the eve of a campaign. The act signified his determination to die should he fail to accomplish his mission. He was entirely successful. Combining high moral courage with perfect fairness of mind, if there is any man who has no enemy, that man is Count Sasaki. His nature is conservative and unambitious; and, though patriotic in the highest degree, he does not covet positions of great responsibility.

Count Soyeyima was originally a Chinese scholar (*jusha*), but he was not one of the ordinary class of *jusha*. A certain grandeur and dignity of style observable in the Imperial messages in the early years of the *Meiji* era are attributed to his powerful pen. Though a scholar, his views about warfare are valued by veteran soldiers. His mental vision is wide, and he is at any time competent to grasp the remote bearings of a national question. Often he indulges in large language, but people never seem disposed to ridicule his sayings. He lacks, however, the capacity of carrying out details, and is prone to be eccentric in his conduct. A firm believer in the possibility of communion with the deities of the country, as Hikohohomimi-no-Mikoto, Kanko, and so forth, he gets the credit of being sincere in his belief.

Count Katsu was a retainer of the Shogun. At the time of the Restoration he succeeded by courageous conduct in rescuing the House of Tokugawa from utter destruction. Subsequently he was for a short time Minister of State for the Navy, but he soon retired from office. The public always refused, however, to regard him as a private individual. He is fond of conversation, and very often astonishes his listeners with witty sayings. Though somewhat stricken in years, he is still strong and active, spending his time in writing books. Above all he is distinguished by magnanimity. Among his visitors are men of all sorts and conditions of life, officials, party politicians, conservative malcontents, and so forth, but he listens and is listened to by all with frankness and friendship. "The presence of a man of such weighty character is of great importance in an age like the present, when folks are becoming more and more unsteady," opines the critical *Ajiya*. Was there ever an era that did not seem degraded in the eyes of those growing old in it?

THE AMERICAN SECRETARY OF STATE.

TELEGRAPHIC news received on Monday in Tokyo announces that Mr. J. W. Foster has been appointed to succeed Mr. Blaine as Secretary of State. Mr. Foster has served as United States Representative in several capitals and has distinguished himself in connection with work of special treaty making. It was at one time expected that he might come to Tokyo as Mr. Swift's successor, but either the claims of home politics were too strong, or the idea, at one time entertained, that American trade with Japan might be greatly promoted by diplomatic efforts was abandoned.

JAPANESE AND FOREIGN PAINTING.

SEVERAL of the Japanese newspapers—the *Nippon*, the *Nichi Nichi*, the *Hochi*, and the *Yomiuri*—have created a sensation by publishing singular statements about the foreign school of

painting in Japan. Three years ago this school was regularly organized under the presidency of men like Viscount Enomoto and Mr. Watanabe Koki. We do not mean that a school actually exists in the ordinary sense of the word. A society only has been formed under the name of *Meiji Bijutsu-kai*. From the first its members seem to have laboured under a sense of unpopularity and opposition. Their periodical exhibitions showed steady progress, some of the pictures being of more than average merit. But the Japanese student of Western pictorial art has a terribly up-hill road to travel. He finds scarcely any patrons among his own countrymen. Elaborately framed oil and water colours are entirely out of place in a Japanese house. Their hope of finding a market in this country is about as rasy as would be the hope for Leighton or Tadema in London did he paint upon long strips of silk with ivory-tipped *finu* and brocade borders. Moreover, the conditions of life in the houses of Japanese artists are not suited for the production of such pictures, and the painters are entirely excluded from access to the great galleries where the Western student acquires his best education. But despite these difficulties steady progress has been made, and much resolution is shown. In connection with the Chicago World's Fair the artists resolved to make a strenuous effort, and to send pictures to the value of seventy thousand *yen*. But this design has now been abandoned, and it is in connection with its abandonment that the sensation has been created. For the newspapers referred to state that the artists came to this resolve in consequence of the determined opposition encountered by their school at the hands of conservative Japanese. The motive of the opposition is represented as nothing less than a desire to exterminate Western pictorial art altogether in Japan, by closing the places where instruction is given in it, withholding all recognition from its products at domestic exhibitions, and placing every possible obstacle in the path of its pursuit. According to reports published by the above journals, especially the *Nippon*, some artists of the Western school, at a recent meeting held in the Imperial Hotel, Tokyo, alleged that Mr. Kuki, Director-General of the Imperial Museum, had expressed a resolve to do everything in his power for the destruction of their art and for the revival of the pure Japanese style, and that this declaration of hostility, coming from such an influential quarter, was one of their reasons for resolving to send no pictures to Chicago. Mr. Kuki, however, has addressed to the *Nippon* the following letter:—

SIR,—In the miscellaneous items of your issue of to day, I find a paragraph to the effect that at a meeting held by artists in oils at the Imperial Hotel, I was charged with having delivered a lecture urging the abolition of oil painting, and that the oil-painters, being much angered in consequence, determined to abandon their intention of sending pictures to the Chicago World's Fair. There is not the slightest foundation for the assertion that I delivered such a lecture. Not only have I delivered no lecture since last year on the subject of fine art, but also I have never expressed myself in favour of abolishing the school of oil-painting. I greatly regret that the artists in oils should have decided upon a policy of abstention in consequence of such a false rumour. I shall be much obliged if you will publish this contradiction.

With reference to the above letter, the *Nippon* wonders what proof the artists in oils will be able to furnish of their allegation, and adds that, if they can furnish no proof, they will occupy the unpleasant position of having committed suicide under a silly delusion.

THE NATIONAL UNION.

THE *Kokkai* writes thus:—

"The members of the so-called Anti Popular Party organized a Club during the last session of the Diet under the name of the *Chuo Koshu-kai*, their object being to provide means of communicating their policy to other political bodies. Sometimes they held meetings, but the arrangement proved by no means convenient, so that some of the members proposed to establish permanent political or social associations after the adjournment of the House. This proposition obtained considerable support. Thus on the 20th ultimo, Messrs.

Watanabe, Tsuda, Sone, and some others assembled at the Imperial Hotel, and conferred about the nature of the new association. Mr. Kataoka and others were opposed to the idea of organizing a non political association. They claimed that the time is not suited to such vague methods of conducting political affairs, and contended that a publicly acknowledged political association ought to be established, consisting of all the elements opposed to the *Min-to*. Some of the elder members, however, traversed Mr. Kataoka's argument on the ground that things are not yet ripe for the organization of an association on such a scale. It was ultimately agreed to form a non political club, the members of which should exchange their knowledge and experience for the welfare of the country, and by watching the course of events, create a new political party. It was decided to name the club the Kokumin Kyokai (National Union), and to hold a general meeting on the 1st of November next, when a resolution should be finally adopted as to making the club political or otherwise. Curiously enough Messrs. Suyematsu Kencho, Inouye Kakugoro, and other most distinguished members of the Anti-Popular Party, are not included in the list of the club. It is said that Count Ito, father-in-law of Mr. Suyematsu, was originally in favour of establishing such an association, but that afterwards he became decidedly opposed to it, and consequently his son-in-law refrains from joining it. As for Mr. Inouye Kakugoro, he has found favour with Counts Matsugata, Goto, and Viscount Takashima: in fact he is their tool. But these members of the Cabinet are far from pleased with the step taken by Count Saigo and Viscount Shinagawa in resigning their seats in the Privy Council to place themselves at the head of the National Union. Therefore Mr. Inouye abstains from joining the Union, acting by confidential advice. These rumours sound natural, but there are other reasons which prevent Messrs. Suyematsu and Inouye from becoming members of the Union. Mr. Suyematsu is not a man to lend his name hastily to any new enterprise, unless he is firmly persuaded that the project will last. Moreover, he does not like to be used by others as a tool, or to have his merits obscured by the shadow of a leader. Hence he is patiently waiting to see the result of the new enterprise, and to determine the proper time for him to join it. Mr. Inouye, again, is a man who dislikes to join any affair started by others, and since he has been favourably treated by Count Matsugata and other members of the Cabinet, there is no necessity for him to serve Count Saigo or Viscount Shinagawa against his own inclinations. Moreover, he does not like to work under Messrs. Watanabe, Sone, and others whom he regards as his inferiors politically. Thus these two men and some others are now watching the issue of the undertaking, but as the policy followed by the members of the National Union does not differ from that of either Mr. Suyematsu or Mr. Inouye, all these personal feelings will be merged soon in the interests of the country, and the politicians now standing aloof will throw in their lot with the Union. Messrs. Kataoka, Ushiba, and others, who are engaged in commerce, will not be able to join the Union, as such an act might injure their firms. They will therefore stand outside the union and support it. There is a rumour that the Union intends to engage in a political campaign soon, but the story is quite unfounded. When the promoters assembled at the Imperial Hotel, Mr. Sone said that if it should be decided to organize an association the members must determine a settled policy before separating. For unless a definite policy be known to every one, each might deliver lectures or make speeches out of his own head, and the result would be contradictions calculated to rouse the suspicions of the people. He then presented a statement of the motives of the association, but expressly explained that it was not to be regarded as the policy of the association. In fact, the members intend to wait until the general meeting in November, when it will be decided whether the association shall be political or not, and its policy will be definitely settled. Till then they will not take any decisive step. Some trouble has been experienced. Many of the influential members are by no means inclined to support the present Government through thick and thin; they intend to attack official measures of which they disapprove, as they do not wish to be slaves of the clan statement. What will become of the association after the general meeting next November, it is impossible to predict now.

The *Hochi Shimbun* also has some interesting, but of course partial, remarks on the same subject:—

It is a well known fact that Mr. Watanabe Koki has been visiting members of the House of Peers, and begging them to join the Popular Union. He

points out that the Union is not established for the protection of clan government, or solely to support the Cabinet. In fact he is so pusillanimous that he does not venture to state the real object of the association. It is, however, reported that he has presented a document, written by himself, to every member of the Upper House visited by him, together with a copy of the statement of the Union's motives. The following is a translation of the document:—"The existence of a State involves that of the people forming it, and there never yet has been a case where the people were wealthy and tranquil while the State was neither prosperous nor peaceful. A State and its people are practically a unit in respect of prosperity and power. According, however, to the time and its circumstances, the distribution of wealth among the people and the degree of their tranquillity differ more or less. The polity of the Japanese empire is without peer. Forty millions of people are ruled by a Sovereign belonging to a race of monarchs whose lineal succession has remained unbroken for ages. The national manners and customs have been transmitted similarly. In short the Japanese are one family, pure and simple. It is grossly erroneous to compare us with foreigners who have formed States either by uniting peoples of different origins or by usurping neighbouring territories, the manners and customs of which are different in every case. The duty of people living under such a polity as ours is to govern the country by the united power of the high and the low. Our Imperial Constitution suits our polity. It was freely granted to us by Our Sovereign for the purpose of uniting all classes, preserving our peace with foreign countries, extending national prestige abroad, and promoting the welfare and tranquillity of the people. Our system cannot for a moment be compared with that existing in foreign States where the Prince was distinct from his people, and the people struggled to acquire for themselves a portion of the administrative power, peace being at last restored by effecting a compromise. Every loyal subject of this empire ought to regard the August Imperial Sovereign as his master and father, and, in obedience to the Constitution, should work harmoniously together at home, and for the increase of the national prestige abroad, so as to preserve our independence. If each individual seeks to enforce his own opinion, and by borrowing strange ideas based on the manners and customs of foreign lands, involve the people in political disputes, he will bring upon his country slights from abroad, and will stir up sedition at home. Such a conduct is not the duty of any subject of this empire. The empire having long remained in a secluded corner of the Orient, our civilization is not well developed. Occidental countries evolved their arts and their experience amid the friction of competition and contest. Thus, in respect of national defences, of agriculture, of industries, and of commerce, in short of everything which constitutes the wealth and power of a nation, they have reached a higher standard than us. It behoves us, therefore, to work with harmony and vigour so as to secure these various advantages and thus bridge over the interval by which we have fallen short of the world's progress during the last many hundreds of years. There devolves upon us the grave responsibility of equipping the nation to compete with countries already so far advanced. In foreign States, the evil of excessive individual competition in politics and in industries has been already recognised and abandoned. The principle of individualism, if carried too far in practice, interferes with administrative control, on the one hand, and, on the other, acts injuriously to public interest and tranquillity. In fact such a principle may bring total destruction upon the country. Whether in politics or in commerce, it is necessary to pursue the principle of combining small bodies to form large ones, in which the people of the country are co-operators. By this means only can individual welfare and national prosperity be safely compassed. In obedience to the above reasons we argue in favour of preserving one central administrative control, side by side with the self-government of individuals and the organization of political bodies. By making the defences of the country so strong that no possibility of attack shall present itself, peace and happiness will be secured to the people. We are in favour of encouraging and protecting the enterprises of the people, so that their wealth may be increased. We are in favour of promoting education and sanitary works as national enterprises, and extending them to every part of the Empire. We regard foreign trade and emigration as undertakings urgently necessary for the people, and we are therefore in favour of affording every convenience for their prosecution by due encouragement and protection. We believe that all facilities of communication, as posts, telegraphs, maritime transport, and railways, are vital to the public interest, and we are

in favour of promoting them. Further, agricultural, industrial, and commercial enterprises all contribute to the general prosperity. Therefore, if private strength be insufficient for organizing or extending such works, we are in favour of granting subsidies either from the State or from corporate bodies. We are also in favour of recovering our tariff and judicial autonomy, so that all privileges enjoyed by foreigners shall be regulated entirely by the laws of the land, unless specially arranged by treaty. In accordance with the above principles, we seek to organize the affairs of the country, and develop the wealth of its people. At the same time we would preserve the manners and customs of the nation and increase the spirit of independence. Thus the abuses of favouring the people of certain provinces in preference to others will be uprooted, and by the equal representation of the people in the Diet, the impartial working of administrative machinery will be secured. Further, while reducing taxes, equalizing their incidence, and simplifying the method of their collection, we must not hesitate to grant the necessary expenses for the uses of the nation. Administrative expenditures ought to be economised in order to devote larger sums to works of public benefit, but, on the other hand, the people also must avoid incurring needless outlay. Then the wealth of the nation will naturally increase, and the happiness of its people be assured. It is our desire, in accordance with these principles, to encourage the people to form a strong union to improve the politics and strengthen the finance of the country. We trust that those who approve the above plan will assist us, as is the duty of the people of this Empire.

(Signed) WATANABE KOKI.

THE OSAKA WATER WORKS.

In our paragraph of last issue on the Osaka Waterworks we remarked that Major-General Palmer's original design had been somewhat modified by the late Mr. Nojiri, Chief Engineer to the Osaka Fu, "the reason of the modification being that, after much difficulty, the Military Authorities were persuaded to give permission for a high-level reservoir to be constructed on the Castle Hill." To prevent any misconception on this subject, it may be well to add that the advantage of the Castle site for a service-reservoir, was first recognised and urged by General Palmer at the time of preparing the design, but that, as he was officially assured that the acquisition of the site for such a purpose was hopeless, his desire had to be abandoned. The recent cession of the site, therefore, is merely a tardy acquiescence in his urgent representations of five years ago, and the revision ensuing from it is in no sense an improvement on his original conception.

THE "PEKING"-"FUSHUN" COLLISION CASE.

THIS arbitration case, after a week's hearing before Mr. Hannen in Shanghai, was concluded on the 30th ult., when a decision was delivered entirely in favour of the *Peking*, the result being determined mainly on the observation of the regulations for preventing collisions at sea, there being little or no conflict in the evidence heard. The steamer *Peking* was on a voyage from Shanghai to Hongkong and Canton, and her captain anchored at about 4.30 p.m. on the 6th May last somewhere to the southward of Elliot Island, about 80 miles from Shanghai, in consequence of a fog having come on which made the navigation dangerous. While the *Peking* lay at anchor, her bell, a large one, was kept ringing. Half an hour after she had anchored, whistling was heard, and ultimately the steamer *Fushun* was seen. She was coming at considerable speed straight for the *Peking*, and there was no time to do anything to avoid a collision. The *Fushun* struck the *Peking* a right-angle blow nearly amidships; there was just time for the officers and crew of the *Peking* to scramble over the bows of the *Fushun* before the *Peking* sank. The *Fushun*'s stern was crushed in, but she got safely up to Shanghai. The owners of the two steamers, the one German and the other Chinese, agreed to leave the question of the liability for the loss consequent on the collision to the arbitration of the Chief Judge of the British Supreme Court, Mr. Hannen. The *N.-C. Daily News*, in referring to the fact that the master of the sunken vessel stuck close to the regulations, says:—"A good

deal of surprise has been expressed that a number of men should be found to say that they would have used their whistle if they had been in Captain Schultz' position, and it is a very good thing that Mr. Hannen has put his foot down firmly on this question. It would greatly increase the risks of navigation on this coast, if it were understood that the regulations for preventing collisions at sea might be neglected with impunity. They may not be perfect; Mr. Hannen indeed said, "I think this case has shown plainly that the regulations are not as good as they might be," but they are binding on all sailors until they are altered, and it would be a very dangerous thing if any one were to be excused from obeying them, because they are not perfect. Mr. Thomas Gray, in his *Observations*, warns the sailor "that if in 'fog, mist, or falling snow, he uses the fog-whistle and horn to make any other sound-signals than those specially named in Article 12, and if a collision follows, he may be held to blame for departing from the Regulations; and if so, the collision may be held to be due to his wrongful act of default." Captain Schultz rang his bell, and thus adhered to Article 12, and Mr. Hannen has quite rightly found that no blame attaches to him for the unfortunate collision by which his steamer was sunk. In the sympathy the Arbitrator expressed for Captain Crowd everyone who knows him will concur; but it would have been disastrous if he had been exonerated in the present instance."

THE STEWART BILL.

THE history of the Stewart Bill and its exact provisions are probably not familiar to many of our readers. The Bill was introduced into the Senate by Senator Stewart, of Nevada, in December, 1891, under the title of "A Bill to provide for the free coinage of gold and silver bullion and for other purposes." It provided that the unit of value in the United States should be a dollar of $412\frac{1}{2}$ grains of silver, or of $28\frac{1}{8}$ grains of standard gold; and that any owner of gold or silver bullion might deposit it, in sums of not less than \$100, in any United States Mint, to be coined into standard dollars without charge, and that the Treasury should be authorized to issue gold and silver certificates therefor. The Bill was placed on the Calendar in February, 1892, with an adverse report from the Senate Committee on Finance. Public opinion then regarded the fate of the Bill as sealed, but on May 26th the Senate, by 28 (16 Democrats, 10 Republicans, and 2 Alliance Senators) against 20 (17 Republicans and 3 Democrats), voted to take up the Bill, and it has now been passed by a slender majority of four. It has still to go before the House of Representatives, however, and in the unlikely event of the latter's passing it, the President's veto would doubtless be interposed. If the Bill became law, its effect would be to make 15.37 the gold and silver ratio in the United States, whereas the real ratio at present is nearly 20.

THE EVANGELICAL ASSOCIATION.

THE annual meeting of the Evangelical Association came to a close on Saturday evening, the 2nd of July, after a busy session of four full days. The occasion was marked by the deep interest taken in all the institutions and various departments of work. Some important measures were taken which will no doubt have a great influence in shaping the future work and success of the Mission. One applicant was recommended for licence to preach, one was voted his recommendation to deacon's orders and one to elder's orders. The body was composed of 9 elders, 3 deacons, six probationers, 1 local deacon, and 4 local probationers, a total of twenty-three. Three young men made application for admission into the Theological Seminary and were unanimously recommended. The number of students will therefore be 13 during the coming year. Several changes were made in regard to some of the fields of labour, transferring preaching places from one to another charge, and some new points were recommended to be taken up during the coming year. The statistics show a moderate increase in membership, the total

number being 488. Itinerant preachers 18, deaths 4, expelled 30, moved away 50, newly received 130, adults baptized 79, contributions for church work yen 575.17, for benevolent purposes yen 187.81. Sunday schools 29, scholars 590, applicants for baptism 111. A monthly paper, the *Fukui no Tsukai*, devoted to the interests of the mission, will be undertaken during the coming year, and will be supported for a time by the home Board of Missions. A moderate attempt at the publications of evangelical tracts will also be made. A unanimous motion was carried requesting the Senior Bishop, J. J. Escher, to come to Japan next year and organize the work into a regular Annual Conference. The authorization for this step was given by the General Conference of the church which met in Indianapolis, Ind., U.S.A., last October. The Sunday Services were well attended and over two hundred yen was collected and subscribed for mission work. Fitting and strong resolutions were passed upon the subjects of education, temperance, and Sunday schools. A proposition to improve the course of study in the Seminary was submitted, and recommended for consideration to the faculty of the school. The outlook for the coming year is very hopeful, and each member hopes that the success of this year may be increased an hundred-fold in the next.

THE MITSU BISHI SAVINGS BANK.

It seems worth while again to note that the 119th National Bank has opened a Savings Bank. This Branch pays $5\frac{1}{2}$ per cent interest on deposits ranging from 5 to 1,000 yen. Money deposited may be withdrawn at any time. One of the conditions is that deposits and withdrawals shall not be made by substitutes. The owner of the money entrusted to the Bank is furnished with a pass book, in which all deposits and withdrawals are made. Nothing less than 5 yen can be either deposited or withdrawn. The high rate of interest has, it is said, induced a large number of Japanese to entrust their savings to the Bank. This, perhaps, accounts for the fact that it has not been considered necessary to advertise the new branch in foreign newspapers.

THE TREATMENT OF FOREIGNERS AND TREATY REVISION.

THE *Fiji Shimpō*, in a recent issue, discusses a line of policy, *vis-à-vis* foreigners, which has always found advocates in and out of Government ranks. Exasperated at the slowness of the negotiations on Treaty Revision and their meagre result, certain Japanese politicians have, from time to time, urged the Government to treat foreigners in a less courteous and considerate manner than has hitherto been customary. The disadvantages of the present system are not sufficiently realised by foreigners, say these controversialists, on account of the lenient manner in which they are treated by the Government. Let this liberal policy be abandoned. Let nothing be conceded to foreigners that is not stipulated for in the letter of the Treaties. Pursue this plan till foreigners begin to realise the unpleasantness of the situation, and they will no longer regard Treaty Revision with the listlessness they now show. Whether the Government would be justified in following such a policy the *Fiji* is not prepared to say. But of one thing it is certain, namely, that the adoption of any such methods as those recommended would exercise a most baneful influence on the minds of the nation at large. Harsh treatment of a foreigner by the Government would be interpreted by the people to mean that he was not a *persona grata* to the Authorities, and it is not to be supposed that distinctions drawn by officials would be drawn by the people. The severity of the Government would be surpassed by that of the people. The Government would make the foreigner's yoke heavy, but the people would make it heavier; the Government would chastise with whips, but the nation would resort to scorpions. And what would be the result of such treatment, asks the *Fiji*, on that large number of foreigners who come to Japan without knowing anything about the character of her people? It would prejudice them against the

race, and they would return to their native lands and spread such reports about the incivilities they had met with in this country that the effecting of Treaty Revision would be out of the question. The present reluctance of foreigners to come under Japanese jurisdiction is solely owing to the fact that they distrust the Japanese; and this distrust is founded on ignorance. At present, mutual ignorance of each other's ways characterises the mass of foreigners and Japanese alike, as is abundantly illustrated by things of common occurrence. To show how, while this ignorance exists, acts prompted by the best of motives are misinterpreted, the *Fiji* may allude to the fact that the naming of a steamer *The Empress of Japan* by the Canadian Pacific Railway Company was considered by some Japanese to be a gross insult to the nation, they not being familiar with this method of showing honour. Nothing but mutual knowledge can engender mutual respect, and the attainment of such knowledge would be impossible were encouragement given to the commission of unfriendly acts by the people. The *Fiji* is not concerned about the course the Government may pursue, but it lays stress on the importance of the nation at large adopting a friendly and conciliatory attitude to foreigners, and reminds its readers that upon their way of treating the numerous foreign visitors who come to these shores will depend the opinion of foreigners generally as to the qualifications of Japan to be admitted to the comity of Western nations.

There is no denying that certain officials have, on and off, recommended the adoption of the line of policy to which the *Fiji* refers, and occasionally measures have been taken which, by some foreign observers, have been cited as a proof of the regard in which the policy is held. But we are of opinion that no Japanese Cabinet has ever seriously thought of resorting to such extreme measures. It has always been recognised that the step would most certainly defeat its own end. At the present time, with a decided reaction against foreign methods and institutions, were the Government to take the field against foreigners there is no saying what the issue might be. The *Fiji* is quite right in affirming that the present temper of the nation would lead it to interpret firmness of Government policy as an indication of absolute aversion to foreigners, and in that case it is easy to see how, in the name of loyalty, the greatest outrages on foreign life and property might be committed at any time. Despite the boasted influence of the new competitors for administrative power, there is no denying that the feelings and the conduct of the mass of the Japanese is greatly guided by the policy of the men who have held the reins of Government ever since the beginning of the *Meiji* era. This fact is well known to men in power, and accounts in part for the extreme caution with which they have acted in all matters that concern foreigners. The cry for a more stringent policy *vis-à-vis* foreigners comes from the conservative section of the nation, and is taken up by hot-blooded youths to whom any measures are welcome that are calculated to cause commotion and that promise opportunities of earning distinction. Very probably increased advocacy of the policy referred to, noticeable in some quarters, accounts for the serious manner in which the *Fiji* discusses the question.

MARRIAGE OF H.I.H. PRINCE KOMATSU.

ON Wednesday the fashionable quarter of Tokyo presented an animated scene owing to the wedding of His Imperial Highness Prince Komatsu Yorihito, which took place at his residence in Nagatacho. The Prince recently returned from a long stay—seven years we believe—in Europe. He served for some time in the navies of England and France, and acquired to perfection the carriage and bearing of a naval officer. Possessing a fine physique, a handsome face, dressing invariably in faultless Bond-street fashion, and driving a stylish equipage with all the skill of a finished whip, his Imperial Highness represents the most advanced type of young Japan. The

bride was Lady Yaye, daughter of Marquis Yamouchi Yodo, formerly feudal chief of Tosa, one of the most powerful clans in Japan. The wedding ceremony followed the orthodox Japanese custom, the bride being accompanied at 10 a.m. to the house of the bridegroom by H.E. the Minister of State for the Imperial Household and Viscountess Hijikata, who, acting in the capacity of *Nakodo*, had arranged the preliminaries. The bridal carriage, on its way from Hakozaki-cho, was escorted by a troop of Imperial Body-guards and a number of Police Inspectors. Lady Yaye, we read in the vernacular press, was dressed in white silk with a long train, and carried a bouquet of rare flowers, while the Prince wore naval uniform. The room for the ceremony—which, as many of our readers are doubtless aware, takes the form of exchanging wine-cups—was brilliantly decorated. After the ceremony the bride retired to change her costume, and presently re-appeared in a travelling dress of white silk with delicate purple embroidery, the Prince, in the meanwhile, having exchanged his naval uniform for an evening-dress suit. At noon the wedding breakfast was served, Viscountess Hijikata, Mr. Takasaki, the Poet, and Mrs. Takasaki, and Mr. Nagasaki, Private Secretary in the Imperial Household, and Mrs. Nagasaki, being among the guests. At 1.30 p.m., Viscount Ayanokoji, an Imperial Chamberlain, arrived on behalf of the Emperor to congratulate the new married couple and to present to them some wedding gifts; and half an hour later two Chamberlains, one from the Empress and the other from the Prince Imperial, also arrived with wedding presents. Shortly afterwards the bride and bridegroom drove to the Palace, and were received in audience by the Emperor and Empress. Thence they proceeded to the Akasaka Palace, to visit the Empress Dowager; and on the way back they called at the residence of H.I.H. Prince Fushimi in Kioicho, where Prince Komatsu presented the bride to his mother, the Princess Oriko. At 7.30 p.m. they repaired to the residence of Prince Komatsu (senior) at Surugadai, where all the Imperial Princes and Princesses were invited to celebrate the union. It is stated that the bride and bridegroom propose to entertain their Japanese and foreign friends in October, when the weather becomes cool.

THE GOVERNOR OF TOKYO.

We have already noted the existence of some excitement in Tokyo about the rumoured removal of Governor Tomita. The subject was brought up at the City Assembly's Meeting last Tuesday, when Mr. Kiriha Sutezo introduced a motion for the election of five to investigate the matter. He said that, according to the Law of the Special Municipal Organization, the Governor is also Head of the City (*Shicho*), and in that capacity the City Councillors have a right to elect him. His removal by the mere fiat of the Administration without reference to the City Assembly would be a violation of that right, and as the rumours generally circulated with respect to Governor Tomita's removal had not been contradicted by the authorities, the Assembly should take some steps. The motion was supported by Mr. Nakamura Yasuke, who made the point that since cure had never been found possible in these cases, prevention must be resorted to. Hitherto, on the occasion of good Governors being removed from their prefectures, the people had often petitioned the Government against the step. But such petitions had always been presented after the actual issue of the order of removal, and in no instance had they been successful. He therefore urged the advisability of anticipating the Government's action. Another advocate of the motion was Mr. Ogawa Michizo, who, however, advised the more thorough course of opening direct communication with the Authorities. The other side of the question was set forth by Mr. Izawa Shugo, who reminded the Assembly that the appointment and dismissal of officials are specially included by the Constitution among the Imperial Prerogatives, and that, consequently, the Assembly had no business to interfere

as proposed. Mr. Kojima moved as an amendment that the discussion of the subject be postponed, and a majority voted in that sense. It seems to us that the Assembly's injudicious advocacy is likely to do more harm than good to Governor Tomita.

TRAGEDY IN CHINA TOWN.

ABOUT two o'clock on Thursday afternoon, the particular portion of the Settlement of Yokohama, known as China-town, and about which hangs an air of general disorderliness and ruffianism, was startled by hearing the quick sharp cracks of revolver firing proceeding from the direction of No. 124. Immediately afterwards a man named Jacob Carstens, a ne'er-do-well, disowned by all the Consulates, was seen running from the house with a revolver in his hand. A British Marine, who was passing, seeing the desperate condition of the man, knocked him down, and three Japanese Policemen rushed up to the spot. Carstens, however, rose to his feet, and shooting wildly, wounded all of the constables, one in the face and back of the neck, the others in the legs. He then turned his weapon upon himself, inflicting a wound in his own leg, from which he swooned. In this condition he was easily arrested. By this time an entrance had been effected at the house, No. 124, and it was soon discovered that it had been the scene of a most deliberate murder. Carstens, it appears, had that morning been liberated from gaol, having been incarcerated by the Japanese police for five days. He seems to have imagined that a man named Beatty was the cause of his imprisonment, so immediately upon quitting the gaol he went in search of him with a bull-dog six-chambered revolver. He found his victim lying down on a bed at 124, and, after a few high words had passed between them, he raised his revolver and shot the prostrate man five times in the head and neck, one bullet penetrating to the brain. Having accomplished this work of vengeance, Carstens left the house in search of a man named Valentine, but, fortunately for the latter individual, he was interrupted as before mentioned. Upon making enquiries this morning it was ascertained that Carstens had recovered consciousness, while the wounds of the policemen had been examined and found to be very severe. Constable Murakami Seitaro was shot in the mouth, and the ball passed through his shoulder. Constable Masuda Shichigoro was struck on the left thigh, and the ball passed right through. Constable Sunaga Keijiro is also wounded on the left thigh.

* * *

A jury was at once empanelled at the British Court-house, before James Tramp, Esq., Coroner, which consisted of Messrs. H. W. Lea, foreman, A. Rogers, and K. F. Crawford. The evidence of Dr. Wheeler was taken, who deposed to the nature and character of the fatal wounds received by the murdered man. The Court then adjourned till 9 o'clock this morning.

A FINANCIAL OPERATION.

THE great Burnay sale of port wine, which began on the 24th inst., says the *London and China Express* of May 27th, has been an event of general interest in London this week. Ten thousand pipes of port wine have been publicly sold by Messrs. Southard at the London Wool Exchange; and as a pipe contains from 115 to 119 gallons, the whole quantity is not far short of a million and a quarter gallons. It is not, however, in the mere quantity of wine brought together that the interest of this sale lies. The unique thing is, that it has all been offered for immediate public sale by a single firm. The history of the transaction presents some curious and interesting points. Count Burnay is at the head of an important financial firm in Lisbon. He has nothing directly to do with the wine trade, nor is he a merchant; but he owes the privilege of mining silver. Now, silver is very cheap at present, as most people know, and the profit on coining is large; but it has to be bought with gold, which is extremely dear in Portugal, owing to the high rate of exchange. An English sovereign is worth about 27s. there,

so that the loss on the gold more than counterbalances the gain on the silver. Under these circumstances, Count Burnay hit upon an ingenious plan for buying gold in London by a great sale of port wine there, whereby two birds would be killed with one stone. His firm would avoid the loss involved by the rate of exchange, and his country would benefit by a big stroke of trade. Accordingly he approached Messrs. Southard, who soon grasped the merits of the scheme, though somewhat taken aback at first by its unprecedented magnitude. Fortunately they were just in the right position to carry it out. A member of the firm, familiar with the wine districts of the Douro, went out at once to arrange the selection and purchase of the wine. The wine has all been paid for in Portugal in paper currency; and the pecuniary advantage of selling it in London for gold, under the circumstances just explained, is so great as to permit of its being disposed of even at an actual loss. The bottom of the whole business is the currency question: it is not so much a mercantile transaction as a financial operation.

THE SHIPWRECK AID SOCIETY.

ON the 3rd of November, 1889, the Japanese Shipwreck Aid Society (*Sunan Aisai-Kai*) was formally organized, that day being chosen because the Prince Imperial, Yoshihito, was then declared Heir to the Throne. The rules and general organization of the Society were based upon those of a similar association in Russia, which had elicited Count Kuroda's admiration on the occasion of his recent tour in Europe. H.I.H. Prince Arisugawa Takahito is now President of the Society, and its Chairman and Councillors are Marquis Nabeshima, Viscount Fujinami, and Messrs. Kimotsuke Kaneyuki, Kiyoura Keigo, Fukaya Yasusada, Maruyama Sakura, and Yoshikawa Taijiro. The *Tokyo Shimpō* says that since the Society's formation it has succoured over 90 vessels in distress, rescued more than 300 mariners, and saved about 100,000 yen worth of property. Apparently the Russian authorities have conceived an interest in the Society, for they have applied through the Japanese Representative in St. Petersburg for a detailed account of the situations of the Society's stations, its income, the nature of the boats used by it, and other matters. A reply is now in course of preparation.

COUNT INOUE.

IN a day or two, writes the *Nichi Nichi Shimbun* of the 7th inst., Count Yamagata, who is now enjoying the fresh sea-breezes at Oiso, and Count Ito, who is by the side of his sick mother at Odawara, and Count Kuroda, who passes his time fishing in Shinagawa Bay, will again assemble at Count Matsukata's, for Count Inouye has at last started to come to the capital from Yamaguchi, and has already left Kobe by the *Saikyo Maru*. His re-appearance is desired not only by the Camera statesmen but also by the forty millions of this empire. About the time when Count Inouye reaches Yokohama, Count Ito will come to the capital from Odawara and Count Yamagata from Oiso, and Count Kuroda also will exchange his fishing rod for the affairs of his country. Whether Count Oyama will come is a question. We believe that Count Inouye desired to stand aloof entirely from the present complications, but the time and its circumstances have compelled him to join the Camera conference. What is abundantly clear is that when consulted in the public interests he does not disregard the summons, as was shown by his action in the Oiso affair and on the occasion of the failure of Treaty Revision negotiations. The approaching conference of Camera statesmen is not a sign of unsettled troubles, but is an earnest of progress towards the conclusion of the present political crisis.

THE OSAKA ARSENAL'S CONTRACTS.

WE are glad to see that the virtual monopoly hitherto enjoyed by German and French contractors in respect of the Osaka Arsenal's purchases abroad has been at length broken in favour of an English firm. So far as we are

aware, the only order placed by the Arsenal in England during recent years was one for gun-carriage material, and the result was not considered satisfactory, owing to the fact that whereas the metre system is followed at the Arsenal, absolutely exact metrical sections of bar iron are not procurable in England, where the standard is in feet and inches. There did not appear to be any valid reason, however, why England should not supply the steel hoops used at the Arsenal for shrinking over the guns manufactured there. These hoops come to Japan completely finished on their inner surface, and, after being shrunk on the guns, their exterior is finished in Japan. One difficulty in England's way was that Japan had no inspector in Great Britain. All material of this character has to be inspected during manufacture, and whereas duly appointed Japanese inspectors were available in Germany and France, no provision of the kind had been made in England. Nevertheless, British firms tendered, we believe, more than once for the supply of steel hoops, but were not able to compete with German prices. Now, however, Messrs. Vickers, Low and Company of Sheffield have obtained a contract for \$90,000 worth of hoops, at prices some fifteen per cent. lower than the German tender. Moreover, an inspector has been appointed in England. The same firm has obtained an order for \$40,000 worth of gun-carriage material.

ANOTHER STEAMER ON SHOR

ANOTHER steamer, this time a vessel owned by the China Merchants' Steam Navigation Company, the *Hsinsheng*, has been run on shore, and will probably become a total wreck. A passenger on board the vessel sends the following account of the accident to the *Shanghai Mercury*:—"The steamer *Hsinsheng* of the C.M. S.N. Co., which left Shanghai at 9 a.m. on the Friday, 24th June, met with a mishap at 3 a.m. on Sunday, the 26th. Heavy fogs were encountered during most of the voyage, and in one of these the vessel struck the rocks, a few rods north of Alceste Island. The boats were at once manned, and as the sea was quite smooth the six foreign passengers and 150 natives, with most of their luggage, were soon safely landed at a little cave on the rocky island close by. About noon the *Feima* was sighted en route to Chefoo, and shortly afterwards she picked up the passengers. The cargo is said to be a valuable one, and it, as well as the ship herself, suffered heavily. It is doubtful if she will ever come off.

MURDER IN YOKOHAMA.

ON Wednesday morning a woman, aged nineteen years, was discovered strangled in the Public Garden, Settlement, opposite the Washington Market. The remains were taken to the Settlement Police Station. A man was also found drowned in the Creek near Minato Bridge the same morning, these two fatal events having originated from the same cause. The discoveries of the police go to prove that the girl found strangled was the daughter of a farmer named Sato, living at Hagiwara-mura in the Nakashima District of Aichi Prefecture; her name was Ume. The man, Kato Yasujiro, aged twenty-two years, who was found drowned, belonged to the same village. The couple eloped from their native place during last April, and settled in Yokohama, since which time they have resided together at a tailor's house in Shichome, Onoyecho. Their means were soon exhausted, and poverty at last separated them from one another, the girl obtaining a situation as waitress in an ice shop at Furocho, only a day before the fatal affair. It seems that Kato strangled the girl with an apron, and then proceeding to the Creek committed suicide by plunging in. His *geta* were discovered near the remains of the unfortunate girl.

THE "OMI MARU."

THE *Omi Maru*, Captain F. Devenish, a steamer belonging to the Japan Mail Steamship Company, which left here on Sunday last for Otaru, via ports of call, is ashore near Yeisan-saki, a locality presenting great perils of navigation

during the fogs that prevail at this time of year. There are good hopes of getting her off if the weather continues fine, as the damage is confined to one compartment forward. The *Tagonoura Maru* was at once despatched from Hakodate to bring off the passengers and render assistance, and the *Kumamoto Maru* left Yokohama on Wednesday at 3 p.m. with a salvage party and all necessary appliances. Everything, of course, depends on the weather. So far as can be ascertained, the injuries thus far received by the ship are not of a character to suggest any serious difficulty in getting her afloat, but she lies in a very exposed position, and unless the sea remains tolerably calm, her fate may soon be sealed.

* * *

We have learned nothing more about the prospects of getting the *Omi Maru* off the rocks. A Japanese gunboat, the *Amaki Kan*, and the Japan Mail Steamship Company's *Tagonoura Maru*, endeavoured to tow her off on Wednesday, but the attempt could scarcely have been considered very hopeful, as the *Tagonoura Maru* is a small steamer of only some seven or eight hundred tons. The arrival of the *Kumamoto Maru* on the scene ought to furnish sufficient power, and doubtless the question of saving the vessel will be determined finally in a very few days. Much, as we have already said, depends on the weather, and fortunately telegraphic news received yesterday announces calm water and every appearance of continued fineness. The injury being confined to one compartment forward, it seems probable that by lightening the ship and getting her down by the stern, the operation of floating may be accomplished.

BARON R. VON BIEGELEBEN.

H.E. BARON R. VON BIEGELEBEN, who for nearly four years has represented Austria-Hungary at the Japanese Court, left this country on leave of absence on Sunday. Up to the last moment the exact time of the Baron's departure had not been published, despite of numerous inquiries, and it thus resulted that no demonstration of farewell could be made in the case of one of the most popular Ministers who have ever served in Tokyo. He was accompanied to the steamship *City of Peking* by his colleagues of the Corps Diplomatique and by those of his countrymen who had been able to assure themselves of the time of his leaving. It is the universal hope that this able and much liked Minister may soon return to Japan, and that his health, which of late has not been very robust, may be entirely restored by the trip to Europe.

HARMSTON'S CIRCUS.

THIS company, which is about to visit Yokohama, has had some difficulty in obtaining a "pitch," but we understand from the agent that a place will be ready for them by the time they arrive here. The *N.-C. Daily News* thus refers to the last performance in Shanghai:—"The largest audience ever collected together under one roof in Shanghai met at Harmston's Circus on Thursday to say good-bye to this popular company, and especially for the benefit of Mr. George Harmston. The programme was a very good one and was very well executed, the Feeley family being a good attraction, and only equalled by the jumping contest for a handsome silver claret jug, between gentlemen riders mounted on Australian horses from Mr. Harmston's stud. Mr. Sampson, on Bangalore, was the fortunate winner. No company has ever done better in Shanghai than this Circus, and there is a general hope that it will return here."

THE METAL MARKET.

MESSRS. S. W. ROYSE & Co., in their last Report, referring to metals, say:—"The continuance of the Durham miners' strike has caused large withdrawals of pig iron from public stores at Glasgow, and this has kept up the price of warrants there, fluctuation during the month having been unimportant. At Middlesbrough also the withdrawals from the public stores have been very heavy, especially during the last week, and there has been an advance there of about

1s. 6d. per ton in prices of warrants, and of about 2s. 9d. in prices of hematite, during the last few days. At Middlesbrough there is a better demand from abroad, shipments are good, and a short supply of iron is now distinctly noticeable. The manufactured iron trade in the Midlands is showing a little improvement, and prices are steady. The reports as to the reduction of output have caused copper to advance, but it is now easier. Tin has advanced about £4 10s. per ton during the month, and is strong. Spelter has advanced a little, but is easy. Lead also has advanced and is steady."

ACCIDENT AT THE INNAI MINE.

AN accident involving very serious loss of life is reported from the Innai Mine in Akita Prefecture. No accurate particulars are yet to hand, but from what has been telegraphed we gather that, owing to the recent heavy rains, water suddenly burst into one of the shafts, causing the death of over sixty miners who were caught by the flood, and hemmed in before any aid could be rendered. The Innai Mine is the property of Mr. Furukawa Ichibei, who purchased it some years ago from the Government for 75,000 yen. It is situated near the town of Ginzan-machi (silver-mine town) in the Okutsu district of Akita Prefecture, and is about 740 feet above the sea level. During the past three centuries silver, a small quantity of gold, and some lead have been found at the place, the silver ore containing 2½ per cent. of silver and 1 per cent. of lead.

CLERICAL STAGE-ACTORS.

THIS is in many respects a land of surprises. We have had *soshō* actors, and now, according to the *Hochi Shimbun*, we are to have reverend priests figuring on the stage. A priest called Tanaka, belonging to the Shingon Sect, has announced that from the 31st prox. a series of stage performances, designed to illustrate the chief events in the life of the patron saint of the Sect, Kōbodaishi, will be given at the Fukurokuza, Akasaka. Some 20 priests will take part in the play. The *Hochi* praises the ingenuity of the scheme. It will no doubt result in filling the coffers of its promoters, as the novelty of the proceedings will attract crowds. As to the propriety of the new departure, the Japanese religious devotee holds very different views from most Westerners: though it is a question whether some of the ceremonies performed by the Greek Church, for instance, differ essentially from other forms of theatrical representation.

YOKOHAMA SEAMEN'S MISSION.

THE social entertainment given on Thursday at the Seamen's Mission passed off in a highly satisfactory manner, and about 150 sailors and their friends were present. All seemed thoroughly to enjoy themselves, and joined heartily in the frequent applause which greeted each lady and gentleman who contributed to their entertainment. The night was warm, but with the aid of a liberal supply of aerated waters no great inconvenience was experienced. On such occasions during the summer season the need of a good punkah to keep the air moving is felt. Who, asks the Chaplain, will supply the need?

MR. L. G. EATON WOOLLEY.

Says the *Bedfordshire Standard*:—"At the Levée held by H.R.H. the Duke of Connaught on behalf of Her Majesty the Queen on May 12th, Mr. L. G. Eaton Woolley was presented by Major Lamorock Flower. Mr. Eaton Woolley is an old Bedford Grammar boy, and the eldest son of Mrs. W. A. Woolley, a lady well known in Bedford, and late of Japan. Mr. Eaton Woolley is a most promising young fellow, and deserves the honour just conferred upon him. He is a member of a very old family, and a relative of his held an official appointment at Buckingham Palace for over thirty years. Mr. L. G. Eaton Woolley expects shortly to proceed to Japan.

THE CABINET.

It was expected that permanent holders of the portfolios of Home Affairs and of Justice would be announced in the early days of the present month, but the present programme is to defer a

Original from

decision until Count Inouye can be consulted as to the policy of the Cabinet. The Count has been telegraphically requested to return to the capital for the purpose of taking part in a conference, and has signified his compliance. It is believed that he set out from Mitajiri in Yamaguchi on the 4th instant. In that event his arrival in Tokyo may be looked for about the 8th, and the appointment of the new Ministers of Home Affairs and of Justice would doubtless take place about the middle of the month.

SCHOOL OF THE MORNING STAR.

The Summer Commencement Exercises at the School of the Morning Star, in Tokyo, came off on Thursday afternoon in the presence of S. G. Mgr. Osoul, Archbishop of Tokyo, the French Chargé d'Affaires, and a large number of visitors, both Japanese and foreign. The boys, as usual, afforded manifest proof of the unsparing pains and intelligent care devoted to their education. Moreover, they all looked healthy and happy, and the number of prizes won by them showed how successfully industry is encouraged by the system pursued at this excellent school, which now includes among its students the sons of many of the leading foreign and Japanese residents of Japan. The following is the programme of exercises:—

Chœur d'ouverture.—Célébration, chers amis.....par Ackermann.
Alfred, a drama by Alkin (adapted)..... E. Hall.
Gubba, a Former's Father..... B. Dithlefsen.
Gaudelin, Gubba's Father..... J. Dabier.
Ell, an Officer of Alfred..... R. van der Heyden.
Sonatine dusek (Op. 70, No. 4)..... J. Mason.
Scene aus Wilhelm Tell.....
Kaisers von Österreich..... I. Murakami.
Rudi der Fischer..... Ch. Rishow.
Jenni der Fischerknabe..... A. Dewette.
Wilhelm Tell..... A. Dewette.
L'Orchestre du "Père Krakkele" (charge comique)..... E. Yuzo.
Extraits de l'opéra "Héroïsme" par Ch. Goussod.
Monsieur Baclin, avocat.....per Brueya et Palaprat.
Monsieur Guillaume, drapier..... H. Brinkley.
Aucun, berger de Guillaume..... P. Paternostro.
Bartolin, Juge du village..... Ch. Eymard.
Chœur des Soldats de l'opéra "Faust" pas Goussod, arrangé pour piano par Brinkley Richards..... Olive Hall.
Chûshin Kagami..... Y. Ozawa.
zer Toneyaku..... N. Yamamoto.
se Toneyaku..... K. Kofuji.
zer Dohin..... K. Ogata.
se Dohin..... H. Hamao.
Rônin Oishi Kuranosuke..... E. Yuzo.
Rondo de Mazas quatuor.....
ser violon—A. Dewette, M. Hayashi, F. Ribeiro.
Ch. Eymard, P. Paternostro.
se violon—A. Poque, H. Brinkley, D. Weed.
Ch. du Bousquet, A. Laferrerie, G. Nez-Vignetti.
Violoncelle—J. Enoye.—Piano—Olive Hall.
Chœur: Le Pays, Pas redoublé par Violet.
DISTRIBUTION DES PRIZ.

KIM-OK-KUM.

The *Mainichi Shimbun* and the *Kokkai* both publish sensational rumours about the Korean refugee Kim-ok-Kun, who has now enjoyed the privilege of asylum for several years in Japan, where he is known as Iwata Shusaku. About four years ago it was asserted that the Korean Government had endeavoured to have Kim assassinated in Japan, and this story is now resuscitated. Our contemporaries allege that when Messrs. Ogawa and Omiwa recently brought some Korean students to study in Japan, they were accompanied by an official who was under secret orders to compass the death of Kim. This official is represented as a man of resources. Penmanship is his great forte, and he is said to be travelling towards the capital, via the Tokaido, paying his expenses by writing ideographs for scrolls and so forth. His arrival in Tokyo is expected soon. This man's mission was preceded by a similar attempt in March last, when two Koreans, coming to Japan, exhibited a document from the authorities in Seoul authorizing them to kill Kim, and endeavoured to procure assistance from certain Japanese. Unsuccessful in their effort, they returned to Korea about a month back, and were severely punished for their failure. The same journals allege that the Korean Government's reasons for desiring to make away with Kim-ok-Kun are that the Tai-won-Kun has memorialized the Throne urging the necessity of getting rid of the notorious plotter, and that rumours have been busily circulated of late to the effect that Kim is planning an invasion of Korea, at the head of a large body of *soshi* belonging to the Genyo-sha, and in conjunction with Mr. Toyama Mitsuru, the leader of that association. They add that, in reply to tele-

graphic queries, General Le Gendre, Korean Commissioner in Japan, has assured the Soul Authorities of the baselessness of these rumours, but apparently the latter are still anxious to have Kim assassinated. We (*Japan Mail*) do not place the smallest credence in these extraordinary tales.

THE BIG DIAMOND.

No inconsiderable sensation was created at the early part of last month by an item in some of the Japanese papers, which stated that a certain Mr. Takabayashi of Kuwana, in Ise, had found himself the possessor of a very large diamond, excelling in size the world renowned Koh-i-nor. The *Jiji Shimpō* now says that the stone was lately examined at Osaka by Mr. Kyochi, a mineralogist of the Mining Bureau, who has pronounced it to be a topaz, such as are discovered from time to time in the hills of Ise.

A BIG PIECE OF CORAL.

We read in the *Nichi Nichi Shimbun* that a certain fisherman of Tomiye in the Goto Islands has fished up a piece of coral exceptionally large. Since coral was discovered in the seas adjoining the Gotos, from twenty to thirty thousand yen worth has been obtained yearly. The specimen in question has been brought to Osaka. It weighs two *kwan* (16½ lbs.), and is in the form of a tree, measuring about a foot round the root and having more than two feet spread of bough. The value is estimated at a thousand yen.

THEFT OF A DOCUMENT BY A LAWYER.

An attorney named Yano Teikichi, a member of the Tokyo Lawyers' Association, while conducting a case for the Makarazu Company (Yokohama) appropriated a document worth \$150. Legal proceedings were instituted by the employer, Yano being accused of theft. The case was given in favour of the defendant in the Tokyo Provincial Court, but on being carried to the Court of Appeal by the Public Prosecutor, Yano was convicted of theft and sentenced to 5 months' minor imprisonment and 6 months' police surveillance.

ADVENT OF A RUSSIAN PRINCE.

SEVERAL Japanese journals recently stated that the Grand Duke George, second son of the Emperor of Russia, would visit this country in June of 1893. The Tokyo News Agency corrects the statement, and says that the Grand Duke whose visit may be expected next year is H.I.H. Alexander, fifth son the Grand Duke Michael, and consequently cousin of the Czar. The Grand Duke Alexander, who is now in his 27th year, is serving in the Russian Navy.

POACHERS.

The *Tokyo Shimpō* says that news has been received of the presence of a foreign poaching vessel in the vicinity of Oshima, off the Izu coast. The ship is said to be American, and it is understood that she has on board some Japanese acting in the capacity of pilots and general assistants. The *Tokachiho Kan* was despatched from Yokosuka on the 29th ultimo to look after the intruder.

VISCOUNTESS ENOMOTO.

VISCOUNTESS ENOMOTO has for some time been suffering from an attack of typhoid fever. Happily the disease was not of an acute character, and the Viscountess' numerous foreign friends will learn with pleasure that she is now out of danger and progressing satisfactorily towards recovery.

PASSPORTS.

THE News Agency reports that the number of passports issued by the Foreign Office for travel in the interior from January 1st of this year to the 5th instant is 2,950, many of which included two or more persons—a husband, wife, and family. Thus the number of tourists up to the present has probably been at least 3,500.

THE NEW ORIENTAL BANK.

We understand that a private telegram received in Yokohama speaks of the resuscitation of the New Oriental Bank as assured. It is sincerely to be trusted that this intelligence may prove correct.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The political situation remains uncertain. We stated in our last weekly summary that the Ministers of State had been requested to assemble in full force on the 30th ultimo. That meeting did not take place, however. It appears that the conference of the Camera Statesmen on the preceding day resulted in an unexpected development, which for the moment precluded all ideas of a speedy solution of the problem, and which consequently compelled indefinite postponement of the appointed Cabinet meeting. What that new development was we are not in a position to state. Indeed, the whole vernacular press is entirely in the dark as to the nature and results of the recent conferences of the *Kuromaku Saishō*. It is reported that even the Ministers of State were not let into the secrets of these conferences. But it is generally believed by the metropolitan papers that the difference of opinion between Count Ito and Count Yamagata, which at one time seemed capable of accommodation, suddenly became so radical that the Premier, Count Matsukata, thought it prudent to ask Count Inouye to return to the capital by all means, in order to lay the matter before him for consideration. How much, if any, truth there is in this report, we cannot say; but it is certain that Count Inouye, notwithstanding his open avowal of resolve not to have anything to do with the present Ministerial question, has yielded to the solicitation of his friend Count Matsukata. He set out from Yamaguchi with the intention of reaching the capital either on Thursday evening or Friday morning. Upon his arrival, the conferences of the Camera Statesmen were to be resumed, and something definite will be known in the course of the coming week.

The press of all parties shows great impatience at the delay in settling the present Ministerial question. The spectacle of a few apparently irresponsible statesmen holding conferences over the destiny of a Cabinet, the members of which, with the single exception of the Premier, are not even allowed to ask information about the conferences, is too much for the metropolitan papers to pass without sarcastic comments on the singular patience of the Ministers of State. The *Fumiuri Shimbun* recommends them to reject altogether the interference of the Camera Statesmen; or, if they are unable to do so, to admit the latter into the Cabinet. The *Hochi Shimbun*, on the one hand, recommends the *kuromaku* statesmen to desist from all interference with affairs which lie entirely beyond the limit of their responsibility; and at the same time reminds the members of the Cabinet of the ignominy of tamely submitting to the dictation of outsiders, whosoever they may be. Even the *Chaya Shimbun*, which is regarded as a most thorough going supporter of the present Cabinet, does not hesitate to urge upon the Ministers of State the importance of asserting their independence of the statesmen behind the curtain.

Count Inouye is considered by the Tokyo papers to possess the casting vote in the settlement of the Ministerial question. His present position is compared with that occupied by Count Yamagata in 1889, when the latter's arrival home from a Western tour decided the fate of the Treaty problem, then agitating the minds of the people. The points now at issue not being accurately known, it is difficult to say in what respect Count Inouye's appearance on the scene will affect the situation. The *Hochi Shimbun*, however, is disposed to believe that Count Inouye is in favour of a moderate and constitutional course of policy. At all events, he will not, our contemporary thinks, give countenance to any policy which, under a constitutional guise, aims at the preservation of a despotic system of Government. He is expected by the *Kaishin-to* organ to be capable of solving the problem in a masterly fashion, and is requested to establish a general rule that the

Camera Statesmen shall henceforth altogether desist from interfering with politics. The *Kokumin Shimbun* also believes in the great ability of Count Inouye. It states that there are open to him three courses of action; first, to form a Cabinet in company with Count Ito, Mr. Mutsu, Viscount Nomura, and others of the same group; secondly, to divide the statesmen in the Government into the two distinct parties of those advocating a militant policy and those favouring a constitutional policy; and thirdly, to content himself with a time-serving device.

* * *

The situation evidently perplexes everybody. All are equally at a loss to see how the transition from an Imperialistic form of government to government by party can be effected in a smooth and natural manner. The *Fiji Shimpō* is firmly convinced that sooner or later government by party is sure to be carried out in this country. To make the transition as smooth as possible, our contemporary advises the leading statesmen on the Government side to renounce their peerages and become members of the House of Representatives. The difficulties of the situation are owing to indiscriminate opposition by the majority in that House to the Government. Lack of gravity and mature consideration characterizes the conduct of these members of the Lower House. If the leading statesmen on the Government side took seats in the House, their presence, in the our contemporary's opinion, would exercise a very salutary influence upon the younger politicians of the Opposition. Count Saigo and Viscount Shinagawa having cast in their lot with the National Union, are called upon to take the initiative and resign their peerages. While, on the one hand, offering this advice to the statesmen in the Government and to those connected with it, the *Fiji*, on the other, recommends the young politicians of the Opposition to be more prudent and dignified in their conduct toward the Government. They are reminded that the day is not far distant when they will be called upon to take seats in the Cabinet. On every occasion of a change of Cabinet in recent years, it has been observable that new and young elements were admitted. The process will go on steadily until young officials in the Government who are now on a level with the junior leaders of the Opposition, will come to the front ranks. When that stage of progress has been reached, it will become unavoidable to give Ministerial portfolios to the Opposition leaders, and the consummation is not very far distant. In view of the approaching crisis in their political career, the Opposition politicians are advised to conduct themselves so as to win the confidence of the nation.

* * *

The *Kokumin Kyokai* (National Union) continues to loom up large in the journalistic vista. The Opposition papers persist in condemning the Union as a party pledged to support Clan Government, or more correctly Government by the two clans of Sasshu and Choshu. Neither Count Saigo nor Viscount Shinagawa, say these critics, is specially fitted to be a party leader: their connection with the National Union is a proof that their qualification consists in being representatives of Sasshu and Choshu respectively. Such a party is declared to be incompatible with the progressive atmosphere of the present day. Another point that has evoked adverse comment is the circumstance that the Union has not issued any manifesto. Count Saigo and Viscount Shinagawa both declared that they approve the aim and purpose of the Union; but what that aim and purpose are, the public is left entirely in the dark. The Opposition press thinks it very strange that the leaders of the new party should hesitate to declare their programme. One of the *Kaishin-to* organs, the *Yomiuri Shimbun*, is silly enough to advise the Cabinet to let the public distinctly understand the nature of the relations which it intends to maintain with the National Union. If the Cabinet has no connection with the Union, let the fact be distinctly known, says the *Yomiuri*; if, on the contrary, the Cabinet contemplates maintaining intimate relations with the new

party, nothing can be more injurious than to attempt to conceal the intention. The evil results of leaving the public in a doubtful frame of mind on this point, are declared to have been illustrated by the case of the *Rikken Tetsui-to* (Constitutional Imperialist party) which was formed some years ago by Messrs. Maruyama Sakura, Fukuchi Genichiro, and Mizuno Torajiro. That association was regarded as a Government party, but the undefined attitude of the Government cooled the ardour of many who would otherwise have gladly joined. The consequence was that the party soon died a natural death, without having induced any applications for admission to its ranks. In order to avert such a calamitous result, the Government is slyly advised to define its connection with the National Union. Among the independent section of the metropolitan papers there seems to be some doubt as to the permanence of friendly relations between the Union and the Government. The *Fiji Shimpō* entertains such a doubt. It thinks that both the Government and the Union will be disappointed, if they believe in the permanence of their friendly relations, supposing such relations to exist between them. There might be permanence if the members of the Union were content to be mere instruments of those in power; but such submissive conduct cannot be expected from them. Neither will the Government consent to be dictated to by the Union. Thus it is quite probable, nay almost unavoidable, that the Government and the Union will quarrel, and in that case the Government will be compelled either to drive the Union into the camp of the Opposition or to admit its leaders to Ministerial positions. On the whole, the *Kokumin Kyokai* seems to be regarded by the majority of the metropolitan papers with doubt and suspicion.

* * *

Much anxiety is felt by the vernacular press at the delay of the Cabinet in advising the Emperor to sanction the law for the postponement of the date on which the new Codes go into operation. As already noticed in these columns, there was at one time a rumour that the Cabinet contemplated disregarding the vote of the Diet and carrying out the new Codes from the originally appointed date, namely from the 1st of January next. This rumour, however, was rejected by the press as being extremely improbable. But there being no indication that the Cabinet is at all concerned to advise the Emperor to sanction the postponement of the Codes, it is again anxiously inquired by papers of all sections what the Government intends to do. For our own part, we have not the slightest doubt that the matter will receive the attention of the Government immediately after the present Ministerial crisis has been settled. But papers like the *Nippon* and others urge that the Ministerial question can have nothing to do with the matter of the Codes. The latter, they declare, has a vital bearing upon the interests of the whole people, and the Cabinet is bound to give its earliest attention to the settlement of the problem one way or other. As to the question whether the Cabinet ought to advise the Emperor or sanction the postponement of the operation of the Codes, it is claimed that no warrant exists for withholding sanction, for whereas injurious effects cannot result from postponement, their immediate operation would have a most pernicious influence upon the natural development of the nation—a tolerably bold method of begging the whole question. That the Codes have no connection with the question of Treaty Revision, is falsely alleged by these journals to have been openly admitted by the Minister of State for Foreign Affairs, and they then proceed to ask whether postponement can effect the peace of the country, or whether it would be incompatible with the general policy of the Cabinet. These queries the *Nippon*, more confident than conscientious, does not hesitate to answer in the negative. What reason is there then, it asks, to insist on the operation of the Codes, in the face of the united opposition of the Diet and of public opinion. Even the *Tokyo Shimpō* strongly urges upon the Cabinet the importance of speedily advising the

Emperor to sanction the Bill for postponement. The *Nichi Nichi Shimbun* does not seem to doubt the Cabinet's intention to agree to the Bill. It discusses the constitution of the Commission which will be charged with the revision of the Codes, and devotes much space to reviewing the history of codification in Germany and Italy, as well as to defining the course which should be followed in this country. There are, in fact, a thousand cooks, and the Codes will fare ill in their hands.

* * *

The Columbian Exposition continues to occupy journalistic attention. The *Kokkai* recently advised those of its countrymen who can write English to compile a history of the country, and send it to the Exposition—a delightful notion. It now recommends the despatch of a large number of scientific experts to study the secret of the industrial prosperity of Occidental countries. The Japanese are backward in the application of science to practical purposes. The World's Fair at Chicago will be a unique opportunity to examine the various scientific appliances of the West. There ought, says the *Kokkai*, to be ample funds to send a band of properly qualified scientific experts. The *Hochi Shimbun* urges upon manufacturers the importance of paying a visit to the Fair. A project is entertained by some intending visitors to the Exposition to combine and hire a steamer to carry them across the Pacific. If there be a sufficient number, the expense of the whole trip, supposing it to occupy two months, are stated to be from two to three hundred yen in all. Manufacturers are advised to join these persons, and the authorities are requested to afford every facility.

* * *

In connection with the Columbian Exposition, some excitement has been caused by the singular conduct on the part of the painters in oils. In a body they cancelled their application to send pictures to Chicago, alleging that there is no hope of their works receiving fair treatment from the Japanese authorities connected with the Exposition. Mr. Kuki, Vice-President of the Temporary Bureau of Exposition, is accused of having let fall some unguarded language about the school of Western painting in Japan. But whatever may have been the proximate cause of this unexpected move on the part of the students of oil painting, there is no doubt that the relations between the Japanese and foreign schools of art are extremely strained. The *Yomiuri Shimbun* deeply regrets such a state of things. It entirely agrees with Mr. Kuki as to the importance of developing the original Japanese characteristics of art; but it fails to see any reason why full toleration and even encouragement should not be extended to the Western school also. Free development of all schools of art, side by side, will be conducive to the final production of a truly nationalistic school.

* * *

The *Nichi Nichi Shimbun* exposes in strong terms the absurdity of the position taken by the opponents of mixed residence. These persons do not pretend to deny the ability of their country to take her position as an independent State among the Powers of the World. But, asks our contemporary, is it not tantamount to a confession of inferiority to declare that the Japanese are unfit for direct competition with European and American races? Some people also think that tariff autonomy can be easily recovered without any concession on the part of Japan. The *Nichi Nichi* exposes the absurdity of this sort of reasoning. Russia and the United States of America are the only countries where tariff is regulated by home legislation. In all other states rates of customs duties form the subject of international convention. This general rule must be observed by Japan; and there is little probability of European Powers agreeing to any one-sided scheme of Revision. Mixed residence and recovery of national rights must go hand in hand. The time, says our contemporary, has long passed when it was possible and advantageous to shut out foreigners from the interior of the country.

Original from

BLAINE'S DEFEAT.

NOTHING could have been more unexpected than the sequel of BLAINE'S attempt to obtain the nomination at Minneapolis. When the intelligence reached this country that the Secretary of State had resigned, and that he was about to enter the Presidential contest, one opinion alone prevailed, namely, that he would be nominated by acclamation. The contingency of failure was dismissed without a second thought. Mr. BLAINE possesses gifts of the highest order. He is probably one of the greatest orators in the world, and his power of winning friends has been translated by many writers into the expressive formula that his personal magnetism is unparalleled. The terms in which his name was presented to the Convention by Senator WOLCOTT seem to embody the true sentiments of many of his countrymen :—

Years of struggle in the public service have left their impress upon him, but he still stands, to us who love him, the embodiment of all that is brightest and best in American statesmanship. And, mellowed and brightened by the creeping hours of time, we thank God he is still able and equipped to give the people of these States an administration which shall not only protect our citizens but, looking beyond the confines of our borders, shall embrace the well being of all Americans. And so, Mr. Chairman, in the hour when victory is at hand, we turn to the intrepid leader who so shaped this party's policy as to lift it above the danger of further defeat, and to those of us who belong to the younger element of the party, who are not content to follow and yet are not able to lead, and who ask only to hear their share of the burden and heat of the day, he stands our ideal, our inspiration. His name is engraved on all our hearts in living letters that shall never fade—brave, true-hearted, great. There is not one Republican who will not follow where he leads with loving faith, and we trust that providence will long spare him to the populace, whose grateful homage he has earned and whose affectionate devotion he possesses. We pledge our unfaltering, loyal support to James G. Blaine.

BENJAMIN HARRISON, on the other hand, is a simple, honest-hearted gentleman ; a man not so richly gifted as BLAINE, but possessing the invaluable faculty of avoiding mistakes, and possessing also courage to be guided by the dictates of unselfish patriotism. Mr. DEPEW, than whom no orator can be more rhetorical when he pleases, contented himself with this pithy summary of HARRISON'S claims in presenting his name to the Convention :—

By the grand record of a wise and popular administration, by the strength gained in frequent contact with the people in his wonderfully versatile and felicitous speech, by the claims of a pure life in public and in the simplicity of his typical American home, I nominate Benjamin Harrison.

Yet, in the actual struggle between these two men, HARRISON obtained 535 votes against BLAINE'S 182. The defeat was as signal as it had been unlooked for. And, even with the facts before us, it is not easy to interpret them confidently. The truth appears to be that BLAINE'S supporters consisted chiefly of the so-called "Party Bosses" and of politicians hostile to Harrison for personal reasons. Whether the "Plumed Knight" would have obtained a more respectable following had he entered the field earlier, is a question that will doubtless be variously answered. But

the moral of the Minneapolis story, as told by the American press, seems to be that BLAINE committed the great mistake of lending his name to political agitators who sought only to conjure with it for their own ends. PLATT, FILBEY, QUAY, CLARKSON and so forth do not represent the best element of the Republican Party. It is doubtful whether they ever honestly desired to secure BLAINE'S nomination. What they did unquestionably desire was to prevent HARRISON'S nomination, and in pursuance of that object they were ready to vote for any one who possessed a chance of being elected. They did not care for the triumph of the Republican Party but only for the defeat of HARRISON. Their respect for Mr. BLAINE is well illustrated by the fact that after placing him in nomination and thus exposing him to the peril of defeat, they deserted him in the fight, and transferred their allegiance to MCKINLEY, in the vain hope of preventing any nomination on the first roll-call. In a word, they simply made a catspaw of BLAINE, and the result is that a man who yesterday stood below none in the esteem of his country, is to-day hopelessly discredited as the central figure in an utter fiasco. We are not Americans, but we may plead the privilege of close relationship to be candid, and to say that, although BLAINE'S record and endowments may have entitled him to the Presidency, the Republican Party has obeyed a wiser and worthier instinct in choosing HARRISON. Somebody once said of BLAINE, "We honour him for the sake of the enemies he has made." It may be said now of the Delegates at Minneapolis that they rejected BLAINE because of the friends who supported him. The Republicans wanted the strongest man they could get, and a man representing the best traditions of American statesmanship. They did not want a man supported chiefly by "Party Bosses" and "sore-headed politicians" discontented about the division of the spoils. It was a stupendous blunder on BLAINE'S part to accept the aid of such persons and to rely on it solely. A great career ends in a sorry episode. We believed in BLAINE, and should have welcomed his success, despite the widely held idea that he has not hesitated to make political capital out of his country's foreign relations. But when we analyse the backing he obtained at Minneapolis, we can only be pleased at his failure.

POLITICAL PARTIES.

IT cannot surprise anyone that there should be an appearance of perplexity at present in both official and political circles in Japan. The machinery of constitutional government is so new that some trouble in working it is inevitable. Many of the elements which contribute to its smooth operation, and which, in other countries, precede its existence, have still

to be created in Japan. We ourselves believe that a satisfactory result will ultimately be achieved, but the state of affairs in the interval is disquieting. Within the Government and among the Camera Statesmen there are evidently two views. One party favours the adoption of an unflinching attitude towards the Diet ; the other would make every possible concession and employ every possible means of conciliation within the strict limits of the Constitution. Gradually the balance appears to be swaying towards the former policy. Its supporters argue that, in the first place, to employ conciliation at present might be taken as an indication of weakness. Conciliation can be successful only when the other side is in a mood to be conciliated, and it is very doubtful whether such a mood yet exists. Certainly it does not exist among the *Kaishin-to*, whatever may be the case with the *Fiyu-to*. Those who have followed the writings of the vernacular press since the struggle between the Government and the Opposition entered an acute phase, will remember that independent journals have consistently urged the wisdom of an unflinching attitude on both sides. These impartial onlookers think that the time has not come for compromise, and that it cannot come until the Opposition learns to appreciate the hopelessness of expecting complete victory. Such a view is strengthened by the general consideration that it is always easy to make concessions, but scarcely ever possible to recall them when once made. Moreover, the advocates of a strong policy have another argument in their favour. They can point to the indisputable fact that no army was ever rallied to a standard of compromise. The most noteworthy feature about the composition of the last Diet, during the session just ended, was that it included the acknowledged embryo of a Government party. There was a semblance of a Government Party in the first session, but it became entirely invertebrate after the Budget compromise, and when the second session opened, only one member in the whole House of Representatives ventured to openly declare himself a pro-Government man. Things could scarcely be otherwise. So long as it was uncertain whether the Government would hold the fort, no one felt any strong inclination to stand in the breach. Dissolution materially changed the complexion of affairs. Politicians saw that the Cabinet was in earnest, and when the Diet re-assembled, there were found in the Lower House some ninety members who, though not openly organized as a Government party, did not hesitate to vote consistently with the Government and to identify themselves with official measures. That was a very substantial gain. Let Government by party be ever so distant, it is beyond question that, so soon as a constitutional polity is adopted, the Cabinet should spare no pains to obtain support in the Diet. The head of a house may be unwilling to

concede to the members of his household the power of dismissing him from office and choosing his successor, but at the same time he will endeavour to contrive that his management of affairs shall not be censured by a majority of the family. Japanese Ministers of State are determined to uphold the EMPEROR'S constitutional prerogative of appointing and dismissing the heads of the Administration, without interference or dictation from the Diet or from any other body in the State. But at the same time it is their bounden duty to avert the unsightly and dangerous condition of perpetual disagreement between the Cabinet and the majority in the House of Representatives. That can be achieved only by organizing a Government party, and a party cannot be organized on a nebulous platform of compromise and concession. The strong measure of dissolution created the nucleus of a pro-official party, and the resolute attitude of the Government throughout the third session has so far strengthened the Cabinet's supporters that now at length they have formed themselves into an organized association. To adopt a conciliatory policy at this juncture towards the Opposition would certainly deprive the new association of verve and cohesion, and might possibly estrange it altogether. Besides, there is no assurance that such a policy would disarm the Opposition. On the contrary, as we have noted above, independent Japanese thinkers maintain that the Opposition will never lower its hands until it finds itself confronted by forces that render its complete success hopeless. To try the experiment of conciliation now would be to catch neither the bee nor the wasp, as the Japanese proverb puts it. Yet the situation is sufficiently difficult to demand long and deliberate thought on the part of those responsible for dealing with it. We ourselves have not the least faith in half measures under the circumstances. The experience of the past three sessions seems to place one fact beyond all doubt, namely, that by a resolute and unflinching attitude only can the Government hope for organized support in the Diet.

THE STEWART BILL.

THE news received on the 5th inst. by telegram that the Senate has passed the Stewart Bill reads very strangely in the context of the journalistic comments evoked when, on May 26th, the Senate, by a narrow majority of 28 to 20 in a House not half filled, voted to take up the Bill. The Republican newspapers denounced the measure in unqualified terms. They called it a deliberate attempt to pass a law compelling every creditor to accept 67 cents in silver as equal to 100 cents in gold, and they predicted that when the Bill came up for final discussion, it would be ignominiously rejected. "There is not,"

wrote one newspaper, "a bare possibility of the enactment of a free coinage law this session, no matter what the maniacs may say. Neither of the great parties dares to make itself responsible for the certain derangement of the finances that would ensue from such an enactment. The Presidency is a great prize no doubt, but there is a price too great to pay for it, and free silver is too great a price. Great as the price may be, it would not purchase the boon. The masses are wiser than the leaders this time, and a great deal more honest, and they will not back the demand to compel the Government to pay thirty per cent. more than the market price, even for silver bullion." This is pretty confident writing, yet the Bill has passed. A curious point is that the silver men in Washington had said that they entertained no expectation of passing it until after the two National Conventions had been held, and now, while the news of the Democratic Convention's result is still fresh, intelligence comes that the Bill has passed. Evidently the silver men gauged their times and seasons pretty accurately, and knew what they were about a great deal better than the press imagined. But between the passing of the Bill by the Senate and its becoming law, there is a considerable interval. It may pass the House, but we can predict with tolerable certainty that President HARRISON will veto it, and that the nation will thus obtain a square and direct issue in the Presidential campaign on what some journals justly call "the gravest and most far-reaching of public questions." The amendment added by the Senate is significant. All the silver bullion now lying in the vaults of the Treasury is to be coined. We cannot say exactly what that bullion now represents. But at the beginning of May the Secretary of the Treasury, in response to questions propounded by the Senate as to the operation of the Silver Law of July, 1890, said that the Treasury notes issued in payment for silver bullion purchased under that Act up to April 27th, amounted to \$92,852,000, and as there was already a considerable quantity of the white metal in the vaults when the Law came into force, we may fairly assume that the silver bullion now in the Treasury aggregates not less than 100 million dollars. On the other hand, the estimated stock of silver coin in the United States on January 1st, 1891, was 465 million dollars, and the quantity coined during the preceding year had been 40 millions approximately, so that this proviso adopted by the Senate means an immediate coinage of silver $2\frac{1}{2}$ times as great as the usual annual coinage, and means an addition of 22 per cent. to the stock of silver coin in the country. Such operations take one's breath away. What on earth the Treasury is to do with a hundred million silver dollars when they are coined, we cannot con-

ceive. Equally incomprehensible is the notion of America attempting to rehabilitate silver by steps of the nature taken by her during the past two years, or rather since the enactment of the Bland Bill. Without going so far as to adopt the language of an American journal which describes the Stewart Bill as "the most gigantic swindle ever proposed in the Congress of the United States," we certainly cannot consider it anything but a piece of the wildest legislation ever endorsed by sober-minded men. If it became law, the world would witness another of those disastrous financial disturbances that followed the operation of the Act of 1890. What commerce wants is something like a stable and natural ratio between gold and silver. These attempts to force the latter to a fictitious and unobtainable value only aggravate the evil from which international trade is suffering so acutely.

BAD TIMES.

WE doubt whether in the memory of any foreign resident the East has ever been visited by a time of such financial embarrassment as the present. The depreciation in all local stocks during the past twelve months represents a great sum, and there is a feeling in the air that the crisis has not yet passed. Some hold the United States responsible for the whole trouble, averring that the extraordinary silver legislation of the Washington Government in 1890 fatally disturbed exchanges, and produced a fever of speculation the consequences of which are worse than anything that preceded. It is impossible to believe this. One might as well allege that the faulty treatment of a disease by a particular college of physicians was responsible for the origin of the malady. The disease in this case existed long before America undertook to apply to it an evil palliative. Its seeds were sown when Great Britain demonetized silver, and the maturity of the harvest was assured when Germany followed suit. Trade between silver-using and gold-using countries during the past ten years, above all during the past five, has been simply gambling, and the banks, which, in the long run, have to take the major part of the risk, are bound to suffer most. In the East it may truly be said that the majority of the firms engaged in commerce are carried by the banks. Thus the failure of a bank means a great deal more than direct monetary loss to its shareholders and depositors. It means also the temporary, if not permanent, crippling of the numerous *clientelle* who rely on the bank's aid to continue their business. The most disheartening feature of the situation is that, so far as concerns silver, no prospect of any immediate relief is discernible. The approaching International Conference offers no element of hope. Europe has not yet

suffered sufficiently to be ready for bold measures. The United States' financiers probably have it in their power to force the situation by temporarily abandoning the white metal to its fate, throwing their huge stocks of silver on the market, and absorbing all the gold they can obtain. The result would be a state of affairs so embarrassing for Europe that her consent to rehabilitate silver must follow speedily. But the process would involve a heavy loss for the United States in the interim. Perhaps it is too much to expect that she should voluntarily face such a loss, though her present policy of plunging her head deeper and deeper into a sea of silver eminently unfits her to take the lead in devising measures to stem the tide of depreciation. And if America is not prepared to enter this heroic route for the sake of reaching the goal more speedily, England has at least equal cause for reluctance to re-monetise silver. The investments of British subjects in foreign countries are enormous. They are entitled to receive the interest and recover the principal of these investments in gold, and their feeling is that to consent to an international agreement, placing silver on the same footing with gold, would be to deliberately reduce the value of the nation's investments. Englishmen have not yet fully realized that by persisting in monometallism they are shutting themselves out of nearly all avenues of profitable investment, and condemning themselves to be content with the most insignificant returns on their capital. Neither have they yet fully realized what the Manchester Chamber of Commerce recently declared, namely, "that the unsatisfactory conditions of trade which have existed for so long without there being any prospect of alleviation in the future, are largely caused by circumstances connected with the frequent and violent fluctuations in exchange with India." Further processes of suffering have to be endured before the truth is forced home. It may even be feared that the abortive result of the approaching Conference will still farther postpone the time of salvation, by rendering the nations reluctant to approach the subject again.

AINU DIVINATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In one of the Ainu villages in which I have spent many months, one of the men, with whom I am well acquainted, was one day very angry at having lost a paper dollar. He had a strong suspicion that a particular young woman, his daughter in fact, who was married and lived next door, had stolen the money. He accordingly accused her of the deed. But as she refused to confess, and stoutly and persistently denied the charge, her father proceeded to perform what the Ainu call by the various names of, *Niwok ki marapto*, "The ceremony of discovery"; *Shitumbi*

marapto, "The ceremony of the fox"; or *Kema koshue guru marapto*, "The ceremony of the light-footed person," the fox being so called on account of the rapidity with which it can get out of one's way.

This "ceremony of the fox" is a sort of divination by means of which the guilt or innocence of an accused person is supposed to be established, and is very closely allied to trial by ordeal. In the present case, however, though the person was brought in guilty, and implicit faith was placed in the decision, there appears to have been a mistake, for shortly afterwards the dollar was found; but it was quite against the father's dignity to tell his daughter so. I verily believe that he was angry to find out that his divination had played him false.

Every married Ainu keeps one foxes skull, carefully decorated with willow shavings, stowed away among his treasures in the eastern or sacred end of his hut. With this he divines, should he have lost anything or should something have gone wrong in any other way with him. In such a case he takes the skull from its corner and, after having prayed over it and told it all his troubles, asks it to make known to him the cause. Should the spirit of the skull be favourable, it will show him the whole matter in a dream.

The ceremony concerning which I am now speaking was conducted as follows:—The accused person was brought into the hut of her father and made to sit in front of him. He then produced his foxes skull, prayed before it, told it of his loss and asked it to favour him by answering truly. He next separated the lower jaw from the rest of the skull. The top part of the skull, which is called *sapa num*, was reverently put on one side, and the jaw placed upon his head, teeth upwards. He then gently lent forward so as to allow the jaw to gradually slip to the floor. As it fell with the teeth to the ground his daughter was thereby proved guilty; but should it have fallen with the teeth upwards she would have been declared innocent. The person proved guilty was called *Ko-niwok guru*, "the person pointed out" or discovered.

Should it have happened, however, that the loser of the money had no suspicion as to the thief, he would have tied a long piece of string to the skull, and, having gathered up the string in a bunch in his hand, would have caused an assembly of likely people each to take one piece of the string and all pull together. He who took the piece immediately attached to the skull would have been the person "pointed out" as the culprit.

It is needless to add that the Ainu have implicit confidence in this curious ceremony, though it does play them false sometimes. I should also remark that many Ainu men, when going on a long journey, reverently carry a fox skull among their luggage; with this they divine, and determine which way to take or which of two things should be done next.

Yours, etc.

JNO. BATCHELOR.

JAPANESE PHILOLOGY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Inasmuch as it appears that the "last word" has been written, in English, for instruction in the Japanese language, I beg to suggest that some experienced capable scholar bend his energies to the compilation and arrangement of a scientific exposition of the philology of the language, and its relations to linguistic cognates. An example of this kind of work may be seen in Boltz's Russian Grammar (*Lehrbuch der Russischen Sprache, Von Dr. August Boltz, Berlin, 1886*). In the theoretical part of this excellent instruction book, words are analysed into primitive elements, their representatives in other languages are given (only partially—recent discoveries have furnished more widely spread examples). The same element is shown in many different verbal and syntactic situations. For instance: *orok* (lesson); *ryāchi* (speech—compare our word "orator"); *ryāka* (river) are from the same root meaning "the flowing," as of a stream; compare "fluency," stream of words," etc. This is a simple example of Dr. Boltz's thorough work.

Besides the usual practical lessons, the volume contains a thorough, concise scientific tableau of the Russian language in the *Grammatische Uebersicht*, where we learn that many ancient terms are now represented by a simple letter only, while cognate tongues often show more complete forms. Certain terminals and individual letters signify classes of objects and of ideas. Such treatment of the word *sei* (Japanese), with its many kindred meanings, might perhaps, serve as a type after which to model philologic analysis in elucidation. Of course, due regard must be had for the great difference in the morphologic genius of languages.

A work of this sort in Japanese (and Korean?) seems now especially desirable since we have come to know of its linguistic connection with the speech of the ancient Tartars, Mongols, Semites, and

the (hitherto so called) Indo European languages—of which illustrations may be found in *The China Review*, and in other recent publications in *ra*. These results have been largely due to the labours of special and general philologic scholars in the Far East.

Very respectfully,

F. B. STEPHENSON.

Nagasaki, Japan, June 27th, 1892.

THE EXCURSION TRAINS TO NIKKO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As considerable misapprehension seems to exist among the public about these trains, I hand you herewith a translation of a circular sent a few days ago to the different officers of the Government by the Nippon Railway Company for distribution among the official classes. From the circular it will be seen that these trains are not excursion trains in the general sense known abroad, as the invitations are addressed to some particular class and not to the general public. On the occasion of running of a similar train on the 2nd inst. the sending of invitations was limited to large mercantile establishments; and this time it is to officials. They therefore are more of the type of excursion trains on Sunday for schools, &c., which are frequently run in England and elsewhere and from which the general public are excluded.

Whether this will eventually lead to the establishment of regular excursion trains available for the public generally it is not yet possible to predict. But the facts will probably remove some of the misapprehensions I have noticed. As to the limiting of the number of excursionists to 400, this may have been necessitated by the want of an extra supply of rolling stock. This is a busy season for railway traffic, and I learn that the completion of extensions to Aomori on the Nippon Railway has been pushed on quicker than expected, and that the Company's rolling stock has not been able to keep pace with the requirements of increased mileage; they may not therefore yet be sufficiently equipped to guarantee the carriage of an unlimited number of excursionists.

I am, Sir, yours faithfully,

THOS. NOSEGAY.

We beg to announce that we propose to run a second Excursion Train to Nikko, for the convenience of those who desire to visit the place, on Sun day the 10th instant. Intending excursionists are requested to peruse the following conditions, and avail themselves of the train should they desire to do so.

TRAFFIC DEPARTMENT OF THE NIPPON RAILWAY COMPANY.

July 2nd, 1892.

—As the proposed excursion train will be run provided three hundred applications are received. Intending excursionists are therefore requested to send in their applications to our Traffic Department by the 7th instant.

As accommodation will be provided for four hundred passengers, only, all applications received after that number have been filed up will have to be declined.

2.—Notices will be sent to each of the applicants, or to bodies of applicants in due time as to circumstances favoring or otherwise the running of the train.

3.—To afford the means of taking a pleasure trip is the main object in running the proposed train, and on the present occasion, the issue of these invitations will be confined to official circles, and the mingling of different classes among excursionists will thereby be avoided. There will be no distinction of charges—1st, 2nd, and 3rd—in the train. The fare between Ueno and Nikko and back will be yen 2.50 for adults and yen 1.50 for children between the ages of four and twelve. No special arrangements will be made for those who may bring in one party a number of friends or relatives.

4.—The train will consist of second and third-class carriages.

5.—It is proposed to start the train from Ueno at 5 a.m. and it will arrive at Nikko at 9.30; return train to start from Nikko at 6 p.m. and to arrive at Ueno at 10.10.

6.—About nine hours will be by this arrangement be at the disposal of the excursionists, within which time the temples as well as Utsunomiya, Kiriyu, &c., may be visited.

7.—One of the objects in running this train is to enable excursionists to get back to Tokyo within the day. However, for the convenience of those who may desire to stop at Nikko, return tickets will be made available for five days. These tickets when used on ordinary trains will be considered as third-class; and those desiring to ride in classes above the third will have to pay the difference.

8.—Other conditions being favourable and unless heavy rain should fall the train will be run without fail, on the appointed morning.

LAUNCH AT YOKOSUKA.

There was every indication early on Thursday morning that the day would be one of exceptional warmth and brilliance, and the prognostications then very confidently given utterance to were not belied in any way whatsoever. These circumstances were peculiarly propitious to the Naval authorities at Yokosuka, for yesterday was the time appointed for the launching by his Majesty the Emperor of the new cruiser, *Akitsu Kan*, just finished building at the Imperial Dockyard. The pageant was naturally taken great advantage of by most of the holiday loving middle-class residents of the district, and the morning trains from Yokohama and Tokyo, and intermediate stations

were heavily freighted with pleasure-seekers. The 10.25 train from Yokohama carried down most of the principal officers of the day, and immediately upon its arrival at Yokosuka the guard of honour, consisting of two detachments of the 1st Division of Infantry and a naval brigade, were ordered to fall in and line the road to the duckyard, in readiness for the arrival of the Emperor. The soldiers were in full marching order, and the "tars" were lightly but suitably equipped, but both services bore the heat and dust good temperedly and appeared little fatigued at the close of the wearying proceedings. Near the station entrance were also massed the children of the national schools, in charge of their various teachers, and very pretty they looked with their bright, expectant faces.

Shortly after twelve o'clock the Imperial train drew alongside the platform and a salute was fired. Its echoes had hardly died away when the voices of the children were heard chanting the National Anthem. The Emperor, who was accompanied by his Grand Chamberlain Marquis Tokudaiji, entered a brougham, and was driven off in the direction of the Duckyard. He was preceded by a mounted escort, while a second brougham containing Viscount Kabayama, Minister for the Navy, and other Ministers of State followed, the rear being brought up by mounted police. At the entrance to the Duckyard a large evergreen arch was erected and near this stood the trumpeters, clad in scarlet and gold, who were deputed to receive His Majesty at the gates. The various high naval officials in Government employ were also grouped around, in full uniform. His Majesty, immediately upon arrival, proceeded to a specially prepared salon and rested, during which time the last touches were bestowed upon the new cruiser. She is built after the Armstrong pattern, and is a fully-armed cruiser, capable of a speed of 19 knots per hour. The *Hashidate Kan*, which was built at this duckyard and launched last year is her sister-ship. Her lines, even when upon the stocks, were remarkably fine, her designers putting as much grace into her as a modern warship is capable of showing or receiving. The dimensions, as given officially, are as follows:—length, 91.700 m.; beam, 13.144 m.; draft, 5.624 m.; displacement in tons 3,150. She has twin-screw propellers driven by 4 horizontal cylindrical engines. When completely fitted she will carry twelve guns of the quick-firing type, and will have two fighting tops; her ram is rather short, but sufficiently powerful to be able to give a good account of itself should the contingency ever arise for its employment. The war-ships awaiting her advent in the placid waters of the lovely little harbour of Yokosuka were the *Fuso Kan*, *Tsukushi Kan*, *Riojo Kan*, *Fingei Kan*, *Chobin Kan*, *Atago Kan*, *Chiyoda Kan*, *Musashi Kan*, *Itsukushima Kan*, and the *Hashidate Kan*, who had all "dressed ship" in her honour. The *Akitsu Kan* is of course only a shell at present, her armament and other fittings not being yet on board, but she was gallily bedizened in flags, while a wreath of evergreen and red flowers was draped around her. At the bows was suspended a large paper cage in which were confined some pigeons, and at the stern floated the Japanese Naval flag—the sun with rays on a white ground.

Patently the vast crowds waited in the broiling sunshine—only a fortunate few gaining admittance by invitation to the reserved enclosures—for nearly two hours, and their numbers increased every minute. At a quarter past two o'clock a fanfare of trumpets announced the approach of the Emperor, attended by his Ministers of State and the following visitors:—The Emperor was accompanied by Marquis Tokudaiji, Grand Chamberlain; Viscount Nishiyotsutsuji, Chamberlain; and Mr. Hironishi, Assistant Chamberlain. Among the guests were their Imperial Highnesses Princes Arisugawa, Kitashirakawa, and Kanin, Count Matsukata, Prime Minister; Viscount Kabayama, Minister of State; and Vice-Admiral Ito, Vice-Minister for the Navy; Mr. Hanabusa, Vice-Minister of the Imperial Household; and several high officials of the War and the Naval Departments. His Majesty walked to the pavilion erected at the bows of the vessel, taking his seat in the centre and having Viscount Kabayama on his right. Other officials around the dais were:—the Captain-Superintendent of the Yokosuka Admiralty Yard; the Director of Shipbuilding; the Harbour Master; the Chief of the Staff; the Chief of the Staff of the Admiralty; the Master of Ceremonies to His Majesty, and Captain Ingles, R.N. His Majesty having signified his readiness, one by one the shores were knocked away, and then the big vessel seemed to pause for a second; then slowly and steadily she began to move, and with calm deliberation slipped from her stocks into the shining sea. There was not the slightest

hitch anywhere and as the bows reached the sea the pigeons were liberated and flew off to tell of the baptism of Japan's latest war-vessel to the authorities at Tokyo. A loud outburst of clapping and steam whistle blowing followed, so loud in fact as to drown the fanfare of the trumpeters who were announcing the departure of the Emperor. His Majesty returned to Tokyo by special train a few minutes after three o'clock, a salvo from the infantry being discharged as the train steamed out of the station. Immediately upon the departure of the Emperor a cold collation was served to visitors, over the big engine shops, the naval band discoursing, meanwhile, a stirring selection of music, among the first pieces being the old but very popular "Nancy Lee," a tune dear to the hearts of all that go down to the sea in ships.

The assemblage of such a large concourse of people at the tiny station of Yokosuka considerably embarrassed the railway folks towards the middle of the afternoon, and the last trains were over an hour and a half late in getting into Yokohama.

"THE GLORIOUS FOURTH."

The Fourth of July was duly honoured in Yokohama on Monday, every loyal citizen of the Great Republic doing his level best to celebrate it in one form or another, socially, convivially, or pyrotechnically—in fact twelve o'clock had scarcely ceased chiming at Sunday midnight when the first crackers and rockets were discharged. The Settlement hung out a profuse supply of bunting, nearly every national flag being represented, but the Stars and Stripes naturally predominated. Few of the retail stores were closed but the Banks and chief hotels held holiday. It was rather a pity that no American warship was in harbour, but perhaps we deserved the respite from naval saluting, for during the last few weeks we have had enough and to spare of this noisy form of marine etiquette. During the day the usual congratulatory visits took place, the fine weather of the morning and early afternoon greatly facilitating them, and in the evening an *al fresco* fête took place on the Bund, from the Grand Hotel to the French consulate. At the latter place an ice-cream carnival was held for the benefit of the Jizenkai hospital and this was largely patronized. A fine display of fireworks was discharged from barges anchored in the bay, nearly opposite the Grand Hotel, the showers which fell between four and five o'clock only damping the set pieces slightly. The hotel itself was gallily decorated with strings and festoons of coloured lanterns, while a band discoursed gay music upon the verandah, attracting a large concourse of people. On the Bluff, in the evening, the most prettily decorated house, externally, was the American naval hospital, which was wreathed in many lanterns of varied shades and shapes.

During the afternoon a keenly contested game of cricket took place between teams—twelve aside—of H.M.S. Fleet and the Yokohama Cricket Club, somewhat higher scoring prevailing than has been the rule of late. The Fleet went in first and compiled a total of 114 before being all dismissed, de Robeck contributing a well played 23 and Philipps 41, de Robeck, being third man out and Philipps tenth. The Club at the start put in Burn and Williams, but the first-named was given l.b.w. before he had had a chance to score. Edwards took his place and 67 was telegraphed before Hewicz found his wickets. Dodds then joined Williams and had added a useful 7 when Adair bowled him clean. Williams was the next to retire, being caught by Moggeridge off de Robeck, but the Fleet's score had by this time been passed with 3 runs to spare. Watson and Duff carried the total to 172 before they were separated, Duff remaining till 193 was reached, to which he had contributed 64 by careful play interspersed with some free hits. Barton Layard, and Dickinson added 11, 12, and 6 respectively, and then the game ceased, the Club having still two wickets unplayed. Score.

MRS. PATTON'S THIRD EXHIBITION.

The third annual exhibition of Mrs. E. S. Patton's pupils was given on Tuesday evening, having been unavoidably postponed from two previously arranged dates, in the Public Hall, Bluff, before a large assembly of residents. The entertainment was of high merit, surpassing perhaps the efforts of previous occasions, each little performer having gained in some particular of voice, grace, or action. By special request, the Cantata, "Queen I love you's five o'clock tea," was repeated with even greater aplomb than on the last occasion, the soloists displaying a closer acquaintance with their parts, while the choruses were more reliant and in better tune, familiarity having also brought ease in execution. Mrs. Patton accompanied upon the piano, Mr. E. Beart essayed the rôle of conductor.

But by far the most enjoyable part of the evening was that devoted to calisthenics and dancing. The audience sat around the hall in a ring, the floor having been raised to a level, and in the centre the lads and lasses went through their varied and pleasing exercises. The elementary and advanced classes having satisfactorily disposed of the movements of the musical drill, a waltz was given by all, and "La Varsoviana" which followed on was taken by the advanced class alone. The Lancers disposed of, the "Minuet de la Cour," was daintily footed by Miss Boelmer and Master Charlesworth, both being dressed in the mode which prevailed when "George the First was King." A recall was demanded and the young exultants bowed their thanks. A walking polka immediately preceded the Wreath Dance, one of the prettiest things of the whole evening. The Parisian Quadrilles were nicely danced, but the next item, "La Krakovienne" almost drove it out of recollection so charmingly sedate and natural were the two wee mites who went through this quaint dance of ancient Hungary, clad in the national costume for gala days. The Spanish dance which concluded the second part of the proceedings was taken from Gilbert and Sullivan's opera, "Les Gondoliers" and its effect was considerably heightened by the Andalusian dresses of the performers. In addition to the fancy dresses already mentioned were some of the reign of Edwards the Fourth and Sixth, while Uncle Sam and Bunty Prince Charlie were also represented.

Mrs. Patton, in distributing the prizes to her painstaking and deserving pupils, announced that it was her intention, upon her return from Australia, to institute annual musical competitions, both for the vocal and instrumental, practical and theoretical, branches of the art. Some more dances followed this pleasing function, and the hands of the clock were closely approaching the hour of midnight when the strains of "God Save the Queen," announced the termination of the entertainment. Below are given the prize list and programme:—

PRIZE LIST.

DANCING.

DEPORTMENT:—Ladylike—Miss Daisy Roth; Gentlemanship—Master George Russell. Extra prize, Miss Gladys Smedley. 2nd prizes Master Mendelsohn and Master Robin Roth.

DANCING (new pupils):—1st Miss Helen Holmes, Miss Dorothy James and Master Louis Stornebrink; 2nd Miss Bertie Mendelsohn, Miss Beryl Dodds, Miss Abbey, and Miss Eugenie Joubin, Masters Abbey and Gibbs.

CALISTHENICS:—Miss Joubin.

GOOD CONDUCT AND ATTENTION:—Miss Gertrude Mendelsohn, Miss Meiklejohn, Miss Marian Russell, Miss Lottie Walker, and Miss Jennie Walker.

SPECIAL PRIZES IN DANCING:—Master Chester Poole, Master John Walker, Misses Carrie Cook, Allcock and Rebecca Stornebrink.

MUSIC.

PREMIER PRIZE:—Master Thayer Lindsley.

SPECIAL SUBJECT (not including pianoforte):—Miss Emily Jarman.

GENERAL MUSICAL KNOWLEDGE (in class):—Miss Minnie Schwabe.

INTERMEDIATE CERTIFICATE (youngest pupil):—Miss Maya Lindsley.

SPECIAL PRIZE (neat writing and rapid improvement):—Master Mendelsohn.

PIANOFORTE-PLAYING:—1st Miss Watson, 2nd Miss H. Watson.

MARKING AND RAPID IMPROVEMENT (in piano-forte and theory):—Miss Evelyn

STEADY IMPROVEMENT (in Pianoforte)—Miss Bravay.

STEADY IMPROVEMENT (in singing and Pianoforte) Miss Annie Walker.

SPECIAL (interest in theoretical work and neat writing)—Master Mendelson.

SPECIAL (marked improvement and attention):—Master Wilson Walker, Master Harry Cook, and Master Shorlef Jensen.

SPECIAL IN TONIC SOL-FA:—Miss Douville and Miss Diack.

CANTATA.

"Queen I love you Five o'Clock Tea."

CHORUSES.

"Queen I love you" with recitations. Miss Violet Brent.

"Tea-leaf the Comfort" with Chinese Song. Master Wilfred Smith.

"Staff of Life" with *Frise*.—The Wheat—Misses J. Loomis, E. James, and C. Sarvent. The Flour—Misses M. and N. Schwabe, and E. Jarmain. The Bread—Misses E. Batavus, M. Watt, and M. Stornebrink.

"Sweet Cream" with Song. Miss Christina Carat.

"The Sugar Cane" with Song. Master G. Wheeler and Master W. Carst.

"Dresden the Dainty" with Song. Miss Mabel Vanum.

Choruses by the Members of the Yokohama Juvenile Tonic Sol-fa Choral Society.

Monical Director and Accompanist. Mrs. E. S. Patton. Conductor. Mr. E. Beart.

Exhibition of Callisthenics. 1st, Elementary Classes, and, Advanced Class.

La Yaroslava. Mrs. Patton's Advanced Class.

Minuet de La Cour. Miss Boehmer and Master Charlesworth.

By the Misses A. Carst, N. Johnstone, Alcock, H. Holmes, J. and E. Jubin, M. and N. Schwabe, M. Stornebrink, E. Batavus, M. Watt, M. Moss, L. Douville, A. Boehmer, A. Diack, A. Walker, and Miss Rebecca Stornebrink.

La Krakovienne, by Miss Rebecca and Master Louis Stornebrink.

Military Schottische.

Spanish Dance.

From Gilbert Sullivan's Opera "Les Gondoliers."

By the Miss M. Stornebrink, E. Batavus, A. Diack, L. Douville, M. Moss, M. Schwabe, N. Schwabe, and E. Jubin, and the Masters J. Walker, W. Johnstone, W. Carst, and J. Charlesworth.

Distribution of Prizes.

Dances.

1.—La Melange.

2.—Wai 2.

3.—Singing Lancers.

4.—Polka.

5.—Highland Schottische.

6.—Sir Roger de Coverley.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, June 9th.

The American *Shokonsai* was celebrated in the usual patriotic way by processions, orations, and decoration of the grave of the brave dead. President Harrison was the orator of the day at Rochester, N.Y., where a magnificent soldiers' monument was unveiled. In this city a large number of persons took advantage of the holiday to visit the World's Fair grounds; and many more would have done likewise if it had not rained in the afternoon. Your correspondent enjoyed an evening local celebration, in which the most interesting feature was the singing by and with Dr. George F. Root of some of the famous war melodies which he himself composed. It was really an inspiring sight to see the white-haired old gentleman, mounted on a chair, leading, with all the vim and enthusiasm of youth, the singing of his "Battle Cry of Freedom." In all the schools of the country there are special "Decoration Day" exercises.

The leading article in the May number of *The Christian Review* is upon "Charity in Japan."

Miss Mary Allen West, one of the editors of the *Union Signal*, has been chosen Superintendent of the World's W.C.T.U. School of Methods, and will visit the Sandwich Islands and Japan to teach and train workers in the temperance causes.

Miss Charlotte M. Yonge, the famous author, has given \$10,000 for building a missionary college at Auckland, New Zealand.

At the recent anniversary of the American Baptist Missionary Union in Philadelphia, Rev. A. H. Bennett, of Yokohama, was one of the speakers. In the discussion of a resolution condemning the Chinese Exclusion Act strong language was used in denunciation of that un-Christian act. Sunday, June 26th, was set apart as a "centenary day." An appeal was made to raise, during this current centennial year of missions, a special fund of \$1,000,000, apportioned as follows:—Churches, \$400,000; Sunday Schools, \$150,000; individuals, \$200,000; and women's societies, \$250,000. On the spot \$45,000 were pledged.

The Presbyterian General Assembly finished its labours without a trial of Dr. Briggs for heresy. His case was remanded to the New York Presbytery with instructions to try him "on the merits of the charges as originally made."

The Pope has given his *tolerant* protest to the so-called Faribault-Stillwater educational plan of

Archbishop Ireland. This scheme, tried in Stillwater and Faribault, Minnesota, is the placing of parochial schools under the control of the State on condition that at certain hours of the day Catholic teachers may appear as instructors for sectarian ends.

The Pope, by the way, has also made public his intention of making a special exhibit at the World's Fair, and has applied for space.

A Chicago woman, named Mrs. Elizabeth G. Kelly, has given \$50,000 for a "women's home" in connection with the University of Chicago.

The reciprocity treaty between Austria and the United States has been signed at Washington, so that Austrian sugar, molasses, and skins will enter the United States free of duty, and the United States gets "favoured nation treatment."

Gen. Eppa Hunton has been appointed to succeed the late Sen. Barbour, of Virginia, until the Legislature elects some one to fill out the unexpired time. Gen. Hunton served four terms in the Lower House, and was a member of the Tilden-Hayes Commission.

By the time this letter is printed, you will know the result of the Democratic National Convention. It is useless, therefore, to say anything about the probabilities, except that Cleveland is strongly in the lead. His New York friends, who are rabid anti-Hill men, held their State Convention at Syracuse on May 31st. It was largely made up of young men and representatives from the country districts; and it represented the respectable element of the New York Democracy. David B. Hill's political methods, especially his "snap" convention of Feb. 22nd, were vigorously denounced. A full contesting delegation was chosen to be sent to the Chicago Convention. Hill has only the Nevada delegation outside of his own State, and can not be nominated. Whether he can defeat Cleveland, you already know.

We have as yet had no spring worth mentioning. During the entire month of May there were not more than five or six absolutely fair days, and there were twenty-one rainy days, with four or five "half and half." We are now anticipating a jump into the midst of hot weather.

The June number of *The Magazine of American History* contains an interesting contribution by Rev. W. E. Griffis, D.D., on "Relations between the United States and Japan." It consists of the translation of an article by Mr. Tokutomi in the *Kokumin-no Tomo*; and presents "a stimulating conspectus of both American and Japanese history and their mutual relations." Dr. Griffis is also a "reviewer" for *The New World* quarterly journal of religion, ethics, and theology. The June number, the second issue, contains an article by N. Kishimoto on "How I Came Into Christianity."

Oil City, Titusville and other places in the oil regions of Pennsylvania were visited June 5 by an appalling disaster which caused the loss of perhaps 200 lives and several million dollars of property. A cloudburst produced a raging flood, which carried away a number of oil tanks. In some way the oil caught fire, and added the horrors of conflagration. The details, for which I cannot to-day find space, are terrible and appalling, and remind us all of the Johnstown calamity.

The topic of the day is, of course, the Republican Convention now in session at Minneapolis. You were probably apprised by cable of the tremendous sensation of June 4th, when Blaine sent in his resignation to the President. This was, of course, interpreted to mean that he had cut loose from the administration, in order that he might be free to enter the lists for the Presidential nomination against Harrison. The opponents of the President were naturally elated, and began to push the Blaine "boom"; the Harrison men were at first disheartened, but soon rallied; the Democrats were delighted over the prospects of a bitter contest which might eventually help them. The Independents were generally disgusted with Blaine for allowing himself, after having once written a letter of declination, to be allured into a rupture with President Harrison through the efforts of disappointed politicians like Platt, Quay and Clarkson. Many of Blaine's old and tried friends, like Depew, accepted his letter as final, and heartily supported Harrison as deserving of a renomination. The managers of the present Blaine campaign represent chiefly the disreputable, or "spoils" element of the party. It is a well-known fact, that Clarkson resigned his position under the administration because he was not allowed to turn out Democratic postmasters fast enough to suit him; and that Quay and Platt are mad at the President, because he did not give them a monopoly of the Pennsylvania and New York patronage.

The first contest between the Blaine and the Harrison forces was in the National Committee over the position of Temporary Chairman. It

might have gone almost unanimously to McKinley, but he declined. The Harrison men then suggested Senator Cullum of this State; the Blaine men put up J. Sloat Fassett, of New York. The latter won by a vote of 26 to 21.

There was a slight lull in the conflict during the evening of June 6th, when the Exposition Hall, in which the Convention is meeting, was dedicated. The orator was Channcey M. Depew, who delivered a great speech in praise of the record of the Republican party. His allusions to the two great rivals of the day, and to possible "dark horses," were greeted with applause.

It was about half past twelve o'clock of Tuesday, June 7, when Chairman Clarkson, of the National Committee, called the Tenth Republican National Convention to order, and asked Rev. William Bush, Chancellor of the University of Dakota, to offer prayer. Then he introduced Temporary Chairman Fassett, who was greeted with tremendous applause, and who delivered an able and impartial opening address. After his speech ex-speaker Reed was called out and made a brief effort. The persons selected by the National Committee as Secretaries, Assistant Secretaries, Reading Clerks and Official Stenographers, were then chosen to fill those places during the temporary organization. On a motion the roll-call of States and Territories was begun; and the chairman of each delegation announced its representative on each of the following committees: permanent organization, rules and order of business, credentials and resolutions. The convention then adjourned till 11 o'clock the next morning to give these committees an opportunity to meet.

The committee on permanent organization most easily completed its work. It unanimously elected McKinley as Permanent Chairman, and confirmed the minor temporary officers in their appointments also as permanent officers.

The committee on rules and order of business adopted the rules and orders which usually prevail in these conventions.

As the reports of the other two committees presented debatable matters, they will be considered in connection with the discussion thereof in convention.

Tuesday evening there was a great mass meeting of 10,000 people in Convention Hall under the auspices of the State League of Republican Clubs. The orators were Thurston, of Nebraska, and How, of Michigan.

Wednesday's session was also brief. After Bishop Whipple, of Minnesota, had offered prayer, and Temporary Chairman Fassett had accepted a new gavel from Nebraska, Hon. William McKinley, Jr., of Ohio, was introduced as Permanent Chairman, and made a brief but pointed address. The committee on rules and order of business made its report which was adopted; but the committees on resolutions and on credentials asked for more time and were granted their request. After the roll of States the names of the members of the new National Committee was given, a little routine business was transacted, and the Convention adjourned. The Blaine forces had proven strong enough in committee to carry out their plan of delay, which was their only hope.

The Convention re-assembled Thursday (this) morning at 11 o'clock; but, as the committee on credentials was not ready to report, it adjourned till 8 o'clock this evening, when the committee expects to be able to report. The evening session will surely be taken up with the question of credentials: it is just barely possible that a ballot may be taken to-morrow, but it is more probable, that the first vote will not be taken till Saturday. I am sorry to stop at this interesting point, a la serial story style, and write "to be continued in our next;" but I must mail this letter to-night to catch the steamer.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., June 7th.

Boston is again up in arms and much exercised in mind, so wrought up and disquieted that it has not probably slept well of nights for a week or more. The town is shocked almost as much (not quite) as when an unwashed foreigner bathed in the frog pond. It is a case of "depraved presumption" whatever that may be, and insolent, insufferable advertising. It is simply shocking! The case stands thus: Boston is now erecting a new public library building. On the façade of the structure are three granite tablets, on one of which is chiselled the names, Moses, Cicero, Kalidasa, Isocrates, Milton; on the second, Wren, Herick, Irving, Titian, Erasmus, and on the third, Mozart, Euclid, Eschylus, Dante. As a paper has ob-

served, this is "a most incongruous mixing up," but that is not what disturbs "all Boston." The reader may see that the initial letters of the names on the first tablet spell "McKim," those on the second, "White," and the third, "Mead." Well, McKim, White, & Mead is the firm of architects that made the plans of the building and have charge of its construction. As an advertising dodge this beats anything on record. The tablets have been in place some time, but not till last week did Boston bring her spectacles to bear upon them with sufficient accuracy to discover the astonishing fact now made public. The trustees of the library met immediately, and ordered the names and the advertising acoustic to be chiselled off the tablets, and Moses and the rest of them will be arranged without regard to Messrs. McKim, White and Mead. 'Twas a very trying time for cultured Boston. But everything pales in interest before the National Republican Convention, held to-day in Minneapolis, Minnesota. The whole country is looking toward Minneapolis and listening for any sound that may come. A convention of either party has never been held under like circumstances, or under circumstances so interesting to all.

In nearly every letter sent by your correspondent, has been some reference to James G. Blaine as a possible presidential candidate, and the circumstances warranted it, for no man, not even the President, has been more prominent one way or another than the Secretary of State. To recapitulate a little. Blaine was defeated in the election for President eight years ago. The circumstances of the election were such that Blaine had the sympathy of the people. Probably, if another election could have been held a month later, he would have been elected. But that was supposed to be the end of Blaine as a presidential candidate. Four years ago Blaine's name came up again. He was travelling in Scotland with Andrew Carnegie. His friends desired him to be a candidate, but he declined, and sent a letter refusing to have his name used at the convention. Again, it was supposed that James G. Blaine was retired for good, but President Harrison appointed Blaine as his Secretary of State. From that day to this Blaine's "boom" has been on the march, going quietly up and down (not so quietly all the time) the country, appearing here and there at opportunities, when and where there was the slightest possibility of adding to itself. And it added as subsequent events proved. A year or more ago, the question came up good and strong. "Will Blaine try his presidential fortunes again?" Blaine at last responded with a letter to the effect that his presidential aspirations had taken wings, and that he desired to spend the rest of his life in comparative quiet. Again was he laid on the shelf, for at first, the latter was accepted as final, and the fact also that he had dropped out of the race. But the letter appeared to fire the "boomers" for Blaine with new zeal, strange as it may seem, and up till to-day the name of Blaine has been as prominent as that of Harrison for the presidency. Within the last week the interest and excitement in these matters has been at fever heat. The delegates to the convention, and they were on the ground last week, are practically divided into two camps—the Blaine camp and the Harrison camp, and things waxed hot in no time. To crown all, on Saturday, June 4, Blaine resigned as Secretary of State, and his resignation was accepted by President Harrison—all done within an hour. When the delegates at Minneapolis, the Blaine "boomers," heard this, Minneapolis was not large enough to hold them, they overflowed into St. Paul. Although Blaine, within a week, has said, according to report, that he would not be candidate, yet his friends accepted his resignation to mean that he has prepared the way for nomination and will accept it, if he gets it. The Blaine men claim that their candidate will be nominated on the first ballot, and, of course, the Harrison supporters say the same of their candidate. The time is hot, weatherwise and otherwise. Your correspondent will not be able, probably, to send the result of the convention, as only seven days intervene between this time and the sailing of the steamer from San Francisco. California is "solid" for Blaine. Reason enough, he was the author of the first Chinese Restriction Bill. They love anybody out there who tramples on a Chinaman. Minneapolis, the place of holding the convention, has been favoured by a wonderful growth. Twenty years ago only a little village was clustered around the Falls of St. Anthony. Now there is a city there with 2,000,000 inhabitants. Six thousand buildings have been built in a single year, at a cost of ten to fifteen million dollars. The convention meets in the Minneapolis Industrial Exhibition building, in which 30,000 persons may find shelter. The auditory seats twelve thousand persons. Some of the largest hotels in the country are in Minneapolis, some capable of entertaining five hundred to twelve hundred guests.

On the heels of one disaster (I do not refer to the convention) follows another. A cyclone has carried away a Texas town and dropped it down in another place. The buildings were swept away and a number of persons killed. The treeless prairie is the play ground of cyclones and tornadoes, the "swooping terrors" of the plains. Another disaster reported this morning, draws the attention of the country to Oil City, Pennsylvania. The flooded streams brought damage enough, but nothing compared to what followed. About noon on the 6th of June, yesterday, the city was startled by two explosions. The leaking gasoline, escaping from a storing tank had been set on fire by a passing locomotive. The gasoline on fire, began to flow into the river, and the river became a river of fire. A mass of flame shot up into the air a hundred feet, communicating with everything in its course; soon a large part of the city was in ashes. The report comes that two hundred lives were lost—caught in the flood, the fiery flood. Titusville suffered also from the water, and then from the burning oil borne on its surface. It is a fearful disaster. Flood is bad enough, but a flood of oil on fire is infinitely worse. The damage to property, at this time, is beyond estimate.

The United States Senate has made an appropriation for the World's Fair on the condition that the Fair is not open on Sundays. That settles the Sunday question with respect to opening or closing the Fair on Sundays. That matter disposed of, the question of selling liquor will receive attention, and has been already introduced into Congress. There will be liquor enough (there is anytime) in Chicago, within easy reason of the men who are always thirsty, without selling it on the fair grounds. The anti-liquor force is on its mettle, and will probably carry the day.

There are "cranks" and "curiosities" still roaming at large. An Episcopal minister in New York proposes a startling plan for checking the saloons. He would kill the saloons with the saloon. Hear him talk: "Business men of the churches can open saloons and run them profitably. I do not mean to give away the beer, but to sell it at good prices, with a profit. I wish I had the money with which to demonstrate that this is the only successful way to deal with this problem. Would I sell whiskey in these saloons? No, I don't think I would, but I would sell beer and light wines, coffee, and chocolate. What is more I would have them open on Sundays during the proper hours." This is delightful. Think of the business men of a church, such as Deacon A. and Deacon B., and Deacon C. opening saloons for the sale of beer and light wines and "running" them on Sundays. If there be no missionaries at home who can attend to this man, let some in foreign lands come home and pitch their tents in this man's front yard.

Our flag has been treated with indignity in Montreal by members of the Canadian militia. They were reprimanded by the proper officers and an apology was made to the United States. 'Twas done none too quickly. After shaking Italy and Chili out of their boots, diplomatically speaking, little monarchies and bigger colonies may well think twice before they trample upon us. As a matter of fact, however, Americans are not disposed to boast much over the Italian episode or the Chilean embroglio.

PATENT RIGHTS IN JAPAN.

The following translations from official records possess great interest for foreigners seeking patent rights within the Empire of Japan:—On the 20th May, 1891, Masujima Rokuichiro, acting as attorney for Ludwig Mond, of Wilmington Hall, Norwich, England, applied for patent rights for an invention for preparing nickel. Mr. Mutsu, then Minister of State for Agriculture and Commerce, refused the application. A suit was accordingly entered against the Minister for his refusal of the patent, but the case was dismissed on the ground of the plaintiff possessing no legal right to bring the suit. Plaintiff appealed and was again non-suited, the Court finding that the appeal was unreasonable. The case then went to the Supreme Court but with the same result. Messrs. Siemens and Halske subsequently applied for similar privileges, through their attorney Mr. Masujima Rokuichiro, for their machine for obtaining electric analysis of copper, spelter, and zinc, and the extraction of other metals by the same process, but Mr. Kono Togama, Minister of State for Agriculture and Commerce, refused the application.

APPLICATION FOR PATENT.—A new invention for preparing nickel, manufacturing articles, and plating other metals with it. The above was invented by myself, the process of which is shown in the appended document. As I firmly believe it does

not violate the Patent Regulations, I beg to apply for a grant of letters patent for 15 years.

(Signed) MASUJIMA ROKUICHIRO,
21, Hiyoshicho, Kyobashi-ku, Tokyo. Representative of Ludwig Mond, Wilmington Hall, Norwich, England.

(Dated) 20th May, 1891.

To His Excellency Mr. Mutsu Munemitsu,
Minister of State for Agriculture and Commerce.

STATEMENT ACCOMPANYING THE APPLICATION.

In presenting an application for a patent of a new invention for preparing nickel, manufacturing articles and plating other metals with it, I represent Ludwig Mond, a British subject, as shown in a copy of his power of attorney presented herewith with its translation. If the patent for the same be granted, the said Ludwig Mond will obey all the rules and regulations relating to Patents promulgated by the Government of Japan, as if he were a subject of Japan; and in the exercise of the rights of the patent he, the said Ludwig Mond, will abandon all the special rights enjoyed by foreign subjects in the Empire; and his pledge, of whatever kind, may be made by me, in accordance with your order. Whatever I do as his representative, he will ratify afterwards without fail.

(Signed) MASUJIMA ROKUICHIRO,
Representative of Ludwig Mond.

(Dated) 20th May, 1891.

To His Excellency Mr. Mutsu Munemitsu,
Minister of State for Agriculture and Commerce.

THE MINISTER'S REPLY.

The application cannot be granted.

(Signed) MUTSU MUNEMITSU,

Minister of State for Agriculture and Commerce

(Dated) 28th May, 1891.

A suit was then instituted against Mr. Mutsu Munemitsu, Minister of State for Agriculture and Commerce, for his Refusal of Patent rights to the Applicant.

The defendant requested the Appeal Court to approve the decision of the Local Court and dismiss the suit.

The Court of Appeal delivered the following judgment in the presence of Iwano Shimpei, Public Prosecutor:—The appeal of the plaintiff is considered unreasonable, therefore it is dismissed in accordance with the Art. 424 of Civil Procedure.

The principal points stated by the plaintiff were as follow:—1. The plaintiff invented a process for preparing nickel, etc., and has already obtained a patent for it in every country in Europe and America, in accordance with law. 2. The plaintiff applied to the defendant for a patent for 15 years, on the 20th May, 1891, in accordance with the laws of Japan. 3. The defendant, on the 28th May, 1891, notified that the application was not granted. 4. Since the Patent Regulations of Japan do not prohibit any one from enjoying the protection of patent rights for new inventions, it was illegal on the part of the defendant to refuse to grant such an application as that filed by the plaintiff. For the foregoing reasons the plaintiff requests the Court to make the defendant grant the application, the costs of the Court to be defrayed by the defendant.

The defendant, in his reply, requested the Court to dismiss the case for the following reasons:—1. As it is within the right of the Minister of State for Agriculture and Commerce to grant or refuse an application for a patent, the plaintiff has no title to bring a legal suit on such account. 2. In accordance with Arts. II. and XXVI. of the Organization of the Law Courts, a Local Court has a right to adjudicate civil cases, but any matters relating to the Administration do not come within its control.

The Tokyo Local Court delivered the following judgment in the suit in the presence of Odachi Koretaka, Public Prosecutor:—The suit of the plaintiff is rejected for the following reasons:—If by any illegal act of an administrative official the right of an individual be violated, the injured may, according to the circumstances, bring a legal suit against such administrative official, but one whose rights are not injured cannot bring any action. In the present case, the defendant's action in refusing to grant an application for a patent was not illegal, as it was within his right to grant or refuse such an application. Further, the plaintiff can acquire a right to appear in this Court only after the application is granted. Therefore, it is not competent for the plaintiff to bring a suit against the defendant for the purpose of compelling him to grant such an application. As it is the common usage not to allow the costs in a dispute between English and Japanese, the Court will not make any decision on that point.

From the above it appears that on the 4th June, 1891, Ludwig Mond, the plaintiff, brought an action against the defendant in the Local Court upon the latter's refusing to grant an application for a patent through the British Consul, in which the plaintiff requested the Court to make the Minister of State for Agriculture and Commerce grant the application, the costs to be defrayed by the defendant. The Chief Judge in that case was Judge Ichiji Misusada. On the 10th July, 1891, the Local Court delivered judgment, dismissing the case on the ground that the plaintiff possessed no right to bring a legal suit there. The reason assigned by the Court was that it is within the right of the Minister of State for Agriculture and Commerce to grant or refuse such application; and before such an application is granted the plaintiff acquires no right to bring any legal suit.

FIRST APPEAL.

The plaintiff was not satisfied with the decision of the Local Court and appealed against it to the Appeal Court on the following grounds:—(a) In the present case the Minister of State for Agriculture and Commerce ought to act in accordance with the provisions of the Patents Regulations. (b) As the plaintiff is entitled to apply for a patent, in the same way as Japanese subjects, he has a right to bring a legal action in any judicial court. (c) In the absence of express prohibition by the laws of the country, any subject of a Treaty Power has a right to enjoy the same privileges as are granted to all Japanese. (d) The plea of the defendant does not come under the 1st and 2nd clauses of Art. 206 of the Code of Civil Procedure. For these reasons the plaintiff requested the Court of Appeal to make the defendant grant his application, and to reverse the decision of the Local Court.

The principal points stated by counsel for plaintiff in the appeal case were, that the plaintiff invented a method of preparing nickel, etc., and had already obtained letters patent in all the countries in Europe and America. On the 20th May 1891, the plaintiff applied for a patent for 15 years to the defendant in accordance with the laws of Japan; but on the 28th May, 1891, the defendant notified that the application could not be granted. But according to the Patent Regulations no one is prohibited from enjoying patent rights. It was therefore a violation of the laws of the country to refuse to grant such an application. The principal points of plaintiff's dissatisfaction with the lower Court's decision were:—(a) In the present case the defendant ought to act in accordance with the provisions of the Patent Regulations. (b) As the plaintiff has a right to apply for the grant of a patent, the plaintiff has also a right to institute an action in any judicial court. (c) If there is no express prohibition, any subject of a Treaty Power ought to enjoy the same privileges that are granted to Japanese subjects. (d) The defence does not come under the provisions of the 1st and 2nd clauses of Art. 206 of the Code of Civil Procedure. For, in accordance with the Law of the Constitution of the Courts in Japan, it is expressly provided that except in cases coming under the jurisdiction of the Administrative Court, an action against an administrative official ought to be entertained by a Judicial Court; there is nothing to the contrary in any of the laws of the country.

The defendant's Counsel argued that, as the Minister of State for Agriculture and Commerce might, within his administrative right, refuse or grant such application, the plaintiff had no title to institute a legal action on the ground of the Minister's refusal. The Local Court, besides, had no power to receive such an application, as is expressly stated in Arts. 2 and 26 of the Organization of the Law Courts. In fact, the point at issue was whether matters relating to administrative functions could come under the jurisdiction of a judicial court or not.

The Appeal Court in its judgment said:—To grant or refuse an application for patent is within the competence the Minister of State for Agriculture and Commerce; therefore, it goes without saying, that it is within his power as an administrative official. Though Art. 61 of the Constitution provides that "no suit at law, which relates to rights alleged to have been infringed by the illegal measures of administrative authorities, and which shall come within the competency of the Court of Administrative litigation specially established by law, shall be taken cognizance of by a Court of Law," it does not mean that every suit, not specially provided for by law, comes under the jurisdiction of judicial courts. For in the 2nd clause of Art. 57 of the same Constitution, it is expressly provided that the Organization of Law Courts shall be determined by law; and Art. 2 of the Organization of Law Courts provides that in an ordinary court, civil and criminal cases may be decided. The term "civil" referred to in the above signifies matters concern-

ing the rights of individuals only, and it certainly does not include any matter relating to the discharge of administrative functions by the Minister of State for Agriculture and Commerce, within his own administrative competence. Therefore, in a case like the present, whether plaintiff be a Japanese or a foreign subject, he cannot bring an action in the judicial court. Thus, by the 1st clause of Art. 206 of the Code of Civil Procedure, it is decided that the plaintiff had no right to bring the action.

SECOND APPEAL.

The case then went before the Supreme Court, the Chief Judge for the suit being Mr. Imamura Nobuyuki.

The appellant pleaded: (a) that by the Patents Regulations the appellant possesses the right to receive a patent for his invention. But the Judgment of the Appeal Court was delivered without any explanation on this point. (b) The appellant again pleaded that, in accordance with the laws of the country, any foreign subject of a Treaty Power may enjoy the same privileges as Japanese subjects, except those which are expressly denied to foreigners by law. (c) As the Judgment of the Appeal Court did not touch on these points, the said Judgment could not, in the opinion of the appellant, be regarded as a complete decision in the premises.

For all these reasons the appellant now begged to appeal to the Supreme Court, and prayed the latter to annul the former Judgment, to appoint a Court where a correct Judgment might be obtained, and to grant all the necessary remedies in the premises.

The Judgment of the Supreme Court ran as follows:—The case is dismissed for the following reasons: The first point pleaded by the appellant is that though the Appeal Court held that in accordance with the Patents Regulations any persons might enjoy the privilege granted by them, yet it decided that civil cases, tried in any ordinary judicial court, can relate only to remedies for injury to private rights. The provisions in the Patent Regulations point out the method of obtaining patents for any new invention, and therefore it is plain that they do not relate to a public right. It is within the boundary of private rights to apply for patents according to the provisions of the Patents Regulations; and the Minister of State for Agriculture and Commerce is commissioned to grant patents to any one within the limit of the provisions of the Regulations; and he is not permitted to deprive or deny that right according to his individual consideration. Whatever may be the result of the application, any one applying for the rights has to obey the provisions and observe the processes of applying determined by the Patent Regulations. Therefore, the appellant argues, the declaration of the Court of Appeal to the effect that the present suit ought not to be brought in any ordinary Court of justice, amounted to a disregard of the pleading of the appellant and to a misinterpretation of the nature of the rights conferred by the Patents Regulations. Now it is true that according to the Patents Regulations, patent rights may be granted to any person who either invents any new and useful article, or improves such, and he thus is enabled to protect his rights. But the same Regulations provide that the right of granting or refusing the patent is vested in the hands of the Minister of State for Agriculture and Commerce; therefore it is plain that such a matter does not come under the jurisdiction of an ordinary Court of Justice after the manner of civil cases, as provided in Art. 2 of the Organization of Law Courts. The Judgment of the Appeal Court declared that civil cases, tried in any Court of Justice, are to obtain remedies for injury of the private rights of individuals only; therefore neither a Japanese nor a foreigner can bring such a case as that under consideration in any of the Courts of Justice. Such was the Judgment, and since the principal point in the pleadings was rejected by it, there was no disregard of the pleadings, and therefore it cannot be counted an illegal decision. On this point the appellant cannot appeal. The second reason assigned by the appellant is that the appellant considers that the laws of the country confer the rights enjoyed by all Japanese subjects upon any subject of a Treaty Power; except rights which are specially denied to the latter. Therefore, the appellant, being a British subject, ought not to be denied his right. The respondent, however, prevented the exercise of that right by the appellant. The Appeal Court in its Judgment says that such a private right does not belong to the appellant. As regards this point, the Supreme Court rejects the reasoning of the appellant, as his definition cannot be established. The third and fourth reasons pleaded by the appellant cannot be decided until the dispute is settled as to whether the appellant has a right to apply for a patent for his invention in accordance with the provisions of the Patents Regulations or not. The appellant

pleads that the decision of the Appeal Court was imperfect, and that the act of the defendant was not in accordance with the provisions of the Patents Regulations. Such an argument cannot be established, for the reasons stated in the answer to the first and the second contentions of appellant. The fifth reason pleaded by the appellant is, that if the point that any one has a right to apply for a patent, and to obtain the proper protection in accordance with the Patent Regulations, be indisputable, the appellant also has the same right. The question relating to the injury done to the appellant by the defendant by refusing to grant a patent for the former's invention, therefore, becomes a proper question in the present suit. According to the judgment delivered in the Supreme Court in the 24th year of Meiji, the right of the appellant belongs to the category of private rights of individuals, and comes under the jurisdiction of an ordinary Court of Justice. The right of granting or refusing a patent, however, belongs to the Minister of State for Agriculture and Commerce, and, as explained in the 1st clause, does not fall within the purview of Civil Procedure. The 1st clause of Art. 206 of the Code of Civil Procedure is applicable to a case like the present one, which does not come under the control of any Court of Justice. Thus there is no defect in the decision of the Court of Appeal; and the present appeal is therefore dismissed.

SEIMENS AND HALSKE.

PATENT APPLICATION.—A process for the electrical extraction of copper, spelter, and zinc from mineral ores, and the extraction of other metals by the same process, by means of improved machinery. As the above machine is invented by the applicants, and I believe it does not violate the Patents Regulations, I request the Government to grant a patent for the same for 15 years.

(Signed) MASUJIMA ROKUICHIRO,

Representative for Seimens and Halske, inventors.

(Dated) June 7th, 1892.

To His Excellency Mr. Kono Togama,
Minister of State for Agriculture
and Commerce.

In presenting an application for a patent for an invention for extracting copper, spelter, and zinc and valuable metals from mineral ores by the process of electrical analysis, and for improved machinery for the same purpose, I represent Seimens and Halske, Germany, as shown in a copy of their power of attorney, presented herewith, with its translation. If the patent for the same be granted, the said Seimens and Halske will obey all the rules and regulations relating to patents, promulgated by the Japanese Government, as if they were subjects of Japan; and in the exercise of the rights of patent they, the said Seimens and Halske, will abandon all the special rights enjoyed by foreign subjects in the Empire; and any pledge, of whatever kind, will be made by them in accordance with your Excellency's order. Whatever I undertake, as their representative, they will ratify afterwards without fail.

(Signed) MASUJIMA ROKUICHIRO,

Representative of Seimens and Halske.

(Dated) 7th July, 1892.

To His Excellency Mr. Kono Togama,
Minister of State for Agriculture
and Commerce.

THE GOVERNMENT'S REPLY.

As the Patents Regulations of the Empire of Japan are not applicable to foreign subjects, the application cannot be granted.

(Signed) KONO TOGAMA,

Minister of State for Agriculture
and Commerce.

(Dated) 18th July, 1892.

IN THE YOKOHAMA CHIHO SAIBANSHO.

Before Judge Ono and Assistant Judges.

MOURILYAN, HEIMANN AND CO. V. THE GOVERNOR OF KANAGAWA KEN.

THE KEROSENE OIL CASE.

(CONTINUED.)

The hearing of the above case was resumed on the 14th April, in the Yokohama Chihō Saiban-sho, Mr. Mitsubishi, for defendant, and Mr. Okamura, for plaintiffs, were the Counsel engaged. The examination of Mr. Middleton was continued.

Counsel for Plaintiffs.—When was witness absent from Yokohama?

Witness—Last year.
Counsel for Plaintiffs—Who signs the kerosene delivering orders for your firm?
Witness—Edwards.
Counsel for Plaintiffs—No other person than Edwards?

Witness—White, an Englishman, sometimes signs them.

Counsel for Plaintiffs—Can any European sign them if he is an employé in the office, or can any outsider sign if he is an European?

Witness—Except those employed in the office no one is, as a matter of course, allowed to sign any document, and those employed are allowed only when commissioned to do so.

Counsel for Plaintiffs—What sort of agreement do you make if any outsider is given the power to sign?

Witness—There is no settled form. We make a verbal contract when such a service is required.

Counsel for Defendant—Are those Chinese, Ki-ching, Akew, Alai, and others in Yokohama now?

Witness—As I only returned to Yokohama yesterday, I do not know. But I don't think they are in our employ now.

Counsel for Defendant—Don't you ever allow Chinamen to draw out any contract between you and the Japanese?

Witness—We never allow them to sign any document, whether the agreement is concluded with Europeans or Japanese.

Counsel for Defendant—I believe you have said that you generally make verbal contracts with European outsiders when you give them authority to sign for the firm. But by what method do you commission your employes? And how do you notify it to the public?

Witness—A circular is distributed, and sometimes we advertise the fact in the newspapers.

Counsel for Defendant—When you say newspapers, do you mean the vernacular press as well as European publications? And when you distribute the circulars, do you send it to your customers as well as to the Kencho and the warehouse?

Witness—It is not always advertised in the papers, so I cannot answer your question directly. I believe the circular is not sent to the Kencho or the warehouse.

Counsel for Defendant—When did you discover the loss of the kerosene oil for which the present suit is brought?

Witness—I think it was in January, when I was in England.

Counsel for Defendant—I want to know by what process kerosene cases are imported and deposited?

Witness—I don't know the process, as the business is always managed by our clerks.

Counsel for Defendant—Do you preserve the receipts given by the warehouse officials for the deposited kerosene cases?

Witness—They are kept by our principal manager who is authorized to keep them?

Counsel for Defendant—Is that manager authorized to keep them?

Witness—Yes. He is the same person who has been authorized to sign the kerosene delivery orders.

Counsel for Defendant—This (producing a delivery order) is one of the delivery orders your firm presented. Do you think it is genuine?

Witness—I certainly think it is genuine, but it can easily be identified if the original writer were to see it.

Counsel for Defendant—What do you think of the stamp on it?

Witness—It matters not, so long as the signature is genuine. It is a genuine order.

Counsel for Defendant—Do you use any particular stamp in your firm?

Witness—That I don't know.

The Judge—Why do you not know?

Witness—The stamp of the firm changes sometimes.

The Judge—Even if it is changed, do you always use it?

Witness—Yes.

Counsel for Defendant—How is that stamp kept?

Witness—There is no person appointed to specially take care of it. It is always kept in the office.

Counsel for Plaintiffs—Our word for stamp is so vague, what better term can we use?

The Judge—Then use the English word "stamp."

Counsel for Plaintiffs—Was the witness in Yokohama during September 1888 to February 1891?

Witness—I went back to my country about three years ago.

Counsel for Plaintiffs—Who was the chief manager in your office while you were in Yokohama?

Witness—Mr. Gnom, my senior partner.

Counsel for Plaintiffs—Have you ever signed kerosene delivery orders?

Witness—Never.

Counsel for Plaintiffs—I have completed my examination of this witness, but I must request the Court to summon Edwards, Michel, and another person as witnesses.

The Judge—What do you wish to question them about?

Counsel for Plaintiffs—I wish them to appear as witnesses, in order to ascertain the usage of commercial houses in Yokohama, and they are, I think, absolutely necessary.

The Judge—Are your proposed questions similar to those you have asked to-day?

Counsel for Plaintiffs—Yes. It is necessary to get as many witnesses as possible for the purpose of ascertaining the commercial usages of the port. I suppose the Kencho will call a large number of witnesses also.

The Judge—Whom does the defendant intend to call as his witnesses?

Counsel for Defendant—I intend to call Kuwabara, Abe, Masuda, Muchizuki, and Wada—all Japanese.

The Judge—I think Edwards is necessary to the case, so he may be called some other day, but the other witnesses, mentioned by both counsel, do not seem necessary, so you will not be allowed to call them.

Counsel for Plaintiffs—I wish to ask the Court to determine a further request. Those delivery orders issued by the plaintiff are most important evidence in the present suit, as well as the applications for deposit presented by us. They are all in the hands of the defendant. I request the Court to order the defendant to produce them. My application was refused by the Court at the last sitting, on the ground that the request was made according to the provisions of Art. 333 of the Code of Civil Procedure. But, in accordance with Art. 339 of the Code, it is expressly provided that, if the Court so determines, any important fact may be proved by producing a certain document, and if such document is acknowledged by any party to an action to be in his possession, and if the application is made in proper form, the Court may order the possessor of the document to produce the same. In the present suit the defendant acknowledges that he has possession of necessary documents, and therefore, by the provision of the Art. 339, the plaintiffs now request the Court to order the production of those documents.

Counsel for Defendant—No complete set of such documents is preserved in the Kencho. Besides, since the plaintiffs have all the necessary books, there is no need of the defendant producing those documents, therefore I refuse to comply with the request.

Counsel for Plaintiffs—The defendant has no right to refuse, since those documents are in his possession. I therefore request the Court once more to order him to produce them.

The Judge (to the plaintiff)—The defendant has stated that the documents are incomplete. Do you mean to ask him to collect them?

Counsel for Plaintiffs—Oh, no; the ones still in existence suffice.

The Judge—Do you request the production of them by the defendant in accordance with Art. 336 of the Code, where the obligations of parties to a suit are expressly provided?

Counsel for Plaintiffs—Even if the defendant has no obligation, if the Court considers the production of the documents necessary, I think, the defendant must produce them.

The Judge—Counsel for Plaintiffs asks the Court to order the defendant to produce certain documents, according to the provisions of Art. 339, but the same provisions ought not to be taken separately, as they refer to the foregoing Article, No. 336. That is to say, the term document used in Art. 339 means only a document considered necessary to be produced by the defendant. Since the documents in this case are deemed unnecessary by the Court, the request of the plaintiffs cannot be granted.

Counsel for Plaintiffs—One of the clauses in Art. 336 expressly provides that if one of the parties demand the production of certain documents of the other, that other party is under an obligation to produce them. Now the documents I wish produced are most important to the present suit, so I think I have a right to demand them.

The Judge—The documents mentioned in Art. 336 are those which the defendant has an obligation to produce. In the present case, however, the documents in question have already become waste and void, by the completing of the required transactions. Therefore it is not necessary to produce them. For instance, a document was handed from A to B for receiving a certain quantity of rice on deposit. When A delivers the rice back to B the document becomes a waste sheet of paper. There is no provision in the Code which compels A to reproduce such a document. Therefore your request cannot be granted.

Counsel for Plaintiff—I will abandon my request.

The Judge—Then the Court will adjourn. The Court rose at 6.20 p.m.

THE MURDER OF ROBERT BEATTY.

INQUEST.

The inquest into the circumstances surrounding the death of Robert Beatty, of No. 124, Settlement, which occurred on Thursday afternoon in his room, and who was found with four several revolver shot wounds in his body, was resumed at 9 o'clock on Friday morning at the British Court before James Troup, Esq., Coroner, and Mr. H. W. Lea, Mr. A. Rogers, and Mr. R. F. Crawford, jurors.

Okabe Tokichi, cautioned, deposed—I am an oil seller, living at No. 124, Settlement. I saw the shooting yesterday. About half-past one o'clock I was standing before the house where the man was shot; my house is opposite to it, and I could see through the windows and doorway. I was 20 feet off at the time and could see right into the room. I saw deceased hold up his right arm, and the little man, now in custody, shot him there. The deceased had held up his arm to cover his face. After the first shot was fired deceased fell to the ground and then four more shots were fired at him. I only saw the shots fired, what took place before I do not know. I have seen the man who fired the shots before, but I do not know his name, or where he lived, or what he did for a living. I merely know his face.

To Mr. Lea—I saw the man who fired the shots coming along the road by No. 124. I heard a wordy quarrel and then the shots were fired. I saw the short man leave the house and go elsewhere.

To the Coroner—I afterwards heard five more shots fired.

Mr. Lea inquired whether witness would be able to identify the man if brought before him.

The Coroner said that witness had stated that he knew the man's face.

Mr. Lea—Yes, but perhaps he might say afterwards that he does not know the man.

Okoshi Kenjiro, an employé of the cook at No. 238, cautioned, said—I was at No. 124, on business yesterday, about half-past two o'clock. I saw a foreigner with a revolver in his hand walking in front of the compound. I next noticed a man-of-war's man take hold of this foreigner about the body, but the man shook himself free and fired a shot, which I think struck the man-of-war's man on the shoulder. Some policemen came running up, one of them stumbled and fell, and the man with the revolver fired at him, wounding him in the leg. Another policeman tried to seize hold of the foreigner and both fell to the ground. The foreigner continued firing his revolver,—five shots in all. While the man was on the ground I took the revolver from him and handed it over to the police on the spot. There were other policemen there beside the ones I have mentioned. There were no special marks on the revolver. I don't remember having seen the man before, but I think I could recognize him if I saw him a second time.

To Mr. Lea—I did not hear any firing before I saw the man walking outside No. 124. The man was finally arrested by the police. I saw him arrested and went to the police station with the man and the constables. The man was taken to the station in a *jirikisha*.

To the Coroner—I did not see any clock at the police station, but I believe it was past three o'clock when I got there. I am sure it was about half-past two o'clock when I heard the shots fired. I left the house of my employer at two o'clock, and walked along leisurely. When I was taking the revolver from the man it went off.

Sawa Kenichiro, cautioned, deposed—I was on duty near a restaurant at the Maita bashi when I received information of a disturbance at No. 124. This was about half-past one or twenty minutes to two. I ran along, having first beckoned to another policeman to follow me. When I got to the corner of a plot where some timber was lying I was met by a policeman named Hachio. I looked down the street and saw a foreigner aiming at some one and firing. When we got closer the man aimed at us, but a Japanese behind him called out and warned us. I was informed that the man had killed another with his pistol and had reloaded it. As there were only two of us and as we did not think we could manage the foreigner ourselves we sent a *kurumaya* off to the police station to ask for assistance. The man with the revolver ran from No. 106 to No. 81. There are three grog shops there, and the man entered the middle one of them. He was only in the place a few minutes, and upon coming out entered No. 136. While we were following the man he prevented us from getting close by aiming his revolver at us. He stayed in No. 136 only for a minute or so, when he came out, he threatened us again. Then he went back again to No. 124 and we followed him. Some other policemen had by this time arrived. The foreigner went into No. 124,

but what happened inside I do not know, as he was only in it a few minutes. He next walked through the compound and entered the gate keeper's house. No. 124 is a collection of small houses. When the foreigner came out he saw me standing in the roadway and immediately pointed the revolver at me. I fell back, and the foreigner went on to No. 106 again. Here an English man-of-war's man clasped the man round the arms from behind, and the man fired at him. A policeman then ran up and seized the man, and another shot was fired. I saw blood coming out of the mouth of the policeman and he fell to the ground. We all tried to arrest the man, and several shots were fired; I saw the man pointing his revolver at another policeman who had fallen to the ground and this man was also wounded. We finally secured the man and took him to the Settlement Police Station. I do not know the man at all. The man threatened every one who came near him.

Mr. Lea—Was the man sober?

The Coroner—You must understand, gentlemen, that no person is on trial, therefore it does not matter whether he was drunk or sober. You are here to inquire into the question as to how the man died, or came by his death. No doubt at the close of the enquiry I shall take occasion to point out to you whether you will have to state and make a presentment whether the man was drunk or sober, sane or insane, but that is a question which you have not to inquire now and does not really concern you at present.

Witness—The man was perfectly calm and collected.

Marcellien Horace Gomez, sworn, said—I am a clerk in the New Oriental Bank. I knew Robert Beatty by sight, having seen him many times. He has been living at No. 124 for some time. I live at No. 114. I did not see the man named Jacob, the little man, shoot Beatty, but I saw him shoot the man-of-war's man and the policeman. It was a little after half-past one when I noticed a crowd opposite 124, round the gate of the alley. While I was looking they scattered, and I saw the man Jacob come out. He had a revolver in his hand, and I noticed that his coat was spattered with blood. I asked Jacob what was the matter, as I knew him, and he replied, "Don't trouble me," and shook his revolver in front of me. I left him, but followed. The first house he went to, after leaving the compound, was a house on No. 106 occupied by Ned Valentine. He went inside in search of Ned Valentine; I saw him go as far as the kitchen. I did not hear him say anything while in the house. When he came out, he went up Hommura-road and entered several of the saloons. He stayed but a few seconds in either. I followed him as far as No. 81, and after entering two or three saloons there, he came back the same way. I saw him enter No. 124 again, but what he did inside I could see or hear. He came out again. There were two foreigners standing outside the gate of the compound. He spoke to them. They were the captain of the schooner *Saipan*, John McGinnis, and a man called "French Joe." I am not aware of his right name. I went up to them and I heard him say that he had killed one man and was looking for another. This other man was Ned Valentine. He said: "I am looking for this nigger Ned." I understood that Valentine was the man he meant. He did not say whom he had killed, but I knew to whom he referred. I entered Beatty's house and saw him lying dead. When Jacobs had told us that he was looking for the nigger Ned, he added: "I will kill him and then shoot myself or give myself up." I saw him walking along the street with a crowd of policemen behind him. When anyone attempted to get close to him, he pointed his revolver at them and said "Go away." At last I saw an English man-of-war's man take off his straw hat and shoes and make a rush upon Jacob from behind. He struck Jacob a blow on the head which staggered him, but Jacob recovered and turning round fired at the man-of-war's man. Then I saw the crowd rush up, and what followed was blocked out of sight, but I heard several shots fired. After this I went up close and saw Jacob laying senseless on the ground, blood flowing from his head; the policemen put him into a *fintrisha* and took him away. That was the last I saw of him. I used to call him Fred. He was known by that name. I have never heard anyone call him Jacob before to day. Jacob was lately a runner for the Oriental Hotel—Haefker's hotel.

To Mr. Lea—I knew the man by the name of Fred only. I did not know his surname. I did not see the policeman shot.

To Mr. Rogers—I went to No. 124 after Jacob had been taken away by the police.

To the Coroner—That would be close on to half-past two, or a quarter past to half past two.

The Coroner—What did you see at No. 124?

Witness—There was a crowd round Beatty's

house. I saw Beatty's body lying in a pool of blood in his house, near the door-step.

To Mr. Lea—I do not know what became of McGinnis and "French Joe." I saw no more of them after "Fred" had spoken to them.

To the Coroner—Jacob is a small man, light and thin; light hair. I did not see the man-of-war's man seize Jacob.

John Otis, formerly of the Royal Oak Restaurant, now living at No. 114, Creekside, sworn, said—I saw Robert Beatty shot yesterday. I was next door to Robert Beatty's house, at my friend's house. I was sitting on a chair in the verandah, drinking ice water and sugar. I saw Jacob Carstens come along—they call him Fred—and he asked me: "Otis, where is Barronel?" I said, "Poor fellow, it is no use bothering him, he has been working all night." Meantime he was looking at Beatty's house. Barronel is the watchman at the Club Hotel. I went indoors but noticed, through the planking of the closed door, that Fred was walking up and down the compound. Then I heard him say: "I will go and finish him, I have lost my employment through him." He still walked up and down, like one crazy. In his left hand he carried a bundle while in his right he grasped a revolver, with his finger on the trigger. He next went into his own room, but came back quickly, and next I saw him enter Beatty's room. "Fred" has a room at No. 124. While he was in it this time a woman tried to take the revolver from him, but he struck her in the stomach and she ran away. I was still looking through the planking of the door, and noticed him coming across my friend's house. I hid, and his mother-in-law called out: "Otis is gone," and Carstens said to the Japanese women standing about "Go away." Finding Beatty's door open, Carstens, walked straight into the room, and I heard a shot fired. I came out of the house and went into the alley way, getting into a Chinese man's house. There I could see everything. Beatty tried to run away, but Carstens fired at him again and again. Beatty fell to the floor dead. There were five shots fired. I called out to a woman "Beatty's shot," she asked me who had shot him and I said, "Fred has." The remark Carstens made after he had shot Beatty was, "I have finished one, and now I will go and finish two more, Nigger Ned and Brown." Brown is the policeman. I went home and informed my wife of the occurrence. I did not follow Carstens into the street.

To Mr. Lea—I saw the first shot fired through the crack in then door, and then I opened the door. Beatty was lying in bed at this time, and I heard him coughing, as he struggled up.

To Mr. Rogers—The first shot struck the wall, and I saw the mark on the wall afterwards. I did not see the plaster break away.

To the Coroner—The second shot struck Beatty down. I could see this better, as I was then in the alley-way. Beatty was trying to run out of the room, and the shot was fired just as he rose up. I can't say what part of his body was struck.

To Mr. Crawford—I don't think I could recognize the revolver, but it is a brand new one. This I know because he had shook it in my face.

To the Coroner—I think it is a 37 bull-dog. I picked up a cap and a cartridge which were on the floor.

To Mr. Lea—Jacob Carstens was in the room during the whole time that he was firing the five shots. Barronel lives on the same compound with Beatty.

To the Coroner—Barronel's room is between Carstens' and Beatty's. Before Carstens went to the Japanese Court he told me that if he lost his case he would go and shoot Beatty. This was about the 7th of June.

Otsuki Seigosuki, Superintendent of police at the Settlement Police Station, deposed—I was present at the affray near No. 124 yesterday. I know the man who was shooting. His name, I was told afterwards, is Carstens. I received the revolver from Okashi Kenjiro, who himself had taken the revolver from Carstens. I received the revolver in the street. The one produced is the weapon I received.

The Coroner (to the Jury)—There is further evidence to be obtained if you wish it, that is if you have not made up your minds upon any point. The evidence of the man McGinnis is to be obtained if you so desire.

Mr. Lea—I think you might sum up now, sir.

The Coroner, in summing up, said that the jury had but three things to consider, and they were the time, place, and method by which Robert Beatty came by his death. The body had been identified by Dr. Wheeler and others. The evidence of Doctor Wheeler pointed out that the shot which entered the head under the lobe of the left ear, at the angle of the lower jaw, and penetrated through the neck was, in his opinion, sufficient to cause death. The evidence of the oil-seller in regard to the firing of the shots was very clear.

That witness stated that he could see right into the room through the window. Now we must compare this with Otis' statement. Otis did not see the first shot very distinctly, and he said that he could not tell precisely where it struck, but the oil seller said that the first shot struck the deceased on the arm. The Japanese witness, I think, therefore, makes that point more clear. In regard to the number of shots fired, both agree that there were four other shots after the first was discharged—five in all. The witnesses Otis and Gomez testified that they both knew the man who fired the revolver by the name of "Fred," while the former said that "Fred" was the name which Jacob Carstens went by among them, but that he knew him by his proper name, while the last witness has ascertained that this man was named Jacob Carstens. The first witness to-day described the man with the revolver as being a short, light man. The evidence of Otis goes to prove that there had been ill feeling between the men for some time, and that Carstens had expressed the intention of shooting Beatty; the evidence therefore, is more than circumstantial, it is direct. We have the conversation which took place between Carstens and McGinnis at the compound gate, and you have heard the police tell how the man was followed, after having left 124 until he was finally carried away under arrest. The revolver has been brought before you, and has just been identified as the weapon which was used. I think it would be quite unnecessary for me to go into fuller particulars as the evidence must be quite fresh in your minds. There is another point which I would draw your attention to, and that is, that you will have to say in your finding the nature of the crime which has been committed. There is, as you know, a distinction drawn between murder and manslaughter. Murder is stated where evidence of malice aforethought, a deliberate intention of hurting another even to slaying him, is clearly shown. Where this intention is absent, and although the slaying takes place, but it is clearly shown that it was unintentional, then the crime is accounted the lesser one of manslaughter. You must take this into consideration in determining your verdict, and you are also required to name the man. You must remember that no man is before you for trial, that no charge is laid against anyone here, and that therefore your verdict amounts to nothing more than preferring a charge, which may, however, afterwards prove the basis for proceedings in trial. I will now leave the matter entirely in your hands, gentlemen.

The jury did not retire and after a fifteen minute's consultation in their box,

Mr. Lea rose and said—I speak in the name of my fellow jurors. We have agreed and come to a decision in this sad business, would we be out of order in passing up our finding to you, sir, for revision of technicalities in the wording before we sign it?

The Coroner (after reading) I see no objection to the wording.

Mr. Lea—This then, is the finding of the jury in the case:—"We find that the deceased, Robert Beatty, of No. 124, Settlement, Yokohama, met his death between the hours of 1 and 2 o'clock on the 7th day of July, 1892, by means of a bullet, or bullets, discharged from a revolver in the hands of one, Robert Carstens, against whom we bring a verdict of wilful murder," signed, etc.

The Court rose about a quarter to one o'clock, after Coroner had thanked the jurors for their services.

London, June 20th.

The Right Hon. W. E. Gladstone in a recent speech charged the Government with raising religious issues and denied that the Protestants of Ulster were solidly opposed to Home Rule. He also denied that Home Rule would lead to an established Roman Catholic Church in Ireland. The power of the priests, Mr. Gladstone said, was due to the people's lack of legitimate freedom.

London June 21st.

The opposition party in Ulster has issued a manifesto in reply to the convention held at Belfast denying that Ulster is entirely Unionist or that there is danger of civil war.

CHESS.

(All Communications to be addressed to the Chess Editor.)

ANSWERS TO CORRESPONDENTS.

W.E.W.—We hope to continue the Chess column after the close of the competition.

NEPTUNE.—Quite at sea again. The Black Kt at Q Kt 5 moves to Q B 3, and where is the mate?

SOLUTION OF PROBLEM No. 24.

WHITE.

1—R to Kt 3
2—Q, R, or Kt mates accordingly.

BLACK.

1—Anything.

Correct solutions received from Scacchi, W.H.S., Diganima, Omega, J.D., and Ed. B.

PROBLEM No. 26.

BY T. TAVERNER.

BLACK.

WHITE.

White to play and mate in two moves.

In April an interesting event came off at the British Chess Club in the form of a quintangular match between the five strongest players who were staying in England at that time. Young Lasker followed up his success at the British Chess Association tournament by carrying off first honours with a score of 6½ wins, Blackburne coming second with 6 points, Mason third with 4 points, Gunsberg fourth with 2½ points, and Bird last with only 1 win against Gunsberg. The leader's score was made up of two wins against Blackburne, two draws against Mason, a win and a draw against Gunsberg, and two wins against Bird. A match was afterwards arranged between Lasker and Blackburne, to be commenced about 16th May, at the British Chess Club. The match is for seven games up, draws not counting, and the stakes £50 a-side. The following is one of the games played in the quintangular match. We take it with notes from the *British Chess Magazine*:-

FOUR KNIGHTS GAME.

NOTES BY W. WAYTE.

WHITE.

Lasker.
1—P to K 4
2—Kt to KB 3
3—Kt to B 3
4—B to Kt 5
5—P to Q 3
6—P to KR 3
7—B to K 3
8—P to KR 4
9—B to R 4

BLACK.

Blackburne.
1—P to K 4
2—Kt to QB 3
3—Kt to B 3
4—P to Q 3
5—B to K 2
6—Castles
7—Kt to K sq
8—P to QR 3
9—B to R 3

The common-place P-Q Kt 4, followed by Kt-Q R 4 and taking of the B, is probably better.

10—Kt to K 2

11—Kt to Kt 3

12—P to B 3

13—B to Kt 3

14—B to R 6

15—Q to K 2

16—B x B

17—Castles (K R)

Perhaps unexpected by his formidable opponent; but White soon shows that he has well weighed the consequences.

18—K R to B sq.

After this excellent move the exchange of Knights is practically forced, and White gets the K P into line with the rest.

19—P x P

20—Kt x Kt

21—P to B 4

22—P to K 5

To stop at all hazards P-B 3; but the fatal weakness in the position of the two Rooks soon betrays itself.

23—R to K sq.

24—Q to B 3

25—Q x B

Dangerous, but we will find a satisfactory move for Black at this point.

26—P x P en pass.

27—Q to Kt 2

28—R to K 7!

Kt-K sq. equally fails to save the Kt.

29—R to K sq.

30—Q x R

31—P to B 5

32—R x Kt

33—Q to Kt 2

34—K x Q

35—P x R

36—P x P

37—K to B 3

38—P x P

39—K to K 3

The moves of the Pawns will soon be exhausted; Black must then play K-R sq. and be mated in two moves.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Thompson, reports:—Left Kobe the 6th July at noon; had light E. to S.E. winds and fine weather throughout the passage; passed Rock Island at 2:45 p.m. on the 7th. Arrived at Yokohama the 7th July at 9:50 p.m.

The Japanese steamer *Saikio Maru*, Captain Corner, reports:—Left Shanghai the 1st July at 3:35 p.m.; had moderate S. and S.E. winds to Nagasaki, arriving the 3rd at 5:55 a.m. Left Nagasaki the same day at 5 p.m.; had light S.E. winds and cloudy weather to Shimonoeki, arriving the 4th at 6:20 a.m. Left Shimonoeki the same day at 11:10 a.m.; had light variable winds and hazy weather to the Northern Passage; at 7 p.m. passed 3 Japanese men-of-war bound to the westward; from Northern Passage to Kobe gentle E. winds and fine weather, arriving the 5th at 8:10 a.m. Left Kobe the 7th at noon; had light S.E. winds to Siwo-misaki at 8:00; passed a sailing ship bound to Kobe; from Oshima to Rock Island light easterly winds and fine weather; thence to port light S.W. winds and weather. Arriving at Yokohama the 8th July at 3:40 p.m.

LATEST COMMERCIAL.

IMPORTS.

A fortnight's dry hot weather has done much to improve the agricultural prospects of the country, concerning which very ominous opinions were being expressed a short time ago, and as the price of Rice has declined considerably in consequence, it may be accepted as a favourably augury. The planting of the New Crop has been accomplished satisfactorily, and country people are likely soon to give serious attention to their supplies of Goods for the Autumn trade. Already there are indications of more doing in Yarns, at improved prices, in sympathy with the advance established by the Native Spinning Mills, and as supplies are moderate, the market rules strong in sellers' favour. For Piece Goods there are considerable enquiries, but at low prices, and it is very evident that with a continuance of low sterling exchange it is only a question of waiting a little for higher prices to be paid, as supplies are likely to be below the average; on the whole, prospects promise well. Good prices are ruling for both Silk and Tea and the trade finance of Japan is healthier than a year ago. Sterling Exchange is now quoted 2/10½ Bank on demand. Sales for the week comprise 1,325 bales

English Yarn, 103 bales Bunnays, 2,250 pieces glb. Shirtings, 480 pieces T-Cloths, 4,000 pieces Victoria Lawns, 150 pieces Velvets, and 750 pieces Italian Cloths.

Pig Iron, No. 1	1.25 to 1.30

KROSENE.

Market practically unchanged and firm. Country dealers are expected to be in the field again, as usual after the present month, and, as arrivals are scarce at the moment, holders are strong and prices have an upward tendency.

QUOTATIONS.

Chester	\$1.64 to 1.65
Comet	1.57 to 1.60
Deros	1.52 to 1.55
Russian Anchor	1.52 to 1.55
Russian Moon	1.50 to 1.52

SUGAR.

Market has hardened still further, and buyers apparently have been anxious to secure some goods before prices advance yet more. Our quotations of last week are well maintained, and some business has been done both in White and Brown.

	PER POUND.
Brown Talao	\$4.20 to 4.30
Brown Daitong	3.30 to 3.40
Brown Canton	3.40 to 3.50
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was of the 1st instant, since when settlements on this market amount to 425 piculs, divided thus:—Hanks, 80 piculs; Filatures, 174 piculs; Re-reels, 126 piculs; Kakeda, 34 piculs; Oshu, 11 piculs. In addition to this, direct export has been about 25 piculs, making the total business for the week equal to 450 piculs.

Supplies are now beginning to come in a little more freely, attracted by the high prices recently paid, and holders are very anxious to push the market still higher. They have been assisted in their endeavours by one or two foreign houses who

have not hesitated to pay very high prices for a few purchases, especially in *Filatures*. There is also some inclination for local speculation, operators being tempted to make purchases by the conflicting accounts of the European crop. Some recent cables assure us that it will be as much as 20 per cent. less than last year, but it does not seem at all certain that the true result is as yet properly ascertained.

A few sample *Cocoons* have been brought down from *Shinshu* province and these appear to be excellent specimens, so that we should have some good silk from that province in a few days' time. As before mentioned, many silks are coming in from *Shinshu* factories, but these are all reeled from *Koshu*, *Foshu*, *Bushu*, *Hida*, or *Omari* *Cocoons*, and can in no wise claim to be considered *Shinshu* silks.

There have been two shipping opportunities since we last wrote, the French mail steamer *Oxus* and the U.S. mail steamer *City of Peking*, both leaving port on the morning of the 3rd instant. The former took 197 bales for France and the latter carried 320 bales for the New York trade. There departures bring the present export figures up to 540 piculs, against 696 piculs last year and 488 piculs to the same date in 1890.

Hanks.—Some activity in the Lyons market has caused a little movement here. Several parcels of new *Hachofu* have brought \$445 and \$450 per picul; one parcel of new *Mobashi* was settled at \$170; some old *Shinshu* have been done at the same price, with a little worse quality at \$160. New silks are now held for some advance in sympathy with *Filatures* and *Re-reels*.

Filatures.—Business goes on to some extent in the so-called *Shinshu* brands, \$715 being reported paid for one or two small lots. Some large parcels were settled at \$710, and holders now ask \$720 for the same things. Some good quality genuine *Koshu* *Filatures* are on the market, but are held for prices which at the moment do not admit of business.

Re-reels.—These are also held for a smart advance, and in some cases sellers have succeeded in getting what they want. One parcel of so-called No. 1 *Foshu*, but running very full in size, was weighed up at \$645, and for the next arrivals holders ask \$660 per picul. *Bushu* *Re-reels* have arrived, but so far have given rise to no transactions. As a rule, they are eased and full sized, preventing no very great temptation to buyers.

Kakeda.—Several large parcels of old silk have been taken off the market for shipment to Europe. The price of this old stuff remains unchanged, and some of the lots are reported to be going forward on consignment. The purchases made were on the basis of \$500 for common silk, *Okama* chop.

Oshu.—One parcel of coarse *Sendai* taken for France at \$466, and nothing further has been done in this department.

WASTE SILK.

The market has not yet opened, and this week has given rise to no transactions, if we except a few piculs of medium to common *Mawata*, old fibre, which brought from \$160 to \$130 per picul, according to grade; the last named lot will in all probability find its way to Bombay by the out-going English mail.

There are two or three small offerings of new *Foshu Noshi* in the place, but these have given rise to no purchases. Buyers say that the quality is very inferior and they do not want it, while holders seem inclined to be rather stubborn about the price, on the basis of our last week's quotation.

Since we last wrote, the French mail steamer *Oxus* has left port with 71 bales common *Kibiso* for Marseilles. These, of course, are old fibre and are packed very heavy, weighing as much as 342 piculs. From the table below, it will be seen that the present export is 342 piculs, against 89 piculs last year and 508 piculs at the same date in 1890.

TEA.

Some buyers are apparently inclined to hold off a bit, while others are busy filling their orders. Prices for good Teas are strong, they being less plentiful as the season progresses, and second crop leaf dominates the market. Settlements to date are about 150,000 piculs, against 165,000 last year, export to date being 12½ million pounds or practically the same as last season.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

Perfect blendings of the Choicest Brandy of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untempered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them unique and unequalled.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, JULY 16TH, 1892.

SUMMARY OF NEWS.

THE vacancies in the Cabinet have not yet been filled.

THE Emperor visited the residence of Marquis Nabeshima last Saturday.

THE "Morning-glory" gardens at Iriya, Tokyo, will be opened to the public on the 13th inst.

A STORM of typhoon character visited the south and west of Japan on the 11th instant and following days.

MARQUIS SAIONJI, Superintendent of the Decoration Board, has been decorated by the King of the Belgians.

MR. KONO has been appointed Minister for Home Affairs, and Viscount Sano Minister of Agriculture and Commerce.

THE dividend of the Osaka Godowns Company for the past six months is estimated at the rate of 15 per cent. per share per annum.

THEIR Imperial Highnesses Princesses Kane and Tsune proceeded to Nikko on the 11th inst. starting from the Uyeno Railway station at 8.50 a.m.

THEIR Imperial Highnesses Princesses Kane and Tsune were received in audience by Their Imperial Majesties the Emperor and Empress on the 8th inst.

MR. M. W. E. DE BUNSEN, British *Chargé d'Affaires*, and Mr. Spring-Rice, Secretary of the British Legation, proceeded to Karuizawa on the 11th instant.

THE Conference of the Camera statesmen, which the public had looked forward to with so much interest, has resulted in a resolve to leave the present Cabinet undisturbed. It is understood, however, that the connection between the Cabinet Ministers and the Camera statesmen has been entirely severed.

interest, has resulted in a resolve to leave the present Cabinet undisturbed. It is understood, however, that the connection between the Cabinet Ministers and the Camera statesmen has been entirely severed.

DURING last month gold and silver coins were struck in the Osaka Mint to the following amounts:—Gold 5-yen pieces yen 119,095 and silver 1-yen pieces yen 1,370,000.

THE total receipts of the Kyushu Railway Company during last month amounted to yen 30,215.74, of which yen 24,198.12 was obtained by the sale of tickets, and yen 6,017.62 in the shape of freight.

THE dividend of the Miye Cotton Spinning Company for the first half of this year has been declared at the rate of 15 per cent. per annum; that of the Oji Paper Mills at the rate of 4 per cent. per annum.

THE shareholders of the Hankai Railway Company held a general meeting on the 8th inst., and resolved to raise a loan of 75,000 yen, at 7 per cent. interest per annum, in order to lay down a double line on the Section between Naniwa and Sumiyoshi.

THE report and accounts of the Yokohama Saving Bank for the half-year show that the total receipts amounted to 5,695,335 yen, of which 2,750,000 yen was declared as a dividend for the half-year, and 1,277,062 yen was set apart as a reserve, 1,668,293 yen being written off to the new account.

THE shareholders of the Omi Railway Company, at a general meeting held lately, elected Messrs. Yubita Mojuro, Tamura Hanjuro, Ozawa Tahei, Beniki Tokugoro, and Hiraoka Kyuzayemou to take charge of the construction of the proposed new line of the Company. The estimated cost is placed at 100,000 yen.

THE receipts of Mr. Hiranuma's bank in Yokohama during the past half-year were 81,068,756 yen, of which 16,213,761 yen was appropriated as a reserve, 23,000,000 yen as reward to officers, 8,106,587 yen office expenses, and 3,748,130 yen were carried forward to the next account, 30,000,000 yen being declared as a dividend at the rate of 3 per cent. per annum.

THE report and accounts of the Tone River Shipping Company, Tokyo, read by Director Inaba Shusaku and adopted at the half-yearly general meeting of shareholders of the Company held on 8th inst., show that the total receipts during the first half of this year amounted to yen 15,498,731, of which, after deducting yen 2,572,615 for miscellaneous expenses, yen 12,880,000 was declared as a dividend for the half-year at the rate of four per cent. and a half per annum.

THE regular general meeting of shareholders of the Hirano Cotton Spinning Company, Osaka, was held on the 7th inst. The receipts during the first half of this year were yen 71,017,529, of which yen 3,500,000 was set apart for the expenses of establishing the Company, yen 9,200,000 was added to the reserve fund, with yen 20,000,000 as a special reserve, yen 6,880,000 as remuneration to officers, and yen 30,000,000 as a dividend for the half-year to be declared at the rate of 20 per cent. per annum, yen 1,437,529 being carried forward to the next account.

THE total receipts of the Naniwa Cotton Spinning Company, Osaka, during the past half-year amounted to 52,631,677 yen, of which, after deducting sums for miscellaneous expenses and remuneration to officers, 5,180,657 yen was set

apart as a reserve, while 1,007,139 yen was carried forward to the next account, 30,000,000 yen being declared as a dividend for the half-year at the rate of 8 per cent. per annum. The dividend of the Amagasaki Cotton Spinning Company for the same period has been declared at the rate of 17 per cent. per annum. The gross revenues of the Hirano Cotton Spinning Company amounted to 68,819,000 yen, of which 25,000,000 yen was added to the reserve fund, and 1,437,529 yen was carried forward to the new account, the dividend for the half-year being declared at the rate of 20 per cent. per annum.

THE EMPRESS, attended by Viscount Kagawa, Grand Master, and Mr. Sannomiya, Vice-Grand Master of Services to Her Majesty, and several Ladies in Waiting, visited the residence of Marquis Nabeshima at Nagatacho last Sunday afternoon, leaving the Palace at half-past one o'clock. The Imperial Party arrived at the house at two o'clock, and was at once conducted to a salon where Her Majesty gave audience to the Princesses of the Imperial Blood, the Marquis, the Marchioness, and members of the Nabeshima family. Afterwards the Empress witnessed a very interesting performance of the *No* dance given by the leading experts of the art in the capital. A display of fencing followed; among the performances were bouts between Miss Okuda Tama and Mr. Miyake Sadayuki, armed respectively with a long halberd and sword, and a contest between Miss Okuda Tama, who was armed with a halberd, and Mr. Okubo Chikayoshi, with a *kusarigama*, or sickle having a long chain attached to the handle. At six o'clock Her Majesty dined with Their Imperial Highnesses Princess Arisugawa (senior and junior), Kitashirakawa, Kanin, Countess Matsukata, Countess Goto, Marchioness Mayeda, Princess Tokugawa, Marchioness Hosokawa, Countess Abe, Viscountess Nabeshima, Marchioness Adachi, Madame Matsudaira, Marquis and Marchioness Nabeshima, Madame Muro-machi, Countess Kuroda, Viscountess Kagawa, and Madame Hanabusa. After dinner there was a display of *san kyoku* music, which was followed by dancing by a party of Kwaryu-ren, in which the Lady Ito, second daughter of the Marquis, took part. Legerdemain by Choryusai closed the entertainment, and the Empress left for the Palace at twenty minutes to eleven o'clock.

THE Import trade remains much as last reported, and prices are well maintained. Yarns have been in fair request as regards English spinnings, while Bombays are quite nominal. The principal item in demand in Piece-goods has been glib. Shirtings, which have been sold at slightly easier rates; and in Woollens, Italian Cloth has been most enquired for at about recent rates, though other descriptions of Woollen goods have not been moved in large quantities. Nothing to report in Metals. No change to note in Kerosene, the market being steady and firm. The Sugar trade continues in a healthy condition, and though Takao Brown is slightly easier, the market has been cleared of other Brown sorts, and prices for Whites of all descriptions are steady and firm. The Silk trade is not yet large, and none of the very best new fibre has yet arrived. Prices are high, and appear like keeping up, though rates will doubtless be affected one way or the other when positive statements are received in regard to the crop in Europe. The small business done in Waste Silk has been in old stock. The Tea trade is active and prices are firm, and shipments to date, without including what the *Oceanic* took this morning, amount to fourteen million pounds. Exchange is low and shifty.

EDITORIAL NOTES.

THE EMPEROR'S VISIT TO MARQUIS NABESHIMA.

ON Saturday the 9th instant, at 1.15 p.m., the Emperor, accompanied by Prince Iwakura and other notables, proceeded to the residence of Marquis Nabeshima, in Nagatacho. His Majesty was received by the Marquis at the outer gate of the enclosure and conducted to a salon in the upper storey of the new building, where he gave audience to the Marquis, the Marchioness, and several members of the family. The vernacular press says a feature of the furniture in this room was a colossal pair of celadon vases of Hizen porcelain—Hizen is the province which originally constituted the fief of the Nabeshima family—over eight feet in height, and that all the decorations and furniture of the room were of the most beautiful description. From ten minutes past two o'clock until half-past four, the Emperor witnessed a display of fencing. Some of the performances in this line are said to have been particularly interesting; for example, a contest between Messrs. Matsui and Hori, armed respectively with sword and carbine and sword-bayonet; a bout between several men and the celebrated female fencer Okuda Tamako, who, with a long halberd, proved herself an almost invincible adversary, and a tussle after the *Jufutsu* style between Tobori Takisaburo and Yashuyama, the latter being tumbled about like a ball by the renowned *Jufutsu-ka*. After the fencing, wrestling took place, and his Majesty is said to have been particularly pleased with the prowess of Nishi-no-umi, who threw Ogi-no-hama and his four pupils with as much ease as though these strong men had been only "rice-dumplings," and with the not less remarkable performance of the favourite champion Konishiki, who grappled with Yashuyama and five other athletes, one after another as fast as they could come on. At half-past seven dinner was served, and again we read descriptions of the magnificent gold lacquer of the dining-room ceiling and the gorgeousness of the furniture and apparatus. Those who had the honour of dining with the Emperor were their Imperial Highnesses Prince Arisugawa (Taruhito), Komatsu, Fushimi, Kitashirakawa, Kanin and Kuni, their Excellencies Count Matsukata, Count Goto, Viscount Yenamoto, Viscount Takashima, Count Oki, Mr. Kono, and Viscount Kabayama, and a number of other high dignitaries. At half-past eight there was a performance of legerdemain, and this was succeeded by *Koshaku*. The Emperor showed his appreciation of the efforts made to entertain him by remaining until midnight.

A JAPANESE DEAKIN.

A VERNACULAR newspaper publishes a note intended to be highly complimentary to Mr. Ikeda, a well known Kyoto dealer in objects of art. It says that Mr. Ikeda is noted for his enterprise. Not content with having fine stores in Kyoto and Kobe, he follows wealthy foreign collectors even to Osaka, Yokohama, and Tokyo, as he did last year in the case of Prince George, and altogether displays so much industry and ability that he has been called a "Japanese Deakin," the latter gentlemen being noted among foreigners for enterprise and cleverness. The vernacular journal concludes its paragraph thus:—"We do not know whether Mr. Ikeda will be content merely to have suggested such a parallel, but we trust that he will push a step farther, and make his way to foreign markets, so that the people of the West may say, not 'Japan has her Deakin,' but 'Japan has her Ikeda.'"

It is pleasant to see that the merits of two enterprising men are thus acknowledged, though we have very grave doubts whether the juxtaposition of Mr. Deakin's name with that of Mr. Ikeda will be particularly flattering to the former, who, if report speaks truly, owes as much to his integrity and fair dealing as to his shrewdness and energy. However, since it is always the duty of magnanimous folks to believe in the steady progress of reformation, we shall not pursue this phase of the subject any

farther, so far as Mr. Ikeda is concerned. But the opportunity should not be suffered to pass without a word of warning to Japanese dealers in Kyoto, Kobe, Yokohama, and Tokyo who lay themselves out to exploit the unfortunate tourist. We can assure these men that they are doing permanent injury to Japanese commerce and Japanese reputation. They look for their chief source of profit in deliberate deception. Some of the best artistic talent of the nation is employed by them to counterfeit ancient works of art for the purpose of throwing dust in the eyes of long-pursed amateurs. Among these simulations many possess high merit for their own sakes, and if honestly offered as products of modern Japanese skill, they would have the effect not only of attracting custom but also of proving that the Japan of to-day is technically on as high a level as was the Japan of any era. But when they are falsely represented to be antique specimens, and when their vendors do not hesitate to declare that nothing of the kind is producible by modern experts, days of very evil reckoning are prepared for the country, on the one hand, and fatal injustice is done to Japan's art ability, on the other. Little by little the rascality and chicanery of these unscrupulous dealers will come to light, with the inevitable result that tourists who now spend large sums of money in Japan and take pleasure in the operation, will become distrustful and disgusted, and will either shrink altogether from buying, or treat every Japanese dealer as a man unworthy of the smallest credence. We do not pretend that Japanese are the only sinners. But it rests chiefly with them to mend their ways, and the sooner they set about doing so, the better for their own reputation and pockets.

THE CHINESE AND CHICAGO.

MR. DE GUERVILLE, who recently had the honour of delivering a lecture illustrated with spectroscopic views before the Emperor and Empress of Japan, seems to have met with considerable success in China also, though ill-health prevented him from carrying out to the full his programme in that country. Received with much cordiality by the Viceroy Li, he repeated his lecture before that statesman, who appeared to take a keen interest in the views of the cities of the West, and in all matters relating to the Great Republic. The Viceroy has always enjoyed the reputation of exceptional liberality, and certainly his conduct at the present juncture justifies this estimate. A man of less magnanimity would have little patience with a nation which treats his countrymen as the Americans now treat the Chinese, but despite these unpleasant incidents the Viceroy still retains his friendship for Americans, as is evidenced by the fact that the tutor of his children is an American, and that one of his most trusted employés belongs to the same nationality. It remains to be seen, however, whether even his magnanimity will be sufficient to overcome China's reluctance to contribute to the World's Fair at Chicago. Mr. de Guerville seems to have worked hard and with much tact in that cause. The Chinese Government has never taken any direct share in foreign exhibitions, so far as we know. But, on the other hand, it has not placed any obstacles in the way of private enterprise, and as a consequence China has always been fairly well represented on any important occasion. To-day, however, there has been so much talk of active reprisals on China's part—the banishment of all American citizens from her territories, and other extreme measures—that Chinese merchants are naturally doubtful whether, in contributing to the World's Fair, they may not be acting directly contrary to the wishes of their Government. Mr. de Guerville, we believe, has cleverly met this difficulty by suggesting that, under certain conditions, the Chinese Government should remit the export duties on goods going to Chicago. Such an act would of course prove conclusively that the Authorities are in favour of every exercise of private enterprise for the purpose of contriving an adequate representation of Chinese industries at the World's Fair. But it is plain that an

absolutely essential condition is the admission of Chinese merchants into the States during the progress of the Fair. Men cannot be expected to send their goods to Chicago unless they are at liberty to go there themselves and attend to the arrangement and sale of the articles. This could be very easily managed by means of passports granted, in the first instance, by the Chinese Government and endorsed by the American Representative in Peking. But unless the State Department in Washington consents to this or some corresponding arrangement, there can be no question of China's concurrence in the World's Fair. Mr. de Guerville's visit seems to have produced a very good impression, and if it be supplemented by a little practical liberality in Washington, there is no reason why China should not make a very good display at Chicago.

THE KOREAN QUESTION.

THE *Kokumin-no-Tomo* thinks that the best thing to do with Korea is to place it under the acknowledged protection of the principal European and Asiatic Powers interested in its territorial integrity. After alluding to the report of the attempted blowing up of the Tai-won-Kun's palace, the Tokyo periodical calls the attention of the Koreans to the necessity of making up their minds, once for all, as to the course of their future policy. Left to itself, without any exterior support, the Korean Kingdom is sure to fall an easy prey to some aggressive Power. The *Kokumin* even believes with Mr. Oishi Masami that, Korea being already utterly disorganized, the question is not whether, but when, she is destined to fall. Her people are ignorant and idle. They pay about seven or eight hundred thousand *yen* in taxes, but not more than one-thirtieth part of that sum ever reaches the national Treasury. In a word, the people as well as the Government are on the verge of bankruptcy, the only persons benefited by the taxes being the fortunate officials who belong to the faction that happens to be influential at Court. Under such circumstances the *Kokumin* deems it idle to hope that the Koreans will be able to help themselves. Their independence is altogether out of the question. They ought to feel thankful if they are able to escape the calamity of utter bankruptcy. Their position does not warrant them in hoping for anything better than that, and to compass it, the best, perhaps the only, course is to place the peninsular kingdom publicly under protection as above stated. At present Korea exists by the assistance and support of three countries, Japan, Russia, and China. The *Kokumin* would like to have some other European Powers enter the arena, and take a share in watching over the safety of the little State. Protection need not involve coercion: the protecting Powers should allow the Kingdom full liberty in the management of its domestic affairs. The Koreans have no sentiments of high-spirited patriotism; they would be only too glad to place themselves under the protection of foreign Powers.

THE PRESERVATION OF TEMPLES.

THE *Fiji Shimpō*, in a leading article on the above subject, deplors the fact that so little is done to preserve such specimens of Japanese architecture and art as the ravages of fire and natural decay have left. Though Japan possesses natural scenery sufficiently attractive to tempt foreign travellers, it is to her art that she must look for the adequate representation of the distinctive genius of her people. The iconoclastic spirit which prevailed at the commencement of the *Meiji* era is answerable for the destruction by fire of some splendid monuments of antiquity, and the various anti-Buddhist influences of after years have all combined to reduce temples to the lamentable state of dilapidation in which so many of them are now found. Since the whole nation is interested in the preservation of temples, the expense, our contemporaries think, might well be borne by the State. But if this is not feasible, then the *Fiji* is in favour of resorting to the system of lotteries, which yielded such good results in the Tokugawa days. Though lotteries are now illegal, there is no reason why the law against them should

not be rescinded if it can be shown that they serve a good purpose. Lotteries were condemned because of the bad uses to which they were put in this country, but no one pretends that they do not serve good purposes when rightly controlled. Such is the *Fiji's* idea.

POLICY NOT PERSONS.

THERE are many candidates, said the *Nichi Nichi Shimbun* before the recent conference, for the important portfolio of Home Affairs, Mr. Shirane standing first on the list, Viscount Nomura second, Mr. Kono third, Viscount Tani fourth, and Mr. Kuki fifth. A certain far-seeing man remarks, however, that it is not a time to discuss the question of who should succeed to the vacant office, but rather to determine the future policy of the Government. Unless a definite course of policy is settled in the first place, the new Minister may be found in disagreement with his colleagues of the Cabinet, and disputes may again arise. To talk of candidates at this juncture is like employing carpenters and bricklayers before a plan of the proposed edifice has been prepared by an architect. The pending conference of Camera statesmen is to determine, not the holders of portfolios, but the policy of the Government.

It is plain that Count Inouye was the arbiter of the situation when the conference met. He occupied the position held by Count Yamagata a few years ago, with this important difference, that whereas Count Yamagata consented to become Minister President, Count Inouye would not agree to accept any office at the present juncture except on conditions which the Cabinet found too irksome.

THE ELECTRIC LIGHT COMPANY.

It is satisfactory to see that despite the mishaps of the past eighteen months the Electric Light Company of Tokyo is in a fairly flourishing condition. The burning of the Diet buildings threatened at one time to seriously injure the credit of the Company, and just when the evil effects of the catastrophe were beginning to disappear, the great fire at Kanda inflicted a heavy loss by destroying the company's offices and plant in that quarter of the capital. Nevertheless the accounts submitted to the last general meeting of shareholders show that the net earnings of the company during 1891 were 25,837.824 yen, and that it was possible to declare a dividend of 5 per cent. on the capital of the Company. The following are the figures given by the *Shogyo Shimpō* :

	YEN.
Net Profit during the year	25,837.824
Carried over from last account	3,972.347
Total	29,810.171
Replacing of plant destroyed by fire	5,294.537
Reconstruction of Kanda Offices	2,174.843
Reserve for wear and tear (5 per cent. of profits)	1,120.000
Expenses of establishing company (10 per cent.)	2,240.000
Reward to Officers (10 per cent.)	2,240.000
Dividend, at the rate of 5 per cent. per annum	16,713.000
Balance carried to next account	27.891

Total..... 29,810.171
It appears from the above that the Company was able to utilize the shell of its brick buildings in Kanda after the conflagration. Still a considerable loss must have been entailed by the suspension of operations in that quarter of the city during several months. The electric light has found great favour in Japan. Its cleanliness and coolness are strong recommendations to the Japanese, and one is surprised to observe how largely it is used, even in the shops of the pettiest tradesmen.

THE EMPEROR AT COUNT GOTO'S.

THE *Nichi Nichi* tells a pretty little story of an incident that occurred during the Emperor's visit to Count Goto. Among the Count's most favourite belongings is an alcove ornament in the form of a badger drumming on its paunch. The animal's face is said to wear a particularly comical expression of silly satisfaction, which

attracted his Majesty's attention. It appears to be the custom, on the occasion of these Imperial visits to private houses, for the Emperor to carry away some trifling souvenir in token that he desires to recall a pleasant afternoon, and we need scarcely presume that the Sovereign's host counts himself particularly honoured by such an act. The Emperor in this instance desired to have the inane badger, and on the wish being intimated to Count Goto, the latter expressed the greatest satisfaction, but begged to be allowed to have a box prepared for the badger. "I don't want any box," said the Emperor, "but only this comical creature," and he thereupon transported the badger with his own hands to his carriage. Altogether the Emperor seems to have enjoyed himself thoroughly at Count Goto's, for it appears that, contrary to the reports originally published, and entirely contrary to the usual custom, his Majesty remained at the Count's until nearly midnight.

CUSTOMS RETURNS.

The following is a summary of the Customs Returns for May, showing the foreign trade of Japan for the month :—

	1891.	1892.
Exports.....	6,493,465.080	7,198,007.890
Imports.....	4,843,208.750	7,252,540.580
Total exports and imports	14,450,548.470	14,450,548.470
Excess of exports	1,650,256.330	1,650,256.330
Exports.....	166,537.359	166,537.359
Imports.....	294,374.173	294,374.173
Miscellaneous.....	12,092.614	12,092.614

Total..... 473,004.145

THE "KWANTO-KAI."

JAPANESE political parties are like clouds in a windy sky: perpetual disintegration and regrouping are their normal condition. Just when the Radicals seemed to be developing something like strong cohesion, just when some leaven of congruity appeared to be permeating their motley mass, a big section breaks away under the leadership of Mr. Oi Kentaro and other vehement politicians, and pitches an opposing camp on its own account. At first it was imagined that this *Kwantō* coterie might be contented to play a sectional part, working along lines

of its own choosing in minor matters, but throwing in its strength with the bulk of the Party in all vital crises. We entertained no such anticipation ourselves, having been always persuaded that Mr. Oi Kentaro's ambition was about as large as that disposition is made, and that his purpose was simply to become a dictator himself. Our expectation is now fulfilled, for the leaders of the *Kwantō-Kai* have resolved to organize a big political party called the *Toyo Jiyu-to*, or Eastern Radicals, in which shall be included men from all parts of the empire who share the views of the *Kwantō-Kai's* leaders. We do not know precisely what those views may be, but it will probably be very near the truth to say that Mr. Oi Kentaro seeks to attract to his standard all men of radical persuasion who think that things are moving too slowly, and who advocate forcing the Government's hand by manoeuvres more emphatic than mere votes in the Diet. Already a number of politicians in Ibaraki and Tochigi Prefectures have signified their adhesion to the new programme, and it has been decided to hold the first general meeting of the *Toyo Jiyu-to* next September in Tochigi, and to have the inaugural ceremony of the party in Tokyo the following month. From one point of view it is well that this ring of extremists should be thrown off by the Radical body. The nucleus that remains may perhaps fall into a steadier pace, and since it is scarcely possible that two sections of a party can fight against each other yet work in effective union against a common foe, the Government may enjoy comparative peace while its opponents squabble. But, on the other hand, these incidents tend to postpone still farther the possibility of Government by party. With the Opposition split up into the *Jiyu-to*, the *Kaishin-to*, and the *Toyo Jiyu-to*, while a fourth party, the *Kokumin Kyo-kai*, stands by not pledged to support anyone in particular, it is plain that the country does not yet possess a political association competent to assume the responsibilities of administration.

JAPANESE SILK.

THE *Nichi Nichi Shimbun* writes as follows on the subject of silk:—"Among our staples of export silk receives official protection and inspection, and the consequence is that sericulturists have made great efforts in the direction of improvement. The results are striking. In 1886 the export amounted to only 19,544,637 yen, but in 1888 it rose to 28,345,646 yen, being an increase of nearly ten million yen within 3 years. Last year, the quantity exported was 95,000 bales, the money value of which amounted to 40 million yen approximately. On the other hand, the Government has not yet formed any definite policy with regard to the protection of silk manufactures, and the persons engaged in that industry have consequently shown so little energy that small progress has been made since the Restoration. In 1867 the export of silk piece-goods amounted to only 512 yen; in 1868 it fell to 6 yen, and until 1878 it did not exceed 2,200 yen annually. In 1886 for the first time some signs of real activity became apparent, the export then reaching to 61,235 yen, and since that time the figures have been as follow :—

1886	61,235 yen
1887	135,224 yen
1888	258,033 yen
1889	623,450 yen
1890	1,107,881 yen
1891	1,763,715 yen

Thus, without protection and despite comparative want of enterprise, the industry has grown to considerable dimensions. During March and April of the present year, the foreign merchants were unable to fill up their orders owing to scarcity of supplies, and the consequence was that 100 *me* ($\frac{3}{8}$ lb.) of the goods, a quantity which under ordinary circumstances would be purchasable at about 5.50 yen, rose to 6.50 yen and upwards. Still the demand could not be satisfied, and commissions had to be left unexecuted. In June the price fell again, and the export is once more proceeding briskly. The quantity sent abroad from January to May, a period of 5 months, was over 1,300,000 yen.

Original from

Habutay is the principal article of export, and the United States are Japan's best customer, despite the customs impost of 50 per cent. England and France have also begun since last year to take considerable quantities, and as there are no high import duties in their case, there ought to be a good market for the article if the manufacturing processes be improved. Australia, too, will probably become a customer. What steps should be taken hereafter with regard to this industry in order to make it a strong source of national wealth?"

CHRIST CHURCH BAZAAR.

MRS. IRWINE, having now made up the accounts of the Bazaar held on June 29th, desires to express her sincere thanks to all those who contributed to the success of her undertaking, and to inform them that the gross receipts amounted to \$1,337.40, and the expenses to \$82.64, leaving a balance of \$1,254.76, which has been handed to John Rickett, Esq., Chairman and Hon. Treasurer of Christ Church, from whom she has received a very kind reply, saying that the much-needed improvements will be commenced at once. Mrs. Irwine's especial thanks are due to the Ladies of the Congregation for their work at the Parsonage and at home during the past six months, and she further gratefully acknowledges gifts of working-materials, paintings, and finished pieces of work from them and from other friends. Her thanks are also accorded to the Ladies who presided with so much patience, energy, and skill at the Stalls, and to those who assisted them; to Admiral the Hon. Sir E. R. Freemantle, K.C.B., C.M.G., Captain McQuhae, R.N., and the Officers of H.M.S. *Imperieuse*, for the use of their excellent Band; to the Yokohama United Club and to the Cricket Club for the loan of a tent and other matters; to Messrs. Arthur & Bond for the loan of some fine screens and wall-pictures; to the Club Hotel for the use of crockery and glass; to Arthur Brent, Esq., for "Aunt Sally," and to the men of H.M.S. *Pallas* for their untiring exertions at the game. Mrs. Irwine cordially thanks the *Japan Herald*, *Gazette*, *Mail*, and *Advertiser* for kind reductions in their rates for advertising and printing, the Directors of the Public Hall for their obliging and moderate terms, Mr. Louis Boehler for some beautiful flowers, and Messrs. Jno. W. Hall and Eyton and Pratt for generous gifts of refreshments. For many other evidences of good will and kindly feeling in connection with the Bazaar, too numerous to specify, Mrs. Irwine can only repeat her most grateful thanks.

THE JAPAN SOCIETY.

We observe that the second general meeting of the Japan Society was fixed for Thursday afternoon, 23rd June, in the Hall of the Society of Arts, John Street, Adelphi, and that the first annual dinner was to take place the same evening in the Whitehall Rooms of the Hôtel Métropole, the President, H.E. Viscount Kawase in the Chair. It was also announced that the third meeting of the first session was to be held in the Hall of the Society of Arts on June 15th, Professor W. Anderson in the Chair, when Mrs. Ernest Hart was to read a paper on "Some Japanese Industrial Art Workers." From the returns issued on the 1st of June, it appears that the membership of the Society had risen to 207, of whom 7 were honorary members.

THE ELECTIONS.

REUTER'S telegrams about the elections in Great Britain are evidently based on the former representation of the constituencies referred to. Thus, when he says, for example, that the Tories have gained 13, the Unionists 6, and the Liberals 43, he doubtless means that thirteen seats and six seats formerly held by Liberals have been captured by Tories and Unionists respectively, while 43 seats formerly held by Unionists and Tories have been captured by Liberals. According to this calculation, the figures hitherto telegraphed give the Liberals a net gain not sufficient to constitute a working majority. Mr. Gladstone's followers must progress at a much greater pace if they are to return to power. In

a minority of 76 at the close of the session, they have to win 38 seats in order to tie with their opponents; while to have a majority of 30 they must win 53 seats. It is questionable whether Mr. Gladstone would undertake to form a Cabinet with a majority of only 30, yet the returns thus far published do not suggest that he can reasonably hope for even so inconclusive a following as that.

The telegrams about the Elections in England become more perplexing than ever. Reuter's message, dated the 11th instant, said that the Liberals had gained 50, and that the press anticipated a small but scarcely a working majority for Mr. Gladstone. One naturally assumes that when a gain of 50 is spoken of, a net gain is meant, especially since a net gain of 50 seats by the Gladstonians would signify a majority of 24 in the House of Commons, assuming that all the Irish Liberal members enrolled themselves solidly under the Old Man's flag. But at this stage comes another telegram, dated the 12th inst., which tells us that the net Liberal gain is only 25. There is a difficulty, however, about this last message; namely, that it represents the Liberals as being in a worse condition than they were on the 10th instant. The four latest telegrams are as follow:—

London, July 9th.

The election returns show that the Tories have gained 13, the Unionists 6, and the Liberals 43.

London, July 10th.

The Tories have gained thirteen, Unionists seven, and Liberals forty-eight.

London, July 11th.

The election returns show that the Liberals have gained 50, and that the position of the Tories and Unionists is unchanged. The Press anticipate that Mr. Gladstone will obtain a small, though scarcely a working majority, including Irishmen and labour members, the allegiance of some of whom is doubtful.

London, July 12th.

The election returns show the Tory gain to be fourteen, the Unionist gain seven, and the Liberal gain forty-six.

Which of these are we to accept as correct? On the 10th we are told that the Gladstonians had a net gain of 28; on the 11th, a gain of 50; and on the 12th, a net gain of 25. It will be observed, however, that the telegram of the 11th speaks of the Tory and Unionist position as "unchanged;" in other words, they had gained no more seats than the 20 which stood to their credit on the 10th. Making that hypothesis, the telegrams since the 9th will be interpreted thus:—

Net gain of Gladstonians on the 9th	24
Net gain of Gladstonians on the 10th	28
Net gain of Gladstonians on the 11th	30
Net gain of Gladstonians on the 12th	25

The last telegram thus becomes the most puzzling, since it does not tally with any of the others. We strongly suspect that some mistake has been made in transmitting the numbers, and as there can obviously be no mistake about the Tory and Unionist returns, the doubt attaches to the Liberal number. If it were 56 instead of 46, the net Gladstonian gain would be 35, and the telegrams would all read in regular and logical sequence.

A net gain of 35 would not yet put the Gladstonians in a majority. They were 76 to the bad when Parliament was dissolved, so that they must win 38 seats from their opponents before they begin to count a majority. And that, too, is on the hypothesis that all the Irish Nationalists vote with them. The Nationalists in the old House were made up of 55 McCarthyites and 31 Redmondites. Will these two factions, fighting now desperately at the polls, join hands with Mr. Gladstone in the new House? We greatly doubt it. Everything seems to point to the probability that the Liberals will find themselves in a majority altogether too small and precarious to attempt any drastic measure of Home Rule.

A NEW LIGHT ON BUDDHISM.

WE are curious to see what the great disciples of Buddhism will say by way of reply to Mr.

G. H. Pember who, in a recently published work, undertakes to demonstrate that the creed of Shaka is nothing more or less than the creed of the Devil. This bold author sets out by analysing Theosophy. Here is what he asserts about it, in brief compass:—"The evidence that fallen angels have conversed with man, and 'told him secrets of the world unknown,' is ample enough. Whence arose the legend of the great Titan, who, in defiance of Zeus, expounded the civilizing arts to men, taught them medicine, astronomy, and divination, and stole fire for them from heaven? Or, again, is there no basis for the catalogue, contained in the mysterious book of Enoch, of arts which the Nephilim are said to have introduced among men; no reflection of truth in the appeal of Michael and his companions when they say: 'See what Azrael has done; how he has taught all wickedness on earth, and has revealed the secrets of the world which were prepared in the heavens?' If, then, the ancient philosopher drew his earliest information from such a source, and since Theosophy claims to have inherited all the occult sciences of the Ancient Mysteries, we do not deny their facts, but ascribe their powers to the supernatural enemies of Jehovah, whose personality they indeed deny, degrading the Son at the same time to the level of an ordinary Mahatma. Theosophy as a system is subversive of all our hopes, a cold, inexorable fatalism, which knows no God of Mercy, no Son of His love; but demands that every sin and stain be burnt out of us by ages of pain and trouble, by a succession of hundreds of earth-lives, many of them spent in the most extreme misery. There is little doubt that the culmination of the Mysteries was the worship of Satan himself; and, when the feelings of reverence and godliness still retained by the human race have been sufficiently submerged by the flood of demon influence which is now being poured upon us from the air, the world will be invited to join the league to reject God and His Anointed, and to worship Anti-christ and that old serpent called the Devil and Satan, who will give him his power."

From Theosophy Mr. Pember passes to Buddhism, the doctrines of which he regards as esoterically identical with those of Theosophy. "In both systems he sees Satan's plan of salvation, communicated probably by the Nephilim, and preserved in the esoteric teachings of the Rishis, the Brahmins, and the Buddhists of the East, and in the Mysteries of the West. And the plan is that, without God or Saviour, men must wear away their own sins, and, as soon as they have done so, will become Gods."

THE SOUL AFFAIR.

A CORRESPONDENT of the *Fiji Shimpō*, writing from Sōul, gives some particulars of the recent incident at the house of the Tai-won-kun. At about 9.30 p.m. on June 15th, he writes, a loud explosion was heard in the direction of the Tai-won-kun's residence, and several officials proceeded thither to make inquiries, but being assured by the gate-porter that nothing had happened, they withdrew. Subsequently, however, it transpired that the Prince had given a dinner that evening to several friends, and all the household partook freely of wine. The Tai-won-kun himself, being somewhat fatigued, went to bed at a little after nine, and it is presumed that during the confusion of the guests' departure some one carried in the powder which subsequently exploded. Shortly after the Prince had retired a loud noise was heard in or near his room, and the servants, rushing thither, found that a part of the building had been completely wrecked. Unable at first to see the Prince, they supposed that he had been killed, but presently he emerged unhurt from the ruins, and gave orders that the rest of the house should be searched. Examination revealed that boxes containing about 13 or 14 lbs. of gunpowder each had been placed in the heating flues under the Prince's bed-room, study, and reception-chamber. These rooms practically constitute the Prince's regular dwelling-place, so it is plain that by exploding the three boxes simultaneously, the plotters expected to kill

the Tai-won-kun without fail. The boxes under the bed-room and reception-room did actually explode, but that under the study failed, the fuse having been damped by rain which was falling heavily. The correspondent goes on to say that the Prince at once reported the particulars to the King, but that neither the latter nor the Queen-Dowager took any notice or sent any message of condolence. Various conjectures are said to be current, some laying the attempt to the charge of the Ming Family, whose representatives are now in power, and others being wild enough to accuse the Chinese Resident, Mr. Yuan. The Ming Family, on their side, allege that the thing was a plot designed to injure their reputation. At all events the facts were kept secret for nine days. It was only on the 24th of June that information reached the Chinese Legation, and the Japanese Minister was informed two days later.

FISHING IN JAPAN.

MORE than one angler in Yokohama has been planning an outing which would include a few days' fishing at Sapporo, since the greater part of the journey can be made by rail, but whatever the fishing there might have been like years ago, it is certain now that it is entirely spoiled—for the time at least. Not beyond recovery, though, for the cause is one that can easily be removed; and the day may come when the Authorities will have their eyes opened to the fact that tons of the people's food are being annually destroyed, because certain mill-owners are permitted to foul the river with the refuse from their works, and thus kill the fish. There is probably no more acrid, pungent, and malodorous substance in the world after it has undergone decomposition than the outer skin of the flax plant, which has to be removed to obtain the fibre of commerce, and it is this matter, it appears, that is turned into the river at Sapporo, to the utter destruction of the fish below the works. Mines, mills, and chemical works in England used, in certain places years ago, to destroy all the fish, but this has been put a stop to, and those responsible are now made to carry off the poisonous matter by conduits. In one case, where a beautiful trout stream was utterly depleted by reason of the quantity of mundic turned into it from a mine, the owners were foolish enough to contest the case, but the result was that they had to cut an aqueduct to the sea—some ten miles. This little river, which was full of trout before the mines were opened—expert fly-fishers could always get two or three dozen before breakfast—had not a living thing in it a year after the mundic came down, but rapidly recovered its former condition after being re-stocked with a few fish from another stream; and many similar instances are on record. It would be a very simple matter to divert the mill poison at Sapporo, but it is hardly likely anything will be done until the Authorities interfere. A correspondent, writing from Sapporo, who being a past master with rod and reel and an enthusiastic follower of the gentle craft, dilates in strong terms upon the condition of the river now, compared with what he has known it in years gone by, says:—"Only nine salmon have we taken (two rods); and well I remember the day when fifteen fine fish fell to me, each of which gave from 20 to 40 minutes' hard and exciting work to land." It would almost seem that the Authorities are not aware of the damage being done, because our correspondent says:—"At one point you see the Government spending money on the up-keep of a breeding station, while lower down you see a flax-mill turning out its filthy poison and upsetting the Government's good intentions." The value of this river, from an angler's view, may be gathered from the fact that, beside salmon, it contains a large species of trout. The writer says:—"A big river trout, called 'Ito,' remains, and every now and then causes you to think you have a salmon. I caught one weighing 10 lb., and G. when he was here got one of 16 lb. Tradition says that some of these fish run six and even nine feet long, but these big fellows are always in the other river." Our correspondent, however, like all true disciples of Old Izaak, is something of

a philosopher, for though evidently much disappointed with the fishing, he is moved to admiration by his immediate surroundings, and says:—"The place and the climate are certainly lovely, and to see oaks and elms, daisies and meadows, and orchards of apples and pears, rather than paddy fields and clumps of bamboo, makes up for some of our disappointments." Referring to the river scenery, he says:—"The contemplation of the big rocks, deep pools, and bounding rapids of the river, backed up by grassy glades, with forest-covered mountains for a background, made me wish to become their owner." The fishing of the future in these parts, I think, will have to be done at some of the rivers round Volcano Bay, or between Mororan and Tomakomai. But then it will only be fishing—there will be no meadows or orchards—and on many a rainy day one will have to be shut up on the mats, peeping out between the *amado* and praying for fine weather."

* * *

Viewing the rivers and lakes in Japan for the first time a new comer naturally jumps to the conclusion that the country is a fisherman's paradise. Hundreds of small streams, which in the British Isles would contain a goodly number of trout, here breed nothing but sticklebacks and *dojo*, while in the big rivers of Central and Southern Japan only two species, generally speaking, of salmonidae are found—the *ai* and the *yama-me*, neither of which are often taken with English flies. These fish are caught by Japanese with what may be termed a fly—it is used in a similar manner to an artificial fly, but is really an imitation of the *ari* (ant). These are made at Kyoto, and are tied on white horse hair, which in this climate becomes rotten very quickly, and even when fresh is a ticklish means of landing a fish that weighs more than a few ounces. Then the hooks are made with soft iron without barb, and, if the horse-hair stands, the hook often breaks or the fish slips off while being lifted out of the stream. North of Tokyo, however, there are plenty of the salmon family in both rivers and lakes, but they are generally not sporting fish. There are bridges over the upper Tonegawa, and rivers running into it, where one may stand and see dozens of fine salmon in the pools below; and may tickle their noses with a fly or a spoon without exciting the smallest desire on the part of the fish to become the occupant of the creel. There is the Nakagawa at Mito, where with nets the fishermen annually take hundreds of splendid salmon, but the angler may whip the water all day, trying every fly in his book, without getting a rise, nor can these fish be tempted with either of the many forms of spinning bait now in vogue. The lake at Shimo-no-Suwa contains a large number of silver char marked with rows of brilliant scarlet spots—a strong, handsome, game-looking fish—but no one has ever been known to take one with the fly, and spinning is a dead failure on account of the number of weeds growing in the shallow parts as well as of loose ones floating in the deep water. It is from this lake that the Tenri-gawa flows. In the upper part of this river there are plenty of *sabi-ai*, a beautiful fish, five or six times bigger than its congener of the mountain streams, that rises freely to the Kyoto *ari mushi* above referred to, but will not look at the smallest specimen of black or red palmer, coachman, black gnat, or several other English flies tried on the stream. The Kyoto hook and horse-hair are entirely inadequate for this strong fish, which fights bravely. Spinning in the lakes is dull work, and the quantity of fish killed is generally small compared with the time. Then the great depth of water—you must fish deep—necessitates a lot of lead, which dulls the touch, and by the time the fish is wound up to the surface he is nearly drowned and has very little fight left in him, he is ever so big. The best catch ever made at Chusenji was that by Colonel Hooper, a gentleman on his way home from India, who captured 33 salmon and *masu* in three days, the total weight of which was considerably over 100 lb. Colonel Hooper used nothing but the *dojo*,

spinning, and fished deep and fine. Fish are mostly taken at Chusenji now with a spinner—a combination of feathers and bright metal—which is a modification of an American bait called the "Columbian." Two fish were taken one day this year at Chusenji by the same rod which weighed 15 lb. each. There are thousands of fine fish in Hakone Lake, but no one has yet found a method of hooking them,—flies, spoons, minnows, *dojo*, and other lures all failing to attract. A salmon weighing 19½ lb. was taken there a few weeks ago with a night line, but the theory of the Hakone men is that the big fish, preying upon the thousands of young trout and salmon fry put into the lake, are too well fed to take any notice of artificial baits. There can be little doubt that climate has something to do with the lack of sporting qualities in the fish of Central Japan, and as very little is known of the rivers and lakes of the northern part of the main island, it may yet turn out that good fly fishing is to be found in that region. That the fish are there is certain—both salmon and trout, the latter running very large. But few men can often get away from business for several days together, whereas if a creel of trout could be captured by taking a trip of a couple of hours by rail, there are many men who, though they may not have wetted a line for years, have not forgotten the art of casting, and would gladly leave the haunts of business for a quiet day by a river where the speckled beauties were plentiful. There are good streams within a couple of hours of Yokohama, but the fish are not. Could they not be put there?

* * *

The above question is easily answered. Of all the contrivances of man, there is perhaps nothing so simple as a fish hatchery. A strong stand of timber, a few shallow boxes of rough wood, and two or three piculs of washed sand, gravel, and pebbles, with a bamboo pipe to carry running water, are all that is necessary to hatch out thousands of salmon or trout ova, or the eggs of any other fish. It would be of little use stocking a river with Japanese varieties, seeing that the sporting proclivities of the fish of the country are almost entirely dormant, but spawn properly prepared can be obtained from abroad and at small cost. One of the best fish for the purpose is the rainbow trout of America, a breed that has been turned into many fresh localities and always succeeded well. This fish runs large, rises freely, and fights desperately when hooked—in fact it is acknowledged to be one of the gamest of the game fishes of American waters. A few men formed into a club could carry out a scheme of fish-breeding to stock a river at very little trouble and expense, but it would doubtless be urged that as soon as the Japanese discovered the existence of fine fish in a river they would be captured in nets. There is a river, however, within two hours of Yokohama that could not be netted for a good many miles of its course, even now, and the best and deepest pools could soon be rendered proof against nets of any description, the ordinary casting net of the Japanese being absolutely useless. They might lime the river, but nothing short of a ton to every hundred yards would be effectual, and that game would not be worth the candle. If Japanese were anglers in the same sense that foreigners are, a strong society might be formed and fishing rights be obtained and protected, but the Yokohama Fish-breeding and Angling Association can only now be regarded as an institution of the far-off future.

KYOTO.

THE merchants and manufacturers of Kyoto are evidently resolved to make a resolute effort for celebrating the eleventh centenary of the erection of their city into the capital of Japan. It was in 794 that the Emperor Kwammu chose Uda, a suburb of Kyoto, as the site for his new palace, calling the city Heian-jo, a name that never came into general use. The last Japanese Industrial Exhibition was held in 1890, and as these exhibitions are supposed to be organized once every four years,

1894, or the eleventh centenary of Kyoto's becoming the capital, will be the regular time for the next. The Kyoto folks think that, under the circumstances, the Exhibition should be held in their city, and a number of the merchants and manufacturers have formed themselves into an association called the *Kyoto Shoko-domei-kai*, for the purpose of pushing three objects, first the celebration of the centenary on a fitting scale; secondly, the holding of the Industrial Exhibition in the city, and thirdly, the building of a railway from Kyoto to Maizuru, which latter place is said to possess the best harbour on the west coast of Japan, and was chosen as the site of a new naval depot two years ago. The *Shoko-domei-kai* has organized itself after the usual fashion, with committees and so forth, and with all the necessary rules as to meetings, expenses, &c. Its members are manifestly in earnest, but we doubt whether it will be possible, or whether indeed it would be advisable, to hold an industrial exhibition in 1894, the year after the World's Fair at Chicago.

THE EFFECTS OF THE OPENING OF THE SIBERIAN RAILWAY ON CHINA AND JAPAN.

A CORRESPONDENT of the *Yiji Shimpu*, a resident of Vladivostok, in a letter on the above subject, contends that neither China nor Japan will benefit commercially by the opening of the new route to Europe, the reason being that no time will be saved by sending goods by this line. The following are the figures given by this correspondent:—The distance from Vladivostok to St. Petersburg is 6,500 miles, and the distance from Vancouver to Montreal, 3,050 miles, which occupies 7 days and 7 nights. Allowing for the slow rate at which Russian trains travel and the bad state of some parts of the track, the journey from Vladivostok to St. Petersburg will take 20 days. Further, allowing 3 days for travelling from Tokyo to Vladivostok and 4 days for the journey from St. Petersburg to London, the whole trip, even supposing there are no delays, would occupy 27 days. But the ships now running between Japan and Canada can do their 500 miles a day and the Russian railway is not likely to exceed 400 miles; hence it is not to be anticipated that traffic will be diverted from the Canadian route by the opening of the Siberian line. Moreover, in another few years the Nicaraguan canal will be open, which will render Eastern ships still more independent of the Siberian route. It has also to be borne in mind that under the pressure of competition there is every prospect of the voyage to Europe, via the Suez Canal, being shortened by 10 (ten) days or even more. In that case the choice will be between the two sea routes. The risk of delay and damage to goods on the Russian lines has also to be taken into consideration. According to the *Yiji's* correspondent, the benefits to be derived from the new line will be such as Russia only will feel. It will enable her to transport men and arms to the East with a rapidity hitherto unattained. This and not the development of foreign commerce is, according to this writer, Russia's chief object in pushing on the completion of the line.

TRAVELS IN CHINA.

We take this from the *Hongkong Daily Press*:—

M. Paul Boell, correspondent in China of *Le Temps*, has just completed a notable journey. He started last year from Shanghai for Chungking, and travelled from thence, alone except for his Chinese servant, through Szechuen and Kweichow to Kweiyang. From Kweiyang he proceeded to Yunnan, and from Yunnan to Minghao, ultimately reaching Mengtsu, whence he entered Tonkin and travelled south to Haiphong, at which point his journey terminated. M. Boell, who travelled in Chinese costume, was never molested during the whole course of his travels, but found the populace in Szechuen very strongly anti-foreign and much excited over the demonstrations that had been got up against the missionaries in the cities along the Yangtze. In Kweichow and Yunnan he found the peasantry very friendly and well disposed, and the mandarins in the latter province especially treated him with great courtesy and consideration. He declares Szechuen to be a great and rich province with which a vast trade might be developed, the people being more cultivated and better off than those of most of the other provinces. Yunnan M. Boell considers to be extraordinarily fruitful in minerals. The copper mines are simply wonderful, fabulously rich

and most easily worked. There are also productive coal mines and gold, silver, and tin mines. In the hands of a Western Power, Yunnan would soon be a great centre of activity and population instead of, as at present, having great stretches of country untitled and unpopulated. When on his way up the Yangtze last year to Chungking, M. Boell stopped for a short time at Hankow and visited the Viceroy's (Chang Chih-tung's) ironworks at Hanyang, which he says were then far advanced towards completion. The iron ore with which the works will be supplied comes from a mines about thirty miles distant now being connected with Hanyang by a light railway. M. Boell is of opinion that the ore is good, and ought to make good railway iron. He also visited the extensive Cotton Spinning Mills established by the Viceroy at Wuchang. After arrival at Haiphong the traveller made a tour through Tonkin and Annam, visiting Hue, which he describes as curious and interesting but squalid for even an Oriental capital, all the city outside the royal and official precincts being very mean and poverty-stricken. He is very favourably impressed with the prospects of Tonkin, which only wants capital to develop it into a highly prosperous country. He paid a visit to the Hongay Mines and was much astonished and pleased with what he saw there. The vastness of the coal deposits and the extensive works undertaken show with what faith and enterprise the mines are being exploited. M. Boell, who arrived here on the 22nd inst. from Haiphong, will after a short stay here and in Canton, go north to again visit Peking.

ENTERTAINMENT.

THE "Snowflake Minstrel" troupe of H.M.S. *Pallas* provided a very diverting entertainment at the Public Hall, Bluff, on Monday evening, which seemed greatly to delight the large audience which assembled. The whole affair went with a nautical swing from start to finish, but the second half of the programme was slightly more popular than the preceding, though the character song: "I'm not its father," might with advantage have been left out or substituted by another,—what suits a smoking concert to a nicely may not always prove acceptable at a public gathering where ladies constitute a portion of the assembly. Lieut. Allenby received a long and enthusiastic recall for his character song "A coster," and in response he gave the plaintive jingle, which has for chorus the touching words:—

Teacher, teacher,
Why am I so 'appy, 'appy, 'appy,
In my Sunday school?

The pathetic reference to the weekly and yearly putting by of "dollars and tin" for the conversion of the "little heathen," somehow or other striking a responsive chord in the breasts of most of those present—if one might venture to judge by the amount of applause which greeted the line. The pharmaceutical stump speech of A. Shaw was rather funny too, but the "patter" of the corner men needed a little more galvanizing into modern life. Programme:—

1ST PART.
OPENING CHORUS.
Coloured Girl..... W. Lloyd.
When you and I were Young, Maggie..... E. Wall.
The Brook Side..... J. Merritt.
The Fisherman and his Child..... H. Spencely.
Sentimental Bonnie o'er the Ocean..... E. Larcome.
Some Day I'll wander back again..... H. Stevens.
When I took our Nance to Church..... D. Murphy.
Funny Little Nigger..... A. Shaw.
2ND PART.
Stump Speech..... A. Shaw.
Character Song—A Coster..... Lieutenant Allenby, R.N.
Character Song—'I'm not its Father..... H. Spencely.
Step Dance..... W. Lloyd.
Powder Monkey Jim..... E. Wall.
Mr. G. H. Hawkins, R.N., Master of Ceremonies.
God Save the Queen.

GRADUATION CEREMONY AT THE IMPERIAL UNIVERSITY.

THE Graduation Ceremony took place at the Imperial University on Sunday, the 10th instant at 9 a.m. We are unable to say why Sunday should have been chosen for such a purpose, for although no character of sacredness attaches, or can be expected to attach, to the day in Japanese eyes, it is nevertheless the recognised holiday at all educational institutions, and one is puzzled to understand why the precedent should be set of holding the graduation ceremony on a day of rest. However, there were doubtless strong reasons for this unusual departure. His Imperial Highness the Prince Imperial was present, but the number of visitors was not large, probably owing to the great heat. Short addresses were delivered by the President of the University and the Minister of State for Education, and one of the graduates replied with cor-

responding briefness. The following list shows the number of graduates in each College; the names we publish elsewhere:—

COLLEGE OF LAW.
General Law and Jurisprudence—1st Department 26; 2nd Department 25; 3rd Department 10. Total, 61.
Political Science 9.
COLLEGE OF MEDICINE.
Medicine 31, and Pharmacy 2. Total, 33.
COLLEGE OF ENGINEERING.
Civil Engineering, 7; Mechanical Engineering, 1; Naval Architecture, 1; Naval Engineering, 1; Electrical Engineering, 4; Architecture, 5; Applied Chemistry, 1; Mining and Metallurgy, 5. Total, 25.
COLLEGE OF LITERATURE.
Philosophy, 2; Japanese Language and Literature, 1; History, 1. Total, 4.
COLLEGE OF SCIENCE.
Mathematics, 1; Astronomy, 1; Physics, 2; Chemistry, 1; Zoology, 1; Botany, 1; Geology, 1. Total, 9.
COLLEGE OF AGRICULTURE.
Agriculture, 23; Forestry, 26; Veterinary Medicine, 11. Total, 60.
Grand Total, 201.

OSAKA.

A CORRESPONDENT writes:—"There is very little stirring at present in this city, most of the foreigners having left for the cool retreats in the hills. Those remaining find it exceedingly warm. Sequah, the great healer, has appeared in the streets, and seems to attract as much attention here as in Kobe. A kind of revival has been organised by some religious body, and a procession is met in the highways bearing red-cross lanterns, and frequent halts are made at convenient places for singing and preaching. The foreigners remaining in the Settlement on the 4th of July, who were interested in the observation of that day, organized a picnic to the sea side (Suma), and spent a very pleasant day there. The Congregational Annual Meeting is now in session at Kobe, and the annual meeting of the Methodists will open on the 20th instant. Bishop Key is expected on the next Canadian steamer, which may perhaps arrive at Yokohama before these notes reach the Mail.

TEA IN KOBE.

SINCE the commencement of the tea season until the beginning of June, says the *Choya Shimbun*, the inferior grades of tea, sent from Shikoku and Kiushiu to Kobe found no purchasers, and even the best kind fell to the low figure of 9 yen per picul. But from the middle of June a gradual rise of price took place. Tea for which only 9 yen could be obtained at the end of May, fetched over 12 yen in June, and the best grades of Yamato and Yamashiro, which were quoted last year at about 17 yen, now sell for 23 yen per picul. Again, Chikugo leaf which, at the end of May, could be had for 11.50 to 12 yen per picul, has risen to 14 or 14.50 yen. In fact, the state of the tea market this year is contrary to all expectation. Such prices have not been seen for 13 years. Moreover, a report dated the 1st instant says that the supply at Kobe does not exceed 4,000 catties, and that, in view of this small quantity, there is no reason to expect a fall in price.

THE DERBY.

OUR telegram giving the result of the Derby stated that the odds against Sir Hugo, the winner, were 40 to 1. This of course would be at the post. The following list shows that the Duke of Bradford's colt was at 50 to 1 in town on the morning of the race:—

6 to 4 agst. La Fliche (t & o)	30 to 1 agst. St. Angelo (t & o)
8 to 1 — Bonavista (t & o)	35 to 1 — Persimmon (t & o)
10 to 1 — Ruell's	50 to 1 — Hatfield (t)
100 to 1 — St. Damien (t & o)	50 to 1 — Sir Hugo (t)
12 to 1 — Thessalon (t & o)	60 to 1 — Gallopas (t & o)
150 to 1 — Lanthorn (t & o)	60 to 1 — Lucanature (t & o)
150 to 1 — El Diablo (t & o)	500 to 1 — Rust (o)

Referring to the time, the Special Commissioner of the *Sportsman* says:—"The official time for the Derby is given as 2min. 44sec., but I am confident that I erred, if at all, in making the time too long, as I started the watch a trifle too quickly. The watch in question had been recently tested, and I shall always believe that Sir Hugo won the Derby in 2min. 42½sec., or even less time." If Sir Hugo won the Derby in 2.42½, he is the first horse that ever did so, at least since the

official time was first taken in 1846. There is nothing on the record lower than 2.43, this being the time of Kettle drum in 1861, Blair Athol in 1864, Merry Hampton in 1887, and Ayrshire in 1888. Blue Gown (1868) did it in 2.43½, and Kisber (1876) in 2.44, the time officially returned for Sir Hugo. There are light courses and heavy courses, but a general view of Derby time during the forty odd years it has been officially taken shows that it is gradually being reduced.

A SILLY PERSON.

A CERTAIN Mr. Arthur H. Smith has published a volume containing forty essays bearing upon the characteristics of the Chinese race. We have not seen the volume. Our notion is that Mr. Smith will endeavour to limit its circulation to remote districts of Europe, for if it comes out here where the Chinese are known, he will be laughed at as heartily as he deserves. His silly facetiæ cannot even aspire to be caricatures of the people whom he so grossly misrepresents. The man is evidently an ignorant prig who does not hesitate to base monstrously ridiculous generalizations on his own equally monstrous ignorance. We take from a London journal the following reference to his volume:—

John Chinaman is the most credulous of mortals, as Mr. Smith shows us by one or two examples:—

It is by no means uncommon to meet with scholars whose talent, gauged by competitive examination, has been adjudged to be "flourishing," inquire in all sincerity if in your honourable country there is also a sun and a moon. We have seen a popular audience gathered by the roadside to gaze at the foreigners, entirely satisfied with the information that in Western lands the plants are the same as in China, except that they have the peculiarity of always growing with the roots in the air and the fruits in the soil. The announcement attracted no more interest than statistics as to the depth of the sea or the distances of Venus. When the British troops occupied North China, the Chinese soldiers for the first time saw foreign ladies mounted on the backs of ponies. The singular appearance gave rise to the tale—doubtless implicitly believed to this day—that there is a variety of Occidental women with but one leg! A country woman expressed the opinion that the remarkable whiteness of foreign children is due to the practice of their mothers of licking them every day, as cats do their kittens! Foreign newspapers, containing cartoons intended to be humorous, are very ill-adapted to circulation in China. An intelligent Mahomedan inquired of a foreign physician in China as to people with wings who live in trees. On investigation, it turned out that his ideas were based upon pictures which he had seen on a match-box!

In the readiness with which he misunderstands the most simple statements the Chinaman is without a rival. Mr. Smith gives some entertaining instances, of which the following is one:—

It is often very difficult for an ordinary Chinese mind—as a current American colloquialism apparently derived from the use of horse-cats phrases it—to "catch on." A foreigner who was spending a short time in the capital met a drove of camels, among which was a baby camel. Turning to the driver of the cart, who had been for many years in the employ of foreigners, he said, "When you come back to the house, tell my little boy to come out and look at this little camel as he has never seen one, and it will amuse him very much." After a considerable lapse of time, during which the idea was undergoing slow fermentation, the carter replied thoughtfully, "If you should buy the camel, you could not raise it—it would be sure to die!"

His ideas, too, move very slowly. Neither his body nor his brain is ever in a hurry, and nothing surprises him so much as an idea:—

His mind is like a rusty old smooth-bore cannon, mounted on an old decrepit carriage, which requires much hauling about before it can be pointed at anything, and then it is sure to miss fire. Thus when a person is asked a simple question, such as, "How old are you?" he gazes vacantly at the questioner and answers in return, "I?" To which you respond, "Yes, you." To this he replies with a summoning up of his mental energies for the shock. "How old?" "Yes, how old?" Once more adjusting the focus, he inquires, "How old am I?" "Yes," you say, "how old are you?" "Fifty-eight," he replies, with accuracy of aim, his piece being now in working order. In like manner, if any one knocks on the gate at night, and the keeper inquires, "Who is it?" the invariable reply will be, "I," regardless of the fact that no "I" can pierce a closed door.

You must not ask too many questions in China. If you do you will only make yourself miserable:—

A prominent example of intellectual turbidity is the prevalent habit of announcing as a reason for a fact the fact itself. "Why do you not put salt into bread-cakes?" you ask of a Chinese cook. "We do not put salt into bread-cakes," is the explanation. "How is it that with so much and such beautiful ice in your city,

none of it is stored up for winter?" "No, we do not store up ice for winter in our city." If the Latin poet who observed, "Happy is he who is able to know the reasons of things," had lived in China, he might have modified his poetry so as to read, "Unhappy is the man who essays to find out the reasons of things."

The Chinaman, as everybody knows, has no nerves—happy child of nature that he is!—and he seems rather to enjoy visitations which would polish off the outer barbarian with punctuality and despatch. Says Mr. Smith:—

It is not alone when he sleeps that an Occidental requires quiet, but most of all when he is sick. Then, if never before, he demands freedom from the annoyance of needless noises. Friends, nurses, physicians, all conspire to ensure this necessary condition for recovery. And if recovery is beyond hope, then more than ever is the sufferer allowed to be in as great peace as circumstances admit. Nothing in the habits of the Chinese presents a greater contrast to those of Westerners than the behaviour of the Chinese to one another in cases of sickness. The notification of the event is a signal for all varieties of raids upon the patient, from every quarter, in numbers proportioned to the gravity of the disease. Quiet is not for a moment to be thought of, and, strange to say, no one appears to desire it. The bustle attendant upon the arrival and departure of so many guests, the work of entertaining them, the wailings of those who fear that a death is soon to take place, and especially the pandemonium made by priests, priestesses, and others, to drive away the malignant spirit, constitute an environment from which death would be to most Europeans a happy escape.

STRANGE SOCIETIES.

SOME of the modes of getting rid of ennui devised by the Japanese are quaint. Not long ago there existed a society called the *Shojo Kai*, or the Orang-outang Society,* the members of which were all required to have gained a reputation for consuming large quantities of *saki*. The powers of candidates for admission to the ranks of these wine-bibbers were tested, to see whether they came up to the required standard. The President, Vice-President, and officers of the society were all chosen according to capacity shown at drinking bouts periodically held. A few months ago, we read of a Small-pox Society, which at first we took to be a Society for the prevention or cure of small-pox, but which we afterwards discovered to be a body that undertook to award prizes to those that were more deeply marked with small-pox than any other persons who had suffered from the disease. We now read in the *Hochi Shimbun* that a Society exists called the *Shorin-kai*, which meets for the purpose of pronouncing opinions on the personal attractions of the members' mistresses, the latter being required to attend the meeting.

* The orang-outang is supposed to be able to consume a large quantity of *saki*. The term is also applied to a wine-loving insect.

THE MAXIM AUTOMATIC GUN.

The *Times* contains the following notice of the remarkable performance of the Maxim Automatic Gun, showing that a weapon of extraordinary utility has come into the service:—

In the course of the recent Easter manoeuvres by order of Colonel J. D. C. Farrell, commanding the battalion, a portion of the cyclist section of the 3d Volunteer Battalion of the Royal West Kent Regiment, with a 450 Maxim automatic gun, marched from Woolwich Arsenal to Cowshot Camp, Brookwood. The gun was drawn on its own carriage by two cyclists mounted on two 14-lb. military safety cycles linked together. No change was made in the gun detachment, the same two men working the traction cycles the whole way. Five cyclists, under the command of Captain J. J. Murphy, formed an escort for the gun. The party started from Woolwich at 9 a.m. on April 14, and marched, via Croydon, Epsom, Cobham, and Brookwood, to Cowshot Camp, arriving at 6 p.m. Five halts were made, amounting in the aggregate to two hours. The distance covered was 45 miles, at an average rate of 6½ miles per hour. The roads were heavy from the recent rains.

On the Saturday and Monday following some preliminary firing with the gun at an ordinary target was gone through, the gun being dragged by one man only over 1½ mile of the roughest ground on the National Rifle Association's ranges. On Monday afternoon experiments in indirect firing, which were very satisfactory, were made under the direction of Captain V. B. Fanshawe, Adjutant of the battalion. A position was taken up in a hollow, like a small crater, on some high ground. The gun, completely hidden from view from the front, and partially so from both flanks, was then placed in such a manner that when laid on the supposed hostile position the trajectory just cleared the intervening high ground.

The proper direction was obtained by laying the gun on a point dressed in the required direction. The effect of the fire was reported by officers on the look out on both flanks. At a distance of over 1,200 yards all the shots fell on the hostile position, striking the screens and the ground on which they were placed. The effect of the fire was distinctly visible to the look-outs in consequence of the sand thrown up. The fire was by single shots and rapid firing. In the latter case bullets at the rate of 650 per minute were

discharged, and caused a cloud of sand and dust to rise over the front of the butts. The gun and its detachment were so completely hidden in the hollow ground that the markers were unable to discover, by smoke or otherwise, whence the fire was coming. The whole of the ground in front and flank of the gun was invisible to the firer beyond about 60 yards.

These results were the more remarkable, because they were obtained and the position fixed upon on the spur of the moment without any previous careful survey or measurement of the ground having been made. The exact position was determined readily, owing to the peculiar construction of the gun, which rendered that operation somewhat simple.

Since the experiment was carried out, the ground over which the gun fired has been surveyed and a section drawn by Mr. Kentish Moore, A.M.I.C.E., of Victoria-street, Westminster. On page 3 of his report he says:—"It will be seen that the gun was firing at 1,100 yards range (1204 yards exactly); that the gun lay in a hollow; that in front of the gun was a rise in the ground over which the gun fired. Assuming 13 in. to be the height above the ground of the gun muzzle, then the latter stood 8½ ft. below the ridge and 17 ft. from it." He also says:—"It is impossible to see the gunners at a less height than 70 ft. vertically above the butts."

Thus the gun and gunners are absolutely screened (by the ridge fired over) from observation at the butts. In front, from 45 deg. to the right to about 70 deg. on the left of the line of fire, the position is (throughout this angle) invisible."

AN ACTION FOR LIBEL.

PEOPLE who bring actions for libel must consider beforehand whether their own utterances may not be recalled to their disadvantage in the witness-box. Mr. Michael Davitt is a case in point. He recently brought an action against the *Evening Herald*, claiming £1,000 damages for an alleged libel, but when examined by Mr. MacLaughlin, Q.C., whom he requested not to bully him, he admitted that he had called the Lord Mayor of Dublin a "blathering idiot," and Lord Mayor Kennedy a "right honourable cur." He also accepted the responsibility of saying of Mr. Parnell that "his honour was a by-word, his mendacity boundless, and his infamy measureless," and he maintained that all this was "politically true." Despite these evidences of Mr. Davitt's love of free speech, the Jury awarded him £20 damages, or one-fiftieth part of his demand, against the *Evening Herald*.

FOREIGN POACHERS AND SMOUGGLERS.

INTELLIGENCE having been lately received to the effect that foreign vessels were trespassing off the Kii and Rikuzen coasts, a Japanese man-of-war was sent out to search for them, but it has returned without discovering any trace of the offenders. It is now reported that clandestine proceedings of a similar character are being carried on at places which are designedly left unindicated by the press. Under the pretence of obtaining wood and water, vessels land parties and undertake transactions of buying and selling with the people of the locality, the objects of traffic being whale's flesh and otter's skins. Further, under plea of sickness, the men stop in the villagers' houses, and indulge in various immorality, sometimes absconding without paying their scores. With respect to all this we find the usual formula recorded, namely, "the authorities are adopting strict measures to check the abuse," and doubtless the usual abortive result will soon be announced. It seems strange that if such practices are really resorted to, the local police cannot lay hand on the offenders. If any of the foreign residents attempts to travel beyond Treaty Limits without a passport he is soon apprehended, but, according to the above report, men from foreign ships find no difficulty in evading the law.

FOREIGNERS IN THE UNITED STATES.

THE *Spectator* writes:—"A vague idea is current everywhere that the proportion of foreigners in the United States is very large, but few people are aware of the precise figures. The Census Bureau has now reported that in the great block of populous territory covered by New York, New Jersey, and Pennsylvania, containing 12,700,800 people, 2,724,000, or more than one person in five are foreign-born, and a third of them cannot speak English. This, moreover, does not represent the whole truth, for in New York State only 42 per cent. of the whole population are native whites; in New Jersey, only 48½ per cent.; and in Pennsylvania, only 61½ per cent. This is as if in the United Kingdom we had six millions of foreigners, and twenty millions who were born of foreign parents. We

should find it difficult to assimilate such numbers, more particularly if the number of native-born children to each pair were sinking, as it is in the Union. Throughout the Union, the number of persons per family has declined steadily from 5.55 in 1850, to 4.93 in 1890, and this in spite of an increase among the Negroes of the South. In one typical State, Maine, the average has declined from 5.64 in 1850, to 4.40 in 1890. These figures will greatly intensify the growing desire in the Union to check white immigration, and it will ultimately become as intense as the desire to prohibit the arrival of Chinese."

"A POISON-SELLING FOREIGNER."

UNDER the above title "Sequah" gets a very bad send-off from the *Kokkai* and the *Fomiori Shimbun*. Both papers write as follows:—"An American drug-seller, by name Sequah, came recently to this country and disposed of a quantity of medicine at Nagasaki. The striking character of his advertisements, and the singularly rapid effects produced by his treatment brought him in great sums daily, and it is expected that he will soon arrive in Yokohama. He employs drugs of great strength, as morphine for the treatment of rheumatism, toothache and so forth, and is successful for a time. But the benefit is short-lived. Not only does the malady return soon, but the constitution of the patient is greatly injured. It is said that the authorities are watching the matter closely."

We wonder where our two contemporaries obtained this information. Sequah had not previously been written of in such terms, and some of the stories told to us by eye-witnesses of his proceedings indicate that the relief afforded by his methods is in many cases very remarkable. But of course a peripatetic Galen, who sets at naught all the traditions of orthodox practitioners, must expect to be severely criticized.

DISSECTED BODIES.

We read in the *Hochi Shimbun* that the medical faculty attached to the Imperial University is most scrupulous as to the method of treating the bodies which have been used for teaching anatomy. The parts which have been dissected are carefully joined and the bodies when buried are located in groups of 100 or 1,000. Over every 100 bodies a short service is held. When the graves have reached a thousand a more elaborate ceremony takes place, which is attended by the professors and students of the University. One of these ceremonies, will, it is stated, be held in September next. This method of dealing with the dead, though well according with the usual punctiliousness of the Japanese in such matters, is no doubt an essential condition of obtaining bodies for dissection in Japan. Medical students have so largely increased of late years that the corpses of unknown and unclaimed persons must be altogether inadequate to meet the growing demand for dissecting material.

ADVERTISING LOTTERY TICKETS IN JAPANESE PAPERS.

A CORRESPONDENT of the *Yiji Shimpō* asserts that foreign lottery tickets are offered for sale to Japanese by Mr. Hess, of Tsukiji, Tokyo, and adds that these tickets are advertised in Japanese newspapers. The writer questions the legality of such proceedings, and contends that since the law does not allow Japanese subjects to gamble, it certainly does not sanction the publication of information inciting them to take part in the gambling transactions of foreigners. The correspondent seems to overlook the fact that in a recent law case, relating to this subject, it was decided that the purchase of foreign lottery tickets by a Japanese was not illegal. Such being the case, we fail to see what illegality there can be in a Japanese paper informing the Japanese public where such tickets are to be had.

COMMENCEMENT.

THE Commencement Exercises at the Tokyo Jo-gakwan went off very successfully on the 9th

instant. The school recently passed under the control, as foreign instructress, of Miss Ranken, a considerable change in its courses and general system being made at the same time. Saturday's exercises were the first under the new régime. There was a good attendance of visitors, and the children showed gratifying proficiency in their parts. Bishop Bickersteth gave an address at the conclusion, and said, among other things, that he had been much struck by the good accent of the Japanese pupils in pronouncing English, a statement that must have proved very satisfactory to teachers and scholars alike. The following is the programme:—

PROGRAMME.

Japanese Song (Kimigayo).	Vi Hijikata.
Address by	Mr. Tomita.
Answer by	Mr. Kanda.
Diplomas.	Class.
Address by	Miss Goto.
Song "Swinging"	Miss Goto.
Recitation "A through the Land" (Tennyson)	Miss Goto.
Japanese Composition	Miss Goto.
Piano solo	Miss Iwakura.
Recitation	Miss Iwakura.
Japanese Composition	Miss Iwakura.
Duet	Miss Iwakura and Miss James.
Song "Summer"	Miss Iwakura.
Recitation	Miss Iwakura.
Japanese Composition	Miss Iwakura.
Piano solo	Miss Iwakura.
Recitation	Miss Iwakura.
Japanese Composition	Miss Iwakura.
Song "Ever joyous"	Miss Iwakura.
Recitation	Miss Iwakura.
Japanese Composition	Miss Iwakura.
Duet	Miss Iwakura and Miss Iwakura.
Reading	Miss Iwakura.
Japanese Reading	Miss Iwakura.
Song "My pretty maid"	Miss Iwakura and Class.

THE TOKYO ACADEMY OF MUSIC.

THE Commencement Exercises of the Tokyo Academy of Music took place on the 9th instant, at 3 p.m. It was an excellent performance. Marked improvement is discernible in the singing and playing of the pupils of the Academy, and it is evident that success, for some time doubtful, is about to attend the efforts to introduce Western music into Japan. The following is the programme:—

PROGRAMME.

1. Satsumagata (Cape-life)
2. Sonata for Violin with Piano. Words by M. Torii.
3. Serenade for Piano
4. Chorus with Piano, Entitled mit mir
5. Takro no Tsuki
6. Mensshidori (Zigennerlied)
7. Koto with Violin. Shiki no Tomo.
8. Address by Dr. H. Murakami, Director of the Academy.
9. Delivery of the Diplomas.
10. Address by His Excellency Count Oki, Minister of State for Education.
11. Farewell Address by Miss Tachibana, the Representative of the Graduates.
12. Chorus: Kokubetsu (Parewell)
13. Address by Professor K. Suyematsu.
14. Violin-Concerto I. and II. Parts
15. Koto-Music: Yochigishiki
16. Koto—Misses Koda, Asso, Harada, Uchida, Uyehara, and Mr. Yamase.
17. Kokyu—Mr. Yamamuro.
18. Piano for 6 hands: a. March from the "Ruins of Athens"
19. Wedding March
20. Miss Tachibana, Miss Nakamura, Graduates, Miss Asso.
21. Violins: Japanese popular Songs, Harmonized and arranged by R. Dittich.
22. a. Jizaki Uta (Workmen Song).
23. b. Ryu Kyo-Bushi (Dance Song).
24. c. Medeta (Wedding Song).
25. Three-part female Chorus with Piano.
26. Sotsugyoshiki no Uta (Tandied)
27. Words by A. Nakamura.

THE INNAI MINE.

LATER accounts show that the catastrophe at the Innai silver mine in Akita Prefecture was not of such a serious character as the first telegram announced. It is now stated that the trouble arose from a flood in the Ginzan River, not from an irruption of water into one of the shafts of the mine. The Ginzan river flows through Ginzan-machi, a little town at the mouth of the mine. On the 4th instant at 5 a.m. rain began to descend in torrents, and four hours later the river was in a state of boiling flood, its waters inundating the houses of the miners and flowing into the mine. Lumps of ore weighing over a hundred pounds, mining tools and all kinds of debris were carried away by the raging current, and nine of the miners—not over sixty as originally stated—are supposed to have lost their lives, their whereabouts not having been yet discovered. From the extreme suddenness and great

volume of the flood in the river—a phenomenon evidently not ascribable to the rain which fell at Ginzan-machi—it would seem that a water-spout must have burst in the mountains near the source of the river. At all events the calamity, whether in respect of loss of life or injury to the mine, is not by any means as severe as was at first imagined.

PASSPORTS FOR TRAVEL ABROAD.

We read in the vernacular press that the number of passports granted by the Foreign Office to Japanese subjects, during the first six months of the present year, for travel abroad, was 690, the applicants being divided as follow:—For America, 182 (including 4 women); for England, 14 (including 3 women); for France, 186; for Germany, 17 (including 2 women); for Russia, 32 (including 5 women); for Belgium, 1; for Holland, 1; for China, 11 (including 1 woman); for Hawaii, 37 (including 1 woman); for Austria, 1; for Siam, 1; for Korea, 76 (including 22 women); for Hongkong, 3; for Canada, 2; for Bangkok, 33; for Mexico, 1; for the South seas, 3; for the Philippines, 5 (including 1 woman); and for the rest of the world, 13. In addition to the above, passports were granted by the Local Authorities, during the first three months of the year, to the number of 2,477, among the applicants being 235 women.

SUICIDE OF A NAVAL OFFICER.

A SAD affair occurred on board H.M.'s surveying ship *Penguin* yesterday morning at about 7.30 o'clock, says the *N.-C. Daily News* of the 4th inst., when Lieutenant Arthur G. Cawston shot himself while in his bunk in his cabin, and died almost immediately. He had shown symptoms of a disturbed mind for some little time past, but nobody thought much of it. He was an excellent and very able officer, and a genial companion, and was very much liked on board his ship. He had been with Captain Moore in the *Rambler* which preceded the *Penguin* on surveying duty. At the Naval Court of Enquiry which was held yesterday morning, the finding was that the deceased had shot himself while in a state of temporary insanity. He was accorded a funeral with naval honours, and the procession started from the Foochow Road jetty at 6.30 p.m. It included a firing party of 100 men, under the command of Lieutenant Talbot of the *Caroline*, some 30 other seamen and marines, and about 50 officers from the men-of-war of various nations in harbour. Mr. Hodges conducted the service at the cemetery.

MAJOR FUKUSHIMA'S HORSE.

SOME little time ago an announcement in a French paper stated that Major Fukushima's horse had died at Moscow. The report was contradicted in Japan, but news has now been received to the effect that the horse's legs were strained by the journey over the partly melted snow between St. Petersburg and Moscow, and that at the latter place inflammation settled in the hoofs, and the animal had to be rested and treated for 12 days. After this the Major made a start, but he had not gone far before the complaint of the animal returned, and he was obliged to go back to Moscow and purchase another horse. Hence the horse spoken of as being well in the communication which we published a few days ago, was evidently the Russian horse purchased at Moscow. Whether the English horse is dead or alive is not known. The latest intelligence received announces that Major Fukushima reached Perm on June 26th.

CLERICAL STAGE-ACTORS.

THIS is in many respects a land of surprises. We have had *soshi* actors, and now, according to the *Hochi Shimbun*, we are to have reverend priests figuring on the stage. A priest called Tanaka, belonging to the Shingon Sect, has announced that from the 31st prox. a series of stage performances, designed to illustrate the chief events in the life of the patron saint of the Sect, Kobodaishi, will be given at the Fukurokuza, Akasaka. Some 20 priests will take part in the play. The *Hochi* praises the ingenuity of the scheme. It will no doubt result in filling

the coffers of its promoters, as the novelty of the proceedings will attract crowds. As to the propriety of the new departure, the Japanese religious devotee holds very different views from most Westerners: though it is a question whether some of the ceremonies performed by the Greek Church, for instance, differ essentially from other forms of theatrical representation.

THE FRENCH NATIONAL FETE.

THE tricolour of *la belle France* fluttered bravely in the hot midsummer breezes on Thursday, being flown from nearly every flag-staff and bamboo pole in the Settlement and Bluff, while the private residences and business premises of French citizens broke out in gorgeous array with bunting, evergreens, and lanterns, arranged in pleasing devices in honour of the ever memorable "14 Juillet." The French cruiser *Lion*, at present in port, saluted at noonday, and was answered right loyally by the German flagship *Liesic*, which had arrived a few hours previously. During the day the French Consulate was the centre of entertainment to its nationals, but as evening drew on the old French camp on Yato-zaka became the general rendezvous, the French community having issued invitations to all other residents in the port to a *fête champêtre*, which, needless to say, were greatly availed of. Most of the Consuls in residence were present and took a lively interest in the gathering. The spacious grounds of the old camp were brilliantly lighted up by thousands of blue, white, and red lanterns. In the centre was pitched a dancing floor, under a canopy hung round with the flags of all nations, and many couples disported themselves thereon, during the course of the evening, to the strains of the Tokyo City band, under the leadership of Signor Rossetti. Refreshments were served on the ground by Mons. Maraur of the Oriental Hotel. In the harbour the French mail steamer *Natal* (Messageries Maritimes) was festooned with strings of lanterns of the three national colours, while the *Lion* hung out lanterns all along her hammock-nettings. The Grand Hotel was generously lighted up with the same graceful form of illumination, as were also the French Consulate on the Bluff, Messrs. Bing, Adé and Campredon, Merians, Oppenheimer, and most other French houses in the Settlement. The private residence of the last named, on the Bund, presented an exceptionally pretty appearance in the manner of its ornamentation. In addition to the display of fireworks at the *fête champêtre*, a plentiful supply was discharged at private houses and grounds during the whole evening, causing immense fun for the crowds of Japanese, who had dutifully turned out to see the "French no Matsuri."

THE NEW CALEDONIAN JAPANESE EMIGRANTS.

By intelligence received from New Caledonia it appears that there was no foundation for the recent reports of ill-treatment of Japanese coolies, but that *beri-beri* had broken out among them. There were some 350 Japanese suffering from this disease. Mention is made of the kindness with which the *kakke* patients were treated in the hospital, some 600 *latami* having been specially ordered from Japan for use in the wards. It is stated that the coolies in New Caledonia are treated with greater consideration than is shown to those in Hawaii. The outbreak of *kakke* is attributed to the high temperature and change of climate, and it is anticipated that in two months or so the new settlers will be acclimatized and recover. The men sent to New Caledonia are said to be older than is desirable in the case of emigrants to southern climes.

MUSIC.

We commend Mr. R. P. Rider's description of music to the educators of this country:—

Music is an independent, intricate, competent, and universal language. It has its grammar, laws of phrasing, forming clauses, and rounding periods; it has its rules of position, agreement, government, and progression; its principles controlling climaxes, repetitions, and other rhetorical figures; nor is it wanting in idiom, as we shall realize when we compare Oriental and Western systems, ancient and modern, or note the peculiarities of the different Western schools. It has also its mannerisms or provincialisms, so that a

tyro may readily know whether he is listening to a Scotch, an Irish, an Italian, or a German melody. As an organized and veritable language it manifests its strength in its ability to express thought, portray feeling, and arouse emotion. In all these it is the superior of verbal utterance. The eagle of intellectuality, it soars into those regions of exalted thought which verbal formula cannot penetrate; and where logic would droop on weary wing, it beats the pulseless ether of abstract thought, with confident buoyant pinion.

Added to this potent comprehensiveness as a language, music, in its physical feature, involves mathematical relations and complexities; the acoustic principles of resonance, vibrations, and concords; the subtler influences of overtones and interferences. In the mechanical appliances, by means of which its multi-form relations are represented to the eye, and in the construction of, and giving temperament to, the instruments through which its harmonies are presented to the ear, some of the most intricate problems of the higher mathematics find their solution.

Further, in the physics of music, discrepancies between harmony—the latest and richest development of the science—and melody, the original science of song, exist. These discrepancies are irreconcilable with the theory of absolute pitch, as generally accepted by scientific musicians in former times. The science of music among the ancients and among the Orientals to-day is merely the science of melodies; while the Western theories involve the richer and much more complicated system of harmonies, and the concession we have to make to this more comprehensive system is a compromise, resulting in a scientific imperfection allied to that apparent imperfection in the movements of the heavenly bodies which causes the procession of the equinoxes. This principle of the shifting keynote, which unsettles the theory of absolute pitch, is as yet undreamed of by many, apprehended by few only, thoroughly comprehended, perhaps, by none.

The study of music is equal to the study of literature and language as a means of intellectual growth, superior to the study of mathematics, and in no way inferior to the study of the natural sciences. It is more available and adaptable than the study of psychology, because, while calling forth the intellectual powers, it engages the emotions and assures the condition necessary to the best development of thought, viz., genuine enjoyment of the means employed.

It strengthens the memory; call reason into lively play; favours habits of exact thought; inspires the imagination; ennobles the perceptive faculty; facilitates physical expression; arouses the emotional nature; cultivates the æsthetic principle; gives breadth of mental comprehension. In all these things, music stands in the front rank of the sciences, if indeed, it does not lead them all. Can any science do more as a factor in intellectual growth to develop the many-sided nature of the man intellectual?

COUNT OKUMA'S CRITICISMS.

AMONG those who have had opportunities of estimating Count Okuma's capacities there exists but one opinion, namely, that Japan possesses few, if any, statesmen of more brilliant ability and self-reliant courage. With much interest, therefore, do we turn to a column of the *Yomiuri Shimbun*, which professes to give the gist of some opinions recently expressed by the *Kaishin-to* leader with regard to the prominent men of the *Meiji* era. Very probably the authenticity of the criticisms will be subsequently denied, but it is scarcely possible that they should be altogether baseless, though their absolute accuracy may be apocryphal. With regard to Count Matsukata, Count Okuma is represented as placing colourlessness among his most prominent traits. The present Premier, he says, is simply an executor of vicarious policies. He reflects with fidelity the methods of the Camera Statesmen, but produces no image of his own. Count Okuma also expresses astonishment that the Minister President did not resign in view of the hostile attitude of the Diet, and says that no administrative progress can be made so long as the Cabinet does not enjoy the confidence of the people's representatives. But we imagine that few will be found to admit the justice of this estimate of Count Matsukata, who has undoubtedly established his title to a very different verdict since he became Minister President.

As for Count Inouye, the *Kaishin-to* leader declares inability either to believe the report that the Count has been asked to take the leadership of the Cabinet at this juncture, or to conclude that he would consent to take it if asked. "In the event of his joining the Cabinet, he would assuredly insist on certain conditions. I cannot consider Count Inouye a great statesman. On the whole, he combines caution in some directions with much general boldness, and he

possesses capacity to achieve great things. But this daring disposition may lead him to do correspondingly great mischief. If the bold Inouye be allied with the prudent Ito, there is nothing from which the pair need shrink. Whenever the empire is confronted by serious trouble, Count Inouye will show his ability by settling it. But the unscrupulous hero of a disordered age is not necessarily an able statesman in a peaceful era. His daring disposition may often involve trouble, and his natural genius cannot entirely supply his want of erudition. On the other hand, if he accepted office, he would not cling to it in the face of all opposition. Did he consent to enter the Cabinet, he might be bold enough to bring in Viscount Torio, Marquis Saionji, or some other men of varied complexion. The Popular Party would be delighted to have such a formidable foe."

Passing to Count Ito, the *Kaishin-to* leader is represented as saying:—"Among the statesmen of the present era Count Ito stands first. But he is a very shrewd man. He will not join the Cabinet now. The secret of statesmanship is patience. Nothing is so bad as to be in a hurry. Count Ito knows that well. Viscount Shinagawa, though honest, is easily excited; that is why a man like Fujita Ichiro can deceive him by clever ruses. Honesty is a fine quality, but honesty alone will not make a statesman or a politician. I am sorry for Shinagawa, but his own excitability is to blame. As for Count Saigo, he is to be pitied. He has been dragged upon the political stage, not by Viscount Shinagawa alone, but by those who remember the language used by the Count in the last general election, and who now hold him to his words. When he came to visit me last year I gave him some counsel:—'Count, you have left the Government now. Take care that you are not captured by noxious worms. If you act like a crafty fox who has gone through many experiences, it is well. But great care will be needed to keep you out of trouble.' My apprehension has now been verified."

THEFT OF WOMEN'S SASHES.

SOME fifty years ago it used to be very common for Japanese women to loose the greater part of their girdles while standing in a crowd. Following the general tendency to revive long forgotten customs, certain thieves, it is stated, have of late taken to sash-cutting. The effect to on-lookers is very funny. A fair damsel who has been priding herself on the propriety and gracefulness of her costume, is suddenly reduced to a most inexcusable state of dishabille in the open streets, for the *obi* occupies a most important rank in Japanese female costume. This mode of annoying female passengers in the streets, bad as it is, is preferable to the face-stabbing which we reported a month or two ago. On the whole, the annals of Japanese crime must be pronounced insignificant when compared with the records with which our home-papers abound.

THE NATIONAL UNION AND THE FIVE PARTIES.

OPPOSED to the so-called Popular Party are five associations in the provinces, known as the *Genyosha* of Fukuoka, *Dosei-kai* of Saga, the *Yuishinsha* of Ichikawa, the *Aikoku-koshinsha* of Aichi, and the *Kiuyukai* of Niigata. For some unexplained reasons these five associations did not at first throw in their lot with the National Union, but the Tokyo News Agency now reports that a coalition is likely to be effected shortly, the principal men of the five associations having signified their intention of joining the National Unionists.

The Government's critics profess to think that it is acting inconsistently because, while declaring that the Cabinet Ministers are ultimately responsible to the Sovereign alone, and will accept no mandate from the Diet, efforts are nevertheless made to secure the support of a party in the House of Representatives. It should scarcely be necessary to point out the extravagance of such a contention. No sane Ministers of State are so reckless as to openly defy parliamentary opinion. They may decline to accept

their dismissal at the hands of the people's representatives, but they are none the less under an obligation to organize their fellow-thinkers, and to adopt every legitimate means of preventing collisions which tend to precipitate changes for which they do not believe the country to be prepared. It would be wanton rashness to abandon to one side all the advantages resulting from combination, discipline, and organization. The Government also must organize its supporters, and endeavour to make constitutional institutions work smoothly by securing a majority in the Diet. That is the mere *abc* of politics under a representative system, whether party Government be accepted or tabooed.

Reading recent correspondence from Japan in a Shanghai journal, we observe that the writer speaks with evident pleasure of this country's gradual approximation to the English system of Government by party. Ought that to be really regarded as a subject of congratulation on Japan's account? Even were there no other cause for doubt, the things now happening in Great Britain might suggest reasons for hesitation. During the past six years England has been governed by statesmen, concerning whose administration of home and foreign affairs there can be but one verdict—it has been eminently successful. If it rested with the Sovereign to retain these men in power, they would assuredly remain in power. But the country has become accustomed to a change of parties at the end of a long term of years, and so the constituencies veer round and vote for giving an innings to the picturesque old man who heads the Liberal party. If any one can honestly allege that the best interests of the empire are consulted by that kind of thing, we shall be surprised. Japan had better think long and seriously before she commits herself irrevocably to government by party.

THE VACANT PORTFOLIOS.

ON Thursday evening, at a late hour, two of the vacant portfolios were allotted. Mr. Kono, hitherto Minister of State for Agriculture and Commerce, becomes Minister of State for Home Affairs, and Viscount Sano, hitherto a Privy Councillor, becomes Minister of State for Agriculture and Commerce. The post of Minister of Justice is also held by Mr. Kono, but that, of course, is only a temporary measure. We shall not be surprised if this last portfolio ultimately goes to Mr. Inouye Ki.

Of Mr. Kono we need not say much, our readers being already well acquainted with him in his capacity of Minister for Agriculture and Commerce. He appears to have played a very important part in the recent political complications, and doubtless the important position now assigned to him is the reward of these exertions. Viscount Sano has been a member of the Privy Council since the organization of that body. During the past fifteen years his name has been constantly before the public in connection with movements for the encouragement of Art and the development of Art manufactures, and his appointment to the Department of Agriculture and Commerce on the eve of the Chicago World's Fair will commend itself to many minds. He belongs to the former Hizen clan, and his admission to the Cabinet will disarm a certain section of the opposition hitherto encountered by the Government within the ranks of officialdom. The Viscount is well on in years, and though still capable of active work, is by no means so strong as he was before the fracture of his leg, a few years ago, by a fall from his carriage. These appointments confirm the impression that the policy of the Cabinet is to be directed henceforth solely by Count Matsukata.

THE PHILIPPE CASE.

MR. PHILIPPE'S second offence against the Japanese Tobacco Regulations was tried before the Yokohama Local Court, as has been already related in these columns, and ended in

an acquittal, the Court adhering to the view maintained by it on a previous occasion, namely that the subject of a non-treaty Power is not entitled to carry on any business in Japan, and that, consequently, he cannot be punished for failing to take out a Japanese business license. It will doubtless be remembered that when this verdict was originally delivered by the Court, the Public Prosecutor appealed against it, but failed to reach the Appeal Court owing to a blunder on the part of a clerk. The second offence, however, having been declared by the same tribunal to be unpunishable, for the same reason, the case was duly carried to the Appeal Court, and a judgment has now been rendered by the latter, upsetting the finding of the lower tribunal, and imposing upon Philippe the penalties provided by the Regulations. In short, the Appeal Court has ruled that Japan is now open to all strangers; that no treaty is required for coming to reside and do business here, and that the only condition which strangers have to accept is, the obligation of observing Japanese laws and regulations. It would be interesting to know, under these circumstances, what restrictions are imposed, and how they are imposed, on the enjoyment by an alien of all the privileges attaching to Japanese nationality in Japan. If a treaty is not required for residing or doing business in Japan, and if the subject of a non-Treaty Power is punishable by Japanese tribunals for neglecting to observe Japanese laws, why should he not enjoy all the privileges of a Japanese subject? How is the line of demarcation drawn, and where?

WILD CRITICISM.

REFERRING to the remarks of a certain local English newspaper, published in Japan, respecting the decoration lately received by Sir Edwin Arnold, as reproduced in these columns, the *Jiji* has fallen into an amusing error. "In writing on things which occur in distant countries" says the *Jiji*, "mistakes are not easily avoided. That very loosely conducted newspapers are to be found in country districts in England is evident from remarks which have been recently made respecting Sir Edwin Arnold's decoration. That any country should seek to increase its reputation by employing a foreign poet is one of the wildest notions we have ever met with." The *Jiji* is evidently not aware of the fact that the writer referred to resides in Kobe, and that trustworthy sources of information are open to him.

CHOU-HAN.

It has apparently been found impossible to bring home to Chou-han the various charges preferred against him of publishing and disseminating anti-Christian literature. Their Excellencies Chang, Governor-General of the two Hu, and Chang-hsi, Governor of Hupei, being instructed by the Tsung-li-Yamen to make full inquiries into the matter, reported as follows—We take the translation from the columns of the *Shanghai Mercury*—

Chou-han published formerly, under the name of Pao Shau-tang (Benevolent Institute) books, exhorting people to be good, and the bookseller Teng Mao-hua confessed during examination, that within the Little West Gate he had kept a book stall, in which Chou-han was no partner, or assistant. But he was well acquainted with Chou-han; last year he had been staying with him for a few days, and then left the city (the provincial capital) again. During his stay he had frequently been talking in a confused, wild and incoherent manner, as if crazy. Chou-han's books had been printed by Chen Chu-te, and the late Tseng Hui-wen. Chen Chu-te stated that he had a xylographic shop, for the cutting of characters and plates these many years, and he had formerly prepared a number of works for Chou-han, as:—"Exhortation to the Officials and Gentry;" "Advice to Foundling Houses," and others' when the plates were ready, Chou-han took them away, and did the printing himself. In his business he had several assistants, unable to understand the contents of the characters they were cutting. It was business routine to charge for the number of characters cut; their contents were not enquired into; therefore, he could not remember whether the plates for the works in question had been prepared in his establishment or not. Wu Tung-hai, an employe of the late Tseng Hui-wen, said he could not remember whether the books in question had been printed in their office. The nephew of Chou-han, Chou Te-chih; his cousin, Chou Kin-yi; Tang Liao-nan, a policeman, and Huang Shu-chin, one of Chou-han's neighbours, gave corroborative evidence. Chou-han believes and trusts in ghosts and geni, and styles himself T'ieh Tao-jen "the man of iron fortitude," and has full confidence in the oracle of Fuh-chi. It has been impossible therefore, so far, to prove who is the author of the various

books, pamphlets, poems, and pictures. It was necessary to discover the whereabouts of the plates used, on purpose to destroy them, that the intention of the Government might be carried out to maintain friendly relations with Foreign Powers. Therefore, rewards were offered for the delivery of the plates, payable when handed over, and to allay the fear and suspicion of the people no questions were to be asked.

After some delay the following plates were delivered, amongst others:—*Kuei chiao hai su* (Death of the devilish belief), *Sa shou wen chang* (Hand-hurting essays), *Chi tien chu* (Attack on the Catholic religion), *Shieh Kuei Ko* (Devil annihilation song), *Tien chu hsteh chiao* (The false sect, called the Catholic religion).

In all twenty-five plates were delivered, used for thirty-one tracts and pictures. Most of them had been made useless already, showing that the proprietors had become afraid, and intended not to publish any more foul literature. Chou Te-chih, Chou-han's nephew, was repeatedly interrogated, but always insisted that his uncle was leading an untitled life, and had left home with his whole family.

Chen Chu-te added to his former statement that, when in his establishment a plate was ready, it was taken away, and it was paid for according to the number of characters. In the books kept by his firm sometimes the name of the party who ordered a plate is marked down, and sometimes it is not; the employes change frequently, it is consequently impossible for him to have an idea whether the plates had been cut in his establishment or not.

The Commissioners then once more urged the local authorities to thoroughly search the provincial capital again, and make sure what had become of Chou-han. Secret enquiries proved that his speeches had become still more confused of late, and that there could be no doubt the man must be demented; if he met anybody, he commenced cursing and swearing, but nobody had ever heard that he had published any anti-Christian literature.

Under these circumstances it would be hopeless to ex-amine Chou-han himself, and since all his relatives and friends make the same statements, these latter ought to be sufficient to allow of forming an opinion.

The preaching of the Christian religion is guaranteed by treaties. It is in every Chinaman's option to become a Christian or not, no foreigner can force him. If the Missionaries should commit irregularities or breaches of the treaties, then complaints against them must be lodged with the foreign officials concerned and see justice done. It is utterly forbidden to set false rumours afloat, and to excite the multitude to riots.

Concerning the infamous criminals, who have abused Chou-han's name, in publishing under its cover libellous literature, and forging public documents and private letters, the strictest orders have been given to find the culprits and bring them to justice.

MISS ANNA DICKINSON.

WHAT women can achieve as politicians is illustrated by the case of Miss Anna Dickinson. The *New York Herald* says of this lady:—"She was for years not only the foremost woman of the country. Hers was a name to conjure with, for her surpassing eloquence carried an audience as a millstream carries chips. These Republicans professed to be proud of her genius. They were glad to kiss the hem of her garment, and her services were considered cheap at any price. As the queen of the platform she held undisputed sway everywhere, and they crowded about her as their bright particular star." In 1888, the Republican leaders engaged Miss Dickinson for thirty days, she, on her side, undertaking to deliver addresses in support of Mr. Harrison's candidature, and they, on theirs, promising her \$125 per diem, together with a contingent sum of \$1,250 in the event of Harrison's election. But for some unexplained reason Messrs. Quay and Clarkson, Chairman and Vice-Chairman respectively of Harrison's Committee, concluded that Miss Dickinson's addresses were injuring the Republican cause. They therefore cancelled the remaining appointments, but paid her in full for 30 days. Three thousand seven hundred and fifty dollars was not a bad stipend for three weeks work. Miss Dickinson, however, concluded that she was entitled also to the \$1,250 promised if Harrison were elected, and as she didn't get it, she instituted legal proceedings. At the trial some correspondence from Mr. Clarkson was submitted. On August 18th, 1888, he wrote:—

I shall use my influence to urge the Committee to engage your services, and at Christian rates.

I can never forget our conversation of yesterday. I shall always be proud of the hour or two of your company. You do not need friendship, and it would seem out of propriety for me to talk of such a thing. But I have always admired you much, and so heartily appreciated your great works and many good qualities that I would like to be worthy of your friendship; would like also a chance some day to show how sincere I am in it. It will take time for the American people to know how grateful they ought to be to you.

In a missive dated August 28th, he had this to say:—

I do understand that it is not all dollars and cents with you, and I want you to know that I fully understand and appreciate it. It makes my own heart ache to know the world has repaid you with ingratitude, and worse, when you deserved everything fair and generous that it could give.

God bless you always.

On October 11th he sent a touching communication to Miss Dickinson's sister, in which he said:—

Dear Miss Dickinson—I like to call you dear Miss Dickinson because you love Anna so much, and I like everybody who loves her.

Besides, I have always heard good reports of you on your own account.

I have to go early in the morning, at 7, if General Dudley is well enough for me to leave. I must go to raise money, for we are poor and bankrupt, and must have something, and rich old Boston is stingily hanging on to the money it ought to give to us.

I wonder she [Anna] has been able to bear the wear and tear of the hard campaign she has made. She must not risk too much hereafter. She is too precious for that. She has done nobly, and we are all her debtors.

My candid regards to all in your home and my special regards to the divine little mother—whom Miss Anna has taught us all to love. If your sister is not well enough to bear it, keep her at home until she is really able for hard work. The power she is throwing into her speeches must drain her strength greatly. Let her up and make her strong before you send her out again.

Concerning these interesting epistles the *New York Evening Post* says:—"There have been differences of opinion in the past as to whether the J. of the signature of J. S. Clarkson, of the National Republican Committee, stood for John or James. Now that his official communications to Anna Dickinson have been made public to charm and move the world, we think there will be general consensus of opinion that the initial should henceforth stand for Jennie. There is a distinct feminine quality about the letters, which, coming from a great practical politician in the midst of a fierce Presidential campaign, makes them the most remarkable effusions of their kind in all political literature. What a sad commentary it is upon human nature that the man who could thus pour forth his soul in private correspondence should subsequently refuse to keep the bargain he had made with the woman he had professed such deep solicitude for, and should go into Court and escape full payment by pleading an old statute forbidding the use of money to influence votes!"

THE NEW CABINET MINISTERS.

THE Tokyo News Agency has a good deal to tell about the new appointments to Cabinet portfolios. On the 12th instant, it says, reports were circulated that the future occupants of the vacant posts of Ministers of Home Affairs and Justice had been determined, and that Count Matsukata had addressed the Emperor on the subject. But the statement was premature, for though the Cabinet agreed on that day to recommend the nomination of Viscount Sano and Mr. Inouye Ki, doubts existed as to whether the latter would accept a portfolio. The following day, another conference was held, but no definite decision was arrived at. It appeared that while Mr. Kono was not unwilling to accept the portfolio of Home Affairs, he required certain conditions which would necessitate more or less modification of the Government's policy. Hence some ministers were in favour of giving the portfolio of Justice to Mr. Inouye Ki and that of Home Affairs to Count Oki, since between the latter and the Vice-Minister, Mr. Shirane, as well as the local Governors, there would be no disagreement. But Count Oki showed no disposition to accept the proposed position, declaring himself, on the contrary, quite ready to resign if his remaining at the Department of Education caused any inconvenience. Moreover, it was alleged that the majority of the officials in the Department of Justice regarded Mr. Kono as the best man to settle the troubles now existing in that section of the Administration. The Conference, therefore, ended abortively, the various Ministers going about their business, and Count Matsukata proceeding to the Palace to report results to the Emperor. On the morning of the 14th, the Ministers reassembled at the Cabinet, and the discussion was resumed. Mr. Kono restated the conditions on which he was prepared to accept the portfolio of Home Affairs, and after these had been considered, Count Matsukata had audience of the Emperor, returning to the Cabinet at 3.20 p.m. Mr. Inouye Ki also visited the Cabinet, and had a brief conversation with the Minister President. At 4.50 the Conference closed, and at 7 o'clock Count Matsukata again proceeded to the Palace.

Thither Mr. Kono and Viscount Sano were summoned at 8.30 p.m., and duly nominated by the Sovereign to preside over the Departments of Home Affairs and Agriculture and Commerce, respectively. Mr. Inouye Ki is said to have declined the portfolio of Justice on the plea of feeble health. The *Nichi Nichi Shinbun* publishes a rumour that Mr. Shirane, Vice-Minister for Home Affairs, will be transferred to the Privy Council, his successor being Mr. Kitagaki, now Governor of Kyoto.

In the *Kokkai* we find a statement that the National Unionists are by no means pleased at the appointment of Mr. Kono to the Home Office, since they believe that he has some relations with the Popular Party. But their remonstrances have not affected the result.

PORTUGUESE JURISDICTION IN JAPAN.

THE following Imperial Ordinance was published in an extra of the *Official Gazette* on the 14th instant:—

We hereby give our sanction to the Ordinance allocating the stipulations concerning Consular jurisdiction contained in the Treaty concluded with the Portuguese Government, and order the same to be promulgated.

(H.I.M.'s Sign Manual)
(Great Seal.)

(Dated) The 14th day of the 7th month, the 25th year of Meiji.

(Counter-signed) The Minister President of State.
The Minister of State for Foreign Affairs.

The Minister of State for Justice.

IMPERIAL ORDINANCE No. 64.

The stipulations concerning Consular jurisdiction, which are contained in the Treaty concluded with the Portuguese Government on the 17th day of the 6th month, the 1st year of Man-yen (1860), shall henceforth cease to be in force.

We understand that the Portuguese residents of Yokohama, or at any rate a portion of them, rendered uneasy by rumours that the above action was contemplated by the Japanese Government, held a meeting on the 14th instant, and decided to address a telegram to Macao, promising to follow it by a memorial. It is to be regretted that this action was not taken sooner. The die is cast now, and neither telegrams nor memorials can alter accomplished facts.

SILVER COINS.

SOME little time ago, the Department of Finance referred to the Bankers' Association the question of abolishing 50 *sen* and 5 *sen* silver pieces. The Association, has, we observe, recommended that both coins be dispensed with, the former owing to its bulkiness and the latter on account of its smallness. The abolition of 50 *sen* notes has been also suggested, on the ground that the circulation of paper money of this value, in the absence of coins, is deemed undesirable from a financial point of view. These recommendations, it is stated, will be adopted by the Department of Finance. Certain members of the Bankers' Association proposed that the American custom of issuing 25 cent coins be followed, and that 20 *sen* pieces be withdrawn. But this proposition has not met with general support, owing to the fact that to carry out such a change would prove a great expense to the nation, without bringing any corresponding advantage.

COTTON SPINNING IN JAPAN.

We take the following from the *Board of Trade Journal*:—

IX.—COTTON SPINNING IN JAPAN.

The Secretary of the French Legation at Tokyo, in a recent report to his Government, gives the following particulars of the cotton-spinning industry in Japan.

Cotton-spinning dates only in Japan from 1848, and was then limited to the provinces governed by the Princes of Satsuma. This branch of industry remained stationary for many years, when, towards the commencement of the twelfth year of Meiji (1879) the Government, recognising the advantages which its development presented for the future of the country, ordered in Europe machines on a new model, which it distributed in certain provinces and districts of the Empire. Notwithstanding these official arrangements few factories were established up to recent years, and

the yarn manufactured according to ancient methods, although superior to 16 "suzi" (three ds), sufficed to satisfy the limited demand of the market under the general name of "Japanese cotton yarn."

In 1881-82 (11th and 12th years of Meiji) several companies undertook the establishment of new workshops. The number of bobbins, which, in 1884, amounted only to 35,000 in all, reaches at the present time 380,000, and the capital devoted to the spinning of cotton amounts to 10,000,000 piastres. At first, this large extension of production resulted in burdening the market with yarn specially intended for native consumption, and the necessity of producing a yarn of superior quality, capable of competing with similar articles of foreign origin, requires great economy and care on the part of the Japanese manufacturers. Owing to the strenuous efforts put forth collectively by them, owing to the spirit of solidarity which holds them together, owing also to the sacrifices they imposed on themselves by sending, in 1889, a special agent to the Indies whose mission was to study thoroughly the art of cotton spinning, the Japanese producers finally reaped the fruit of their perseverance, and have had the satisfaction of seeing the imports of cotton yarns, which previously were growing larger, gradually diminish in recent years. It is worthy of note that the estimated value of this article, one of the most important of foreign imports, reached in three years (from 1888 to 1890 inclusively) more than 12 million *yen* (the *yen* is equivalent to about 3s.). This figure shows that if the efforts of the Japanese have been crowned with success, a final victory has not yet been achieved, and that the native spinning industry must be careful to preserve and increase the advantages which have been obtained during the last 10 years.

The 20,000 workmen employed, the 10,000,000 piastres at disposal, and the 380,000 bobbins give this industry a preponderating place in the national production, and will probably enable it very soon, not only to completely meet the wants of the country and to dispose with the imports of foreign yarns, but also to seek markets in China and Korea.

The imports of cotton yarns into Japan during the years comprised between 1882 and 1890 were as follows:—1882, 252,007 piculs; 1883, 266,406 piculs; 1884, 211,867 piculs; 1885, 213,973 piculs; 1886, 246,303 piculs; 1887, 332,985 piculs; 1888, 474,396 piculs; 1889, 428,109 piculs; 1890, 319,083 piculs. The estimated value of the imports in 1882 was 7,815,356 *yen*, and in 1890, 9,928,362 *yen*. The imports for 1891, the results for which have just been published, indicate a value of no more 5,589,289 *yen*.

X.—STATE METALLURGICAL WORKS IN JAPAN.

A correspondent of the *Economiste Français*, writing from Tokyo, says that the Japanese Government have for a long time had the intention of establishing in the country its own works to supply the needs of the army and navy. According to a report recently made by the commission, composed of engineers of the different ministries (Marine, War, Commerce, and Agriculture), which has been empowered to examine and report upon this scheme, the annual consumption of iron for the army and navy will be 3,000 tons. But according to the evidence given before the said commission, the general consumption, both for the army and navy and private industries, will assume larger proportions from one year to another, and it is estimated that it will reach 7,000 to 8,000 tons for establishments of the two first. Little profit will, it is anticipated, be derived from the Imperial works, as probably only sufficient will be made to just cover the general working expenses.

This will appear evident if comparison be made between the price of unwrought iron and the expenses which must be incurred to transform it in Japan into rolled iron. Thus, rolled iron purchased on the London market at present costs the Japanese about 64 *yen* per ton. With regard to the price of iron manufactured in Japan, it may be urged that the unwrought iron costs about 30 *yen* per ton, to which should be added 50 *yen* for expenses of manufacture, and further 12 *yen* for the workmen's wages, which shows that made in the country would cost at least 92 *yen* per ton. It appears from the foregoing that Japanese would derive more gain from rolled iron coming from foreign markets than from that produced at home.

It must, however, be taken into consideration that the price of 64 *yen* given is that of iron of common quality. Now, according to the requirements for the time being, it frequently happens that for iron 100,200, and even 300 *yen* per ton has to be paid. It follows that for the good qualities a saving would be effected by the Japanese works, because the expenses of manufacture must be the same as for common iron.

In the second place it must not be forgotten that by the commencement of this new industry in Japan a new branch of labour will be opened up to the workmen. This point is of some importance in view of the development of the national resources, and with an increased production of 80,000 tons of iron per annum, the country will be endowed with industries of the greatest importance for the well-being of a nation. It is with this object that the Government has decided to establish these metallurgical works, and that it has recently demanded a vote of 2,500,000 *yen* from the Chamber of Deputies. The plea on which the Government looks for support by the vote of the legislative body gives the following reasons:—

"The consumption of iron for the army and navy has been for the 23d year of Meiji (1890), 3,000 tons, but this figure will be further increased by 3,000 tons,

when the arsenal of the two Admiralties of Kuré and Sasého are constructed, and the works of naval construction doubled in the yard of the naval arsenal at Yokosuka. Again, 700 to 800 tons per annum may be counted on for the manufacture of arms and different engines of war. This would give a total annual consumption of 8,000 tons for the Government arsenals."

The Government will proceed to found these new works in the following manner:—In the first year, that is in 1892, it will purchase the land and engage the foreign engineers who are to be entrusted with the management of the establishment. During the second year, the works themselves will be constructed and the machinery fixed there, and, finally, in the third year (1893), the manufacture of iron will be commenced. The sum to be expended on this enterprise will be divided as follows:—Of the sum of 2,250,000 yen, the total amount of the expenditure, 1,750,000 yen will be devoted to the purchase of land, to expenses for the construction of buildings, to the engagement of engineers and foreign workmen and the purchase of the necessary machinery and materials. Lastly, the remaining 500,000 yen will be used as a manufacture fund (purchase of ore, &c.).

BANKRUPTCY OF THE HAKUBUNSHA.

We regret to learn that the well known publishing firm of Tokyo, the Hakubunsha, has fallen into financial difficulties, and that an attachment has been granted against its property. The Hakubunsha has shown remarkable enterprise during the past few years; too much enterprise indeed, for it has undertaken the publication of works for which no considerable circulation could be expected. Several foreigners, some of whose works have been brought out there, are interested in the firm. The expense of publishing these works was borne by the authors, but as the sale was to some extent managed by the Hakubunsha, it is possible that the authors may suffer some loss by the bankruptcy. For some time there has been a kind of mania for publishing all kinds of books in Tokyo, and firms exercising so little judgment as the Hakubunsha were bound to suffer loss.

LANDSLIP IN TOKUSHIMA PREFECTURE.

From the Miyoshi district of Tokushima Prefecture a serious landslip is reported. It seems to have been caused by the heavy rains in the second half of last month. At about 4 p.m. on the 1st instant, a loud noise was heard in the hills near Sansho, and this was accompanied by a landslip measuring 260 yards in length by 120 in width. The shrine of Kibune was completely buried, as were three houses in its vicinity. It is not stated, however, that any loss of life occurred. The course of the river Iani having been choked by the falling earth, inundations are feared, and the people of the place are said to be so much disturbed that there is talk of their moving to some other locality.

YOKOHAMA CHESS CLUB.

A SPECIAL meeting was held at the Club Hotel on Wednesday, when the members gave a complimentary dinner to their President, Mr. J. T. Griffin, who recently returned from a trip to Europe. Fourteen sat down to dinner, the chair being taken by Mr. G. Sale, who in a few well chosen words, proposed the President's health, which was enthusiastically drunk. Mr. Griffin suitably responded, narrating his chess-adventures en route. The absence from unavoidable causes of Messrs. C. H. Hinton, who had been specially invited, J. T. Meikle and H. L. Fardel, prize-winners in the recent tournament, and W. B. Mason, was much regretted. After dinner the members paired off and engaged in their favourite pastime till a late hour.

WATANABE'S PICTURES IN LONDON.

SOME time ago certain prominent art amateurs in London conceived the idea of getting together a sufficient number of modern Japanese paintings to hold an exhibition in London. The execution of the project was attended by many difficulties, for though it is easy to find any number of inferior Japanese pictures, it is not by any means easy to find examples sufficiently good to be counted representative of the leading artists of the day. Twenty excellent paintings were collected after a considerable interval, chiefly from the brush of Mr. Watanabe Seitei, and these having been afterwards supplemented by about forty others, the whole were

recently displayed in New Bond Street. The *St. James's Gazette* thus refers to the display:—

An unusual amount of interest attaches to the exhibition now on view at Mr. Larkin's Gallery, 28, New Bond-street. A Japanese artist of no small repute in his own country is represented by upwards of sixty drawings of much artistic merit. He uses quite a different box of paints from any with which our English water-colour painters are familiar, and an instance may be quoted in the case of ink, of which a very effective use is made. The painter, Watanabe Seitei by name, has a sense of colour which shows him to be a true artist. The subjects are very slight, and are treated with the greatest economy of paint; but they will never fail to please any one with an artist's eye. In the same rooms at the Japanese Gallery there are a number of Mr. John Varley's oils and water-colours painted last year in Japan. There is a remarkable similarity of effect in Mr. Varley's oil-paintings (which are all on panel) and his water colour drawings, and a visitor might at first have some difficulty in distinguishing between them. For our part, we have little hesitation in expressing our preference for the panels, which unquestionably show great skill and intelligence. Mr. Varley's name has now been for some time past associated with his Japanese work, and we should have liked to devote more space to an inquiry into his methods and results. What we now see of his work quite confirms the favourable opinions which were expressed last summer of a much smaller collection at Mr. Larkin's Gallery. The catalogue of his pictures contains a pleasant and appreciative notice of them by Sir Edwin Arnold, who refers to Japan as "The Land of Gentle Manners and Fantastic Arts."

CORAL.

THE industry of collecting coral in the Bays of Kashiwajima and Muroto-zaki off the coast of Tosa used to be a prosperous affair, says the Tokyo News Agency, but has fallen off of late. Last year, according to returns compiled in the Kochi Prefectural offices, the quantity of coral collected was 54 *kwan* 83 *momme* (446lbs.), the value of which was 8,672 yen. The most prized variety was peach colour, which sold for 20 yen per 100 *me* (5/6th of a lb. avoird.), the same quantity of red being worth only 8 yen, and of white 1 yen. This Tosa coral illustrates the exacting character of Japanese taste. Though very little inferior to imported coral, it does not command a fiftieth part of the latter's value in the market. In fact no self-respecting lady will wear a hair-pin of Tosa *sangoju*, if she can procure foreign coral, and a mere nuance in the tint of abraded of the latter will double its value in her eyes.

KAWAI KURATARO.

KAWAI KURATARO has been sentenced in the Tokyo Provincial Court (the section for Major Offences) to six years' imprisonment with hard labour. The sentence was increased by two years owing to a discovery, lately made, that in addition to other frauds Kawai had forged two agreements, one between himself and Viscount Doi, and another between himself and Prince Tokugawa. Among his associates the two who were convicted of crime were Tsubata Shuei, sentenced to 20 months imprisonment and 10 months' police surveillance, and Doi Toshiharu, sentenced to six months' imprisonment, six months' police surveillance and to pay a fine of 10 yen.

THE GAMBLING CASE.

THE Disciplinary Tribunal organized to try a charge of gambling brought against the President of the Supreme Court and six Justices of the same, has now delivered judgment, to the effect that no evidence whatever has been adduced to prove that the accused Judges were guilty of playing cards for money, and that, consequently, there has been no offence against the law. Quite a number of witnesses were examined by the Court, among them being several danseuses and keepers of restaurants, but the whole affair has ended in a fiasco, as we fully anticipated. It should never have been allowed to go forward for trial, in our opinion.

JAPANESE MISCELLANEOUS STORE AT CHICAGO.

AN idea was conceived that profitable results might be obtained by opening a store for the sale of miscellaneous Japanese manufactures in connection with the Chicago World's Fair, but the project does not find favour in Japan owing, it is said, to the heavy expenses that would be incurred. The estimate is that if ten thousand dollars worth of goods are to be sent, a capital

of thirty thousand dollars would be required. We read that a conference is to be held at the Department of Agriculture and Commerce on the 10th instant, to settle the final fate of the project.

THE ANTIQUITIES IN THE "SHOSO-IN."

THE Imperial Household Department publishes a notice in the *Official Gazette* that the antiquities preserved in the Imperial store-house (*Shoso-in*) at Nara will be put out for the purpose of being aired, from the 1st to the 31st of August, and that permission to see them will be granted on due application. In the case of foreign employes the application must be made through their respective Departments or employers, and in the case of other foreigners leave must be sought through their Ministers. Applications have to be sent in by the 25th of this month.

FAREWELL DINNER TO DR. BAEZ.

WE learn that the members of the Tokyo Club propose to entertain Dr. E. Baelz at a farewell dinner in the Rokumeikan on the 20th instant. Dr. Baelz has such a multitude of friends that some may possibly fail to be reached by the form of notice usual in these cases, especially as the season does not encourage club-going. We therefore employ our columns to suggest that members desiring to be present should use all expedition in intimating their intention to the Secretary of the Club.

NAGASAKI.

THE old Custom House at Megasaki, says the *Rising Sun*, a rotten and dilapidated building erected some seventeen years ago at considerable expense, is now being demolished, just in time to save it from collapsing, having been replaced by a very handsome and substantial building on the opposite side of the road. A new examining shed is, we understand, to be erected on the site of the old Custom House, as the present shed has long been found inadequate to the requirements of the port.

NICARAGUA.

THE *Fiji Shimpō* says that Nicaragua has approached Japan with the object of concluding a treaty of commerce and amity. There has never hitherto been any intercourse between Nicaragua and Japan. It is therefore believed that the purpose of the treaty would be merely to secure Japanese immigrants to assist in developing the Central American Republic. No objections, however, present themselves on Japan's side, and the negotiations, according to our contemporary, are likely to be soon undertaken.

THE ESTABLISHMENT OF A BOURSE.

THE Pro and Anti-Bourse parties have for many months past been engaged in active warfare. We now read in the *Hochi Shimbun* that a compromise has been arrived at, and that the Government has decided not to abolish the hitherto existing Rice Exchange and Stock Exchange, but to establish a Bourse for the sale of other articles. The rules already drawn up will be modified so as to suit the old and new Exchanges.

NEW ORIENTAL BANK CORPORATION.

THE Manager of the Bank writes on Tuesday:—"I beg to inform you that I have to-day received a telegram from London stating that reconstruction of this Bank is probable."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Ministerial problem has entered a new phase. The Cabinet has been found positively disinclined to deliver the reins of Government into the hands of the Camera Statesmen on the basis proposed by the latter. Henceforth there are no longer to be any statesmen behind the curtain, and for good or for evil the Cabinet will have to shape its own course without any interference from outsiders. When Count Matsukata accepted the Premiership last year, he did so, as the *Nichi Nichi Shimbun* points out,

only on condition that he should always have the benefit of the friendly advice and support of the elder statesmen. Under those circumstances, the Premier always on important occasions consulted Count Ito and others, who thus came to be openly regarded as the real possessors of power. This abnormal state of things at last culminated in the strange scene of a few outsiders deliberating on the destiny of the Ministry at the request of the Minister President. It was at one time extremely probable that a new Cabinet would be formed by the statesmen of the first order, with Count Ito as Minister President. But the Ministers in power, who had meanwhile been called various names by the press for their singular "patience" and "meekness," at last asserted their independence, and are now apparently quite determined to pursue a strong course of policy towards the Opposition. As to the filling up of the vacancies various reports were circulated, but finally the portfolio of Home Affairs fell to Mr. Kono, and that of Agriculture and Commerce to Viscount Sano, the portfolio of Justice remaining still to be allotted.

The press does not seem to regard the present Cabinet as likely to last long. But all papers without distinction of party are glad that the Ministers have distinctly severed their equivocal relations with the elder statesmen. In this respect, the repeated conferences of the Camera Statesmen, though leading to no positive result, have been productive of a most important negative issue. The *Nichi Nichi Shimbun* regrets that it has not been possible for the statesmen of the first order to return to power, and calls upon the present Ministers to allot the vacant portfolios as quickly as possible. In a few days, says our contemporary, the public will be able to see whether Count Matsukata is prepared, as he once declared, to march forward even over the bodies of his opponents, or whether he is an irresolute and weak statesman. The *Hainichi Shimbun* criticizes the conduct of Count Matsukata on the present occasion as being impolite towards the Camera Statesmen, whose counsel he most earnestly solicited, but whose advice when given he has not hesitated to reject unceremoniously. But our contemporary at the same time congratulates the Cabinet on its severance of connection with the Camera Statesmen. The *Kaishin-to* organ sincerely hopes that the spirit of independence shown by the Ministers of State on the present occasion may be enduring. The *Fiji Shimpō* also congratulates the Cabinet on its new career of independence, for, says that journal, the Cabinet's curse has been, not the Diet, but the statesmen who stood behind the curtain. At the same time, the *Fiji* thinks it very strange that the elder statesmen, whose advice has been so rudely rejected, do not show any signs of dissatisfaction at the treatment they have received from their juniors. Two explanations occur to our contemporary. The first is that the elder statesmen are perfectly satisfied with the present arrangement because there is a tacit understanding that they are to come into power very soon. The second that they know they can easily get into office whenever they please.

A few papers, like the *Kokumin Shimbun* and the *Hochi Shimbun*, believe, or pretend to believe, the rumour that the present Cabinet has decided to pursue a *chōsen* policy, that is, a policy of keeping independent of all political parties. These papers are very much excited over the rumour, and vehemently denounce the folly of pursuing such a retrogressive policy. For our own part, we fear that our worthy contemporaries are tilting against a windmill.

In certain quarters it is seriously believed that the so-called "strong party" in the Government aims at the maintenance of power even at the point of the bayonet. Count Yamagata is regarded as the leader of this section, and high spirited officers in the Army and Navy are said to be its principal supporters. Among these persons, some, it is rumoured, have been

rash enough to remark that, under certain circumstances, it may become necessary to suspend the operation of the Constitution. What is very strange is that the *Kokumin Kyokai* (National Union) is regarded as a tool by which this militant policy is to be carried out. Absurd as all this appears to the sober minded observer, it is none the less true that there are men who seriously believe in the existence of such a party or movement in official ranks. The *Nichi Nichi Shimbun* ridicules the silliness of attaching faith to the possibility of such a bold course at the present time. It is not indeed absolutely out of the question to maintain despotic or military sway in a constitutional or even republican country. But such things are abnormal, and only within reach of men like Cæsar, Cromwell, or Napoleon. Is there such a man in Japan now? Count Yamagata has a splendid war record, but he is deficient in some of the qualifications of a statesman. Count Ito is shrewd and able, but he has no military achievement to strike the imagination of the people. Similar remarks apply to Count Inouye and Count Kuroda. Who else, asks the *Nichi Nichi* is competent to undertake so daring a course of policy? Viscount Shinagawa's speech at the meeting of the National Union and that of Mr. Oi at the meeting of the *Kwantō-kai* are generally regarded as savouring more of a militant spirit than of anything else. But a militant policy must be carried out, not by mere words, but by solid action.

The Gambling Case has been finished so far as the legal side of the question is concerned, the accused Judges being acquitted, not on the ground of insufficiency of evidence, but on the ground of entire absence of evidence. The vernacular papers, which at first strongly called for the sacrifice of these Judges at the shrine of public morality, now turn round upon their accusers and severely criticize the latter's rashness in causing such intense public excitement without any proof to establish the accusation. It is not to be understood that the vernacular papers regret the escape of the Judges from the clutches of the law. On the contrary, they are glad that Chief Justice Kojima and the others, all of whom enjoy a high reputation for professional capacity and general integrity of character, have been able to establish their innocence. The papers fear, however, that the matter will not end here, and that its effect will be to embitter still more the already strained relations between the two rival sections in the Department of Justice. The *Choya Shimbun* advises all the parties concerned to bury the present incident in oblivion. The *Kokkai* recommends Chief Justice Kojima not to be betrayed into the unmanly course of retaliating upon his accusers. The *Hochi Shimbun* calls upon the accusers to resign their office; for it believes that the present case, being essentially different from an ordinary legal proceeding, those responsible for its inception are morally bound to abide by the consequences of their action.

The point that has attracted widest attention in connection with the judgment delivered in this case, is the circumstance that the examination of danseuses and restaurant keepers conducted at the Metropolitan Police Office was declared by the Judges of the Disciplinary Court not to have been in accordance with law. It follows that the Metropolitan Police Office has been guilty of a breach of the Constitution, for the Constitution guarantees that "no Japanese subject shall be arrested, detained, tried, or punished, unless according to law." The papers call upon the Government to take proper steps in respect of this unconstitutional action of the police functionaries.

The rivalry between the Western and the Japanese schools of painting has awakened wide spread interest among the journalists of the capital. The students of the Western style of

painting are severely criticized by the press for their rash and precipitate conduct. Not only have they withdrawn their application for sending pictures to the Chicago Exposition, but they are making much noise to arouse the attention of the public. They do not hesitate to attribute ignoble motives to the patrons of the Japanese style of painting. The *Kokkai* condemns their conduct as mean and contemptible. They are, in our contemporary's opinion, like the degenerate priests of the Sodo sect who have been servile enough to ask for the help of the laity in settling the internal troubles of their order. The Western school of painting is still in its infancy in this country, and if its students fail to find support and patronage, the blame is to be laid on the imperfections of their own works. On the other hand, the artists of the modern Japanese school, though falling very much short of the great masters of the old, are, comparatively speaking, far above the level of their petulant rivals. The latter are advised to be independent and self-helping. Another journal, the *Nippon*, is of opinion that the policy of the Government with regard to pictorial art ought to be to give all possible protection to the Japanese school of painting so as to promote its further development, and to let alone the Western school so that it may attain free growth. Our contemporary thinks it a duty which each nation owes to humanity to develop and perfect its own peculiar style of painting. On the other hand, the *Nippon* recognizes the importance of receiving healthy stimulus from contact with alien schools of art; and in this respect the introduction of the Western style of painting cannot fail to contribute to perfecting the national art of Japan. There are some painters of the Japanese school who entertain the erroneous idea that the students of the Western school are deadly enemies of their art. These prejudiced painters of the Japanese school, on the one hand, and the conceited students of the western school, on the other, who, ignoring the faults of their own work, show themselves ready to grumble and complain, are equally admonished to behave with more consideration and dignity.

The *Fiji Shimpō* joins the general cry for the adoption of a strong policy by Japan toward the Korean Kingdom. The recent attempt to blow up the residence of the Tai-won-kun does not seem to have led to any disturbance. But our contemporary is convinced that the peninsular kingdom, like a latent volcano, may at any moment burst forth into eruption. The Japanese Government must substitute continual alertness for its present mood of indifference. Should Japanese interests suffer in the sequel of a disturbance in Korea, the Government may try to lay the blame on the shoulders of the Opposition politicians who persistently reject the appropriations for the defence of the country. But such a plea would be of little avail, for it is sure that, whatever may have been the conduct of the Opposition, the nation will hold the Government responsible for any disaster abroad. Therefore the Government is recommended to give up its lukewarm attitude toward Korea.

With regard to the revocation of the privileges of extraterritoriality in the case of the Portuguese residents, the vernacular press applauds the step which the authorities have decided to take. Such a step, say the papers, is only just and proper.

The *Yomiuri Shimbun* recommends the Government to conclude a treaty of amity and commerce with the Republic of Nicaragua, in response to the latter's rumoured proposals. The canal now in process of construction across that country is destined to confer immeasurable benefits upon Japan, if the latter be only careful to take advantage of it. Such being the case, our contemporary exhorts the Government to open friendly relations with Nicaragua, especially as the proposed treaty is reported to be on the basis of perfect equality.

THE CONFERENCE OF STATESMEN.

IT would seem that the great Conference of Statesmen inside and outside the Government—the Conference of four Ministers President and five Counts—has ended in a resolve to leave matters undisturbed. The Conference met at Count MATSUKATA'S Mita residence on Sunday, the Camera Statesmen being Counts ITO, KURODA, INOUE, YAMAGATA, and OYAMA. From 10 a.m. until 5 p.m. the deliberations are said to have lasted. The topic of discussion was not the mere nomination of Ministers to hold the vacant portfolios: that would not have required any such protracted consideration. What the Conference met to consider was whether there should be a complete re-construction of the Cabinet, so as to place statesmen of the first class at the head of the various Departments, or whether the portfolios should be left with their present holders, some of whom are not counted the strongest men at the service of the State. The exact character of the Conference's deliberations is not known, but the *Nichi Nichi Shimbun* alleges that none of the Camera Statesmen was willing to return to power at present, except on conditions which the Cabinet found difficulty in accepting. Finally Count MATSUKATA declared his readiness to pursue the policy hitherto followed by him, in the face of all obstacles, and the Camera Statesmen, on their side, announced that they considered it absolutely necessary that the Cabinet should henceforth be wholly independent, in obedience to which view they purpose hereafter to refrain from offering any advice. The *Nichi Nichi* congratulates the Cabinet on this issue, believing that the country will be better satisfied to see the statesmen in power acting entirely according to the guidance of their own judgment and accepting the full responsibilities of their position. At the same time, our contemporary regrets that the day has not yet come for organizing a really strong Cabinet. It applauds Count MATSUKATA'S courage as well as the self-effacement of the Camera Statesmen. The latter, having concluded their business, are quick to leave the Capital. Count YAMAGATA has gone to Oiso; Count OYAMA to Numazu; Count INOUE, will start immediately for Nikko or Hakone, and Count Ito has returned to Odawara.

It must remain more or less matter of conjecture what were the exact points upon which an irreconcilable difference of opinion was found to exist between the present Cabinet and the statesmen behind the curtain. But enough has been ascertained to show that, speaking broadly, the Camera Statesmen, led by Counts ITO and INOUE, are persuaded that the time has not come for the Government to ally itself with any political party, and that the only course adapted to the true interests of the State is for the Government to

stand entirely aloof, in obedience to the spirit of the Constitution, leaving the various parties to attain stability or lapse into disintegration by processes quite independent of official relationship. To follow this policy would involve severance of all connection, direct or indirect, with the newly organized *Kokumin Kyokai*, and apparently those in power cannot reconcile themselves at once to that course. It is further rumoured that another essential condition of the return of the Camera Statesmen to power would have been a charge of policy at the Home Office, involving the removal of Vice-Minister SHIRANE as well as of several Governors who made themselves conspicuous by excessive zeal during the recent general elections. Count MATSUKATA, himself a perfectly upright and patriotic man, would probably have accepted these conditions readily enough, but it is said that some of his colleagues were determined not to hand over the Administration on such a basis, and the Camera Statesmen, on their side, having no desire to assume office, but, on the contrary, having consented to consider that contingency merely out of deference to repeated requests, were very well content to leave things as they are for the present. If this review of the situation be correct—and we are disposed to think that, in the main, it is trustworthy—the newly organized National Union must be counted a potent factor in the political incidents of the time. For the rest, most people will be disposed to endorse the *Nichi Nichi Shimbun's* eulogy of Count MATSUKATA'S courage and loyalty to his colleagues.

CHINESE CHARACTERISTICS.

MR. F. H. BALFOUR signifies very strong disagreement with us in respect of the Rev. A. H. SMITH'S "Chinese Characteristics." Mr. BALFOUR considers that gentleman better fitted than any other foreigner in China to discuss the character of the Chinese, and speaks in emphatic terms of his great literary ability. We must at once confess to a want of full information about Mr. SMITH. At the time of writing the unfavourable comments to which Mr. BALFOUR takes exception, we knew Mr. SMITH only through the extracts republished from his volume by the *St. James's Gazette*, and did not identify him as the author of the essays which originally appeared in the columns of the *North China Daily News*. Some of those essays we have read, and undoubtedly their perusal afforded us infinite pleasure, for, as Mr. BALFOUR truly says, they show wonderful shrewdness, wit, and literary art. But they were not published over Mr. SMITH'S name by our Shanghai contemporary, and the plain fact is that the name of their author has only now become known to us. Mr. BALFOUR will see, if he refers to our comments, that we prefaced them

by avowing that we had not seen Mr. SMITH'S book. In fact we wrote of a Mr. SMITH to whom the *St. James's Gazette* alone had introduced us. And if we are to judge Mr. SMITH'S book by the light of the London journal's extracts, we cannot but speak of it in terms of strong condemnation. Let us briefly recapitulate the "characteristics" which it ascribes to the Chinese. First, "John Chinaman is the most credulous of mortals;" secondly, "he is without a rival in readiness to misunderstand the most simple statements;" thirdly, "it is often very difficult for an ordinary Chinese to catch on;" fourthly, "his ideas move very slowly," and "nothing surprises him so much as an idea;" fifthly, "his mind is like a rusty old smooth-bore cannon, mounted on an old decrepit carriage, which requires much hauling about before it can be pointed at anything, and then it is sure to miss fire;" sixthly, he is the victim of "intellectual turbidity;" and seventhly, "he has no nerves." Now here are seven important generalizations, all, with the exception of the last perhaps, exceedingly unfavourable to the Chinese. On what kind of evidence are they based? We tabulate the conclusions and the premises:

PREMISES.

Scholars have been known to enquire whether there are a sun and a moon in Europe. A Chinese audience, gathered by the roadside, has been apparently satisfied with the information that plants grow upside down in Europe.

The first appearance of foreign ladies riding side saddle gave rise to a tale that there is a variety of Occidental woman with only one leg.

A country woman once expressed the opinion that foreign children are white because their mothers lick them.

CONCLUSIONS.

John Chinaman is the most credulous of mortals.

A cart driver, being desired to call the attention of his master's little boy to a baby camel among a drove, replied:—"If you should buy the camel you could not raise it—it would be sure to die."

A Chinaman, if asked how old he is, does not reply immediately.

A Chinaman, when he knocks at a gate, invariably answers the query "who is there?" by "I."

A Chinese cook, if asked why he does not put salt into bread-cakes, answers "we do not put salt into bread-cakes."

The Chinaman is without a rival in readiness to misunderstand the simplest questions. The Chinaman finds difficulty in "catching on."

Nothing surprises a Chinaman so much as an idea.

A Chinaman's mind is like a rusty old smooth-bore cannon mounted on an old decrepit carriage.

A Chinaman is the victim of intellectual turbidity.

When we read such reasoning as the above, we can form only one conclusion, namely, that Mr. SMITH, instead of studying Chinese character honestly and carefully, has merely sought opportunities to air his own smartness and facetiae. Nothing is so easy as to turn things into ridicule. The lacunæ in one's own powers of observation may be readily filled up with suggestions and inferences which sound very smart and are often diverting, but which in reality convert the pretended portrait into a monstrous caricature. The Chinaman, if interpreted by the light of the above extracts, becomes a ludicrous and contemptible kind of person; a fit

subject for feeble jokes and shallow wit. But, in point of fact—and here we are confident that Mr. BALFOUR will bear us out—the individual Chinaman is about as bright, helpful, practical, and sensible a specimen of humanity as can be found in any country. To those who cannot look beyond the narrow horizon of their own scanty experiences and who judge everything by their own egotistical standards, there may be many “strange” elements in the Chinaman’s character. But it is very sure that the Chinaman finds just as much to marvel at in the character of the Occidental. We think it infinitely to be regretted that men undertaking to interpret the character of any people, should substitute shallow facetiae for logical induction, and build up sweeping generalizations on fragments of isolated fact. Such writers are, in our opinion, the most effectual obstacles to the growth of mutual understanding, and to the development of international friendliness.

PORTUGAL AND HER JURISDICTION IN JAPAN.

IT is impossible to conceive a more striking example of the beam in one’s own eye and the mote in one’s neighbour’s, than is furnished, on the one hand, by the complaints of certain foreign critics against Japanese jurisdiction, and on the other, by the provision which certain foreign Powers make for the judicial control of their own subjects in Japan. Against the notion of entrusting foreigners to the jurisdiction of Japanese Criminal Courts it is persistently alleged that, though the Japanese Criminal Code and Code of Criminal Procedure represent, with some minor exceptions, a very excellent body of laws, certainly good enough to warrant their extension to foreigners residing in Japan, yet the Magistrates and Judges administering the Codes, though they have received a legal education and though they have satisfied tests designed to ensure competence, have not had sufficient training and experience to justify foreign confidence. Yet, while this pretext is solemnly iterated and re-iterated with every semblance of grave conviction, we have before our eyes the spectacle of Western Powers entrusting judicial functions in Japan to men absolutely without legal education of any kind, and moreover engrossed in commercial affairs which constitute the business of their lives. There is only one expression applicable to such a contrast: it is supremely ridiculous. If it could be honestly claimed and proved that European merchants are gilded by heaven with some special judicial faculty, and are consequently competent to sit on the bench and administer laws with which they have no manner of expert acquaintance, then we might condone the monstrous farce of a trader, without any preliminary training whatever, passing from his count-

ing-house to the seat of justice to assume legal charge of the persons of his nationals and of the property of every one bringing suit against them. It does not matter how many or how few there may be of such wholly unqualified magistrates. Neither does it matter how many or how few may be the resulting miscarriages of justice. The fact is what we have to deal with, and certainly it is a sufficiently startling fact. Japan has frequently complained about it, and has pointed out, with manifest truth, that Foreign Powers which claim for their nationals exemption from her jurisdiction, are bound by every principle of justice and good faith, not to speak of the constructive obligation imposed on them by the treaties, to provide an efficient substitute for that jurisdiction. She has hitherto limited herself to protests, however, being more or less debarred by her own past tolerance from insisting upon a change in the case of minor Powers which have neglected their treaty obligation in this respect. But a case has now arisen of such flagrancy that some action more effective than mere protest has been deemed necessary. Portugal has always been a conspicuous offender in the matter of jurisdiction. At the outset the functions which by treaty she had constructively pledged herself to discharge were entrusted to merchant Consuls, whose competence did not extend beyond that of a committing magistrate, subordinate to the tribunals in Macao. In other words, when an offence was charged or a claim preferred against a Portuguese subject in Japan, the Consul could only hold a preliminary examination, and then refer to Macao for instructions. In the sequel of protests made by Japan at the first Treaty Revision Conference in 1882, a Portuguese Consul-General was appointed in Tokyo. But though this constituted a marked improvement in the sense that now, for the first time, did Portugal possess in Japan an official competent to render judicial decisions, it was, in truth, only a very partial improvement, for the Consul-General’s jurisdiction did not extend beyond the district of Tokyo, where he was stationed; cases occurring at the outposts had still to be referred to Macao, after preliminary investigation. A flagrant miscarriage of justice at Nagasaki in 1886, owing to this exceedingly defective arrangement, resulted in a change by which the Consulate-General in Tokyo took the place of the Macao Court, and became the tribunal of reference for all cases occurring throughout Japan. But the Portuguese Government, impelled by motives of economy, recently resolved to remove this Consul-General, their only paid official in Japan, and his removal was not supplemented by arrangements even for reverting to the inadequate and already condemned system which had prevailed before his appointment. The Japanese Government protested strongly. Though not disposed,

as we have said, to insist upon a change in the case of Powers which, from the beginning, have been content to entrust, and have continued to entrust, judicial functions to Merchant Consuls, Japan is emphatically and justly opposed to the inauguration, at this eleventh hour, of a system of judicial *laissez aller*. The Constitution imposes upon the Government certain clear obligations towards the people of this empire with respect to the protection of life and property and the preservation of peace and good order. The Government, if it delegates a portion of those obligations to a Foreign Power, is not thereby absolved from the duty of seeing that they are efficiently discharged, neither can failure in such a matter be condoned by pleading neglect on the part of any foreign Power. It is the Constitutional duty of the Ruler of Japan to provide means for obviating all neglect of functions lying so close to the root of sound administration. Therefore Japan protested strongly against Portugal’s *lache*. But Portugal took no notice of the protest. Whether the authorities at Lishon regarded the whole matter as too trivial to deserve attention, or whether they were engrossed by other affairs, it is certain not only that they left Japan’s remonstrances unnoticed, but that they did not even think it worth while to convey to the Government in Tokyo the intimations usual in case of the removal of an official charged with diplomatic as well as Consular duties. In the face of this indifference or neglect, Japan doubtless felt constrained to adopt a decisive course. She intimated to the Portuguese Government that inasmuch as Portugal, by failing to make any provision for the judicial control of her subjects in Japan, had abrogated the powers of jurisdiction extended to her by treaty, all Portuguese nationals within the limits of the Japanese empire, should, after a certain date, be considered judicable by Japanese tribunals. Portugal had ample time to avert this contingency. She might have intimated that the necessary arrangements would be made independently, or that the judicial functions in question would be delegated to duly qualified Consular Authorities of some other Power. But she preferred to maintain her silence of indifference or neglect. Finally, being again officially approached on the eve of the date originally named by Japan, she merely replied that an answer should be given in due time. Such a method of conducting international relations cannot be considered either courteous or practical. If the officials at the Portuguese Foreign Office regarded Japan’s intimation as an empty menace, they were mistaken. If they counted the affair too unimportant to attract speedy attention, they will perhaps find less difficulty in reconciling themselves to its issue. Japan has not proceeded with any unbecoming haste. Having

allowed a considerable interval to elapse after the fixed date, she now formally proclaims that Portugal has practically abrogated the powers of jurisdiction extended to her by treaty within Japanese territory, and that, henceforth, Portuguese subjects in this empire shall be judicable by Japanese tribunals. Portugal may cry out, but she has only herself to blame. If she cannot afford to discharge the international obligations which she has deliberately assumed by treaty, then she forfeits her title to enjoy the privileges conferred by treaty. Her position in Japan has thus become distinctly peculiar. She has in this country about 140 subjects, who henceforth forfeit the one privilege that constitutes a kind of equivalent for the restrictions imposed upon foreign trade and travel. We can be tolerably sure that the Japanese Government will not re-surrender the jurisdiction now assumed. Portuguese subjects in this empire have finally passed under Japanese jurisdiction, and in exchange for the valued privilege of being tried by their own tribunals, they obtain nothing whatever. With Portugal's pecuniary embarrassments we can sympathise, but it is difficult to find any excuse for the carelessness and neglect of treaty obligations shown by her in this matter.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SEAMEN LEFT BEHIND AT HAKODATE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 2nd a correspondent accuses me of "great injustice" towards the Captain of the *W. H. Meyer*. Well, if helping to feed the men while ashore here, and subscribing to pay their passage to Yokohama, means injustice to the Captain, then I admit the claim.

Mr. Henson says:—"The four men left behind here were deserters from the vessel."—that's his opinion not mine. Again he says:—"the Master did all possible to get them back, after waiting two days for the Police to bring in the men, without result, the master," &c. Surely this is too utterly absurd, when Mr. Henson knows or ought to know, "that neither he nor the captain notified, either verbally or in writing, the Police that the men were wanted. He also knows that the Captain must give a written description of the men to the Inspector of Police before they can be called deserters; all the information the Police got about the matter was from a butcher, who told the Police he had seen four sailors walking on the Kameda road. I myself saw the Captain, within a hundred yards of the men, but it is really too good to say the ship was kept waiting two days for the Police to do what they were not notified about. There is no injustice in this, I suppose.

Hoping you will excuse me for troubling you with this matter.

Yours truly,

OLD SAILOR.

Hakodate, 4th July.

THE BISHOP OF DURHAM AND POSITIVISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The part played by Dr. Westcott in bringing the late strikes in Durham to an end, has naturally attracted a good deal of public attention; for such intervention is by no means common amongst the ranks of the clergy; and the instances in which, when exercised, it has been successful, are rarer still.

How to reconcile the contending claims of capital and labour, is one of the most difficult as well as most urgent of the problems of our time, and many are the plans for solving it that have been,

and continue to be, propounded. One much-favoured proposal is, by co-operation amongst the workmen to get rid of the capitalist class altogether; some more moderate reformers advocate profit sharing as the specific; there are others, like Mr. Alfred Russell Wallace, who would relieve the labourers by nationalizing the land, or like Mr. Henry George by throwing the burden of taxation entirely on the landowners; whilst a still more numerous class, represented by such writers as Mr. Edward Bellamy, the Fabian Society, etc., place their hopes in one or another form of State Socialism. However great the diversity of these multifarious schemes, there is one feature common to them all: they agree in seeking to remedy industrial anarchy by purely material means, economical, legislative, or political.

There is, however, in the field an entirely different school of thought, which views these recurring conflicts between labour and capital as but the outward material symptoms of an inward spiritual malady; a malady which admits, therefore, of only a moral cure. This school demonstrates that wealth is a social product and ought to be devoted to social ends, that the capitalist is as indispensable as the workman; that both are social functionaries, living by the work of others, and therefore bound in return to work for others. Confining legislation to the protection of rights, it would rely for the enforcement of social duties solely on public opinion, directed by a new scientific priesthood, or body of philosophic teachers, whose authority would rest solely on their competence to demonstrate the truths of science in general, and more particularly of their own special sciences—Sociology and Morals. Such, in necessarily bald and meagre outline, is the Positive solution of the industrial problem. As a deduction from the scientific analysis of human nature, and of the structure of the social organism, it proves that the proper remedy for industrial wrong-doing is to get at the conscience, whether of the capitalist or the workman; and that, to be effective, it must be systematically applied by an organized body of teachers; or in other words, by a new spiritual power.

What chance in the struggle for popular acceptance this latter or spiritual doctrine has of overcoming its materialist rivals is a point on which opinions may well differ. The lively editor of *The Review of Reviews* has lately assured his readers, in his confident oracular manner, that Positivism is as antiquated as the philosophy of St. Thomas Aquinas. On the other hand, acuter critics than Mr. Stead have found the defect of Comte's teaching to lie in rather the opposite direction, that of being too far in advance of its time. Be that, however, as it may; the point I wish to bring out is, that the method of procedure by which the Durham strikes have been so happily terminated is essentially that which was enunciated by Comte over a generation ago as the proper or scientific method; and which has many a time since been scoffed at as impractical, chimerical, Popish, antiquated, and all the rest of it.

But, it may be objected, may not this correspondence between the action of the English prelate and the theory of the French philosopher be a mere fortuitous coincidence? Is there any warrant for obtruding the mention of Positivism in connection with Dr. Westcott's name in this matter? I venture to think that there is. Some of his published writings show that the Bishop has studied Comte's great religious work, the "Positive Polity." Nay, it is even rumoured that he has had the candour and the courage to acknowledge some obligation to it for spiritual benefit. Surely, then, it is not an entirely groundless assumption that the suggestion and the success of his recent mediation are to some extent attributable to his knowledge of the luminous teaching of the Founder of the Religion of Humanity.

Yours faithfully,

J. C. H.

Hakodate, July 4th, 1892.

TO THE "X." CLASS OF CRITICS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If such effusions as the letter of your correspondent "X."—no doubt a "Reverend"—are allowed to appear in your columns, such a letter as will make the cheeks of every Japanese burn with indignation, if there is a man left amongst them to whom the honour of his mother, wife, or sister is dear, and I trust the honour of Japanese men has not been buried with the sword of the samurai, I can only come to the conclusion that your intention is to give such correspondents rope enough to hang themselves with. I trust you will permit me to protest against "X.'s" calumnies in terms as strong as those which these "Brother Hankyards" and "Chadbands" use between themselves, and against others, in their so-called "religious" discussions. Apostles

of love, peace, and charity that covers a multitude of sins, do these call themselves who thus traduce defenceless, patient, self-denying women? Do they call themselves servants of God and followers of Christ? The very names of God, Christ, and religion are prostituted in their slanderous mouths; there is not one amongst them man enough, Christian enough, to utter a single word of protest. But others have protested in your journal; I have protested; I do so again. This time I shall send my protest all over Japan and all over the world wherever the English tongue is spoken, the tongue of honest and honourable men, that was never meant to be prostituted to such uses as those to which "X." puts it. For never, during the ten years that I have lived in this country, have I seen such falsehoods in print as this anonymous slanderer of Japanese women has uttered. I have a right and the duty to defend them, for what happiness has fallen to my lot is due to one of them. Let there be any mistake let me reproduce what the "Reverend" "X," whose identity is but thinly veiled, has to say. It is as follows:—

The perfect woman-wife of Japan must be a something to which the very knowledge or perception of purity or honour is unknown: a chattel, a mere bit of goods in her owner's hands, she is passed from father to so-called husband, or from one to another without her own will; without her own cognisance, she is called upon to sacrifice, at the bidding of another, her very crown and privilege of womanhood; she is to make herself that which for ever blots out all prospect of true womanliness; which debases those who demand and those who allow, and by that act she is to win the honour due to filial piety; *filial*—what sense of fatherhood or sonhood or daughterhood exists in such a nation? Has that maiden ever known the meaning of the word "mother"? Is she ever to know of it in her own life? I ask every honest Japanese to refute me if he can. I ask every one of that noble-hearted minority which has realised a happier standard, whether that result was not found by breaking, and only by breaking, with Japanese custom and tradition.

To the majority of Japanese women then, the wives and daughters of the peer and the peasant alike, to the same women, then, whose womanly virtues and noble qualities of heart and mind have so often and so justly been extolled in the same columns in which they are now so grossly slandered by an "X," the very knowledge or perception of honour and purity is unknown? Verily it is impossible adequately to reply to such villenous of the pen. Assuming, however, for argument's sake, that a community were infested with a loathsome disease, would it be the place of a physician, pure in mind and honest of purpose, to drag his patients on a platform and exhibit their sores to the world! One consequence would be that he would be spurned by his patients, and another that the honourable members of his profession would strike him off the rolls. But the medical quack finds it necessary to blow his trumpet in the market, and administer his nostrums to unwilling or but half-willing victims on a platform, in view of an open-mouthed crowd, and the religious quack, the more dangerous of the two, does the same. The difference is that there is no one to strike him off the rolls. But, says "X," there is "noble-hearted minority which has realized a happier standard," to be sure, under his guidance. What a shallow artifice this is! The object is to meet any one who may be man enough to stand up for the defence of his mother, wife, or sister, with the reply that he, of course, belongs to "the noble-hearted minority" and that what was said was not meant to apply to him, but to his neighbour and his family. But his neighbour is his friend. Oh, well then, it does not apply to his neighbour either, but to his neighbour's neighbour, to another street, to another city, to another province, to anyone in fact not within sight or hearing, or anyhow not unpleasantly near. But, Sir, I and others whose sentiments I express, understand all this thoroughly.

"X." must have been writing under some strong sense of personal injury or disappointment, for otherwise he could have scarcely allowed his bias to carry him so far as to call upon all honest Japanese to refute, if they can, that to their mothers, wives, and sisters, honour and purity are unknown, that they have not and cannot have any conception of the closest family ties, unless, I suppose, they acknowledged the "Reverend" "X." as their shepherd. It seems they do not, and the irate "Reverend" pays them out in print. Now I, in turn, ask every Japanese, honest or dishonest, no matter, as long as he is a man: Will Japanese, nobles and commoners,—for "X." expects none, except a mysterious "noble-hearted minority"—permit him, from an ambush on their own soil, to spit into the faces of their wives and mothers without opening their mouths in their defence? If they do, the sooner they make beasts of burden of themselves between the shafts of a *jinriki*.

sha, whom any one may abuse and drive about for ten cents, the better; if they do, let them no longer call themselves men, or claim the respect due to men; if they let the women of Japan take their place, whilst the men nurse children and use the broom. What an outcry there was in the Isoda case, by the Japanese press, in defence of a woman whose conduct in the matter was, to say the least, doubtful. What precautions are there not taken to prevent frail Japanese women from leaving the country, for fear that they might abroad lead lives that would reflect discredit upon Japan. But in Japan, in the country that is so anxious for the reputation of her daughters in foreign lands, any one may call them all that is vile, deny them every womanly virtue, and yet no Japanese will say the slanderer nay. What must the world, reading these calumnies but not knowing them to be such, think of Japan, if they go forth unchallenged. Must not the natural conclusion be, that the husbands and sons of such women are equally deficient in honour and virtue, and could the correctness of such a conclusion be denied? What, on the other hand, must we think of men, who, under the cloak of religion, cajole the Japanese authorities into letting them live outside of settlement limits, on the pretext of teaching all that is good, noble, and useful, and who then hunt in the gutters and cesspools of society for plague-spots, and proclaim with clappings of hands and rejoicings that they have found them—found them, ay, in places where anyone, whose prurient tendencies and low tastes prompt him to such resorts, is sure to find what he seeks, in Japan and in any other country. Were there a telescope to carry so far, "X." would not be satisfied until he discovered plague-spots in the moon and the stars, for a man must have an object in life. But is that the "work"—a much abused term—he and his like were sent to do in Japan, and is that all that Japan has to expect of them? A drop of milk, a drop of honey, and a drop of poison. I shall not hesitate to employ whatever gift of speech I possess for the purpose of exposing these traducers. Finally, I beg to thank my Tokyo and Yokohama friends for the approval which they have expressed, unsolicited, of a previous letter of mine in your journal on a similar subject. Thanking you, Mr. Editor, for the courtesy of your columns, and most sincerely hoping that I may never have to address you again on a similar topic,

I am, yours very truly, F. SHROEDER.
Tokyo, July 5th, 1892.

[Our correspondent is mistaken as to "X's" identity: the latter is neither a missionary nor a Reverend.—Ed. J.W.M.]

YOKOHAMA HARBOUR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It certainly is fair that warships should menace a foe—but it is very unfair that they should come into the port of a friendly Power and be a menace to the shipping of that port. This, practically, is the case in Yokohama. The breakwater, now in rapid course of construction, has confined the channel, or fairway, for ingress or egress: and warships with great persistency anchor almost immediately inside of the breakwater, and as they foul the fairway it makes navigation doubly dangerous. They are also surrounded by a large number of sampans, moored about half a ship's length off them, which adds to the danger.

I have ventilated this grievance, which would result in an evil if a serious accident were to occur, hoping that some remedy may be applied. It seems that a remedy could easily be found by appointing a "Harbour Master," one who would inaugurate some system in the berthing of war and other ships. Such a step would be greatly appreciated by all Master Mariners frequenting the port.

With all respect, I venture to hope that this appeal may meet with some consideration at the hands of those who may have the power to alter the existing state of affairs, and that something may be done before evil happens.

I am, Sir, your obedient servant,
RENNIE TIPPLE,
Master, Steamer *Sendai Maru*.
July 10th, 1892.

"A SILLY PERSON."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of to-day you speak of "a certain Mr. Arthur H. Smith," author of "Chinese Characteristics," as "evidently an ignorant prig, who does not hesitate to base monstrously ridiculous generalizations on his own equally monstrous ignorance."

I wish to say that if I were asked to name the

man, *par excellence*, who, in my humble judgment, understands the Chinese better than any other man I can think of, I should unhesitatingly name the Rev. Arthur H. Smith of Tientsin. I consider Mr. Smith the very highest authority upon the subject; he has lived for many years in the interior, and devoted himself to the study of the Chinese character as no other man, to my knowledge, has ever done. He is well known to English readers in China as one of the shrewdest and wittiest of writers—a man to whom we are all grateful for much keen enjoyment, as well as for the encouragement he has afforded to those who could otherwise have taken but a languid interest in the strange people among whom they dwell.

I am, Sir, your obedient servant,
FREDERIC H. BALFOUR.
Tokio, July 13th, 1892.

A MISTAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Thanking you for the insertion of my letter to the "X." class of critics, I beg to apologise to whom it may concern for mistaking him to be a Reverend and missionary. The style of "X's" letter scarcely left room for any other conclusion, especially as it bore a strong resemblance to a similar letter that appeared some time ago, so that I and five or six others were under the same impression with regard to it—an impression I am sincerely glad to know was an erroneous one, and I shall take the first opportunity that offers to make the *amende honorable*, in addition to this apology, which I trust will be accepted in view of the strong and unwarranted provocation given.

I am, Sir, yours very truly,
F. SHROEDER.
Tokyo, July 13th, 1892.

IMPERIAL UNIVERSITY GRADUATION CEREMONY.

The presentation of diplomas to graduates of the Imperial University took place on Sunday in the Engineering College. Professor Kato, President of the University, and Count Oki, Minister of State for Education, delivered addresses during the proceedings, which were replied to by one of the graduates on behalf of his fellows. H.I.H. the Crown Prince was present during the ceremony. The following is the list of graduates:—

COLLEGE OF LAW.

FIRST LAW SECTION.

Mizuno Rentaro, shizoku, Tokyo.
Aoki Kikuo, shizoku, Nara Prefecture.
Yamaza Yenjiro, shizoku, Fukuoka Prefecture.
Kuzu Kanzo, shizoku, Iwate Prefecture.
Masaki Naohiko, heimin, Osaka.
Hirano Kentaro, shizoku, Okayama Prefecture.
Hiraoka Teitaro, heimin, Hyogo Prefecture.
Nakamura Takezo, heimin, Tokyo.
Kugo Genichiro, shizoku, Tokyo.
Fukuwara Ryojiro, shizoku, Miye Prefecture.
Fuwa Hikomaro, shizoku, Fukuoka Prefecture.
Matsumura Toshio, heimin, Osaka.
Yokoyama Kotaro, shizoku, Saitama Prefecture.
Kasai Shinichi, heimin, Shizuoka Prefecture.
Hida Yojiro, heimin, Oita Prefecture.
Yamazaki Tetsuzo, shizoku, Yamagata Prefecture.
Umeura Teimei, shizoku, Tokyo.
Hirabayashi Yojiro, heimin, Tokyo.
Takane Toramatsu, heimin, Fukuoka Prefecture.
Nozoye Juichi, shizoku, Nagasaki Prefecture.
Karasumaru Mitsunori, peer, Tokyo.
Shiraishi Motojiro, heimin, Miyagi Prefecture.
Siwa Shoichi, shizoku, Yamaguchi Prefecture.
Kuda Saishu, shizoku, Ishikawa Prefecture.
Kizato Kesao, heimin, Kumamoto Prefecture.
Okita Toranosuke, shizoku, Gifu Prefecture.

SECOND LAW SECTION.

Iwatsuki Reijiro, shizoku, Shimane Prefecture.
Iriye Yoshiyuki, heimin, Tochigi Prefecture.
Okamura Shi, shizoku, Ibaraki Prefecture.
Kajiyama Yentaro, heimin, Hiroshima Prefecture.
Mausuoka Yoshiimasa, shizoku, Tokyo.
Asami Rintaro, shizoku, Yamagata Prefecture.
Mine Hachiro, shizoku, Miyagi Prefecture.
Mayezawa Nariyoshi, heimin, Tokyo.
Yamaga Jirokichi, shizoku, Hiroshima Prefecture.
Date Mineichiro, heimin, Yamagata Prefecture.
Oda Yosozo, shizoku, Saga Prefecture.
Kado Tsunemaru, heimin, Miye Prefecture.
Tejima Heijiro, shizoku, Hiroshima Prefecture.
Tsutsumi Sadajiro, heimin, Ibaraki Prefecture.
Ogawa Heikichi, heimin, Hokkaido.
Fujinami Motoo, shizoku, Oita Prefecture.
Sampei Tamotsu, heimin, Tokyo.
Arai Kentaro, shizoku, Niigata Prefecture.

Miyako Keizaburo, shizoku, Ibaraki Prefecture.
Zen Shojiro, shizoku, Osaka.
Yamanaka Kenkichi, shizoku, Yamaguchi Prefecture.
Hadano Kenzo, heimin, Hiroshima Prefecture.
Tsuzumi Rennosuke, shizoku, Tokyo.
Yokumori Ryata, heimin, Okayama Prefecture.
Tsuiji Hideharu, shizoku, Tokyo.

THIRD LAW SECTION.

Ikedo Juzaburo, shizoku, Tokyo.
Yamamoto Hiji, shizoku, Ehime Prefecture.
Nakao Tamotsu, heimin, Miyazaki Prefecture.
Koboshi Shosaku, shizoku, Tokyo.
Inouye Hisoka, shizoku, Chiba Prefecture.
Saigo Masakichi, heimin, Tokyo.
Iomi Teitaro, shizoku, Ehime Prefecture.
Noda Isamu, shizoku, Fukuoka Prefecture.
Hayashi Ryntaro, shizoku, Wakayama Prefecture.
Murai Juiro, shizoku, Kumamoto Prefecture.

POLITICAL SCIENCE SECTION.

Inaba Kinichiro, shizoku, Tokyo.
Kudo Yutei, shizoku, Iwate Prefecture.
Akiba Shinzaburo, shizoku, Miyagi Prefecture.
Iwao Tatsumi, shizoku, Yamagata Prefecture.
Kumagai Kiichiro, heimin, Yamaguchi Prefecture.
Ito Shutaro, shizoku, Yamaguchi Prefecture.
Matsumoto Teizaburo, heimin, Ehime Prefecture.
Tsuneoka Kennosuke, shizoku, Osaka.
Wakimoto Nabematsu, shizoku, Yamagata Prefecture.

COLLEGE OF MEDICINE.

Miyake Soku, shizoku, Tokushima Prefecture.
Tanaka Nayataro, shizoku, Tokyo.
Nakahara Teiyei, heimin, Yamagata Prefecture.
Umebara Junichi, heimin, Osaka.
Kako Toji, heimin, Shizuoka Prefecture.
Momose Genkei, heimin, Hyogo Prefecture.
Kuribara Yunosuke, heimin, Saitama Prefecture.
Ito Sukehiko, shizoku, Yamagata Prefecture.
Tsuda Tokuyuki, heimin, Miye Prefecture.
Sasakura Yezaburo, shizoku, Tokyo.
Sase Ushihachi, heimin, Tokyo.
Furokawa Ichijiro, heimin, Tokushima Prefecture.
Watanabe Rai, shizoku, Tokyo.
Kodo Yojo, heimin, Kanagawa Prefecture.
Nakanishi Kametaro, heimin, Shizuoka Prefecture.
Tamura Mitsunaki, shizoku, Shizuoka Prefecture.
Izumi Tetsutaro, heimin, Tokyo.
Kojima Hisashi, shizoku, Okayama Prefecture.
Nakagawa Juzen, shizoku, Hyogo Prefecture.
Asahina Shinzo, shizoku, Tokyo.
Suzuki Shinchi, shizoku, Niigata Prefecture.
Hondo Tsunejiro, shizoku, Iwate Prefecture.
Ando Keiji, shizoku, Tokyo.
Noda Choko, shizoku, Hokkaido.
Omura Kukataro, heimin, Shiga Prefecture.
Nagamatsu Shonosuke, shizoku, Yamagata Prefecture.
Mamibayashi Genshin, heimin, Nagano Prefecture.

Katakura Keiyo, heimin, Miyagi Prefecture.
Kumasaka Yanoji, heimin, Niigata Prefecture.
Tada Satou, shizoku, Tokyo.
Akinaga Kaitaro, shizoku, Saga Prefecture.
Wake Toshiaki, shizoku, Okayama Prefecture.
Kojima Takazato, heimin, Fukuoka Prefecture.

COLLEGE OF ENGINEERING.

SECTION OF CIVIL ENGINEERING.

Hattori Shikajiro, heimin, Fukuoka Prefecture.
Ando Mitsutaro, shizoku, Ehime Prefecture.
Noda Rokuji, shizoku, Fukuoka Prefecture.
Nai Kyusuke, shizoku, Yamaguchi Prefecture.
Hori Sannosuke, shizoku, Hokkaido.
Ogi Hiroshi, shizoku, Kagoshima Prefecture.
Yasuda Fujimaro, shizoku, Yamaguchi Prefecture.

SECTION OF MECHANICAL ENGINEERING.

Sakuma Tsunataro, heimin, Nara Prefecture.

SECTION OF NAVAL ARCHITECTURE.

Kato Chido, shizoku, Nagano Prefecture.
Hyuga Shosaku, shizoku, Ishikawa Prefecture.

SECTION OF ELECTRICITY.

Nakahara Iwazaburo, shizoku, Yamaguchi Prefecture.

Otake Senjiro, heimin, Gifu Prefecture.
Watatsu Yotaro, shizoku, Shizuoka Prefecture.

Kajura Juzo, shizoku, Tottori Prefecture.

SECTION OF ARCHITECTURE.

Ito Chuta, shizoku, Yamagata Prefecture.
Yamashita Keiji, shizoku, Kagoshima Prefecture.

SECTION OF APPLIED CHEMISTRY.

Mamizu Hideo, shizoku, Tokyo.
Kawaai Ikuji, shizoku, Ishikawa Prefecture.

Tajima Tanezo, heimin, Tokyo.

Kondo Ajiro, heimin, Gifu Prefecture.

SECTION OF MINING AND METALLURGY.
Komura Koroku, shizoku, Ishikawa Prefecture.
Hattori Susumu, shizoku, Hyogo Prefecture.
Imazumi Kaichiro, heimin, Gumma Prefecture.
Yamaguchi Toshikatsu, shizoku, Saitama Prefecture.

Imazumi Soemon, shizoku, Miyagi Prefecture.

COLLEGE OF LITERATURE.

SECTION OF PHILOSOPHY.

Tachibana Senzaburo, shizoku, Fukuoka Prefecture.

Sonoda Shukei, heimin, Wakayama Prefecture.

SECTION OF JAPANESE LITERATURE.

Yoshida Yaichi, shizoku, Fukuoka Prefecture.

SECTION OF HISTORY.

Urai Koichiro, shizoku, Tokyo.

COLLEGE OF SCIENCE.

SECTION OF MATHEMATICS.

Matsui Kisaburo, shizoku, Ishikawa Prefecture.

SECTION OF ASTRONOMY.

Kimura Yei, shizoku, Ishikawa Prefecture.

SECTION OF NATURAL PHILOSOPHY.

Mizushima Kyutaro, heimin, Hokkaido.

Nakamura Kiyoji, heimin, Tokyo.

SECTION OF CHEMISTRY.

Taiko Yukichi, shizoku, Ishikawa Prefecture.

SECTION OF ZOOLOGY.

Fujita Reishin, heimin, Tokyo.

SECTION OF BOTANY.

Fujii Kenjiro, shizoku, Ishikawa Prefecture.

SECTION OF GEOLOGY.

Yamagami Manjiro, heimin, Yamaguchi Prefecture.

COLLEGE OF AGRICULTURE.

FIRST SECTION.

Miyahara Tadamasu, shizoku, Nagano Prefecture.

Kagayama Tatsushiro, shizoku, Fukuoka Prefecture.

Kikuchi Kumajiro, heimin, Ibaraki Prefecture.

Kano Tatsuo, heimin, Tokyo.

Kusakabe Junzo, shizoku, Tokyo.

Seki Toyotaro, shizoku, Shizuoka Prefecture.

Suge Saito, shizoku, Kumamoto Prefecture.

Nakamura Kanae, shizoku, Fukuoka Prefecture.

Obata Kenkichi, heimin, Kanagawa Prefecture.

Haruna Gonzo, shizoku, Saitama Prefecture.

Shigematsu Tatsuchi, shizoku, Ehime Prefecture.

Suge Saito, shizoku, Kumamoto Prefecture.

Komatsu Shigeo, shizoku, Wakayama Prefecture.

Abe Tokukichiro, heimin, Akita Prefecture.

Hara Ki, heimin, Hokkaido.

Yoshikawa Suketaru, shizoku, Hokkaido.

Takeda Soshichiro, heimin, Okayama Prefecture.

Iida Kozo, heimin, Ibaraki Prefecture.

Suzuki Takitaro, shizoku, Tokyo.

Ishiwatari Shigetane, heimin, Kanagawa Prefecture.

Ema Teijiro, heimin, Shizuoka Prefecture.

Ono Hikotaro, shizoku, Fukuoka Prefecture.

SECOND SECTION.

Machida Sakukichi, shizoku, Kagoshima Prefecture.

Naoki Ichisuke, shizoku, Chiba Prefecture.

Miyake Kenkichi, shizoku, Niigata Prefecture.

SECTION OF FORESTRY.

Sato Gingoro, shizoku, Miyagi Prefecture.

Idani Tamezo, heimin, Shizuoka Prefecture.

Kimura Masao, shizoku, Wakayama Prefecture.

Kotoda Hikoji, shizoku, Nagasaki Prefecture.

Moriyama Tanetaro, shizoku, Saga Prefecture.

Shibata Yoshio, heimin, Shiga Prefecture.

Katsumata Shigeyasu, shizoku, Fukuoka Prefecture.

Mayeda Yozuru, heimin, Shiga Prefecture.

Mochizuki Tsune, heimin, Yamaguchi Prefecture.

Tanaka Yutaro, heimin, Nagano Prefecture.

Hachinohe Michiro, shizoku, Saga Prefecture.

Uchiyama Fusakichi, heimin, Kanagawa Prefecture.

Suzuki Kano, heimin, Miyagi Prefecture.

Kazama Gengo, shizoku, Fukuoka Prefecture.

Yamaguchi Shinobu, shizoku, Nagasaki Prefecture.

Nishida Mataji, heimin, Fukuoka Prefecture.

Miki Ryutaro, shizoku, Gumma Prefecture.

Nakamura Goro, shizoku, Saga Prefecture.

Sasaki Wasaku, heimin, Aomori Prefecture.

Shiozawa Ren, heimin, Shizuoka Prefecture.

Hara Itokichi, heimin, Nagano Prefecture.

Hirota Shioyui, shizoku, Tokyo.

Fukuda Sukasaburo, shizoku, Shimane Prefecture.

Inouye Shokei, shizoku, Yamagata Prefecture.

Ainra Teijiro, shizoku, Saga Prefecture.

VETERINARY SECTION.

Muto Kiichiro, heimin, Shizuoka Prefecture.

Hamaguchi Tsurumatsu, heimin, Miyagi Prefecture.

Kaji Teijiro, shizoku, Tokyo.

Uchimura Hyozo, shizoku, Tokushima Prefecture.

Kobayashi Shoichi, shizoku, Gumma Prefecture.

Yamaguchi Teijiro, heimin, Shizuoka Prefecture.

Aoyama Tetsunosuke, shizoku, Shizuoka Prefecture.

Yasu Zunosuke, shizoku, Tokyo.

Saito Kinpei, shizoku, Fukuoka Prefecture.

Kato Yozaburo, heimin, Miyagi Prefecture.

Minamisawa Kwanosuke, shizoku, Nagano Prefecture.

VICTORIA PUBLIC SCHOOL.

The distribution of prizes to the scholars attending the Victoria Public School took place in the School House, Bluff, on Wednesday afternoon, in the presence of a large assembly of parents and friends. H.B.M. Consul, James Troup, Esq., occupied the chair, and was supported by Mr. W. B. Walter, Mr. A. J. Wilkin (hon. sec.) Mr. Stone, Mr. Hinton, late head master, etc.

The CHAIRMAN in opening the proceedings remarked that in his school days the presentation of prizes to successful scholars only took place once a year; he therefore congratulated the boys of the Victoria school upon living in better times, for it was only a short time since he had had the pleasure of being present at a similar ceremony in that school. He would have several things to say to them later on, but would defer his speech until Mr. Fardel, their head-master, had presented his report on the working of the school for the two-thirds of the year just past.—(Applause.)

Mr. FARDEL said he would first ask the company to welcome among them again Mr. and Mrs. Hinton, who had just come back to Yokohama for a short visit.—(Loud applause.) He was sure they were all glad to see them both again. When the applause had ceased, the speaker proceeded to read out the position which each lad occupied in the school, which was regulated by the number of marks each obtained in class. It was as follows:—1st class: Allcock, mi, 625; Poole, ma, 591; Sargent, 416. 2nd class: Braess, 646; Poole, mi, 542; Pohl, ma, 537; Wheeler, ma, 493; Russell, 475; Allcock, ma, 454; Wheeler, mi, 431; Loomis, 429; Mendleson, 395; Carst, 318. Smith, Cooper, Sakamoto, and Takashima. The maximum marks were 700. Next term the classes would be as follows:—1st class: Allcock, mi, and Poole, ma. 2nd class: Braess; Poole, mi; Pohl, ma; Wheeler, ma; Russell; Allcock, ma; Wheeler, mi; Loomis; Mendleson and Carst. 3rd class: Smith, Cooper, Sakamoto, and Takashima. They were losing this year, he was sorry to say, three of their best boys, Sakamoto, Anderson, and Drummond. They were all leaving to enter business, and he wished them every success. Next term some of the older boys would also be leaving, they were Sargent, who was, he knew, going home, Cooper, and another. It would not perhaps be a loss to the school, however, as owing to various causes these lads required special teaching and this took away attention from the other lads. He hoped next term to be able to engage a third teacher, the necessity for whom was now more and more apparent. He had been promised several subscriptions of \$25 each, from various friends of the school, and if he could secure 16 permanent subscriptions of \$25 each he should be able to engage this third teacher; the school would be greatly benefited if this addition was made to its staff. Mr. Fardel next referred to his hopes of making a fourth division in the school, but this would require a fourth teacher, so he was afraid that he could not achieve this yet awhile. It was, however, necessary, as now a days there were so many standards of education which boys were required to acquire in the course of their school curriculum. The speaker then went on to remark upon the many obstacles which were placed in the way of teachers in this place. They were told that they must do as the East does, and that things could not be helped. But it was very hard to put up with, and he warned parents and friends that they were not dealing fairly with the boys in giving them so many subjects to learn outside school. Not only were boys kept away from school by parties, but they were also kept away from the school sports on various pretexts of having music or dancing or other outside lessons to attend to; but by so doing a most important part of a school training was neglected, and the benefit of such gymnastic exercises was not obtained by the boys as it should be. Again such outside work, or as he termed it, obstacles, seriously interfered with the discipline of the school. The boys could not be expected to be proficient in the proper and practical subjects taught at school if they were overburdened with outside work. He saw that such things, too, interfered with the efficient discipline of the school. He would illustrate it in this way. Supposing a boy to be backward in English or other important lesson, and he did not do it properly during school hours, it often happened that he could not be kept in to finish it properly because he had some music lesson or some dancing class to go off too. Well, the punishment was put off for two, perhaps three days, and then it would slip his mind that a lad should be kept in; well, the result would be that that lad would get off scot free. He sincerely hoped that some of these difficulties should be removed. He could assure them that it would be all the better for the school if they were. He intended next term to give each lad a mark book in which the marks gained during the

week would be entered. This book would be taken home on Monday and brought back, signed by the parents, on Tuesday. This would enable parents to see what work was being done by their sons and what progress each was making. Referring to the subject of public oral examinations, Mr. Fardel said that several parents had expressed a desire that they should be instituted in the school, and he had promised that it should be done. But parents must remember that they would not be able to discover many signs of decided mental progress at such examinations, although the teachers knew from week to week, month to month, term to term, what progress each was making. To his mind these public examinations were more show, but there was one advantage they possessed, and that was, they gave greater assurance to the lads, they enabled them to speak out more freely, and express their opinions on various subjects better when before their elders.—(Applause.)

The CHAIRMAN, upon rising again, said that they had heard from Mr. Fardel of their definite losses and their prospective losses, but he understood that their numbers were fully kept up, and he must congratulate the school upon it. He hoped the numbers attending would grow yet larger; as it was, he must congratulate the teachers upon the spirit of general progress and improvement manifest in the school. He had had an opportunity of observing one or two classes in examination, and he regretted that undue circumstances, over which he had no control, had prevented him from not seeing more of the boys and their examinations. With regard to what he had seen while in the school, he had a few remarks to make, especially as to the examination. He had particularly observed that the boys generally showed a practical interest in their work, while a high rate of progress characterised the various classes. Of course this did not apply to every case, every boy did not exhibit the same amount of interest in his subject, but speaking generally the senior and junior divisions displayed a pleasing animation in what they were doing. From what he saw of the examination, the quickness and interest of the boys evidenced the careful training to which they were one and all subjected. During the mental arithmetic examination some faces showed that the brains behind them were working cloudily, but others were remarkably bright. He had had an opportunity of seeing their handwriting, and he thought that it compared most favourably with and that he had seen at home. He had seen specimens of their handwriting, but had not seen the copy books of the juniors, but what he saw pleased him greatly. Handwriting, though such a common and necessary subject, was sadly neglected in their schools and sufficient attention was not bestowed upon it, but here he was glad to see it received its due attention and with most happy results. He had also had an opportunity of examining the analysis of an English sentence—parsing he would call it. This, he was sorry to say, was not quite as successful as the handwriting. This was a pity. Our English literature was well worth the boys' study, especially of those to whom it was their mother tongue. The progress made in it by those to whom it was only a school-subject, showed that its difficulties were not insuperable. He hoped that those who had taken it up as a school subject and those to whom it was their mother tongue would continue in its study until their labours were crowned with success. He did not think that there were any other subjects which he wished to call to their notice, but would again congratulate them upon the success they had already achieved. One thing would not be out of its proper sphere if he referred to it in this place. Mr. Fardel had alluded to obstacles which were placed in the way of teachers, interfering with the proper work of the school and also with its discipline. He might say that that he was entirely in sympathy with everything Mr. Fardel had said on the subject. He had experienced it with his own boys. The only way out of the difficulty—the only practical way out—was to make these ornamental subjects take a second place. We must allow the serious subjects taught at school to have preference of place, and to come first. They must take precedence of music or dancing. If no other course were open, these things could be taught during the winter months only, for the rest of the scholastic year they must be put away altogether. The serious work of the school must come before all these purely ornamental things. He was a great advocate of training children in all of these things—music especially—but when it came to the point of interfering with the serious training for after life then they ought to be made to take a smaller share of the scholar's time and attention. They must not be allowed to interfere with the serious training work of the school. Having alluded to the prizes which he would shortly distribute, the chairman said that it was impossible for every boy to gain one, but that

should only serve to stir them up to fresh exertions. Referring to the movement for providing an additional teacher in the school, the speaker said that he had not been aware of it until Mr. Fardel had mentioned it that day. Perhaps some member of the Committee would like to have something to say about the matter later on. The desirability of providing another assistant was apparent, and he trusted that there would be no difficulty in obtaining funds by which the school might obtain another teacher. Another matter too, was with regard to the religious instruction provided in the Victoria Public School. The Rev. Mr. Freese, who had lately come to Yokohama, had promised to give religious instruction to all those boys whose parents desired them to receive such instruction. He was sure that the thanks of the friends and committee of the school were due to Mr. Freese for so kindly coming forward to gratuitously place such religious instruction at their disposal.—(Applause.) Having again congratulated the boys upon winning such handsome tributes of their school work, the Chairman said that prize winning at school acted as a stimulus, not only to achieving success in school, but also to striving to win prizes in the race of life.—(Applause.) To the non-winners the ceremony that day should act as a stimulus to pull up and attempt to get one next year. He had known a boy who kept a marking table of boys who were in front of him at school—just as they marked off the days before the holidays so this boy marked off all the schoolfellows whom he had picked up and passed; having beaten one, he worked till he has passed the next,—that was the meaning of this giving of prizes—it was the preliminary training for fitting them to take their proper places in the world.—(Loud applause.)

The Chairman then presented the prizes as follows, accompanying each with a suitable remark:

PRIZE LIST.

ALLCOCK	PRIZES.
mi.—I. Class, Mathematics.	Life of Nelson.
1. Class, French.	Cities of the World.
1. Class, Science.	The Magic Glasses.
Poole mi.—II. Class, Mathematics.	Mammals.
Poole ma.—I. Class, History.	History of Scotland.
Russell—1. Class, Grammar and History.	10000 Wonders.
Pohl—II. Class, History.	Urania.
Loomis—II. Class, French.	Famous Explorers.
Brace—1. Class, Geography.	United States Pictures.
Pohl ma.—1. Class, Composition.	Time and Tide.
Sakamoto—1. Class, Drawing.	The Fishes.
Wheeler mi.—1. Class, Latin.	Given to Wheeler mi.
Poole mi.	True Tales.
Wheeler ma.—and Prize in II. Class, Arithmetic.	Spinning Tops.

LOWER DIVISION.

Ozawa—Geography.	The Great Lone Land.
Johnstone—Composition.	Wild Life.
Auster—Composition.	The Dash to Khartoum.
Watt—Arithmetic.	Poetry Book.
Smedley—Science.	The Blue Fairy Tale Book.
Pohl—Science.	Snap Bubbles.
Drummond—Arithmetic.	Biography of a Locomotive.
Walker ma.—Geometry.	Rambles in the New World.
Booth—History.	The Black Arrow.
Russell—Grammar.	Stories from the Bible.
Watt—Drawing.	Stories from the Bible.
Sale—Reading.	The Odyssey.

CERTIFICATES.

Ozawa.	Arithmetic, Geography, Geometry.
Siu Wong.	and Grammar.
Kuhn.	and Arithmetic.
Watt.	Drawing, Arithmetic, Grammar.
Carot mi.	and Geometry, Grammar.
Helm.	Nestness.
Booth.	1st Reading.
R. Walker.	General Application.
Brent.	1st Recitation.
Russell.	1st History (Exam.), and Arith.
Poole ma.	and French and Arith.; Geogr. Euclid.
Brace.	and Geogr. and Grammar (Exam.).
Loomis and Pohl.	and Science (Exam.).
Wheeler ma.	and Composition and Dictation (Term).
Allcock ma.	and French and General Application.

The scripture examination papers were still under consideration by Bishop Bickersteth, so the two prizes for the subject were held over.

The CHAIRMAN said that the boys were now looking forward to spending the holidays either in the hills or upon the sea shore. He hoped that when they returned to school they would take for their motto to strive and do better still, to apply themselves to their studies and to aspire to higher things in whatever branch of work they might be engaged. Mr. Hinton, he was glad to say, was amongst them that afternoon. They would doubtless like to hear a few words from him.—(Applause.)

Mr. HINTON said he was very pleased to have accorded him the opportunity of speaking to his old pupils that day. There were signs of a healthy living companionship running through the whole of the classes in the school, which he was glad to see. Looking at the names in the prize list, he was rather astonished to see how the prize winners lived up to and justified their names. A Watt and a Smedley had taken prizes for science; a Booth had taken honours for elocution. Some people might say there was a trifling aberration in the principle of a Loomis taking the geographical prize, but such people lived a hundred years before their time and no doubt one day we shall see an Allcock appearing as a great mathematician, while a Poole will be an equally great historian.—(Laughter.) He had lately been living in a quiet, secluded country

place, where it would seem that deep thoughts were among the chief incidentals, and he had come to them that afternoon intending to tell them some things that were good and high, but when he looked round at their bright faces and earnest application to study he found that it was not in solitude that the virtues are developed which are a special point in the training of a big school, and which brought out to their full capacity and to their true development those qualities which were demanded of every lad when he stepped from the school into the world. School life and training developed in the lads those qualities which went to make them the worthiest members of society. Turning to the remarks made by Mr. Fardel upon the obstacles in the path of every teacher, Mr. Hinton said that there was no doubt that these things did encroach upon the domain of the different studies at school. He knew he should be striking a vexed note by saying so. Schoolmasters were apt to be immersed in their work, and were not pleased when such things prevented them from doing justice to their pupils. He hoped that a compromise would be effected in this case. Schoolmasters were not very wise perhaps or absolute, still he hoped that concessions would be made for their own sakes. He expressed again the pleasure it always gave him to meet scholars of the Victoria Public School, either on the hills or amid the temple groves of Nikko, for their faces were always bright and attractive. He was sure that if children did not come into existence for 10 years, a great blank would be left in life, for children lead a life which is quite independent of and unknown by grown-up people. They brought a good deal of the vivacity of life with them, and it was through their agency that genial feelings were created among people living in a small community like ours. And this good feeling was very evident in their school, where the lads formed friendships which would be intimately continued in after life. The speaker concluded by again thanking the company for the kind reception to himself and Mrs. Hinton.

Mr. W. B. WALTER, in proposing a vote of thanks to Mr. Troup for presiding, said that the Chairman had made many remarks that afternoon that would be of great benefit to the boys and their parents too, which would also conduce to the progress and extension of the school. He had by his presence at the examination been able to see more into the working of the school than many of its committee had ever been able to accomplish. His (the Chairman's) visit to the examination, he felt sure, would be of great utility.—(Applause.)

Mr. TROUP, in reply, said that his only regret was that he did not see more of the boys than he had done.

Mr. STONE proposed a vote of thanks to Mr. Fardel and Mr. Fenton for their services, which was carried with acclamation.

Cheers for Mr. and Mrs. Troup, the masters, and the holidays, concluded the proceedings.

REVIEW.

The History of David Grieve. By Mrs. HUMPHRY WARD. London: Smith, Elder & Co.

It is an opinion very generally held by readers of fiction that sequels are always failures. The book before us is not, of course, a sequel to "Robert Elsmere" in the ordinary sense; at the same time, as has been elsewhere remarked, Mrs. Ward, in writing it, must have been conscious that she was herself her own most formidable rival. For to have been the author of a preternaturally successful work is a very serious handicap upon any writer who makes fresh ventures. He is expected to improve upon his former effort; he has himself provided a high and severe standard by which his second book will inevitably be judged; he suffers under the possession of a reputation which must be written up to, unless he can resign himself to being regarded as the mere comet of a season, a writer who has exhausted his stock of talent in a single paroxysm. And this was the position accepted by Mrs. Ward when she published "David Grieve." Of course there was a rush for the book as soon as ever it was out, and it speedily passed through half-a-dozen editions; then came the cool breath of dispassionate and somewhat disparaging criticism, and the verdict to day is that it shows a marked falling-off from "Robert Elsmere." The plain fact is that people expected something better than "Robert Elsmere," and they are rather reasonably disappointed. There can be little doubt that if the order of publication had been reversed, precisely the same criticism would have been made—to the opposite effect—and "Robert Elsmere" denounced as decidedly inferior to "David Grieve."

The question, after all, is very much one of taste. Personally, we consider "David Grieve" one of the most disagreeable books we have ever read. This is not intended as a condemnation, still less

as a reflection upon the excellent style and shrewd insight and admirable delineation of character which distinguish it throughout. The book is full of sterling merit, and represents a remarkable amount of labour and finished workmanship. And yet the general effect upon the mind is one of almost unrelieved depression. In the first place, Mrs. Ward does not seem to possess the faintest possible sense of humour. There is scarcely a gleam of humour from one end of the book to the other; all is matter-of-fact, solid prose, and a book made up of this sort of prose cannot but be a somewhat prosy book. In the second place, many, if not most, of the characters, are almost incredibly disagreeable. Take David's sister, for instance; the girl Louie. The first portion of the story is devoted to the lives of these two children on a Yorkshire moor, and we insensibly look for something to remind us of the immortal Tom and Maggie. But we soon discover our mistake, and the sympathetic receptivity of mind with which we begin reading is speedily changed for a mood of impatient disgust. Louie is simply a child-fiend, without a redeeming quality. She is perverse, deceitful, spiteful, selfish, and mean, with the temper of a demon. She never says a word or does a deed, the whole book through, which does not make one long to box her ears. Indeed, as she grows up she exhibits such revolting depravity and ingratitude as would have justified any doctor in pronouncing her insane, and we frankly admit our inability to sympathise with the sufferings of a young and struggling man who had it in his power to rid himself of such an incubus and didn't do it. On the contrary, David behaved towards her in the exasperatingly idiotic way characteristic of your true prig-hero, giving her the whole of his father's legacy (to which she had no claim), allowing himself to be fleeced and plucked and insulted right and left, and even exposing his wife to the mad fury of the virago in his own house. Nor are the uncle and aunt who bring the children up a particularly pleasant pair. The woman is a harsh and tyrannical scold, who embezzles the children's money and never even by chance lets drop a word that is not a threat or a term of abuse; the man is a poor weak-minded creature, in moral terror of his wife, who has not sufficient pluck to prevent the orphans from being either maltreated or robbed. Now all this may be very "powerful," as the phrase goes; but it all makes very disagreeable reading. One longs for a little sunshine to relieve the persistent gloom; a kindly word, a humorous incident, a patch of light and colour. The absence of such an alleviation is, to our thinking, a decided artistic blunder, and it is one that is continued to the very end of the book.

When David and Louie grow up they go to Paris. In a very short time David elopes with Miss Bashkirtseff—here introduced under the name of Elise Delaunay—who is for ever raving about art, and fame, and ambition. Her master-passion is, in fact, vanity pure and simple, and she soon gets tired of David. Her method of ridding herself of her adoring incubus is certainly original. She is sketching trees in Fontainebleau, and sends David a hot dusty walk of eight miles to buy her some more cobalt; and when the poor wretch returns she has disappeared. We are not sure whether Mrs. Ward intends us to admire Miss Bashkirtseff-Delaunay, so need not say more about her. Meanwhile, Louie goes to the bad more promptly even than David. She becomes the mistress of a disreputable brute named Montjoie, whom David has to bribe with a very handsome sum of money to make her "an honest woman," and the last state of her is considerably worse than the first.

The remainder of the story can be told in a few words. David thrives as a bookseller and publisher, marries an insignificant chit for whom he cares not a rush, but who has forced herself upon him against his will, and settles down into decorous family life. The irruption into his respectable house of the appalling Louie is humorous enough, though we don't believe that Mrs. Ward saw the humour of it herself one bit. Eventually, however, Louie is good enough to cut her throat, when "the cold snowlight" shines upon "the life-stream dripping among the folds of her red-and-black dress;" Mrs. David Grieve dies very unpleasantly of cancer in the face, and the widower does not "allow himself to sink for long into the languor of memory and grief." What actually became of him we are not told. He certainly ought to have married Dora. She was the Ritualistic daughter of a crazy restaurant-keeper; she had been in love with David for years, and yet she had proposed to him on behalf of the insignificant but equally lovesick Lucy; so that certainly she ought to have been consoled at last. Perhaps she was; who knows?

F. H. B.

CRICKET.

THE FLEET V. THE CLUB.

Glorious cricket weather favoured the match between the Fleet and the Club on Saturday, and from the number of ships in harbour it was thought that the visitors might possibly be able to bring a team into the field that would take all the talent of the Club to beat. The latter got together a very strong team, which, as the Fleet went in first and were all out for 70, had little difficulty in winning on the first innings, for at the fall of the fourth wicket 84 showed upon the board, and the innings closed for 129. Edwards, W., who has not played much lately, was top scorer with 32, and, bowling for his side, is credited with 6 wickets. Duff, who in recent matches has been somewhat unfortunate, showed his old form and added 22 to the score, and several others got double figures. The Fleet in the second innings made 98, of which 40 were contributed by de Robeck before Edwards sent him back. Following are the scores:—

FLEET.		SECOND INNINGS.	
First Innings.		Second Innings.	
Lieut. de Robeck, b. Edwards	17	b. Edwards	40

LETTER FROM CHINA.

(FROM OUR OWN CORRESPONDENT.)

Shanghai, July 7th.

A case having a very important bearing on the shipping trade of this and other ports in China has just been decided by Mr. N. J. Hannen, Chief Justice, sitting as arbitrator, viz., the *Peking-Fushun* collision case. For convenience sake the owners of the *Peking* were made plaintiffs in the case, and either side was represented by counsel. A great deal of evidence was taken, and the case lasted much longer than was expected, as it commenced on the 23rd June and was not concluded till the 30th. The facts are very simple. On the 6th May last the *Peking* was proceeding on a voyage from the Yangtze to Hongkong and Canton, laden with grain, and off Elliot Island, some miles from this port, met with such foggy weather that at 4.30 p.m. the Captain thought it advisable to anchor. The ship's bell was rung continuously, and all on board appear to have been on the look-out, knowing that they were anchored in a narrow channel directly in the track of vessels bound up and down. About half-an-hour after anchoring the sound of a steamer's whistle was heard at short intervals, and in a few minutes the bow of the *Fushun* appeared out of the fog, bearing directly on to the *Peking*. Those on board the former vessel, having the wind in her favour, did not hear the *Peking's* bell until too late, nor was the *Peking* herself seen until the *Fushun* was almost on the top of her, and it was then too late to avoid a collision, which resulted in the *Peking* being sunk at her anchor in a few minutes; whilst the *Fushun* was seriously damaged. Fortunately, no lives were lost, owing to the coolness and judgment displayed by Captain Croad of the *Fushun*, who kept his steamer rammed into the *Peking* until all on board the latter vessel had scrambled on board the *Fushun*. For the defence it was argued that had the Captain of

the *Peking* blown his whistle the collision would have been avoided, and it is in evidence that immediately after the accident occurred Captain Croad remarked to the Captain of the *Peking*, "Schultz, one blast of your whistle would have stopped my engines." It was proved that the *Fushun* was going over seven knots an hour, which speed the tide then running increased to ten knots. Now with these simple facts in evidence it would be imagined that the case could be decided without delay, and that no great difference of opinion as to the responsibility for the accident would exist. The arbitrator certainly had no doubt, for he declined to hear the Counsel for the plaintiffs' summing up, and immediately after the Counsel for the defence had concluded, the arbitrator gave his decision entirely in favour of the *Peking*. But the difference of opinion among nautical men as to which vessel was in the right exists now perhaps more violently than ever. Many urge that Captain Schultz was wrong in not blowing his whistle while at anchor, and as many more declare that he would have been entirely wrong had he followed such a course, and a great amount of wrangling and ill feeling has been created in consequence. One side says the Maritime Regulations forbid the blowing of a whistle when a steamer is at anchor, and the other side assert that though the Regulations order that the bell must be rung by a vessel anchored in a fog, they do not explicitly state that a captain must not blow his whistle. It is the old story:—

'Tis strange what difference there should be
'Twixt Tweedledum and Tweedledee.

But Mr. Hannen had no doubt at all. He very pertinently remarked that though the case had shown that the Regulations are not as good as they might be, still the opinion at home was that so long as the Regulations exist the whistle should not be used by a steamer at anchor, and in his judgment he pointed out, when dealing with this side of the defence, that the owners of the *Peking* could not be deprived of their right because the captain did not do a thing which some people might consider in itself a misdemeanour. And Mr. Hannen was very strong on the question of speed at which the *Fushun* was running in a fog, as, according to Article 13, a vessel under the circumstances is bound to proceed at a moderate speed, and when it was proved that the *Fushun* was running to knots at the time, it was clear that she was to blame, and that it was an act which most competent men would have avoided doing. Much sympathy is generally felt for Captain Croad, who has been many years in command of steamers belonging to the China Merchants', and who is looked upon as a cautious and capable commander. It is not yet known how much this case will cost the Company, but the damages are bound to be very high.

Misfortunes never come singly, and the China Merchants' have met with another very serious loss in the wreck of their new steamer, the *Hsinsheng*, on the north-east of Alceste Island, off the Shanghai coast on the morning of the 26th June. This accident occurred during a fog, a strong current having taken the steamer out of the course her captain thought he was steering. The *Hsinsheng* ran with such force on a reef of rocks that the steamers which went to her assistance could do nothing to get her off. When the vessel struck, she heeled over to starboard and took in a quantity of water. Fortunately the weather was calm, and all her passengers were safely landed, with the exception of one native child who was drowned by the in-rushing water. The *Hsinsheng* is jammed hard on the reef, and has 8 feet of water under her bow, and deep water under her stern, so that moving off would be dangerous, if possible. The *Poochi* has been sent from here with pumping gear, but the latest advices give no hope of the steamer being saved. The *Hsinsheng* has proved a most useful vessel to the Company, as she is a large and economical cargo carrier, so that her loss at this season of cut-throat opposition will be felt severely. The coast about the two Shanghai Promontories has been fatal to many steamers owing to the dense fogs that so often prevail, and will continue to be dangerous so long as Captains are driven to hug the shore with the purpose of making a quick passage.

The steamer *Glengyle* has been on shore on the Yangtze for ten days, and resisted all attempts to tow her off, but the rising water floated her just when two steam tugs were about to be despatched from this port to her assistance.

Shanghai is not now so pleasant a place of residence for foreigners since the natives have taken to driving about the roads. Hundreds of vehicles of all descriptions are brought into requisition, and in the summer time the natives drive about, throughout the night, being glad to get out of their stuffy and hot residences no doubt. To add to the discomfort and danger of foreigners,

the native drivers are reckless in the extreme, and accidents are frequent. The Municipal Council have striven hard, through the police, to check furious driving, and for long had to contend against the unwillingness of the Mixed Court Magistrate to punish this offence, but have succeeded at last in prevailing on him to punish offenders. It cannot be denied that many foreigners are also offenders in this respect, and the Council have issued instructions to the police to make no distinction between the furious driving of foreign and native owned vehicles; the consequence is that the malno of a carriage belonging to a well-known bill broker was lately summoned, and was fined \$3 though his master tried in vain to exonerate his servant. It is understood that the police are on the look out for other foreign offenders in this respect, and will strictly enforce the Municipal Regulations.

The local Steamship Companies' combination has fallen through, and they are now running in competition one more. This means loss to the shareholders, and a lowering of rates of freight which will only benefit native shippers and merchants. Perhaps passage rates will be reduced for foreign passengers, and this is much needed, for the coast passage charges are excessively high. To the honour of the Nippon Yusen Kaisha it should be said that they alone have steadily supplied first-class passengers with a maximum of comfort at a minimum of cost, so that they have earned—and I hope received—the grateful support of the travelling public.

Our cricketers have been hard at work whenever opportunity occurred, and our first eleven take every opportunity of practising the game, as later on the Hongkong eleven will pay us another visit, and our crack cricketers wish to be in the best condition to meet their southern opponents.

It is a crying disgrace to justice that the man Frame, who shot and killed a coloured man two months ago, still remains in the American Consular jail untried, on the absurd excuse that the U.S. Government provide no means for drawing up an indictment against him. This should bring the blush of shame to every American citizen resident in China!

Our evening paper lately took the *Japan Gazette* to task for extracting matter from its columns without acknowledgment, but the complaint does not come well from a journal which has boldly published as leaders, articles taken from Indian papers, without the slightest acknowledgment.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, June 20th.

The Republican National Convention, on the day after I mailed my last letter, brought its session to a sudden and unexpected close. Thursday evening, June 9th, both the Blaine and the Harrison forces held caucuses which clearly revealed the weakness of the former and the strength of the latter. The Harrison men were elated to find that they had a clear majority which could not be stamped by any sensational tactics; the Blaine men were discouraged to find themselves in a minority, and decided to abandon their plan of attempting to delay a vote. Accordingly, Friday morning, after prayer by Rev. Wagland Hoyt, D.D., a Baptist clergyman of Minneapolis, the report of the committee on credentials (in most cases favourable to Harrison) was unanimously adopted. After an address by Mrs. J. Ellen Foster, the Chairman of the Woman's Republican Association, the roll of States was called to present candidates. The first State to respond was Colorado, through Senator Wolcott, who in an eloquent speech named Blaine. When Indiana was called the venerable "Dick" Thompson, ex-Surgeon of the Navy, presented Harrison. New York seconded both nominations, Chauncy M. Depew for Harrison, and ex-Sen. Warner Miller for Blaine. A few other minor speeches were made as seconds to both nominations. After Sen. Wolcott completed his speech in favour of Blaine, the latter's friends devoted themselves for 29 minutes to a demonstration; and after Depew's speech Harrison's friends spent 21 minutes in the same manner.

When the balloting began it was evident that the anti-Harrison forces, either by mistake or by design, had divided. Probably it was a strategic move to keep Blaine in the field for the purpose of holding some delegates, whose first choice was Blaine, but who, with Blaine out of the race, would vote for Harrison. It was also a shrewd game to throw votes to McKinley, and thus draw off Harrison men in the Ohio delegation. The only hope lay in keeping Harrison from a majority on the first ballot, and then resisting the opposition on McKinley. But, as you know, the wily trick failed; for Harrison had 65 majority over all, as follows:—

Necessary for choice, 453.

Ohio's one vote for Harrison was cast by McKinley himself.

At the evening session, after Whitelaw Reid, editor of the New York *Tribune*, and Thomas B. Reed, ex-Speaker House of Representatives, had been presented as candidates for Vice-President, the latter's name was withdrawn, and the former was nominated by acclamation. Then, after the usual votes of thanks to the city, the press, the officers, etc., the convention adjourned.

The platform which was adopted on Thursday evening without any contest contains nothing specially striking. It, of course, re-affirms "the American doctrine of protection," but only once mentions the McKinley Bill, and then speaks of it as "The tariff act of 1890"; favours bimetallism; declares for a free ballot and a fair count; contains platitudes and glittering generalities on civil service reform, temperance, and miscellaneous topics; upholds the importance of the Nicaragua Canal; favours pensions; strongly recommends the World's Columbian Exposition; and closes by commending "the able, patriotic, and thoroughly American administration of President Harrison."

President Harrison has certainly won a signal triumph in gaining a renomination against the opposition of such shrewd and wily politicians as Platt, Quay, and Clarkson. James G. Blaine, misled by these schemers, made a great mistake, and was "humbled to the dust by a vote which proclaimed the close of his political life." The Republican party deserves credit in being swayed by the people rather than by the politicians, and in having nominated its strongest candidates. From the comments of the press, I make three quotations which represent three different standpoints. The *Des Moines (Iowa) Register*, a rabid Blaine paper, says:—"President Harrison's administration has been one of the strongest and cleanest in the history of the Republican party." The *New York Times*, a leading Mugwump paper, says:—"President Harrison deserved a renomination at the hands of his party. He is an upright and self-respecting man. He has been a good President." Henry Watterson, in the *Louisville Courier-Journal*, thus expresses a Democratic opinion:—"Beyond any question, the President is the strongest candidate the Republicans could have put in the field."

The Democratic hosts have already gathered here in immense numbers for the National Convention which opens its session to-morrow. The hotel corridors are crowded with delegates and visitors excitedly discussing the merits of Cleveland, Hill, Gorman, Gray, Carlisle, Bois, and numerous dark horses. Many of the business houses are decorated with flags and bunting; and the windows of Democratic houses exhibit the pictures of favourite candidates. Badges of all kinds and descriptions are prominently displayed, and are enriching the peddlers thereof. Documents and circulars are being freely scattered about. Cleve-

land is still in the lead; but his opponents are active, and will make a warm fight.

According to R. G. Dun & Co.'s weekly review of trade:—"Hot weather and hot politics together have affected business at many points, but there is, nevertheless, improvement both in actual trade and in prospects." The crop outlook is better.

The Minneapolis mills have again beaten the record on flour output. During the week ending June 11th they ground out 214,930 barrels, or daily 35,821 barrels. The heaviest previous output was 208,930 barrels for the week ending Oct. 31st, 1891.

Still the rainy season continues, and floods and storms are rampant. We have almost been having a genuine *nyubai*, but without the plums; and we have had in various localities wind storms of different degrees of severity, even approaching cyclones and typhoons. This city and vicinity suffered from a disastrous blow which forcibly reminded us of the *taifu*. The storm came up suddenly one afternoon, and raged through the night. A large party of pupils of the Preparatory Department of the North-western University, Evanston, were taking an excursion on the lake just after their closing exercises, and had a narrow escape from death by drowning. Among the number was a Frank Takizo Takasugi, of Hiroaki. He was a speaker on "Christian Work in Japan" at the graduating exercises.

The Parisian School of Languages of this city contains in its faculty for a Summer School a "Mr. E. Choyow, Professor of Japan."

The University of Chicago continues to be prospered. It has lately received \$500,000 each from Mr. S. B. Cobb and Mr. M. A. Ryerson, and \$50,000 from Mrs. N. S. Foster for a woman's hall. It has now secured \$800,000 of the \$1,000,000 needed for buildings.

The Scudder trial has again been postponed, as neither the prosecution nor the defence was ready.

Rev. W. E. Griffiths, D.D., is preparing a volume on Japan for Houghton, Mifflin and Co.'s "Riverside Library for Young Folks." He will take a summer trip to the Netherlands and the eastern counties of England, presumably to delve more deeply into the subject of the Dutch elements in our civilization.

The bill granting an American register to the Pacific Mail Steamship *China* has been favourably reported to the House of Representatives by the Committee on Merchant Marine.

Col. L. L. Polk, President of the Farmers' Alliance of the United States, died recently.

Emmons Blaine, the second son of the ex-Secretary of State, died suddenly in this city, day before yesterday, of blood poisoning induced by bowel troubles. He has not been well since his return from Minneapolis; but he was not considered dangerously sick until a few hours before his death. His indefatigable efforts at the Republican Convention with the accompanying nervous strain, and the bitter disappointment over his father's defeat, undoubtedly caused his sudden demise. It does seem as if within the past two or three years James G. Blaine had been compelled to pass through an unusual series of troubles. First came the death of Walker Blaine, his eldest and favourite son; then the untimely demise of his daughter, Mrs. Coppinger; then the divorce suit against his youngest son, James G. Blaine, Jun.; also Mr. Blaine's own serious illness; and now, so soon after his defeat, comes the death of his oldest surviving son. The American people can have nothing but the deepest sympathy for the man who, having been led to political humiliation by selfish "bosses," must now drink again the bitter cup of bereavement. Mr. Blaine and part of his family are expected here this afternoon or evening to attend the funeral which takes place to-morrow. It is greatly feared that this sudden and terrible bereavement will seriously affect Mr. Blaine's condition.

Death has recently taken away a well-known character, Father Mollinger, whose wonderful cures have attracted a great deal of attention. It is estimated, that 50,000 patients were treated by him during his career. He had many successes which seemed really miraculous; but he did not claim to be infallible, and met with a large number of failures. He differed from other faith-healers "in that he made use of a scientific knowledge of medicine to supplement his blessings, his holy water and his sacred relics." After all "Christian Science" and "Faith Cure" are not so infallible as "Science Cure" and "Christian Faith." But Father Mollinger succeeded in amassing a fortune valued at \$3,000,000.

This is the season when the "sweet girl graduate" blossoms out numerously!

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Mass., June 17th.

This is the anniversary day of the Battle of Bunker Hill. It is a holiday, and the militia from different parts of the state and the citizens celebrate the defeat of the British one hundred and seventeen years ago. We have grown some since that time, and if we could crush Great Britain then, Zounds! what might we do now!

We are having warm weather now of the regular kind, and we have had "two hot days," June 13th and 14th, when the mercury put on its long boots and climbed quickly to the 100 mark. 'Twas a scorching time, and in the middle of the day business appeared to be practically suspended. Many sunstrokes throughout New England have been reported.

The true Bostonian wherever he may be, will be shocked to hear that it is proposed to build a new city hall in the Public Garden—proposed even in a meeting of the City Government—to blot out our tulip beds and pleasure pond for a mere utilitarian, prosaic structure of iron and stone. But it is believed that there is no possibility of disturbing the Public Garden, although in this day of Democratic and Irish rule, there is "no knowing what a day may bring forth," but the Garden will be defended to the last extremity.

The Republican National Convention at Minneapolis renominated President Harrison for the presidency. In the last letter I wrote that Blaine had resigned the office of the Secretary of State, and that this move was accepted as an evidence of his intention to be a candidate, and he was a candidate. Before the convention proceeded to ballot, the reader of the newspapers might suppose that there was little doubt of Blaine's nomination, and that Harrison had no chance at all. But all that Blaine hue and cry was only buncombe and blarney. Harrison was nominated on the first ballot. Necessary for choice, 453; Harrison, 553; Blaine, 182; McKinley, 182; Reed, 4; Lincoln, 1. Blaine was in this city at the time and sent the following letter to the associated press:—"The resolution, energy, and persistence which mark the proceedings of the convention at Minneapolis will, if turned against the common foe, win the election in November. All minor differences should be merged in the common duty of every Republican to do all in his power to elect the ticket this day nominated by the Republican convention.—James G. Blaine."

Morton, the present Vice-President of the United States, was left off the ticket, and Whitelaw Reid was nominated for Vice-President. It is reported that Morton feels the slight keenly, as he was dropped without his "knowledge or consent." He ought to be able to see that he would be no help to the ticket. The only recommendation he ever had for the place was his wealth. The Vice-President of the United States is the presiding officer of the United States Senate, and for some time after election, Morton was incapable of filling the office, and although he afterwards presided, it is not too much to say that he had no head for the business. He was the poorest, the most lightly equipped presiding officer of the Senate that the country has seen. He was conscious of his lack of ability and was absent often from his place of duty. He was not prepared for that kind of work by education or experience. The nominee for the next term, Whitelaw Reid, is one of the ablest men in this country. He is the editor and proprietor of the New York *Tribune*. He has just returned from France where he was the American Minister—the most brilliant diplomat the United States ever sent to any country.

Now the nominations are made, the next thing is to elect the candidates. The great issue with the Republicans is protection—protection of industries and protection of the labourer. The old arguments will be brought out, polished up, and set forth for the admiration of the people. We shall hear again the old cry about pauper labour that without protection our labourers will be reduced to the condition of the pauper labourers of Europe. Land of Goshen, some of the labourers are near it now. When men are obliged to support families on less than a dollar a day, and pay for food two or three times what it cost in England or on the continent, it is natural to remark: "How beautifully does protection protect the labouring man!"

The Democratic National Convention meets in Chicago next week, and then the two parties may measure swords and pitch in. The probability is, according to the party organs, that Ex-President Cleveland will be the choice of the convention, but some of the leaders of the party are in doubt. There is likely to be a hot fight for and against him, for he has enemies as well as friends. No other candidate, however, is in the field. Hill, the

New York demagogue, has no chance, and no one supposed he would have any. He has the audacity to say that if he is given the second place on the ticket, he will retire from the field as presidential candidate. Very kind of him! He will be retired without the formality of consulting him. Dave Hill of New York is a great curiosity, but he is a little late in life to do the most good by way of example. If Barnum, the great show man, were living, he would attempt, doubtless, to add Dave Hill, properly caged and muzzled, to the attractions of his circus, "the greatest show on earth."

While we are sweltering with the heat-mercury in the nineties in the shade, on the sixth of June there was a snow storm and a "raging blizzard" in South Dakota. There was even loss of life, so sudden did the storm arise and fall upon the people. It is unprecedented, and the "savants" are trying to find out what may be the cause. At Deadwood, the snow fell for ten hours and the wind blew with great velocity. The snow lay on the ground six to twelve inches deep, and the mercury fell below the freezing point. There is reported great loss of stock and growing crops. The storm was general throughout the State. Nothing like it has ever occurred before in the balmy month of June in the Great North-west.

The fire in Oil City and Titusville, Pennsylvania, reported in the last letter, extended two miles along the river and laid waste buildings, manufactories, and dwellings throughout the whole distance. The loss in property is two million of dollars and one hundred lives were lost.

The country is now informed in advance that the Russian harvest will be a failure—even worse than last year. It is supposed that timely notice is thus given to philanthropic Americans that they may get ready promptly their cargoes of wheat, corn, and bacon and send them on in time. And they will do it. A little thing like supporting the Russian peasantry will not inconvenience us a bit. No matter if it does give Russia a chance to spend a little more money on guns. Lord, what would the world do without us!

The city people are now moving to the sea shore or to the mountains. Those who are obliged to work for a living, or have no money, say that home is the best place. Warm weather has "struck in" early, and the hotel keepers on the shore and in the mountains are chuckling and hugging themselves. The exodus is great and continuous. Travellers abroad were never so numerous. Indeed, there are not steamers enough to accommodate all who want to go in June. The rush abroad grows bigger every year. When a man may go to England and back for \$60; around the world for \$600; to Alaska for \$200, to Japan and back for \$400, and a thousand other places at prices equally low, he is not likely to remain at home if he have the money and no business cares.

A ladies' wardrobe on the shore where they live on style, small talk, weak tea and toast, consists of twelve gingham gowns, two white and blue flannel suits, two white gowns, three China silks, two grenadines, a white crepe, a black jetted tulle, twelve hats, for general use and then one for every gown, parasols, gloves, shoes to match every suit, and so forth. This is a very modest outfit compared with some. At the big watering places it would be simply "dreadful" to appear twice in succession in the same gown. As some of the ladies appear in two or three different dresses a day, the inference is that a good deal of time must be given to dressing. The man—the man of sense—puts on a woollen shirt and goes into the Maine woods to sleep on hemlock boughs, to fish, and to eat and sleep and to see no one. Forsooth, then he rests.

The appropriation of \$50,000 additional by the British government for the expenses of representation at the World's Fair, making \$300,000 in all, shows that she has increased interest in the Exhibition.

The style of ladies' dresses demands that about a foot of it shall drag behind. The poor initiate the rich, and it is a common sight to see a negro woman or an Irish servant girl sweeping the streets with her dress. But the end is not far off. The papers denounce, and young men have formed societies to "boycott" all ladies who are in the street-sweeping business, and refuse to escort or attend in any way all ladies who are "victims of the unhealthy and filthy habit." This is a reform that is now "up."

"New York merchants" have contributed \$300,000 to "boom" Cleveland at the Convention at Chicago. An administration paper asks: "How much of the amount is given by American citizens?"

IN THE YOKOHAMA LOCAL COURT.

Before Judge Ono and Assistant Judges.
TUESDAY, May 10th, 1892.

MOURILYAN HEIMANN AND CO. V. THE GOVERNOR OF KANAGAWA KEN.

THE KEROSENE OIL CASE.

The Court resumed its sitting at 10 a.m.

The Judge—We shall examine the witnesses called by plaintiffs first.

Mr. Edwards, of Mourilyan, Heimann & Co., accordingly took his stand in the witness-box.

The Judge—The interpreter of the Court is prevented from attending to-day, but I think the parties concerned might translate the statements respectively.

Counsel for Plaintiffs—I don't think such an arrangement will do. Nagai Hisataro, who interpreted for us before, is in Court now, may he not be appointed to act as interpreter?

The Judge—Very well. As the interpreter was sworn last time the process need not be repeated to-day. (To witness)—Are you a member of Mourilyan Heimann & Co?

Witness—Yes, I am a clerk in that firm.

The Judge—Are you an employé of the firm?

Witness—Yes.

Counsel for Plaintiffs—What duty do you discharge in your office?

Witness—I am now engaged in the tea department. That is to say, I attend to all matters relating to tea, etc.

Counsel for Plaintiffs—You are not connected with the kerosene oil department then?

Witness—Not now. But I used to be engaged in it. I used to communicate with the Customs, and make the necessary arrangements for depositing the oil cases. That is to say, I wrote the applications for deposit and signed delivery orders, as well as received payments for oil sold, etc.

Counsel for Plaintiffs—What were the duties of the Chinese in the office? Were they similar to yours?

Witness—Oh, no. The Chinese filled up the delivery orders and I signed them, and when any transaction was concluded they delivered the article, and brought the money to me. I then sent that money to the bank. The Chinamen always brought a memorandum, on which the amount of money so deposited was mentioned, and to this I signed my name.

Counsel for Plaintiffs—Do any of those Chinese sign any application, delivery order, or other document, as representing the firm?

Witness—Of course not.

Counsel for Plaintiffs—How many Chinese had you engaged in the kerosene oil department—what are their names?

Witness—There are four of them. Akew was engaged in shipping, Aking and Kiching were compradores, and Alai a shroff, but the last was sometimes engaged in outdoor work.

Counsel for Plaintiffs—Do you remember the *Hilaria*, *Enos Soule*, *Abba S. Hart*, *Eclipse*, *Anglo-American*, *Atterton*, and *Calyso* bringing kerosene oil from 1888 to 1891?

Witness—Yes.

Counsel for Plaintiffs—Who signed those delivery orders?

Witness—So far as I can remember, I signed them.

Counsel for Plaintiffs—Out of all those cases of kerosene are there any for which the firm has not received payment?

Witness—On the 12th or 14th November, I don't quite remember which day it was, we first discovered that we had not received payment for some of the cases.

Counsel for Plaintiffs—Who went to the Kencho to investigate the matter?

Witness—The first day my brother went, but on the following day I went with him, and copied out the amounts of kerosene oil which had been delivered. To this I added some remarks which I thought might be useful.

Counsel for Plaintiffs—Are these the documents which you copied in the Kencho? (Counsel showed witness a memorandum containing certain numbers of oil cases delivered on certain dates.)

Witness—I certainly think it is, as it is my own handwriting.

Counsel for Plaintiffs—Were there any documents at the Kencho which were signed in pencil or without any stamp of the firm?

Witness—Yes, I think there were some.

Counsel for Plaintiffs—Were the original delivery orders in the Kencho?

Witness—Yes. An official in the Kencho gave me permission to copy them out.

Counsel for Plaintiffs—You said that you always signed those delivery orders, but why is it that some are signed by Chinese only?

Witness—I signed and handed all the delivery orders to the Chinaman, but I suppose he tore up mine, and substituted others with his own signature attached. As they are made out in pencil, I am sure he must have written them at the Store-house.

Counsel for Defendant—I wish to ask witness about the method of keeping the stamp of the firm, as well as about the documents.

The Judge—Very well, do so.

Counsel for Defendant—By what process were you commissioned to sign those documents?

Witness—It is the custom of our firm to commission one person to do so, by verbal contract. It was my duty to sign different kinds of documents, and I was commissioned to do so with the approval of the chiefs in the office.

Counsel for Defendant—Was such power given to you every time separately?

Witness—No. I was commissioned to discharge that duty once, and I continued to do so.

Counsel for Defendant—When such a commission was given, was the fact notified to the Kencho and to the public, or was it advertised in the newspapers? When were you commissioned, and do you still hold that power?

Witness—As it was not considered necessary to publicly notify such a thing, we did not advertise the fact to the Kencho. If the Kencho does not know or recognize my signature it is their duty to ascertain whether I am the properly authorised person to sign such orders. When a person is commissioned to sign his name in any way for a firm, the fact is generally advertised, for he must be known to every customer in the different ports.

The Judge—Do you mean that it was advertised?

Witness—I had then no power to sign the name of the firm, so I always signed my own name.

Counsel for Defendant—In short, do you mean that you were only verbally commissioned to sign documents, and therefore, you did not think it was necessary to notify either the Kencho or the public?

Counsel for Plaintiffs—What the witness means is that there is a distinction between some persons empowered to sign documents and others, and that there are only a few among the employés of the firm who are authorised to sign *per pro*.

Counsel for Defendant—Do you recognize this stamp and the signature?

Witness—The signature seems to be my own, and the stamp looks very similar to that which we use in the office, but I cannot say for certain whether this is genuine or not.

Counsel for Defendant—Are these genuine delivery orders?—(producing two delivery orders; one signed by Pigott and the other by Paterson.)

Witness—I cannot say whether the stamp is genuine, but as these signatures are very like those of Pigott's and Paterson's, I believe they are genuine orders.

Counsel for Defendant—What do those men do in the office?

Witness—Pigott was one of the principal clerks in the office like myself, but he was then engaged in the tea department, but I suppose he signed the order when I was not in the office. Paterson was an accountant.

Counsel for Defendant—Were those two men also authorized to sign such documents, and are their commissions still continuing?

Witness—I suppose they were commissioned by a similar process to my own. In 1888 I was a principal clerk and used to sign those documents.

Counsel for Defendant—Do you recognize the stamp and signatures on these? (Counsel produced some delivery orders signed by Chinamen.)

Witness—I know the names of these Chinamen, but as they were not empowered to sign any document so I cannot recognize them as genuine. As for the stamp, though it is very like the one in the office, any one could get a duplicate made, so I cannot say whether it is genuine.

Counsel for Plaintiffs—The stamp of the office can be used by any one.

Counsel for Defendant—How is the stamp of the firm kept?

Witness—Although it is called an office stamp it is of no importance. It is used instead of writing, for the firm's name is long and it saves time to stamp it. Therefore we do not take any special care of it.

Counsel for Defendant—I only asked you where it is kept.

Witness—Nowhere particularly. Sometimes it is on the table, at other times in the shop.

Counsel for Defendant—You said that when business is done with Japanese some Chinaman in your office receives the money, but who arranges the transaction?

Witness—Cruckshank in our office is commissioned to transact such business.

Counsel for Defendant—When the money is received by a Chinaman he takes it to the bank, but when it is received who gives a receipt for the

original from

Witness—We don't give any receipt, but we hand the purchaser a delivery order instead.

Counsel for Defendant—How were the receipts for deposited kerosene oil kept? And when a delivery order was given to a Chinaman, with a receipt, by what method was he superintended?

Witness—When the receipts from the Kencho are brought in we put them into a large bag, which is kept in a safe.

The Judge—What responsibility is attached to the man who keeps these receipts?

Witness—No one is held responsible. The bag is kept in the office.

The Judge—Then it is not kept by a person duly appointed for the purpose?

Witness—No. Except that I have charge of the key of that safe.

Counsel for Defendant—Do you always give those receipts to Chinamen every time a transaction is made?

Witness—When any portion of the deposited oil is required, a Chinese brings a delivery order and asks for my signature. I sign it, and at the same time give him the receipt for deposit.

The Judge—If the quantity of oil mentioned in the receipt was to be delivered in several lots was the receipt returned every time a portion was deducted, or was the receipt handed in once for all, on the first occasion.

Witness—We don't receive it back. It is kept in the hands of a Chinaman till all the oil is delivered.

Counsel for Defendant—In delivering deposited oil cases the official at the warehouse always states, on the receipts, on what day so many cases of oil are delivered, signed for, and stamped by him. Did not witness inquire whether the amount delivered was correct on every occasion?

Witness—No. For unless there is a delivery order signed by us, no oil can be delivered on a receipt given by the warehouse official, therefore we never thought of losing any of the oil by not examining the receipt every time.

Counsel for Defendant—It is a rule of the warehouse to receive kerosene oil and keep it for a year; after that time, if the depositor wishes it to continue in bond for any longer period, he has to make a new application for deposit. Were you aware of this?

Witness—Yes. We have always done so.

Counsel for Defendant—You said that you copied out some of the delivery orders which were signed by Chinese. There are many other kinds of delivery orders; did you not notice them then?

Witness—Except those I copied out I did not see one.

Counsel for Plaintiffs—Were you the only person, or one of three, who was commissioned to sign delivery orders?

Witness—Of course I was not the only person. When I was away some one else undertook that duty.

The Judge—Were the other two persons commissioned to sign delivery orders always, or was their authority only exercised temporarily?

Witness—We were all commissioned to sign.

The Judge—Did you not say just now that you alone were authorised to sign?

Witness—No, I did not say that. I was questioned about myself alone, so I thought it sufficient to answer about and for myself.

Counsel for Plaintiffs—Is there more than one stamp of the firm in your office?

Witness—That I cannot say for certain.

Counsel for Plaintiffs—I suppose you mean there may be more than one in the office?

Witness—Quite so. There may be several.

Counsel for Defendant—Have Pigott and the other the same powers as yourself?

Witness—I can only answer questions concerning myself; I cannot tell what sort of commission they received, but I suppose they were authorized in the same manner as myself.

Counsel for Defendant—Do you think then that the authorization of Pigott and another was not communicated to the Kencho or to the public at large?

Witness—I suppose it was not.

The Court then adjourned.

The Court resumed its sitting in the afternoon of the 16th May.

The Judge—I thoroughly understand the plaintiffs' complaint of the wrongful delivery of kerosene oil, but I don't understand how often such kerosene is alleged to have been wrongfully delivered.

Counsel for Plaintiffs—The total amount we demand now was wrongfully delivered.

The Judge—But do you know how often and on what dates such cases were so delivered?

Counsel for Plaintiffs—We do know them.

The Judge—Do you know on what certain dates certain cases of oil were delivered, and to whom?

Counsel for Plaintiffs—No. But we know that the whole was wrongfully delivered.

The Judge—Such an answer will not do. Do you know when they were delivered?

Counsel for Plaintiffs—The number is so great—

The Judge—But among these cases some must have been delivered properly, while others, you say, were delivered wrongfully; a clear distinction ought to be made.

Counsel for Plaintiffs—Those cases mentioned in the list were wrongfully delivered and they are not the whole, but as we are unable to definitely ascertain or trace the other cases we only demand indemnity for those whose numbers were copied out. Will you look at the list?—(Counsel handed a list to the Judge.)—You will see there the dates, the number of cases, and the signatures attached to the delivery orders. The cases were not delivered at once but in small quantities.

The Judge—Do you mean that the wrongful deliveries were those which were made on the orders signed by Chinese only?

Counsel for Plaintiffs—Yes. Those which were delivered on orders carrying the signatures of Chinese who possessed no authority to so sign.

Counsel for Defendant—The number of cases mentioned in the list, presented by Counsel for plaintiffs, is incorrect.

Counsel for Plaintiffs—The Chinese used evidently to practise deceit. The firm always handed the Chinese proper delivery orders which were evidently torn up by the Chinamen, who then prepared new orders signed by themselves.

Counsel for Defendant—Is there any order on which a signature alone is written without any demand for delivery?

Counsel for Plaintiffs—Out of the cases shown in this list the plaintiffs demand compensation for those on account of which they received no payment.

Counsel for Defendant—Then may I consider that the number of cases mentioned in the list has no relation to the number said to have been wrongfully delivered?

Counsel for Plaintiffs (receiving back the list and examining it)—The list includes the wrongfully delivered cases also. But we do not regard it as complete.

The Assistant Judge—I understand that a certain number of cases were deposited, but do you know when they were wrongfully delivered?

Counsel for Plaintiffs—The dates may be ascertained by reference to the books in the plaintiffs' office. But the actual dates of the transactions are known to the defendant, as all the necessary documents are in the Kencho.

The Assistant Judge—Don't you know, then, which cases were wrongfully delivered?

Counsel for Plaintiffs—Those which were released on orders signed by Chinese only. As all the necessary documents relating to the present suit are in the hands of the defendant in the Kencho, we are only able to make an approximate estimate.

The Assistant Judge—Can you give the Court the dates upon which those Chinese received goods?

Counsel for Plaintiffs—By the books of the firm such dates can be ascertained.

The Assistant Judge—Do you think you can tell the exact dates from the books?

Counsel for Plaintiffs—The proper delivery orders were torn up by these Chinese, and they prepared new orders for themselves the dates therefore may not correspond. I will send for the books now, however, if the Court will wait for a few minutes? I think I heard just now that there were some delivery orders on which the number of cases alone was written in pencil, without any stamp of the firm or signature. Is that true?

Counsel for Defendant—There are a few on which the name of the firm is alone written without any signature. But they are only a few out of several thousands.

The Assistant Judge—Do you mean to ask whether these orders were presented by the Chinese?

Counsel for Plaintiffs—Yes.

Counsel for Defendant—Before speaking of what quantity of oil was demanded in the orders made out in pencil, I wish to state that though it is called pencil-writing the pencil used was different from an ordinary one. It is, I believe, called a "copying pencil." Thus it is unlike any ordinary ink, it does not rub off, so it is commonly regarded as equal to ink.

Counsel for Plaintiffs—In the delivery orders presented by the Chinese the name of the ship was not filled in, but in accordance with the forms the ship's name ought to be carefully filled in. Did not the Kencho take any notice of which lot the depositor asked delivery of?

Counsel for Defendant—Properly the name of the ship ought to be filled in, but when a delivery order is brought it is always accompanied by a receipt given to the depositor, on which all the necessary information, such as the name of the ship and on what day she arrived, is mentioned; therefore we never raise any difficulty if these particulars are omitted on a delivery order.

Counsel for Plaintiffs—Among the delivery orders, besides those written with a copying pencil, are there not some written by an ordinary pencil, and some actually corrected afterwards by erasing the first written numeral? Did not the Kencho take notice of this?

Counsel for Defendants—There are no orders of that description.

Counsel for Plaintiffs—Are there many delivery orders on which neither the stamp of the firm nor the name of the firm is printed or written?

The Judge—Do you mean to ask whether there are any delivery orders on which the name of the receiver alone is signed without any mark or sign to show that he represents the firm?

Counsel for Plaintiff—Yes.

Counsel for Defendants—There are one or two of that kind.

The Judge—Are they signed by Chinese?

Counsel for Defendant—Yes.

The Assistant Judge—Is that a question in dispute.

Counsel for Defendant—No. I only answered the question asked by Counsel for Plaintiffs, that is all.

The Assistant Judge—Defendant must not misunderstand any questions asked by plaintiffs. The plaintiffs seem not to know when those kerosene oil cases were delivered.

Counsel for Plaintiffs—1,220 cases of kerosene oil, part of the number of cases imported by the *Anglo-American* on the 12th July, 1890, were delivered by presenting a delivery order which bore neither the name of the firm nor the signature of any person. I wish to point that out to you.

The Judge—Wait a moment. The pleading of Counsel for Plaintiffs is not quite clear. He alleges that many cases of kerosene oil were wrongfully delivered, but we have not yet settled whether there was any wrongful delivery of oil or not.

Counsel for Plaintiffs—I call it wrongful delivery, because the Kencho delivered the goods to men who were not authorised to receive them. We are not able to answer when and how many cases of oil were delivered on such occasions until the whole of the documents, &c., are carefully examined.

The Judge—Yes, such things must be ascertained first.

Counsel for Plaintiffs—The Chinese whom I have sent for the books will appear shortly.

The Court adjourned for a short time, but when it resumed it was ordered to be further adjourned till the 18th May.

The Court rose at 2.10 p.m.

May 18th, 1892.

The Court resumed at 10.55 a.m., on the 18th May.

The Judge—Do the plaintiffs know which particular cases were delivered erroneously?

Counsel for Plaintiffs—This document, (presenting a document to the Judge), marked No. 5, will show all the wrong deliveries.

The Judge—Are these all?

Counsel for Plaintiffs—Yes. They were copied out at the Kencho. But the number of cases mentioned is still insufficient, as the plaintiffs did not know exactly the full amount of oil delivered, but we feel sure that there are quite 1,407 cases still to be accounted for.

The Judge—Do you mean that 1,407 cases of oil were delivered over and above the amount mentioned in these documents?

Counsel for Plaintiffs—Yes.

The Judge—Cannot you give an approximate amount of the whole of the oil delivered?

Counsel for Plaintiffs—No.

The Judge—Do you know from what date these alleged wrongful deliveries extend?

Counsel for Plaintiffs—We have ascertained that they extended up to November last.

The Judge—Do you know at what time they commenced?

Counsel for Plaintiffs—From 1890 to November of last year. But among the orders in the Kencho we found one from which the firm's name has been erased, while the name of the ship is not mentioned. Thus we are unable to account for 1,407 cases. We therefore request the Court to ask defendant whether the dates mentioned in the list are correct?

The Judge (to Defendant)—Are these dates all correct?

Counsel for Defendant—Before answering I wish to put a question or two. Counsel for Plaintiffs just now said that the total number of cases lost was not contained in document No. 5, i.e. that there are some further cases missing—is that not so?

Counsel for Plaintiffs—1,407 cases are missing, over and above the quantity mentioned in that document.

The Judge—I do not quite understand you. Do you mean that the document does not contain the

dates and numbers relating to the forty thousand cases declared to be lost?

Counsel for Defendant—I have examined the document which was handed to me yesterday, and I find that it totals up to about 130,000 cases. Even if the erased order is deducted from the amount, the total will not come any where near the number now stated by plaintiffs to be lost.

Counsel for Plaintiffs—If the number of cases imported by those three ships are added together, you will find that the grand total amounts to the number mentioned in the document handed to you. It is out of these 130,000 cases that the 40,000 were wrongfully delivered.

The Judge—Which lots were so delivered, do you know?

Counsel for Plaintiffs—We do not know the exact lots, for there were over forty thousand cases wrongfully delivered.

The Judge—But can't you tell by the marks and numbers which lots were erroneously delivered?

Counsel for Plaintiffs—No.

Counsel for Defendant—It is very inconvenient that you do not know which lots were wrongfully delivered, for some of course were properly delivered. Does Counsel for Plaintiffs know how much oil was properly delivered?

The Judge—What quantity of oil do the plaintiffs now demand?

Counsel for Plaintiffs—That can be ascertained by the account book.

The Judge—How?

Counsel for Plaintiffs—In the end of the account book every lot is recorded separately.

The Judge—Do you mean this account book? (The one lying on the Judge's desk.)

Counsel for Plaintiffs—Yes. At the bottom of the list are recorded the number of cases for which the firm received payment: indemnity for those is, therefore, not demanded.

The Judge—But this list does not say to which lots the oil and cases belonged?

Counsel for Plaintiffs—No. That cannot be ascertained. What we demand is a certain portion of cases imported by the three ships mentioned, which cases were wrongfully delivered; for these alone we demand indemnity.

The Judge—Then we cannot ascertain the exact number?

Counsel for Plaintiffs—We only demand compensation for those which are not paid for.

The Judge—How did you get the money for the others then?

Counsel for Plaintiffs—The money was brought to the office by the Chinese, who said that that amount of oil was sold.

The Judge—But how did the Chinese obtain delivery of those cases?

Counsel for Plaintiffs—The Chinese altered the delivery orders given them by the firm; a portion of the oil which was sold was paid and accounted for, the other portion was not, and as it is not in the Kencho's warehouse it has been stolen by the Chinese.

Counsel for Defendant—Then the demand of the plaintiffs is not brought on account of wrongful delivery, but for those portions of oil which the Chinese in your employ sold, but did not bring in the money for. Is it not so?

Counsel for Plaintiffs—It is not so. Among the wrongfully delivered goods were some which have been paid and accounted for, but we do not demand compensation for them.

Counsel for Defendant—I can now answer the question which Counsel for Plaintiffs asked just now. In comparing document No. 5 with the books in the possession of defendant I find the numbers differ very greatly; therefore I must ask plaintiffs to point out which lots or quantities of oil were found to be short.

The Judge—Which do you mean, the number of cases alleged to be lost or the dates of their delivery?

Counsel for Defendant—Both the number of cases and the dates of their delivery.

The Judge—How about the signatures?

Counsel for Defendant—As soon as goods are delivered the delivery orders become waste-paper, but I cannot say for certain. I believe the signatures were correct so far as I have examined them.

Counsel for Plaintiffs—Then which numbers and dates are incorrect in document No. 5?

The Judge (to counsel for defendant)—Can you answer the question?

Counsel for Defendant—The question as to the accuracy or inaccuracy of the document presented by plaintiffs cannot be answered just now, but if the Court permits I could, on a future date, cite quite a number of instances of inaccuracy and give comparisons.

Counsel for Plaintiffs—Then may I request you to answer the questions relating to the former document, and not those based on the one presented to-day?

Counsel for Defendant—I have no obligation to answer any such questions.

The Judge—Do you mean that you don't acknowledge them at all?

Counsel for Defendant—No.

The Judge—I wish to ask another question of counsel for plaintiffs. The document No. 5 mentions some 130,000 cases, but out of them you demand indemnity for 7,373 cases only. It that last number included in the former demand?

Counsel for Plaintiffs—Yes.

The Judge—But how about the other thousand odd cases?

Counsel for Plaintiffs—Document No. 5, mentions some cases in which the name to the ship was omitted, but whether these were deposited by plaintiffs or not cannot now be ascertained; and we could not include them in the list of lost cases for compensation. If, therefore, that number is subtracted from the original total the two accounts will correspond.

The Judge—What I asked was whether the other thousand or so cases are included in document No. 5 or not?

Counsel for Plaintiffs—They are included in it, therefore the number is greater than the former document. No, no. I mean to say that the number is less than the former document.

The Judge—Do you mean less than the number you deposited at the Kencho.

Counsel for Plaintiffs—Quite so. If the erased numbers are included the total will be greater, but not otherwise. I cannot say whether the other thousand or so cases were delivered, for I have no duplicate copy with me here.

The Judge—Then they are not included in document No. 5?

Counsel for Plaintiffs—We know that they were imported by those three ships, but when and in what quantities they were deposited is uncertain. In short, all the cases mentioned in document No. 5 were wrongfully delivered, and if we had not received money for some of them we should ask for an indemnity for the whole. We cannot say for which particular lots we received payment, but we do not demand any indemnity in those cases.

Counsel for Defendant—Do you mean that every case imported by the *Anglo-American* and the other two ships, was wrongfully delivered?

Counsel for Plaintiffs—Yes; everyone of them. But we received payment for some of them, therefore we ask no indemnity for such quantities.

Counsel for Defendant—The names of the ships are the *Anglo-American*, the *Milverton*, and the *Calypto*. Do you mean that all the cases imported by those ships were wrongfully delivered?

Counsel for Plaintiffs—Yes.

The Assistant Judge—Were there only three ships?

Counsel for Plaintiffs—Yes.

The Assistant Judge—But I thought you said seven ships before?

Counsel for Plaintiffs—Yes, there are seven ships, but the present suit only concerns those three ships.

The Assistant Judge—Then what about the other ships, besides the *Anglo-American*, *Milverton*, and *Calypto*?

Counsel for Plaintiffs—Document No. 5 mentions only those cases of kerosene oil imported by these three ships. We, are however, not able to tell the exact dates on which the oil was delivered.

The Assistant Judge—Can't you tell how many cases were imported by the *Anglo-American*?

Counsel for Plaintiffs—The number of cases imported by the *Anglo-American* mentioned in that document is greater than the actual number, but the total number imported by the three ships is correct. That is to say there were 128,385 cases in all.

The Assistant Judge—Since the number of cases mentioned in the account-book is included in document No. 5, I fail to see how there can be any more cases about which you cannot give clear evidence.

Counsel for Plaintiffs—That document was copied from papers in the Kencho, and there may be some other papers of a similar kind in the Kencho which we did not have access to. As we do not possess all the necessary documents we cannot tell the exact total number of cases missing. But if that number is subtracted from the total we shall be found short of the remainder.

The Judge—If you cannot tell what amount was lost out of the cases imported by the *Anglo-American*, how can you tell that these particular 1,400 cases belonged to the lot imported by that ship? Yet you seem to have stated it for certainty in the account.

Counsel for Plaintiffs—We only demand indemnity for the actual loss.

The Judge—That's all right; but it seems to me that there are more cases alleged to be lost in the account-book than are mentioned in document No. 5.

Counsel for Plaintiffs—No, no, it is not so.

The Judge—But I see there are some thousand cases alleged to be lost in addition to the number contained in document No. 5. Do you mean you received payment for that quantity?

Counsel for Plaintiffs—No. The total number of cases imported is 130,000 odd, and that total is quite correct, but the document presented this time contains details of the loss of some thousand cases more than the one held in possession by the Kencho, but we cannot bring evidence to prove this.

(TO BE CONTINUED.)

EARTHQUAKE PHENOMENA IN JAPAN.

The following is an epitome of the twelfth report on Earthquake Phenomena in Japan:—

TO THE COMMITTEE PRESENTING THE REPORT, VIZ:—THE RIGHT HONOURABLE LORD KELVIN, MR. R. ETHERIDGE, PROF. JOHN PERRY, DR. HENRY WOODWARD, PROF. THOMAS GRAY.

GENTLEMEN,—Owing to the dissolution of the Seismological Society, in the Transactions of which detailed accounts of work relating to Seismological investigations carried out in Japan have for the most part been published, the Report for this year is somewhat longer than usual. For this reason the Report itself has been forwarded directly to the Secretary of the British Association, whilst the following outline of its contents has been drawn up for the consideration of the Committee.

I have the honour to remain Gentlemen, yours respectfully,
JOHN MILNE.
(Secretary of the above Committee.)

1.—THE GRAY MILNE SEISMOGRAPH.

The seismograph constructed in 1883—the expense of which was partly defrayed by the British Association—has during the last year given diagrams and records of Earthquakes, from number 1106 to number 1241.

2.—REPORT ON EARTHQUAKES FELT IN JAPAN IN 1888 AND 1889.

In 1888 the number of Earthquakes recorded in Japan was 630, and the total land area shaken was 970,800 sq. miles. In 1889, the number of Earthquakes was 930, and the area shaken 1,048,200 sq. miles. On Feb. 5th 1888 an Earthquake shook 57,600 sq. miles. Some account is given of Earthquakes which preceded the eruption of Bandaisan, when within 10 minutes, 28 sq. miles of a fertile valley were buried from 30 to 100 feet deep beneath a sea of earth and boulders. Everybody in the district perished. The damming up of the valley has formed a lake $\frac{3}{4}$ miles long.

On July 28th, 1889, an Earthquake took place in the Southern island; 20 were killed and 74 wounded. All these Earthquakes have been classified with regard to hours, days, months, seasons, &c. They are also grouped according to intensity, direction, &c. It is clear that the vast amount of material which comes in yearly from the 700 observing stations is capable of being analysed by methods other than those given. The Government Staff is insufficient to carry out more than their usual routine work. To carry it out privately requires access to documents, and funds. The nature of new researches which might be made is indicated in the Report. At any moment all this valuable material bearing on Seismology accumulated in Japan and of which there is no copy, may be lost by fire.

3.—EARTH PULSATIONS.

So far as the writer is aware, no attempt has been made to determine the character of the movements, common to all countries, usually called Earth Tremors. By using exceedingly light conical pendulums (made from a needle and a silk fibre)—the pointer being replaced by a small mirror reflecting a ray of light—the writer is inclined to the view that the Earth motions producing movements in this form of apparatus are not elastic vibrations, such as might be produced by the beating of a steam hammer, but that they are long wave, or undulations like the swell on an ocean. During the time that these pulsations are continuing it is noticed that they have a definite direction. They are most frequent when the place of observation is crossed by a steep barometric gradient, whether there is wind or whether it is fine. The possible relationship of these movements to the escape of Fire Damp, the swinging of pendulums, is discussed, etc. The records of these phenomena have been photographed, and examples of them accompany the Report.

4.—THE OVERTURNING AND FRACTURING OF COLUMNS, WALLS, ETC.

By continuing experiments on the overturning of columns when subjected to earthquake like motion, we can now state with confidence the acceleration required to overturn any given column by its own inertia. In the experiments on fractur-

ing, all the brick columns and walls snapped at their base. The form of column which, when moved back and forth by an Earthquake, will offer an equal resistance at all horizontal sections to the effects of its own inertia has been determined.

In ordinary engineering practice the cross-section of piers is practically uniform from the base upwards—short piers near a river bank have the same cross-section as long piers in the centre of the river, &c. A large series of piers for bridges now being built in Japan have been designed in accordance with the rules resulting from our experiments on fracturing.

5.—THE GREAT EARTHQUAKE OF OCT. 28TH 1891.

9,960 people were killed, 128,750 dwelling houses were totally destroyed, and in a few seconds Japan lost the equivalent of perhaps 30 millions dollars. About twelve million dollars have already been poured into the district for repairs and relief. The movement reached Berlin at the rate of 9,800 feet per sec. At Tokyo 150 miles from the origin, the ground moved in long flat waves, which tilted the water in ponds and caused seismographs to act as angle measurers. These waves had a velocity of about eight feet per second. A few chimneys fell.

The origin was the formation of a fault, which can be traced for 40 or 50 miles along the surface. Some 3,000 shocks have been recorded since the first great shock. Mountain slopes have been stripped by land-slips, valleys are dammed up, and lakes have been formed. Valleys have been compressed so that farms have decreased in area.

One curious phenomenon, observed by Mr. F. Omori was the movement of bodies like gate posts by a series of jumps, each jump being from one to four feet, 400 miles of river banks were shaken down or deeply crevassed. Mud volcanoes formed, railway lines and bridges twisted and distorted. Foundations of bridges in one case were shifted 19 feet.

Some thousands of calculations respecting accelerations to produce fracturing and overturning have been made. Records of seismographs have been examined and the velocity of gravity and of elastic waves have been computed. The origin was in a non-volcanic district, but where elevation was in process. Earthquakes seldom come from volcanoes, but they occur in volcanic countries where secular movements are in progress or where mountains are in process of formation.

A photographic record, taken at each end of a water level several miles in length, and if possible at right angles to an axis of elevation, might give measurements of slow tilting and throw light on a possible relationship between earthquakes and these movements, &c. Such an experiment might cost £500.

Earthquake and Volcanic effects will, if possible, be illustrated by some very large photographs kindly lent by Prof. W. K. Burton.

Before the end of this year, with the assistance of subscribers, I shall publish a Seismological Journal which will be uniform in character with the Transactions of the Seismological Society.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 8th.

Further election returns are:—Tories, 140; Unionists, 19; Liberals, 112; Parnellite, 1; Anti-Parnellites, 2. The Tories have gained eleven and the Unionists four.

The Chartered Mercantile Bank notifies probable losses of £65,000 through the failure of a Bombay firm, otherwise the losses since the accounts were published are unimportant.

London, July 9th.

The election returns show that the Tories have gained 13, the Unionists 6, and the Liberals 43.

London, July 10th.

The Tories have gained thirteen, Unionists seven, and Liberals forty-eight.

London, July 11th.

The election returns show that the Liberals have gained 50, and that the position of the Tories and Unionists is unchanged. The Press anticipate that Mr. Gladstone will obtain a small, though scarcely a working majority, including Irishmen and labour members the allegiance of some of whom is doubtful.

London, July 12th.

The election returns show the Tory gain to be fourteen, the Unionist gain seven, and the Liberal gain forty-six.

London, July 13th.

The election returns now are:—Tories, 228;

Unionists, 40; Liberals, 215; Parnellites, 7; Anti-Parnellites, 42. Mr. Gladstone was re-elected by a majority of 700.

CHESS.

SOLUTION OF PROBLEM No. 25.

WHITE. BLACK.
1—Q B to K B 6 1—K x Kt
2—R to Q B 4 2—K x R
3—K B to K 6 mate if 2—K to Q 3

Correct solutions received from Scacchi, W.H.S., O. Balk, Ed. B., Omega, J.D., and J.W.E.

PROBLEM No. 27.

By S. LOYD.

White to play and mate in two moves.

The members of the Yokohama Chess Club had a most enjoyable reunion on Wednesday evening at the Club Hotel, the occasion being a dinner in honour of their much-esteemed President, Mr. John T. Griffin, who has recently returned from a visit to Europe and America. A goodly number of members assembled, though some who had sent in their names as subscribers were prevented from attending, the original date of the dinner, June 28th, having been abandoned in consequence of the lamented death of Mr. J. Honigsberger, which took place on the 26th.

After dinner it had been intended to distribute the prizes in last season's handicap tournament, but unfortunately both Mr. Meikle and Mr. Fardel were unavoidably absent, and that part of the programme had therefore to be dropped. The final score of the leading players is as follows:—

	WON.	LOST	DRAWN
J. T. Meikle (II.)	20	4	—
H. L. Fardel (III.)	18	4	—
O. Balk (I.)	17	7	—
E. Batavus (II.)	17	7	—

Mr. Meikle's losses were made up as follows:—One each against Fardel, Ekstrand (IV.), Fox (IV.) and Unite (V.). Mr. Fardel lost one each against Meikle, Merian (III.), Fox (IV.) and von Heimer, sen. (IV.), drew against Helm (V.) and left one game against Unite (V.) unplayed. Mr. Balk lost two each against Meikle and Fardel, and one each against Merian (III.), Ekstrand (IV.) and Hodges (V.). Mr. Batavus lost two each against Balk, Meikle, and Fardel, and one against Ekstrand.

The following is one of the two games played between Messrs. Balk and Batavus:—

PASSENGERS.

ARRIVED.

Per German steamer *Aglaia*, from Hamburg:—
Mr. M. Mumm and Miss Lili in cabin.

Per British steamer *Empress of Japan*, from Vancouver, B.C.:—Mr. Dalaconval, Rev. H. G. Hawkins, Mr. and Mrs. J. H. Jewitt, Dr. Thornecroft, Mr. and Mrs. Waterhouse, Mr. W. C. Wheeling, Mrs. P. A. Shaw, Mrs. Cavendish, Commander Fleet, Lieut. Boothby, Mrs. Paul, Mr. and Mrs. A. B. Rawie, Colonel and Mrs. Bass, Dr. and Mrs. G. W. Lefferts, Rev. Dr. Conkling, Mr. B. P. Conkling, Miss Conkling, Dr. W. T. Helmuth, Mrs. Helmuth, and Rev. Dr. Vincent in cabin; Messrs. J. and W. Narvel, Mr. Jewitt's amah, Dr. Arnold, Mr. A. Gee, and Mr. G. F. Draper in second class, and 5 passengers in steerage. For Shanghai: Mr. G. A. Bruton, Rev. J. S. Key, and Mr. N. Symons in cabin; Mr. and Mrs. J. Edgar and Master Edgar in second class. For Hongkong: Colonel E. D. Judd, Mr. Leckie, Mrs. England, and Mr. and Mrs. J. Levy in cabin; Mr. E. Roe in second class, and 75 passengers in steerage.

Per British steamer *Oceanic*, from Hongkong:—
Mr. G. C. Greenhill, Miss Ethel Hawkins, Captain Hawkins, Mr. and Mrs. R. Fraser-Smith, and Mr. R. Ogilvie in cabin.

Per British steamer *Gaelic*, from San Francisco via Honolulu:—Mr. Adalbert Jankovich, Mr. Theodore Wores, Mrs. Mary Louise Barroll, Mr. Henry Barroll, Miss Zaides Rogers, Mr. Eugene Clarke, Rev. K. Masuco, Mr. Y. Ninomiya, Miss A. M. Colby, Bishop A. F. Mallatien, Mr. W. E. Mallatien, Rev. Daniels, Mrs. R. Hara, Mr. W. G. Hay, Miss J. H. Hay, and Miss M. D. Hay in cabin. For Hongkong: Mr. A. Murison and Rev. Wm. L. Hornsby in cabin.

Per British steamer *Mascotte*, from Hongkong via ports:—86 Japanese in steerage.

Per British steamer *Pathani*, from Penang via ports:—Mr. Brown in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. and Mrs. R. W. Little, Rev. and Mrs. O. H. Gulick, Miss Gulick, Mrs. J. Jones, Mr. and Mrs. Hata, Mrs. Fitzhugh, Mr. Rethers, 2 children, and amah, Messrs. H. Sylva, J. Blohm, McGregor Grant, W. Beall, A. Tison, J. Strauss, A. Meier, M. Smith, W. J. Whymack, D. S. Browne, S. Strouton, C. B. Hicks, Y. Sano, Rev. Herbert Moore, Rev. B. Buxton, and Capt. J. M. James in cabin; Mrs. Barnes, Mrs. Ota, Mr. and Miss Ota, Messrs. Ota, Wm. Haviland, J. Rissmer, Jas. C. Grant, and H. N. Read in second class, and 45 passengers in steerage.

DEPARTED.

Per British steamer *Gaelic*, for Hongkong:—
Lieut. P. Helps, Mrs. A. Langley, Messrs. D. M. Clark, R. Fraser-Smith, C. Klink and native servant, and M. I. Benenko in cabin.

CARGOES.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Treasure, \$30,000.00.

Per British steamer *Oceanic*, for San Francisco:—

REPORTS.

The British steamer *Oceanic*, Captain Smith, reports:—Left Hongkong the 7th July at 3.8 p.m.; had fresh to strong head winds the entire passage. Arrived at Yokohama the 12th July at 9.17 p.m. Passage, 5 days, 4 hours, and 27 minutes.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 25th June at 3.45 p.m.; had light easterly winds and fine weather. Arrived at Honolulu the 2nd July at 6.33 a.m. and left the same day at 7 p.m.; had light variable winds and smooth sea to the 10th; thence to port light southerly winds. Arrived at Yokohama the 14th July at 4.04 a.m. Passage, 17 days, 6 hours, and 24 minutes.

LATEST COMMERCIAL.

IMPORTS.

There has not been much change in the Market during the past week; business in Yarns has con-

tinued to be the chief feature, and dealers have availed themselves of lots offering to arrive without advancing prices any further, though the market remains firm for all counts; Bombays do not seem to be much wanted at present, and quotations are almost nominal. Grey Goods have had very little attention, the few sales of glb. Shirtings at easier rates being all the business reported, and sellers generally are holding for higher prices; for Velvets there has been a moderate demand, but most other Fancy Cottons have been dull of Sale, and excepting a small business in Italian Cloths there has been little doing in Woollens of any description. Sterling Exchange is quoted 2/10 3/4 Bank on demand. Sales for the week comprise 1,000 bales English Vain, 5,000 pieces glb. Shirtings, 500 pieces Washed Shirtings, 500 pieces White Shirtings, 1,000 pieces Prints, 1,500 pieces Victoria Lawns, 110 pieces Silk-faced Satins, and 1,000 pieces Italian Cloths.

Sheet Iron	3.55 to 3.80
Galvanized Iron sheets	6.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Fin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

No change; market steady and firm. No fresh arrivals during the week, either in American or Russian, but total stock in the Nakamura Godowns is about 625,000 cases of all kinds.

QUOTATIONS.

Chester	—
Comel	\$1.57 1/2 to 1.60
Devoe	1.52 1/2 to 1.55
Russian Anchor	1.52 1/2 to 1.55
Russian Moon	1.50 to 1.52 1/2

SUGAR.

Demand for Takao has fallen off, and prices are nominally a fraction off from the quotations of last week. Other Browns have met a good demand at firm rates, and the market is practically cleared of these kinds. White, unchanged market, quiet but firm under a steady demand.

	PER PICUL.
Brown Takao	\$4.20 to 4.30
Brown Daitong	3.30 to 3.40
Brown Canton	3.40 to 3.50
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was of the 8th instant, since which date settlements on this market amount to 445 piculs, divided thus:—Hanks, 106 piculs; *Filatures* 223 piculs; *Reveels*, 91 piculs; *Kakeda*, 15 piculs; *Oshu*, 10 piculs. These has been no direct export this week, so that the total business amounts to the above named 445 piculs.

Curiously enough, the chief business of the season so far seems to have been done for Europe, where consumers are apparently able to pay good prices. Just now the perplexity about the Italian crop still continues, estimates by cable varying from "Same as last year" to "20% less than last year." It seems probable that the exact outturn will not be definitely known before the end of this month. The local speculation mentioned in our last seems to have died away, and all business done during the week is apparently for legitimate export. While writing, buyers for the United States have entered the market to some extent, a few houses apparently being obliged to make some shipments by the outgoing at steamer.

No real *Shinshu* silks have as yet appeared, and all the business done has been in the same class of silks mentioned last week.

Quality generally is not at present satisfactory; *Koshu* *Filatures* are good, but *Re-reels*, both from *Joshu* and *Bushu*, still leave much to be desired, particularly in regularity of size and colour, some of the well-known marks especially exhibiting failings in these respects.

There has been only one shipping opportunity during the week, the English mail steamer *Verona*, which left port on the 9th instant, taking 172 bales for Europe. This departure brings the present export figures up to 716 piculs, against 1,489 piculs last year and 974 piculs at the same date in 1890.

Hanks.—A large business for the time of year, over 100 piculs being settled of old and new staple. Ordinary *Maibashi* *Hanks*, new crop, have brought \$495, with new *Hachofu* at \$475. Further arrivals are held for an advance, holders asserting that the quality is now much improved. This remains to be seen. It is certain that the first supplies were not very desirable. Some old *Shinshu* *Hanks* have again been done at prices ranging from \$500 to \$460, according to quality.

Filatures.—High prices have been paid for some fine sizes, small lots, \$720 being realized for ordinary *Bishu* silks, 10/12 den. In kinds suitable for America, irregular prices have been paid; so-called *Shinshu* have realized \$715 and \$712 1/2; one parcel of *Koshu* *Yajima* is said to have been settled at \$695, while other silks of equal quality but less-known brands have been done at \$670.

Re-reels.—There has been some business in these at what are comparatively cheap prices, *Joshu* of various brands being purchased at prices ranging from \$650 to \$620. These, as a rule, run rather full size; and for anything regular in size and colour buyers are willing to pay a good figure.

Kakeda.—Some more parcels of old silk have been negotiated for Europe, and the first small lots of new *Kakeda*, amounting to about two piculs, have been taken for the same destination. The prices mentioned for this new staple are:—*Flower Girl* chop, \$610; *Tiger*, \$590; *Deer*, \$550. Present supplies are so small that no estimate of quality can be given, but it is expected that we shall have good silks from this province during the present season.

Oshu.—One parcel of the old *Hamatsuki* settled at \$500, and this is the only transaction so far. No arrivals of new produce at present.

WASTE SILK.

Some little business has been done in old fibre, amounting altogether to 86 piculs, divided thus:—*Noshi*, 25 piculs; *Kibiso*, 11 piculs; *Mawata*, 48 piculs; *Neri*, 2 piculs.

A picul or so of new *Filature Noshi* has been taken as a sample, price \$112, but the quality is ordinary and forms no basis for quotations. Nothing done in *Yoshu Noshi* as yet, the market being in the same condition as reported last week.

There have been two shipping opportunities since we last wrote, the English mail steamer *Verona* taking 348 piculs for Europe and the steamer *Energia* carrying 49 piculs *Mawata* for New York. These departures bring the present export up to 739 piculs, against 103 piculs last year and 535 piculs to the same date in the previous season.

The old fibre *Mawata* shipped to New York is chiefly medium to fair quality, at about \$160 per picul.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 28, 1892.

AWARDED GOLD MEDAL L'POUL INTERN'L EXHIBITION, 1889.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 14 to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YOKOHAMA: SATURDAY, JULY 23RD, 1892.

VISCOUNT INOUE, President of the Railway Bureau, left the capital on the 16th instant and returned on the 21st.

THE Authorities granted on the 12th inst. the application for the establishment of a Commercial Chamber in Shizuoka.

MARQUIS NABESHIMA, Superintendent of the Boards of Ceremonies in the Imperial Household, proceeded to Nikko on the 19th inst.

THE third excursion train to Nikko, which left Utsunomiya on Saturday morning, carried more than six hundred and fifty visitors to the famous temple city.

THE total population of Tokyo at the end of last year was 1,217,309, showing an increase of 75,358 as compared with 1,141,951 of the previous year.

TELEGRAPHIC intelligence from Berlin received by the Government, announces that Viscount Aoki, Japanese Minister to Germany, has arrived there.

THE Railway Bureau, hitherto under the charge of the Home Minister, has been transferred to the control of the Minister of State for Communications.

THE receipts of the Tokyo Godowns Company during the first half of this year were yen 9,179,496, and a dividend has been declared at the rate of 11 per cent. per annum.

THE income of the Twentieth National Bank during the half-year, with the sum brought over from last account, amounted to yen 35,049,184, of this total yen 15,000,000 was appropriated for

dividend at the rate of 12 per cent. per annum, and yen 10,000,000 was set apart to be added to the reserve fund, yen 49,184 being carried to the new account.

MR. WATANABE, Chief of the Hokkaido Administration, has been appointed Vice-Minister of State for Home Affairs, and various changes of local Governors have been made.

DURING the severe thunderstorm in Osaka on the afternoon of the 14th inst. an iron chimney (about 120 feet in height) in the enclosure of the Osaka Arsenal was damaged.

THE dividends of the Cotton Spinning Companies at Settsu and Yokkaichi for the past half-year have been declared at the rates of 20 per cent. and 15 per cent. per annum respectively.

A FIRE broke out on the 11th inst. at 10.30 a.m. in a house at Nishikigi-mura in the Shikazuno District of Akita Prefecture, and before the flames could be subdued 69 buildings were destroyed.

THE foreign trade of Sōul, Korea, during April last amounted to yen 21,900.03, of which yen 19,051.32 (Japanese goods, yen 7,956.09, and foreign, yen 11,095.25) represented imports, and yen 2,848.03 exports.

H.I.H. KITASHIRAKAWA YOSHIE returned to the capital on the 16th inst. from the Narashi Plain, and Their Imperial Highnesses Princess and Princess Komatsu (junior) arrived in Tokyo from Odawara the following day.

THE gallery of a theatre at Isezakicho, Yokohama, where circus performances are now being held, fell down while more than fifty persons were upon it, on the night of the 16th inst. Several youths were more or less severely hurt.

H.E. THE BELGIAN Minister, Mr. G. Neyt, and Mr. Cargill G. Knott, late British Employé of the Imperial University, have been decorated by the Emperor with the First Class Order of the Rising Sun, and the Fourth Class of the same Order respectively.

THE net profits of the Third National Bank, during the same period, were yen 59,192.892, of which yen 5,000,000 was set apart as a reserve, and yen 41,192.892 carried forward to the next account, yen 50,000,000 being declared as dividend at the rate of 10 per cent. per annum.

THE regular general meeting of shareholders of the Tokyo Rice Exchange was held on the 15th inst., at which about 100 gentlemen were present. The total income during the half year was yen 57,924.589, of which, after deducting sums for miscellaneous payments, yen 26,519.155 was left as a net profit. Of this sum yen 2,651,000 was set apart as rewards to officers, yen 700,000 to be added to the reserve fund, yen 3,573,000 as a special reserve, and yen 14,500,000 as a dividend for the half-year at the rate of 20 per cent. per annum, yen 120,474 being carried forward to the next account.

THE Empress visited the Noble's School for Girls on the 18th inst., leaving the Palace at half-past 8 o'clock a.m. The Imperial Party was composed of several officials of the Imperial Household and Ladies in Waiting, and arrived at the school at 9 o'clock, where a large number of distinguished guests, instructors, and scholars in the institution had assembled to receive it. The Empress was at once conducted to an upper salon where the report of the school for the past year was presented by President Nishimura for the inspection of Her Majesty, who afterwards attended the graduation ceremony.

The proceedings commenced with the singing of "Kougosaki" and "Mizu wa usuruwa" (words composed by the Empress), by the students. A quartette on Japanese musical instruments by Mr. Sano Sadataka and Ladies Arimura Namiko, Yonetsu Tetsuko, and Hirasu Yeiko followed. Lady Kujo Noriko having given a performance upon the organ, the certificates were presented by the President, who also delivered a short address. This was replied to by Lady Oshima Yukiko, on behalf of all the other graduates. The proceedings concluded with a further display of vocal and instrumental music, both foreign and Japanese. Her Majesty then inspected the rooms which had been decorated with paintings, needlework, and various other objects, the work of both teachers and students, and appeared greatly pleased at the evident improvement exhibited by all. The Imperial Party left for the Palace at 11 o'clock. Amongst the guests were Their Imperial Highnesses Princess Komatsu (junior), and Princess Kitashirakawa, the Minister of State for the Imperial Household, and Viscountess Hijikata, Marquis and Marchioness Nabeshima, Countess Matsukata, the Grand Master of Services to H.I.M. the Empress-Dowager and Viscountess Sugi, Marquis Hosokawa, Mr. Hosokawa, President of the Higher Female Normal School; Mr. Irokawa, a Councillor of the Educational Department, and Mr. Nagasaki, a Master of Ceremonies in the Imperial Household.

As is customary during the week of the Midsummer Bon, there has been less done in Imports, and the sales of Yarns have been smaller than for some weeks past. There has been a fair demand for Shirtings, however, and at late rates 10,000 pieces g/b. have been taken; other Cotton goods have not been in so much request, and Woollens have been almost neglected. Prices are nominal in the Metal market, where buyers are not numerous, and holders, through higher home prices and lower exchange, are not pushing. The Kerosene trade is healthy, deliveries good, and holders firm. The business in Sugar is only moderate, White sorts being most in demand, but prices are well maintained. The Silk market has been active, and at full rates over 1,000 piculs have passed the scales. Real Shinshu Silks now come in, and the quality of Filatures has been pronounced good, but Kakedas, though fair in quality and colour, are irregular in size—a failing constantly complained of. Though both American and Canadian mail steamers carried silk, by far the larger portion of the shipments have been for Europe. In regard to the Italian crop, it was definitely stated in an English Silk Circular received by the French mail that less seed had been put down this season in Italy, which would point to a diminished out-turn as a certainty, to say nothing of the health of the *kaiho* and the condition of the elements in regard to crop production. The same authority also states in distinct terms that the stock in Europe is low, that silk is in fashion, and the requirements of manufacturers are likely to be considerable, all of which circumstances point to a favourable season for Japanese producers. There has been a little more done in Waste Silk, but the business put through has been mostly in old fibre, what has passed in new not having been sufficient to make quotations. Notwithstanding that certain buyers are at the moment holding aloof, there has been considerable activity in the Tea trade. There is an ample stock of second crop leaf, and a reduction may be looked for if the present attitude of some buyers is maintained. Exchange this week declined another point, but is firm at quotations.

EDITORIAL NOTES.

MR. HIRANUMA AND HIS EMPLOYEES.

It will be remembered by some of our readers that in March, 1891, an announcement appeared in the vernacular papers, and was reproduced by us, to the effect that Mr. Hiranuma Senzo, the well-known coal merchant and money-lender of Yokohama, had been defrauded of the sum of 90,000 yen by the forgery of one of his employes named Kawai Kurataro. Kawai was arrested some six months subsequently to the discovery of his fraud and, after protracted preliminary inquiries, was tried before the Tokyo Provincial Court early this month. The trial has caused considerable sensation on account of the facts which it has been the means of eliciting relative to the methods by which Mr. Hiranuma has made his large fortune. For many years it has been rumoured that no man in Japan was so hated by noblemen as Hiranuma Senzo, on account of the treatment they had received from him, but not until now have incontrovertible proofs of the unscrupulous nature of the measures devised by the great Yokohama usurer been furnished to the public. The whole tone of the speech of the Public Procurator (Mr. Odate), delivered on the 6th instant before the Tokyo Provincial Court, was one of regret that while the employe is punished his employer should escape the clutches of the law. The speech, as reported in several of the papers, refers to Mr. Hiranuma as the father of exorbitant usurers (*kori kashi no oyaji*) and denounces his methods as devoid of all moral rectitude. Among the *ipsissima verba* of the Procurator were the following:—"Hiranuma naru mono wa tokugi mo nani mo omowazaru, horitsu ni yotte hito wo kurushime, kasoku wo seibatsu sen to suru Nihon murui hito no kori-kashi nari." "This Hiranuma is a man who has no regard for morality or anything else, whose one desire is to injure noblemen. His is a wicked and exorbitant usurer whose match is not to be found in Japan." The gist of the Procurator's speech we now proceed to give. The charges proved against Kawai are 16 in number, the gravest being the forging of the seals of Viscount Doi and Prince Tokugawa Yoshinori for the purpose of obtaining money amounting to nearly 100,000 yen from Mr. Hiranuma. Kawai's dishonest transactions extended over a period of two years, commencing in January, 1889, and ending early in 1891. In order that the Court may understand how the dishonesty of which Kawai is accused came to be perpetrated, it is necessary to state that he was in the employ of a man the one ambition of whose life is the crushing of Japan's noblemen, and who in attaining this end is unscrupulous as to the methods employed so long as he can avoid the violation of the letter of the law. Kawai having been originally an active member of the Geographical Society, and as such on terms of intimacy with many noblemen, was used as a tool of Mr. Hiranuma for the furtherance of the above mentioned ends. He was ordered by his master to take measures for inducing the noblemen, whose seals were forged, to borrow money from Mr. Hiranuma. In a letter which has been produced in court addressed by Mr. Hiranuma to Kawai, the latter is exhorted to stir up (*undosuru*) a certain Prince and a certain Viscount in order to induce them to contract a loan. The reference was to Prince Tokugawa and to Viscount Doi. Were Mr. Hiranuma's methods honest, no such term as *undosuru* would be applied to the effecting of a loan. The two noblemen in question were not the only ones marked out for Mr. Hiranuma's attacks. Already he had ruined Marquis Satake and he was now planning the downfall of Marquis Asano and of another member of the Tokugawa family. Mr. Hiranuma has been credited with saying, "The money which noblemen have won by the sword I will take from them by the law." The usurer's daily transactions abundantly showed that it was no idle report which attributed these words to him. Had his policy been other than it was, the forgery of which Kawai was accused and of which he was guilty would never have been effected. Kawai was stimu-

lated by the knowledge that his master was unscrupulous as to methods so long as he himself (Hiranuma) was not rendered liable. Kawai had become conversant with the method of conducting shady money transactions in Hiranuma's employ. Instead of making his master the gainer, he makes him the loser. The case put in a nutshell may be stated thus: one of a band of rogues (*waru-mono*) had been convicted of forgery. An entry in Kawai's diary shows that the writer felt considerable glee in turning his weapons against his master. The entry referred to reads thus:—"I am overcome with joy at the thought that my plot for the collecting of the money has succeeded." The cause of this joy was evidently the defeat of Kawai's associates. Thus far the Public Procurator. The contention of Kawai was that Mr. Hiranuma only objected to the forgery because he himself, and not the noblemen, became its victim. The transaction was all of a piece with his master's crooked ways of ruining noblemen. Kawai was one of a set of gamblers, and if he had played his cards well and won a great sum, and did not hand it over to his master, there was not much fault to be found with him.

Kawai is a son of one of the chief retainers of Viscount Doi, and his forgery and subsequent appropriation of Hiranuma's money are connected with this relationship in an interesting manner. When exhorted by Hiranuma to lay a trap for his lord, he thought the affair over, and being overcome with a sense of shame at having consented to act in such a disloyal manner to the benefactor of his ancestors, he there and then determined that he should make the Yokohama usurer pay dear for his effrontery in planning the ruin of Viscount Doi. Kawai stated at the trial that he was quite prepared to suffer the penalty of his crime, but he thought that strict justice demanded that the man on whose behalf he had been working against noblemen in general should take his share of the punishment to be meted out. He and Hiranuma were in the same boat. The only objection that Hiranuma had to offer to the transactions of his employe was that he, the employer, was the sufferer; as to the perpetration of fraud, concerning that Hiranuma had no scruples.

Judgment in the above case was to have been delivered on the 9th instant, and the parties concerned assembled to hear it on that day. They were informed that evidence had been furnished showing that Kawai had been guilty of perpetrating still more heinous forgery than that already under the consideration of the court, and that he would consequently be committed for trial on major crimes.

The objectionable methods of usurers referred to by the Public Procurator, are, briefly stated, the extortion of exorbitant interest, the enforcement of the payment of a number of heavy fees, denominated *tesuryo* in Japanese, the subtraction of a large part of the interest due in advance, the preparation of mortgage documents and other agreements in such a manner that even a day's delay in the payment of interest or the fulfilment of an agreement, though the delay may be entirely unavoidable, places the property at once at the disposal of the mortgagee, and in many cases the exaction of bribes of several thousand yen from the intending borrower, especially when it is known that he is in urgent need of money. The practice of such usurers as Hiranuma is to make promises by the hundred in conversation, but never to commit anything to writing which might be quoted against them in a Court of Law. Never undertaking any complicated transactions without legal advice, and always instructing their lawyers to elaborate means for extorting money from their customers, without rendering themselves liable to legal punishment, they are able to carry on their cruel business from year to year and, like Mr. Hiranuma, amass a large fortune without suffering any inconvenience from the effects of their immorality. We are hardly surprised that the Public Procurator, in the case which

we have reported, felt it his duty to allude to the manner in which men bent on evil can defy the law, and to point out that such methods as those adopted by Mr. Hiranuma are scandalous and enough to ruin a man's reputation, even though they cannot be proved criminal. The Japanese public will rejoice at the exposure that has been made, and one cannot but feel glad that in Japan, as elsewhere, public opinion is showing its power to remedy evils with which no laws can cope.

THE NEW CABINET MINISTERS.

The Tokyo News Agency has a good deal to tell about the new appointments to Cabinet portfolios. On the 12th instant, it says, reports were circulated that the future occupants of the vacant posts of Ministers of Home Affairs and Justice had been determined, and that Count Matsukata had addressed the Emperor on the subject. But the statement was premature, for though the Cabinet agreed on that day to recommend the nomination of Viscount Sano and Mr. Inouye Ki, doubts existed as to whether the latter would accept a portfolio. The following day, another conference was held, but no definite decision was arrived at. It appeared that while Mr. Kono was not unwilling to accept the portfolio of Home Affairs, he required certain conditions which would necessitate more or less modification of the Government's policy. Hence some ministers were in favour of giving the portfolio of Justice to Mr. Inouye Ki and that of Home Affairs to Count Oki, since between the latter and the Vice-Minister, Mr. Shirane, as well as the local Governors, there would be no disagreement. But Count Oki showed no disposition to accept the proposed position, declaring himself, on the contrary, quite ready to resign if his remaining at the Department of Education caused any inconvenience. Moreover, it was alleged that the majority of the officials in the Department of Justice regarded Mr. Kono as the best man to settle the troubles now existing in that section of the Administration. The Conference, therefore, ended abortively, the various Ministers going about their business, and Count Matsukata proceeding to the Palace to report results to the Emperor. On the morning of the 14th, the Ministers reassembled at the Cabinet, and the discussion was resumed. Mr. Kono restated the conditions on which he was prepared to accept the portfolio of Home Affairs, and after these had been considered, Count Matsukata had audience of the Emperor, returning to the Cabinet at 3.20 p.m. Mr. Inouye Ki also visited the Cabinet, and had a brief conversation with the Minister President. At 4.50 the Conference closed, and at 7 o'clock Count Matsukata again proceeded to the Palace. Thither Mr. Kono and Viscount Sano were summoned at 8.30 p.m., and duly nominated by the Sovereign to preside over the Departments of Home Affairs and Agriculture and Commerce, respectively. Mr. Inouye Ki is said to have declined the portfolio of Justice on the plea of feeble health. The *Nichi Nichi Shimbun* publishes a rumour that Mr. Shirane, Vice-Minister for Home Affairs, will be transferred to the Privy Council, his successor being Mr. Kitagaki, now Governor of Kyoto.

In the *Kokkai* we find a statement that the National Unionists are by no means pleased at the appointment of Mr. Kono to the Home Office, since they believe that he has some relations with the Popular Party. But their remonstrances have not affected the result.

MUSIC FOR BOYS.

We wonder whether the head-master of the Victoria Jubilee School and H.B.M.'s Consul, when they agreed in regarding music as a kind of ornamental superfluity in the education of boys, had considered a phase of the question that seems generally to escape the attention of critics. Music, though in rare cases it may become the means of enabling a lad to earn his bread, cannot be regarded as an essential accomplishment, or placed, in that respect, on a par with such things as arithmetic, spelling, and book-keeping. But music is one of the best moral safeguards with which a youth can be

Original from

furnished. To be a musician, however mediocre, means to prefer the society of the drawing-room to that of the casino; means, in short, a general elevation of the plane of a youth's pastimes and pursuits. We believe that any one reviewing his own experience of men and things will acknowledge the truth of this proposition. The rough and ready educational canons of former times—times not many decades removed from the present—excluded music from the educational curriculum of boys' schools, and relegated it to the place which it now seems to occupy in the estimation of Mr. Troup and Mr. Fardel. But if we were asked to make deliberate choice of a means—not necessarily effectual of course, but assuredly helpful—of guaranteeing a lad against wandering into dissipated and vicious paths, and of keeping him in a pure social atmosphere, we should certainly say, "teach him music." Dancing is, perhaps, a horse of another colour, but as to music we venture to hope that the exigencies referred to by Mr. Fardel and recognised by Mr. Troup may never become prohibitive in the case of the Jubilee School.

PORTUGUESE JURISDICTION IN JAPAN.

THE following Imperial Ordinance was published in an extra of the *Official Gazette* on the 14th instant:—

We hereby give Our sanction to the Ordinance abrogating the stipulations concerning Consular jurisdiction contained in the Treaty concluded with the Portuguese Government, and order the same to be promulgated.

(H.I.M.'s Sign-Manual)
(Great Seal.)

(Dated) The 14th day of the 7th month, the 25th year of Meiji.

(Countersigned) The Minister President of State.

The Minister of State for Foreign Affairs.

The Minister of State for Justice.

IMPERIAL ORDINANCE No. 64.

The stipulations concerning Consular jurisdiction, which are contained in the Treaty concluded with the Portuguese Government on the 17th day of the 6th month, the 1st year of Man-yan (1860), shall henceforth cease to be in force.

We understand that the Portuguese residents of Yokohama, or at any rate a portion of them, rendered uneasy by rumours that the above action was contemplated by the Japanese Government, held a meeting on the 14th instant, and decided to address a telegram to Macao, promising to follow it by a memorial. It is to be regretted that this action was not taken sooner. The die is cast now, and neither telegrams nor memorials can alter accomplished facts.

EXAMINATIONS FOR MEDICAL DEGREES.

In an article on the above subject, the *Fiji Shimpō* contends that the desire to give an impetus to the study of the Chinese system of medicine has its origin in the extreme difficulty of the present Government examinations for medical students. The *Fiji* furnishes statistics showing the number of candidates who passed the last examination, and draws its own deductions therefrom. The details given are quoted from this year's report. The examinations for ordinary medical students are held at the Government Medical Hall in Atagoshita-Machi, Tokyo. The examinations in the theory of medicine held this year extended over 26 days; that on medical practice over 11 days. The examinations, it is to be understood, were not held on successive days. They began in April and finished in June. Prior to obtaining a degree each student has to pass two examinations, denominated First and Second. The candidates who sent in applications to be allowed to compete at the first examination numbered 1,548. Of these 424 excused themselves from appearing on the appointed days; 83 retired before the examination was finished, and 932 were plucked. The number who passed was thus reduced to 109. For the second examination the number of candidates was 1,163. Of these 294 did not appear; 32 retired before the examination was over, and 710 were plucked. Thus the number who passed was 129.

So it will be seen that in the first examination only about 10 per cent. of the number of applicants passed and in the second about 15 per cent.

The candidates for the Dentistry Examination amounted to 85, 19 of whom did not appear, 57 were plucked, and 9 passed. Such examinations are held all over the country, continues the *Fiji*, hence the number of medical students who, after spending years in training, find no means of gaining a livelihood is enormous. The Government seems to glory in this state of affairs. It cites the fewness of successful candidates as a proof of the loftiness of its standard, and argues that it is infinitely better for the country to have a limited number of thoroughly able men than a crowd of mere quacks. Our contemporary says that there is another side to the question. Is it essential, it asks, that the standard should be equally high for all doctors? Would it not be feasible to allow men who have not attained the highest standard to practice in country places? Can the majority of people, asks the *Fiji*, afford to pay the fees charged by the high class doctors whom the Government are turning out? And is not the difficulty of passing the examinations enough to deter all but the most gifted from becoming candidates for medical degrees? It is the feeling that the needs of the country call for a lower standard to be adopted in certain cases, at any rate for some years to come, which induces members of the Diet and others to regard with favour the attempt to revive the study of Chinese medicine. This fact, contends the *Fiji*, it is the duty of the Government to recognise and deal with. Some modification of the present system is, our contemporary thinks, demanded.

It seems to us that where, as in the case of medical men, knowledge or ignorance is a matter of life or death, the standard of examination for degrees cannot, within certain limits, be too high. But might not the demand for medical men in country districts be met by creating assistant doctors with the proviso that they would be required to pass a final examination for a medical degree after a given period? The *Fiji* is of opinion that country districts are ill supplied with medical men. Our own impression is that such is not the case; but granted that it be so, we quite agree with our contemporary in thinking that the evil can be remedied without resorting to the measure proposed in the Diet—the resuscitation of an obsolete system of medicine.

THE FAILURE OF THE HAKUBUNSHA.

FURTHER particulars relating to the failure of the Hakubunsha have appeared in the vernacular papers. It appears that the business of the firm has been wholly in the hands of Mr. Nagao and his relations. The reverses which have terminated in bankruptcy originated in a fire that destroyed a large amount of property in 1889. New buildings were erected at considerable cost, and in 1890 a loan of 20,000 yen was granted by the Mitsui Bank. Interest on the money was paid up to last autumn. The Bank allowed the matter to stand over till April last, when they attached the property of the firm. It is stated, that in anticipation of the action of the bank, three days before the attachment took place, Mr. Nagao sold or pretended to sell certain printing presses and other property valued at 10,000 yen to two friends, and that he gave out that the machines had been originally lent to him by their purchasers. It was this proceeding, it is said, which led the bank to take prompt measures to secure themselves against loss. The real or bogus purchasers deny the right of the Mitsui Bank to attach such of the property as is claimed by them, and have taken legal proceedings against the Bank. The case is to be tried on the 19th instant. It is presumable that the bank's loan was granted on the whole of the property of the firm, and that consequently Mr. Nagao had no right to part with a portion of the security without the bank's permission. Messrs. Amenomiya Keijiro, Hayashi Chokuyo, and others have been doing their best to save the firm from bank-

ruptcy. But their efforts have proved abortive. Their intercession accounts for the tardiness of the action of the bank. The *Fiji Shimpō* speaks of the firm as "one of the parents of modern booksellers," and alludes to the extensiveness of its business in years past. It has enjoyed no small amount of government patronage, in the form of orders for large quantities of books, and in supplying schools with textbooks it has long been a formidable rival of Maruya and other firms. Foreigners who have from time to time had transactions with the Hakubunsha complain of the slovenly manner in which business was carried on. So that, if report be true, it is not misfortune alone, but this combined with mismanagement which has landed the concern in bankruptcy. When two or three days ago the news of the failure of the firm was circulated, some 300 persons who had entrusted books to the Hakubunsha applied to the bank for permission to remove their property. It is stated that in the case of Mr. J. H. Gubbins' Dictionary the bank recognised the right of the author to claim the copies in possession of the firm.

OFFICIAL APPOINTMENTS.

MR. SHIRANE, Vice-Minister of Education, has resigned, and his resignation having been accepted, he is gazetted to the post of a Court Councillor. It seems to be generally thought that Mr. Shirane is not an ideal subordinate. A man of exceptional resolution and self-reliance, he prefers to mould others rather than to bend to them. These are valuable qualities in an era when want of back-bone appears to be a blemish of officialdom, and it is reasonable to predict that the retiring Vice-Minister will hereafter play an important part in the Administration. But they are qualities which may easily create embarrassments when too freely exhibited in a subordinate position. His transfer to an inactive post will of course be interpreted as a sign that a less uncompromising policy is to be adopted at the Home Office, but we must await the sequel of the event before coming to any conclusion on that point.

The *Nippon* alleges that Mr. Inouye Ki's refusal, on the grounds of ill health, to accept the portfolio of Justice, must be regarded as temporary only. Mr. Inouye suffers much from illness, but that fact alone would not induce him to stand aloof. Another difficulty which restrains him more effectually is that two questions of great intricacy await immediate solution in the Department of Justice; namely, the enforcement or postponement of the Civil and Commercial Codes, and the Gambling Affair. Mr. Inouye is an advocate, and a very strong advocate, of postponing the Codes, whereas the officials of the Department of Justice, almost without exception, are in favour of putting them into operation at the fixed date. Again, although the legal aspect of the Gambling Affair has been settled, the moral problem has still to be dealt with, and its solution is by no means an easy matter. We infer from the *Nippon's* writing that Mr. Inouye is averse to touching the Gambling trouble, and it is therefore likely that he will not accept the portfolio of Justice until the above outstanding difficulties have been disposed of.

Mr. Kitagaki Kunimichi, hitherto Governor of Kyoto, has been appointed Vice-Minister of Home Affairs. The connection between Mr. Kitagaki and Mr. Kono, the new Minister of Home Affairs, has been close all through their official careers, and they will doubtless work together harmoniously at the Home Office.

Mr. Kono's appointment to the Home Office has given rise to a number of rumours, all dealing, more or less, with the supposition that the nomination involves a change of policy in the sense of concessions by the Government to the Opposition. A representative of the News Agency waited upon Mr. Kono to ascertain the truth of these stories, but, as may easily be conceived, the new Minister was disposed to ridicule rather than to confirm the various conjectures. The press credited him, Original from

he said, with the design of rescinding the *Nan-jorei* (Newspaper, Public Meetings, and Peace Preservation Regulations) and of endorsing the demands of the Opposition. If he had not openly contradicted these assertions, it was not because they embodied any truth, but because he thought it of little use to resort to the hacknied formula of denial. Time would make everything clear. In the meanwhile he pointed out that he had been just as much a member of the Cabinet in his capacity of Minister of Agriculture and Commerce as he would be in his capacity of Minister of Home Affairs. In his former office he had acted not on his own individual judgment, but in conformity with the opinion of the Cabinet, and in his new capacity he would act similarly. Alluding to the Gambling Affair, he said that it was a matter for the law to settle and that the Administration could not interfere; with regard to the charge that the police had behaved illegally in their manner of collecting evidence, he said that he had not discovered any violation of the law. Beyond this somewhat meagre information his Excellency prudently did not travel.

THE "OMI MARU."

THE Japan Mail Steamship Company's *Omi Maru* sailed on the 16th from Hakodate to Nagasaki where she will be docked and thoroughly repaired after her late mishap. On examination in Hakodate it was found that the chief seat of injury was in her forward compartment, where both shells of her double bottom had been pierced by the rocks. The damage extended to the next compartment also, but there one shell only had been penetrated. The affair certainly ended most happily, and the Company is to be congratulated on recovering a fine ship which at one time seemed lost beyond hope. After all, the cheers that went up from the crews of the *Omi* and *Mitoku* when the latter succeeded in dragging the former from her perilous perch were not extravagant, seeing that the successful pull meant a haul of a quarter of million dollars. The *Omi* has had a somewhat chequered career. After the Korean imbroglio of 1884 when proceeding to Chemulpho with Count Inouye, who went as Ambassador from Japan, she struck a sunken rock and tore a hole, over a hundred feet long, in the outer shell of her double bottom. The extent of the injury was not suspected, however, and Count Inouye sent her back at once from Korea to carry to Kobe Mr. W. G. Aston, then British Consul-General in Korea, whose health was in a most precarious condition. The *Omi*'s escape on that occasion was scarcely less remarkable than the recovery of Mr. Aston.

THE SECOND PHASE OF THE GAMBLING CASE.

THE acquittal of the incriminated Judges might have been expected to put an end to the much-talked-of gambling affair, but such is not the case. The incident has entered another phase which the vernacular press seems disposed to magnify to a sensational degree. The Judges were tried by a tribunal—a disciplinary court—specially organized for the purpose. The initial proceedings, however, were conducted according to the ordinary routine; that is to say, a preliminary examination was made by the Metropolitan Police at the instance of the Chief Public Prosecutor. For the purposes of this examination eighteen witnesses, including restaurant-keepers, danseuses, and others, are said to have been summoned to the Police Court at 9 a.m. one day and detained there until 11 a.m. the following day. The testimony obtained from these witnesses was committed to writing and subsequently submitted to the Disciplinary Court, but that tribunal refused to admit it, and even went so far as to include in its judgment a ruling that the testimony was inadmissible having been illegally obtained. Exactly in what the illegality consisted the seven Judges did not explain, but there can be no question that their ruling casts a great slur upon the methods of the Police Court, and it is with reference to this fact that the press has so much to say. Naturally the detention of witnesses over a whole night con-

stitutes a chief topic of comment. We have ere now heard rumours that such procedure is occasionally resorted to by the police, but this is the first instance actually brought under our notice. The Japanese newspapers do not, indeed, seem to question the right of a magistrate to detain witnesses in cases where a criminal charge has been definitely preferred against some one, but they allege that in this case no charge had been formulated or suit instituted; that the witnesses were not sworn, and that they were not prisoners since no warrant for their detention was issued. Hence they claim that the Constitution was directly violated by the procedure of the police, for the 23rd Article provides that "No Japanese subject shall be arrested, detained, tried, or punished unless according to law." It is difficult to avoid this conclusion, and there appears to be a probability that the ruling of the Disciplinary Court may give rise to an interesting complication. For our own part we cannot but express astonishment that it should be possible under any circumstances to detain a witness over-night at a Police Court. The Code of Criminal Procedure provides ample means of securing the attendance of a witness at any time, and though it is very conceivable that the ends of justice may be defeated by allowing witnesses who have been already examined to communicate with witnesses awaiting examination, we doubt whether that contingency would not be preferable to the possible abuses of empowering the police to hold witnesses in custody. In the gambling case the witnesses themselves, or at any rate the majority of them, were suspected of being parties to a breach of the law, but it is plain that if their detention is to be referred to that suspicion, they ought to have been duly arraigned. We do not profess to understand the affair, but will watch its developments with interest.

A NEW POET.

It would seem that England has a new Poet, Mr. W. E. Henley—"a genuine poet" the reviewers call him. He published, some time ago, a "Book of Verses," and this has now been followed by "The Song of the Sword," which establishes his title to the proud title of "a genuine poet." We take two extracts from one of the reviews:—

Through street and square, through square and street,
Each with his home-grown quality of dark
And violated silence, loud and fleet,
Waylaid by a merry ghost at every lamp,
The hansom wheels and plunges. Hark, O hark,
Sweet, how the old mare's bit and chain
Ring back a rough refrain
Upon the marked and cheerful tramp
Of her four shoes! Here is the Park,
And O the languid midsummer wafts adust,
The tired midsummer blooms!
O the mysterious distances, the glooms
Romantic, the august
And solemn shapes! At night this City of Trees
Turns to a trust vague and strange
And monstrous Majesties.

Out of the poisonous East,
Over a continent of blight,
Like a maleficent influence released
From the most squalid cellarage of hell,
The Wind-Fiend, the abominable—
The hangman wind that tortures temper and light—
Comes slouching, sullen and obscene,
Hard on the skirts of the embittered night:
And in a cloud unclear
Of excremental humours, roused to strife
By the operation of some ruinous change
Wherever his evil mandates run and range
Into a dire intensity of life.
A craftsman at his bench, he settles down
To the grim job of throttling London Town.

THE "SEMMON GAKKO."

THE flourishing college (*Semmon Gakko*), established by Count Okuma in the Waseda suburb of Tokyo, held its graduation ceremony last Saturday. Professor Hatoyama is now President of the College, and its condition appears to be very flourishing. A large number of persons were present at Saturday's ceremony, including Count and Countess Okuma, Mr. Tsuji, Vice-Minister of State for Education, Mr. Kato, President of the Imperial University, Professors Toyama, Kikuchi, and Yatabe, Messrs. Nakamura, Inukai, Kato, and many members of the Diet, the visitors numbering in all about four hundred. Professor Hatoyama delivered a speech, which was replied to by one of the

graduates, and after the distribution of prizes Professor Kato and Mr. Kishi Kosaburo also delivered addresses. The numbers of graduates in the various branches were as follow:—

POLITICAL SCIENCE.	
Japanese branch, 44.	English branch, 19.
LAW.	
Japanese branch, 22.	English branch, 5
ADMINISTRATIVE SCIENCE.	
Japanese branch, 27.	English branch, 8.
ENGLISH LANGUAGE.	
Special course, 23.	Additional course, 15.

After the ceremony Count and Countess Okuma entertained the guests at their charming residence adjoining the College.

WOLSELEY ON GORDON.

LORD WOLSELEY has been imparting "remini-scences" to an interviewer of the *Strand Magazine*. Among other things we find this:—"Gordon left London on the 18th of January, 1884; he started from my house, and when he left he said, 'I pray for three people every night of my life, and you are one of them.' When Gordon went to Kartoum he went for God. I think Charley Gordon was one of the two great heroes I have known in my life. I have met abler men, but none so sincere. He was full of courage and determination, honest in everything he did or ever thought of, and totally indifferent to wealth. His departure for the Soudan took place late in the afternoon. There he stood, in a tall silk hat and frock coat. I offered to send him anything he wanted. 'Don't want anything,' he said. 'But you've got no clothes!' 'I'll go as I am!' he said, and he meant it. I asked him if he had any cash. 'No,' was his calm reply. 'When I left Brussels I had to borrow £25 from the King to pay my hotel bill with.' 'Very well,' I said; 'I'll try and get you some, and meet you at the railway station with it.' I went round to the various clubs and got £300 in gold. I gave the money to Colonel Stewart, who went with him; Gordon wasn't to be trusted with it. A week or so passed by, when I had a letter from Stewart. He said, 'You remember the £300 you gave me? When we arrived at Port Said a great crowd came out to cheer Gordon. Amongst them was an old sheikh to whom Gordon was much attached, and who had become poor and blind. Gordon got the money and gave the whole of it to him!'

A CHINESE BISMARK.

A GENTLEMAN with a long bow has been given an opportunity to shoot in the columns of the *Folkeblad*. Here is what he says:—

Li Hung Chang, Chancellor of the Chinese Empire is another Bismarck. For twenty years and more this man has guided the Chinese ship of State, and kept it sailing in a definite direction and to a certain goal. "Once upon a time," begins the tale and also the life of Li Hung Chang, there was a poor wood-cutter, called, I think, Chang or Chen. His family home was in Chee-chow, a miserably small city in the province Nganwhi. The woodcutter had two sons, Han and Hung. After his death, his widow married a literary man in better circumstances. He educated his stepsons, and they passed their examinations at twenty and adopted the stepfather's family name Li. To-day Li Han Chang is Viceroy in Canton, and Li Hung Chang's word is law to about one-fourth of the people of the earth. "The height of a tower," says a Chinese proverb, "may be measured by its shadow, and a great man by the number of his enemies." As true as this is the fact, that the poor woodcutter's son is China's greatest man, for in the last twenty or thirty years, his shadow has fallen upon every event of any consequence in China. The China which Europe knows is Li Hung Chang's China. His enemies are countless. The majority of his countrymen do not understand him. They look upon his far-sighted politics as treachery against the old traditions, and the foreigners in China, the English in particular, hate him because he has crossed their plans by contending that "China is for the Chinese," and not for English capital and domination.

When he left the Hanlin University, an institution for the education of Chinese State officials, the T'ai-ping rebellion was just begun. Li joined the army of the Imperial General-in-Chief, and was made secretary to Ts'ing Kuo-lan. In 1861 he was made Governor of the province Kiangsu. As such he came in contact with the foreign barbarians. His capital Soochow, was, at that time, in the hands of the rebels, but with the second capital, Shanghai, as a basis of operations, by the help of the Ever-Victorious Army, he drove the rebels out of his province, and gave the mortal wound to the rebellion. In 1864 he and Gordon stormed Soochow. On this occasion Li executed five rebel generals

whom Gordon had promised to spare. Gordon grew furious, and threatened to join the rebels. The Englishman, however, swallowed his wrath, and admitted later that the civil war would probably have lasted many years more but for that execution. Li got now the title of "the Emperor's Junior Protector." He assisted next in taking Nanking, and ended that terrible rebellion which was caused largely by England's opium-trade and the missionaries. After the war, Li proved his talents of organization and administration, and from 1866 he is universally known and admired, and is the Vice-Regent of the two provinces Kiangsi and Ki-angsu. The year 1870 gave Li an opportunity to create for himself a position entirely unknown in the thousands of years of Chinese history. In that year the massacre of French nuns took place in Tientsin, and the Imperial Government was threatened with a new visit of the Western Powers. In despair called upon Li, and he made for himself a position for which the Chinese language had no term—Minister of Foreign Affairs and Chancellor of the Empire. He treated with the foreign Ministers, averted war, and since then has ruled China, not for his own aggrandisement, but for China's real good. He claimed *China for the Chinese*, and says, "in order to keep the barbarians out, we must fight them with their own arms." He began the creation of a navy, and since 1885, the Tonquin war, he has bought armoured vessels and added ironclads in great numbers. He set the English Captain, Lang, at the head of the navy, and kept him there until 1889, when he dismissed him, seeing too much English influence in the navy. Since then the English Government has forbidden English officers to serve in the Chinese navy. He has established arsenals and built docks, and organized a naval cadet-academy in Tientsin, all "to fight the barbarians with the arms of the barbarians." Li is to this day the only Chinaman who understands China's position according to treaties with the foreign Powers. He has always been faithful to the ruling Manchu dynasty.

Li Hung Chang has not only paid attention to China's armaments and defences against foreign encroachments, but he knows what uses China might derive from Western science and industry. Three railroads are now running from Tientsin. The city is lighted by electricity. European and American physicians serve in the navy. Promising young men are sent to foreign universities, and his two sons have European teachers. He is not a friend of the foreigner, though his own ignorant countrymen think he is, because they do not understand his views. He is an Asiatic Jew. One side of his face is turned inquisitively towards the future; the other turns, in melancholy towards the glorious past and the deeds of his forefathers. From the point of view of ancient history, he looks upon Western civilization as an ephemeral appearance, subject to all social and political influences, while China can and will stand for thousands of years. He recently passed his 70th year. His abstemious life and his strict regimen will sustain him for a long time to come. It is for that reason that it would be hasty to judge the man's work by what he has done. One thing is sure, the poor woodcutter's son fill a most remarkable page in China's history.

This writer has managed to bring together about as many falsehoods as a couple of columns will hold. There are 9 of them. It is a falsehood to say that the Viceroy Li's father was a wood-cutter. He was, in point of fact, an official occupying a high position in Peking. It is a falsehood to say that he had only two sons, for he had six, of whom only two now survive. It is a falsehood to say that his widow married a literary man in good circumstances, for she never married again. It is a falsehood to say that the foreigners in China, especially the English, hate the Viceroy Li. In truth they like and respect him more than any man in the empire. It is a falsehood to say that Gordon threatened to join the rebels or that he admitted that the civil war would have lasted many years longer but for the massacre at Sochow. It is a falsehood to say that the Taiping rebellion was caused largely by England's opium trade and the missionaries. It is a falsehood to say that the Viceroy dismissed Captain Lang. It is a falsehood to say that Captain Lang was removed because there appeared to be too much English influence in the Chinese Navy. And it is a falsehood to say that three railways are running from Tientsin. Altogether we must give to this writer in the *Folkblad* the credit of being one of the most untruthful essayists that ever found his way into print.

* His Senior Protector is Heaven.

THE PENAL CODE.

The *Hochi Shimbun* is responsible for a statement to the effect that certain parties are agitating for a radical revision of the Penal Code, so as to bring it into conformity with German law. A Bill on the subject was to have been discussed

in the last Diet. But this Bill originated with the French school of lawyers, hence we presume that the alterations proposed were of a comparatively trivial nature. The Code has been in operation many years, and from all accounts is working well, and we quite agree with the *Hochi* in thinking that it is most undesirable that, like the Civil and Commercial Codes, Penal Laws should become the battlefield for rival schools of lawyers. There is, it seems to us, no surer way of undermining that respect for law with which the Japanese people are highly endowed, than by advocating perpetual revision in the way certain professionals are wont to do. We sincerely trust that the Penal Code is not about to be dragged into the arena of controversy.

THE "TOKYO SHIMPO."

A SENSATION has been caused in the world of vernacular journalism by the sudden decease of the *Tokyo Shimpō*. Started a few months before the promulgation of the Constitution, the *Tokyo Shimpō* had not completed its fourth year of existence when this fate overtook it. Its editor, Mr. Asahina Chisen, a man of great talent and wide knowledge. The force and skill of his writings were universally acknowledged. Under his direction the *Tokyo Shimpō* gave powerful support to the Government, at times, however, adopting independent and even hostile views. The paper wielded wide influence and had gradually attained a large circulation, the number of copies printed daily exceeding ten thousand. But it has now suddenly come to an end, and the curious point is that, although Mr. Asahina himself writes its epitaph, he refrains from any attempt to take the public into his confidence. His reasons for bringing the paper to an end are personal, he says, but he does not even outline them, being content to frame them in a very pretty setting of farewell and hope. The paper, he writes, has had a brief life, but he trusts and thinks that the opinions it has educated will not be of brief existence, but will become the germ of a permanent and lusty growth. For himself he announces that his adieux are only temporary, and that he looks to place himself ere long in rapport with the public once more. What he means, the *Yomiuri Shimbun* undertakes to explain. It asserts that Mr. Asahina is about to employ his powerful pen in the cause of the *Kenkiu-kai* section of the House of Peers, of which Viscount Tani is leader, and a prominent spirit is Mr. Kioura Keigo, formerly Chief of the Police Bureau, who has always been an intimate friend of Mr. Asahina. It is rumoured, in another quarter, that the retiring editor contemplates joining the staff of the *Nichi Nichi Shimbun*, but the *Yomiuri* opines that such a step could be only temporary.

THE PRODUCTION OF SILVER.

We take the following interesting note from the *Chicago Herald*—

Mint Director Leech has transmitted to Congress his report on the production of gold and silver during the calendar year 1891. The product of the mines of the United States, according to Mr. Leech, was 1,604,840 fine ounces of gold of the value of \$33,175,000, and 58,330,000 fine ounces of silver of the coinage value of \$75,416,595 and the commercial value of \$57,630,040. The increase over 1890 was \$330,000 gold and 1,830,000 fine ounces of silver. Mr. Leech reports that the world's production last year was \$124,229,000 gold and \$139,175,000 silver. The latter figure is presumably the coinage value of the silver at our mint. The gold product last year was nearly \$5,000,000 greater than in 1890 and the silver product about 8,000,000 fine ounces greater, or \$10,343,000 coinage value.

The statistics of the world's production are of special importance in their relation to the question of international bimetalism. Going back to 1873, or about the time when Germany adopted the gold standard, we find that from that time until 1882 the product of gold exceeded that of silver in coinage value at our mint, while since that time the coinage value of silver has exceeded that of gold. During the nine years from 1873 to 1881, both inclusive, the gold product was \$939,650,000 and the silver product \$791,100,000, giving a gold excess of \$148,550,000, or 18.77 per cent. During the last ten years the product of gold has been \$1,092,139,500, and of silver \$1,302,217,000, giving a silver excess of \$210,077,500, or 19.23 per cent. For the whole period of nineteen years the total product of gold was \$1,909,560,500 and of silver \$1,154,142,000,

giving a silver excess of \$44,581,500, or only 2.33 per cent. There is surely nothing in these statistics of supply which can serve to account for a decline in the commercial gold value of silver from about \$1.30 per ounce in 1873 to 87 cents per ounce at the present time, or a decline of more than 33 per cent. Far greater changes in the relative supply of the metals have been attended by only very slight changes in their relative value.

From 1801 to 1830 the production of silver by weight was forty one times as great as the production of gold. Statistics are not at hand for the period from 1831 to 1848, but in 1849 the product of silver was twenty-three and a half times that of gold. Since there were no very important discoveries of either metal from 1831 to 1848 we may safely assume that during the forty-nine years from 1801 to 1849 the product of silver was thirty times as great as that of gold. Then, with the discoveries of gold in California and Australia, came a great change, and in the thirty-six years from 1849 to 1874 the world produced only about seven times as much silver as gold. Yet, notwithstanding this great change in relative production, the changes in relative value were very slight, not exceeding 2 or 3 per cent. The conclusion is irresistible that a change of less than 2½ per cent in relative production since 1873 cannot account for a change of 33 per cent in relative value.

We have to look for the cause of the change in value not in the supply but in the demand. Germany discarded silver and adopted the gold standard, and the Scandinavian States followed the example. Here, and not in our legislation of 1873, began the value divergence. The divergence was greatly increased when France and the other States of the Latin Union closed their mints against coinage for depositors, and it has been still further increased by the shifting of some other countries to the gold standard. Now, in view of the slight variation in value consequent upon a very great change in relative production from 1849 to 1874, as compared with the previous half century, and of the small change in relative production during the last nineteen years, it would seem to be a reasonable conclusion that a restoration of the old demand by reopening the mints of the Latin Union and the creation of a new demand by opening the mints of England, Germany and the United States to the coinage of silver on private account would suffice not only to restore, but to maintain, the value relation which varied so little for more than seventy years under widely variant conditions of supply. In short, it seems a reasonable conclusion that international bimetalism can be made a success.

It is interesting to observe that the writer of the above refers to Germany's action in 1873 as the prime cause of the decreased demand for silver. The London *Times* apparently adopts a similar view, for, in a recent article on the panic caused in India by an unexpected fall in the gold value of the rupee, the great journal writes:—

"That the position is very serious and, in some aspects, disastrous, is beyond dispute, but how the Government can come to the rescue is by no means so clear. The Government of India finds itself saddled with a currency that is the sport of circumstances over which it has no control. From the demonetization of silver by Germany in 1873 to the American Bland bill in 1892, the Government of India has had to stand by helpless, and see its currency the plaything of foreign legislation and of the shifting policy of distant governments whose financial interests are always independent of, and sometimes antagonistic to, its own."

But in point of fact England herself is primarily responsible. It was England that first took the step of demonetizing silver. Her example was not followed by other Powers for several years, but, nevertheless, the blame rests on her shoulders originally.

DUST.

It is commonly said by physicians that Tokyo is a most unhealthy city on account of the dust which perpetually drifts about the streets, and that the completion of the long-talked-of water works would make a marked difference in the sanitary conditions of the city. To show what is signified by failure to deal with the dust nuisance, we quote the following from an exchange:—"That the dust of the street is often dangerously charged with disease germs has been demonstrated by scientists. Candies, fruits, and cakes exposed to the air in the streets often convey disease to unwary purchasers. The dried sputa of consumptives is blown about in the air, and the germs of many diseases which we seek to avoid by keeping our houses clean, and by careful selection of food, assail us in the streets of our cities. It is related by a medical journal recently, that while Professor Schnirer was at work in his laboratory at Weichselbaum,

he sent for some grapes with which to refresh himself. The fruit brought to him had been kept for some time outside a door in a basket, while on the neighbouring street consumptive patients passed to and from the clinic, or class where students were taught. The fruit being dusty, he had it washed. On looking at the water in which it had been washed he reflected that it probably contained tubercle, and by way of experiment injected the water into guinea-pigs, which died in from seven to eight weeks from tuberculous disease. Every precaution was taken to prevent other sources of the infection, and the cause of the tuberculosis in the guinea-pigs was beyond doubt the dust on the grapes. Doubtless disease germs, other than those of tubercle, are sometimes conveyed to the human body by means of fruit and other food which are so commonly exposed in all cities to the dust of the streets."

THE TANKO RAILWAY SHARES.

RECENTLY, when Professor Mayet was employing a large space in our columns to prove that the shareholders of the Tanko Railway Company were the most fortunate individuals within the four seas, and while the shareholders themselves were rubbing their eyes and wondering why, with such an El Dorado in their possession, the blind public would not purchase their shares even at par, a certain Japanese statesman is reported to have said that it was a pity that Professor Mayet did not have a few lacs of dollars to invest, because the Government would be hokked to give him all kinds of concessions in Hokkaido, on the same terms as those obtained by the Tanko Tetsudo Kaisha. The Company, however, is now confronted by slightly improved prospects, for its 50 yen shares have begun to move upwards, and instead of standing at 45, the quotation of last month, they find purchasers at 52.30 yen. There are, of course, all kinds of conjectures about this unexpected turn of affairs. One set of analysts—we quote from the *Nichi Nichi Shinbun*—affirm that though the Government guarantees interest of 5 per cent. on the Company's capital, there are huge losses in store for the concern, and the present ascent of its scrip is altogether fictitious, the result of "bulling." Others declare that no speculators in Japan are strong enough to move 120,000 shares, valued at 6½ million yen, and that the improved state of the market is a true reflection of the Company's affairs, which are now beginning to recover proper credit after the recent series of disastrous rumours consequent on the dismissal of Mr. Hori, the President, the refusal of the Bank of Japan to accept the shares as security on anything like favourable terms, and the despatch of officials to examine the books. Another view is that the shares are only repeating an old experience. In 1889, when only 1 yen was paid up, they were quoted at 6 yen. In the following year the 15 yen share fell to 12.30 yen. Then it rose to 22 or 23 yen. Again in September and October of 1890, the 35 yen share touched 40 yen. Finally, the 50 yen share fell, this spring, to 45 yen, and has now risen 16 per cent. In a word, the shares are subject to vicissitudes, and will very likely go up to 56 yen on the present occasion. But with what difficulty do investors persuade themselves that the supposed splendour of the Company's position has any reality about it! The Fifteenth Bank alone exhibits faith, for its acquisition of the shares seems to be the true cause of their upward tendency.

MESSRS. BARING BROTHERS AND THEIR INFLUENCE.

"It is an open question still," say the *Mexican Financier*, "whether the intervention of the Bank of England in the affairs of the house of Baring Brothers, eighteen months ago, was, on the whole, a wise act. Without doubt the Bank prevented a tremendous financial catastrophe, but as in some diseases it is better to let them have their due and natural course rather than attempt to break them up, so, in this matter of the Barings, it might have been well to let the storm burst and do its worst. Shrewd English bankers are beginning to doubt if the Bank did, after all, really help matters greatly.

Some go so far as to maintain that the disaster which was averted in November, 1890, was only postponed. We find that excellent observer, Mr. Harold Frederic, writing to the *New York Times*:—"The ever-recurring stress of liquidation grows more harassing each time. There is scarcely a big banking house in London not loaded up with heavily-depreciated securities, for which there is no market whatever, the holding of which makes them poorer and poorer. This shrinking cannot represent a total of less than \$200,000,000 inside the City of London, and, as the necessities of liquidation press, the failures cannot much longer be postponed." The terrific blow which was dealt the entire world of business by the collapse of the Barings, a disaster due to the most wanton and insensate folly, will be recalled in future years as a proof of the unwisdom of trusting too implicitly in the prestige of the oldest and most conservative banking houses when once they abandon legitimate business for wild speculation. People thought that if the Barings went into Argentine enterprises it was because the banking house had good reasons for its course, that, in short, the Barings knew what they were about. It turned out that any curbstone broker might have done no worse, had he been invited by the Barings to manage their business!"

WATANABE'S PICTURES IN LONDON.

SOME time ago certain prominent art amateurs in London conceived the idea of getting together a sufficient number of modern Japanese paintings to hold an exhibition in London. The execution of the project was attended by many difficulties, for though it is easy to find any number of inferior Japanese pictures, it is not by any means easy to find examples sufficiently good to be counted representative of the leading artists of the day. Twenty excellent paintings were collected after a considerable interval, chiefly from the brush of Mr. Watanabe Seitei, and these having been afterwards supplemented by about forty others, the whole were recently displayed in New Bond Street. The *St. James's Gazette* thus refers to the display:—

An unusual amount of interest attaches to the exhibition now on view at Mr. Larkin's Gallery, 28, New Bond-street. A Japanese artist of no small repute in his own country is represented by upwards of sixty drawings of much artistic merit. He uses quite a different box of paints from any with which our English water-colour painters are familiar, and an instance may be quoted in the case of ink, of which a very effective use is made. The painter Watanabe Seitei by name, has a sense of colour which shows him to be a true artist. The subjects are very slight, and are treated with the greatest economy of paint; but they will never fail to please any one with an artist's eye. In the same rooms at the Japanese Gallery there are a number of Mr. John Varley's oils and water-colours painted last year in Japan. There is a remarkable similarity of effect in Mr. Varley's oil-paintings (which are all on panel) and his water colour drawings, and a visitor might at first have some difficulty in distinguishing between them. For our part, we have little hesitation in expressing our preference for the panels, which unquestionably show great skill and intelligence. Mr. Varley's name has now been for some time past associated with his Japanese work, and we should have liked to devote more space to an inquiry into his methods and results. What we now see of his work quite confirms the favourable opinions which were expressed last summer of a much smaller collection at Mr. Larkin's Gallery. The catalogue of his pictures contains a pleasant and appreciative notice of them by Sir Edwin Arnold, who refers to Japan as "The Land of Gentle Manners and Fantastic Arts."

THE CHARTERED MERCANTILE BANK.

THE Manager of the Chartered Mercantile Bank has kindly given us, says the *Shanghai Mercury* of the 11th inst., the following few particulars about the fraud on the Bank in Bombay, by which the amount mentioned by Reuter has been lost. The name of the defaulting firm is Bays, Craig & Co., a well known shipping, exporting, and importing house, whose reputation was previously high, and who had been constituents of the Bank for years. When the firm stopped payment towards the end of last month it was thought that the sum the Bank would lose would have been only about half the amount now named. The discovery of the larger amount must have been made quite suddenly, and though the blow is a nasty one in the present days of depression, it need have no serious con-

sequences. We note from the last published accounts, 2nd April 1892, the Reserve Fund of the Bank stood at £125,000, on the 31st December, the total capital, taken at the low rate of exchange, being £619,779, gold. The last quotation of the shares in London was £8-10.

THE PORTUGUESE IN KOBE.

THE *Kobe Herald* contains the following notice:

A meeting of the Portuguese residents here was held yesterday (17th inst.) at the residence of Mr. F. Guterres to consider the advisability of dispatching a telegram to His Ex. the Minister Plenipotentiary, Senhor Boija, accredited as Envoy Extraordinary to the Court of Japan, regarding the Ordinance promulgated by the Japanese Government on the 15th inst., nullifying certain clauses of the Portuguese-Japanese treaty, and by virtue of which the Consular judicial rights of Portuguese residents in Japan is annulled. Mr. F. Guterres presided, and there were present Messrs. N. Guterres, F. da Roza, R. A. Renedios, F. Remedios, A. Guterres, S. J. Diniz, A. Rozario, F. X. Souza, F. A. Jesus, J. Ritchie, and A. J. Souza who acted as Secretary to the meeting. The Chairman having explained the object of the meeting, said that there was no doubt whatever that if they were placed under Japanese jurisdiction, under the letter of Japan's laws, they will be well cared for—but that, unhappily, the time has not yet come for the Japanese to have control over them. Proof of the competency of Japanese Judges to exercise jurisdiction over aliens was still gravely questioned. The meeting deprecated the absence of Mr. V. E. Braga, the Portuguese Vice-Consul, in Kobe—and although explanations were given by the Chairman, a vote of censure was recorded and unanimously carried. Having taken the sense of the meeting, it was decided to forward a telegram to the Governor of Macao asking His Excellency for immediate protection; and it was agreed to forward a memorial, together with the minutes of the meeting in due course, praying for the appointment of a competent Consul-General to the Court of Japan.

Of course the Portuguese residents are quite right to agitate for the recovery of a privilege, the loss of which, without any *quid pro quo*, is a great misfortune. But we fear that they are only wasting their time and their money in compiling and despatching telegrams to Macao. Portuguese jurisdiction in Japan is gone for ever. There can never again be a Consul-General, a Consul, or a Vice-Consul exercising judicial functions, and to pray for the appointment of such an official is idle.

THE GROWTH AND CHANGES OF THE BRITISH MERCANTILE MARINE.

At the March meeting of the Royal Statistical Society an interesting paper was read by Mr. John Glover on the "Tonnage Statistics of the Decade 1880-90," in continuation of similar papers for the three previous decades, completing a statistical and historical account of British maritime progress since the repeal of the Navigation Laws. It was, said Mr. Glover, a truly remarkable story, showing how, by the introduction of iron in the construction and of steam in the propulsion of ships, Great Britain first recovered the position she was losing through the competition of the cheaper wooden ships of the Scandinavian nations and North America, and then so far out-distanced all our competitors that their sea-going tonnage combined does not equal ours. The tonnage of goods to be carried inwards and outwards, estimated at 53 million tons in 1880, grew to 76½ million tons in 1890, an increase of no less than 44 per cent. The entries and clearances grew from 133 million tons in 1880 to 164 million tons in 1890. In spite of a large increase in the tonnage of foreign vessels in our trade the proportion decreased. The decline in this proportion has been continuous since 1869, when the impetus given by the repeal of the Navigation Laws reached its maximum force: the proportion was 79.58 in 1860; 46.13 in 1870; 42.05 in 1880, and in 1890 fell to 37.63. Norway kept the first place among foreign flags in our trade for the last three decades, followed by Germany, Holland, Denmark, and France, in the order stated. The fears begotten by the system of bounties adopted by France in 1881 proved groundless. The French flag had the fifth place in 1880, and fell to the sixth in 1890 in our ports. More of the

foreign trade of France, however, is done by the French flag than before the bounty system was adopted, though it is still true that more of the French foreign trade was done by British than by French ships. The foreign trade of the United States was done 22.1 per cent. by the United States flag, 52.8 per cent. by the British flag, and all other flags together 25.1 per cent. It is often a puzzle how Great Britain seems constantly to import a much larger value than she exports. The earnings of our fleet form one large item of the explanation. Freight—to the country by which it is earned,—becomes an export and import value, as much as if the same number of men were employed in manufactories on shore instead of carrying machines aloft. Computing the 1890 figures on the basis adopted some time ago by Mr. Giffen, of the Board of Trade, Mr. Glover stated that it is equal to 90 millions sterling, part of which, representing outward business, would swell the value of exports, while the remainder, representing inward business, would decrease the value of imports, and so bring the values nearer together.

Mr. Glover pointed out that steel has more rapidly superseded iron in the construction of ships than iron superseded wood. The production of new vessels in 1880 exceeded that of any previous year. The production of new vessels during the decade exceeded $7\frac{1}{2}$ million tons. Part of the latter would be for foreign nations, no doubt, but how the British mercantile fleet has been renewed can be imagined by the fact that the total on the register in 1890 was under 8 million tons. The rate at which the old and obsolete vessels have been got rid of, is shown by the fact that 1,000 sailing vessels and 300 steamers were removed from the register during each year of the last decade. In one year the removals reached 1,849—a respectable fleet in itself. Mr. Glover said that the loss of life at sea is diminishing, wrecks are fewer, and the traffic is safer. The only qualification on this point is that collisions are still too frequent. Mr. Glover that the law and the regulations on this subject have failed, and that there should be an inquiry with a view to improvement.

The trade through the Suez Canal has undergone great expansion. In 1880 the tonnage was 3 millions; in 1890 it had become nearly 7 millions. The company's revenue in 1880 was under 40 million francs, in 1890 it was nearly 70 million francs, and in 1891 85 million francs. The proportion of British tonnage using the canal in 1890 was 77.37 per cent. of the whole. The next State was Germany 7.12 per cent., followed by France with 5.31 per cent., and Holland with 3.61 per cent. The transit has been much improved and the time shortened since the controversy between the shipowners and the company, and the addition of seven English directors to the board of management. Mr. Glover concludes that the losses entailed by the attempts to pierce the Isthmus of Panama, and the smaller but serious losses involved in other canal and dock schemes at home, make it certain that this century will not see the Panama Canal opened.

Mr. Glover concludes his paper by some observations on the important part which shipping now occupies in feeding the United Kingdom. He said that by far the most important aspect from which this tonnage question can be regarded is its intimate connection with the supplies of food. The facts are so difficult to grasp, so little known, that so long as the ordinary Englishman finds bread and meat on his table, he is content to know that the one comes from the butcher, and the other from the baker, and makes as little further enquiry as an ancient Hebrew would have made as to the supplies of manna in the wilderness. But the degree of his dependence on food brought over sea is constantly increasing. It is not merely that the population is larger than it was fifty years ago, but also that the larger population—in spite of all allegations to the contrary now and then made—is so much better off, has so much more to spend, eats so much more, and drinks

so much more, besides wearing more and better clothes and living in better houses. The limited area of the British islands cannot supply half the present inhabitants at their present rate of consumption. Two-thirds of their daily bread is dependent on sea carriage, but it is carried in ships so easily and cheaply that the consumers generally are quite unconscious of the fact. In 1890 the imported value of five articles—corn (of all kinds), meat, butter, cheese, and eggs—was equal to £2,000,000 per week. To put other nations under tribute for the supply of wants to this vast extent, and to be able to pay for the supplies, Mr. Glover called the miracle of modern commerce. The increased work required of the British flag is largely consequent on these demands for foreign food. It is noteworthy also that some of our nearest European neighbours are following our example in this matter. Their heavy duties on the import of foreign corn have not been able to keep it out, though they have kept the prices, to consumers in France and Germany, at an elevation above the English prices, measured exactly by their import duties. Fortunately the teeming population of the British Islands has suffered no such disadvantage. Free Trade policy has thus benefited mankind everywhere, by stimulating production and cheapening the cost of human subsistence, while the reduction in the cost of sea carriage has made supplies from the more distant sources so freely available as practically to place the surplus food of the world at the disposal of the European populations. Sir Robert Peel had an idea that the freight from America would be too dear to enable American grown wheat to compete seriously with English. In a famous Cabinet memorandum which he presented to his colleagues before the repeal of the Corn Laws, he assured them that no quantity of wheat could probably be delivered from the United States at a less cost than 25s. a quarter. Against this prediction, the fact may be put, that in one year during the last decade—viz., in 1887, with the average price of wheat at 32s. 6d., British ships carried from the United States to the United Kingdom 8 million quarters. To such a degree have the steamer, the railway, and the telegraph changed the conditions of this question, and falsified the prediction on which Sir Robert Peel obtained the assent of his Cabinet to his great measure.

It can hardly be denied that the change from being a self-supporting nation, as Great Britain was fifty years ago, to being absolutely dependent on foreign growers and open sea communications for two-thirds of its daily bread, forces into British policy a new factor of the first magnitude. It is not the balance of power in Europe which concerns her now, but how her people are to be fed. Other nations are in quite different circumstances. In addressing the German Parliament, in December last, General Von Caprivi made the following significant observations, in defending the continuance of the German corn duties:—"The corn laws were necessary for the protection of German agriculture, although it is certain that they have not had the effect expected from them. It is nevertheless certain that their existence prevents an agricultural crisis, of which it would be impossible to overrate the evil consequences. A parallel with English conditions is not possible. . . . The chief reason, however, for the necessity for the maintenance of agriculture is exclusively a question of State. I am convinced that such a cultivation of grain is indispensable to us as will, in cases of need, suffice to feed our ever increasing population in time of war, and that the State which cannot exist from its own agricultural produce, is on the downward path." Fortunately, the English and German conditions are not parallel, otherwise Great Britain should not only be on the downward path, but already near to the bottom, and of this there are no signs. On the other hand, we must not ignore the fact—a fact that has never hitherto existed in the history of the human race—that 38 millions of human beings living on a group of islands depend on sea communication for two-thirds of their daily

bread! Is it too much to expect that these islanders, their Parliament, and their statesmen, and even their philanthropists should appreciate the fleet by which they are fed, in a degree second only to that other fleet by which their shores and empires are defended? Is it too much to say that these are the considerations by which English policy—fiscal and foreign alike—ought to be mainly governed?

"MARRIAGE IN JAPAN."

DISSERTATIONS ON "Marriage in Japan" are numerous, and of varied nature. It is seldom that two writers agree as to proceedings and ceremony. The soft brown eyes, the fair skin, and the elaborate dress of the pretty ladies in this Island Empire are evidently captivating, and every one versed in Oriental lore has a special liking for the custom that makes twain one. Here are a few spicy lines from an American Journal of wide circulation:—"A Japanese wedding in high life is a pretty ceremony. Though no vows are spoken, nor has the church nor religion any part in it, the rite is, nevertheless, solemn and impressive. There are ten bridesmaids gayly attired in costumes of the 'Japs.' Two at a time enter from opposite directions, and salaam each to the other until the entire party has passed in, each kneeling opposite her companion. The parents of the bride and groom now enter, those of the groom at the left and those of the bride at the right, and are seated near the bridesmaids on either side. The bride, attired in a snowy, filmy dress, and closely veiled, now appears leaning on the arm of her affianced, while the bridesmaids salaam. The go-between assists the bride to a seat by her parents, and the groom to one near his. Tea is then served by the go-between, three cups being given the parents of the bride and groom and to the happy couple. Each of the bridesmaids receives one cup. The go-between joins the hands of the bride and groom, and the latter leads his bride to the front and whispers in her ear a promise of faithfulness. The bride whispers in return and they exchange seats to show the union of the two families. A simple repast is now served, and the bridal party disperses, the bride and groom leaving first, then their parents, and lastly the bridesmaids, salaaming as they go. The go-between is generally a friend of the groom. In courtship she settles the question and arranges and assists in the marriage ceremony. It is a pretty scene, but the absence of the kiss, the ring, and the invocation of God mars it for those who are accustomed to the Christian rites." The author of the above was certainly fortunate in witnessing such a pleasant ceremony, and has a very pleasant way of telling it. But we are bound to say that very few people have ever seen all that he or she apparently saw.

MR. A. B. DE GUERVILLE.

As Mr. A. B. de Guerville has left Japan, and as more than one notice of his doings while in Japan appeared in the columns of this journal, we think it necessary to note an extraordinary misapprehension concerning him which is published by the *Japan Gazette*, and which, if left uncontradicted, may do him great injury. The *Japan Gazette's* paragraph is as follows:—

By every mail we receive most wonderful accounts of the Exhibition which is to be held next year in the United States, telling how Germany is doing this, Scandinavia doing that, etc., but how much of these glowing accounts are we to believe when the following is unblushingly told us?

"A. B. de Guerville, who was commissioned to go around the world and give illustrated lectures on the Exposition, has written from Japan that so great is the interest in the Fair that he rarely fails to talk to full houses. He was cordially received by the Emperor and Empress of Japan, and delivered his lecture before the Court. The Emperor expressed enthusiasm and delight over the magnificence of the Exposition buildings, which were shown by fine screen views during the lecture."

We distinctly remember Mr. de Guerville's name being on one of the Yokohama Hotel lists, but to our knowledge he never did anything more than other "World's Fair" Commissioners have done, who have drifted this way under the influence of an all round trip, paid for by some one else. He did not even preach! sermon, as some have done

Original from

as a sort of conscience vent, and we need hardly say that no one has given any illustrated lectures before their Imperial Majesties. It is these fraudulent pieces of news which have justly won for America's press the harsh criticism of all nationalities. A little appeal to the long bow is allowable in certain classes of journals whose general tone repudiates their contents being taken too seriously, but a deliberate lie indulged in for the sake of being a lie is unpardonable in any journal, and we regret to say the trick is very generally indulged in by the American papers which we chance to see.

Now it is a fact that Mr. de Guerville had the honour of delivering a lecture before the Emperor and Empress of Japan in the Palace, and of exhibiting a number of stereoscopic views of the Chicago World's Fair as well as of many of the most noted buildings in the great cities of the United States and Europe, the lantern used for the purpose being kindly lent by the Rev. Dr. Eby who, with Professor Burton, managed the stereoscopic display. A full account of the affair was given in these columns at the time, and in commenting on it we congratulated Mr. de Guerville on the great success achieved by him in this country, for, so far as we know, no similar display had ever been made in the presence of the Emperor. When, therefore, the *Japan Gazette* accuses the American Journal of "a deliberate lie indulged in for the sake of being a lie," it is expedient, in the interests of truth, to re-state the facts.

SILVER COINS.

SOME little time ago, the Department of Finance referred to the Bankers' Association the question of abolishing 50 *sen* and 5 *sen* silver pieces. The Association, has, we observe, recommended that both coins be dispensed with, the former owing to its bulkiness and the latter on account of its smallness. The abolition of 50 *sen* notes has been also suggested, on the ground that the circulation of paper money of this value, in the absence of coins, is deemed undesirable from a financial point of view. These recommendations, it is stated, will be adopted by the Department of Finance. Certain members of the Bankers' Association proposed that the American custom of issuing 25 cent. coins be followed, and that 20 *sen* pieces be withdrawn. But this proposition has not met with general support, owing to the fact that to carry out such a change would prove a great expense to the nation, without bringing any corresponding advantage.

MINISTERS' PRIVATE RESIDENCES.

A QUANT notion is circulated by the Tokyo News Agency; especially quaint coming from such a quarter. It is that the Imperial visit to Count Goto's residence at Shinagawa may possibly prelude the sale of that beautiful place. The reason assigned for this singular hypothesis is that Count Okuma's place in Idemachi, Count Yamagata's place in Fujimicho, Count Ito's place in Takanawa, and Count Inouye's place in Azabu, were all sold subsequently to the Emperor's visit to them. Of course it is not suggested that any connection existed between the Emperor's visits and such sales, but merely that a coincidence so frequent in the past may probably be repeated in the future. The example would be more forcible in the case of Count Inouye's place had not the sale been separated by six years from the Emperor's visit.

THE NEW VICE-MINISTER OF HOME AFFAIRS.

MR. KITAGAKI, formerly Governor of Kyoto, who was gazetted to the post of Vice-Minister of Home Affairs, has handed in his resignation. The reason openly assigned by him for this singular step is that he suffers from an affection of the heart which of late has become somewhat aggravated, and that he consequently shrinks from accepting a post which involves such arduous duties as that of Vice-Minister of Home Affairs. But the *Fiji Shimpō* assigns a different explanation. According to that journal, Mr. Kitagaki belongs to the *Yakki-gumi* of officialdom. There is a so-called *Yakki-gumi*, or "desperate coterie," in each political camp at the present time, and the allegation is that Mr. Kitagaki resided in Tokyo during the last session of the Diet, and worked hand-in-

glove with Mr. Shirane against the Opposition, bringing every possible pressure to bear upon the Cabinet in the cause of the *Kyoko-shugi* (strong policy). Hence he finds it out of the question now to take Mr. Shirane's place under a Minister whose policy is understood to be of a much more moderate character.

* * *

Report is very busy with Viscount Torio's name as the probable recipient of the portfolio of Justice. The Tokyo News Agency speaks of the appointment as almost assured. We are not certain that such a choice might not be very wise. The state of affairs existing in the Department of Justice is believed to be extremely unsatisfactory. There are said to be three parties, all more or less hostile to one another, the Yamada Party, the Oki Party, and the Tanaka Party. An entirely independent man like Viscount Torio, whose lofty character commands universal respect among the Japanese, is perhaps the very official to restore harmony and order.

CRUELTY TO CHILDREN.

FROM time to time the National Society for the Prevention of Cruelty to Children publishes reports, the details of which are appalling. The last report for the year 1891-92 shows that 7,291 cases of real cruelty were discovered by the Society, and that their victims were about nineteen thousand children. Of these instances the worst, numbering 1,115, were made the subject of prosecutions by the Society, and 1,042 convictions were obtained. As to the nature of the inhuman brutality practised, the following extract gives a terrible idea:—

Punishing a child by putting pins into its nostrils; putting lighted matches up to; biting a child's wrist till a wound was made, and then burning the wound with lighted matches; burning the hands of a boy of six with matches; biting, till they bled, the limbs of a seven-months' old baby; forcing bone ring of feeding bottle up and down the throat of a three-months' old baby till it bled; throwing a little girl of two years, ill with bronchitis, out of its bed-room window, breaking its bones, and ending its life; breaking a two-year-old baby's limbs in three places, both arms and a thigh, leaving them untended, when it moaned in its pain, irritably taking it up from its cradle by the broken arms, shaking it by them, and throwing it down again; leaving a baby unlifted out of its cradle for weeks, till toothpicks grew around the child out of the rottenness; leaving another to lie for days and nights on a mattress alive with maggots; keeping the stumps of little amputated legs sore, to have the child, with its little face puckered up in pain, excite pity; tying a rope round a boy of six, dipping him into canal, leaving him immersed till exhausted, bringing him up, recovering him, and putting him in again, repeating the misery time after time; shutting up for hours in dark closet a two-year-old child; tightly binding the arms together of a three-year-old child, and doing the same and ending its life; keeping a child always in cool cellars till its flesh became green; knocking down with the fist a dying boy; driving out the first teeth of a baby with the fist; cooping up a child for months in a room without conveniences, punishing it for "filthiness the floor," for food throwing "leavings of plates" on to it, "as you would throw them to fowls;" scourging a child till it is a mass of bruises, then breaking its little jaw in two; tying cords tightly round little thumbs, then tying them, with extended arms, to the foot of a bedstead, then beating it with a thorn-bush.

JOURNALISTIC PIRACY.

AN interesting and exceptional case came to an end in the Chancery Division of the High Court of Justice on June 2nd. *The Times* appeared as plaintiff, and the *St. James's Gazette* as defendant, the prime cause of complaint being that the latter journal had copied from the former considerable portions of Mr. Rudyard Kipling's letter "In sight of Monadnock," for which *The Times* had paid and in which it possessed copyright. In the course of the proceedings the plaintiff's counsel showed that the copy of the *St. James's Gazette* in which Rudyard Kipling's letter was published, contained also no less than 22 different paragraphs copied from *The Times*, the source being acknowledged in 7 cases only, and it appeared that this wholesale appropriation had been the habit of the *St. James's Gazette* for 12 years. A portion of the judgment delivered by Mr. Justice North is so interesting that we quote it verbatim from *The Times*' report:—

It is said that there is no copyright in news, but there is or may be in the particular form of language or modes of expression by which information is conveyed, and not less so because the information may be with respect to the current events of the day. The defendants have copied from *The Times* without knowing and without probably thinking whether what they

have taken was the subject of copyright or not. So far as the plaintiffs are not proprietors of the copyright in the matters thus copied, they have not any legal ground of complaint. But with respect to the passages numbered 5, 7, and 14 the plaintiffs are within the protection of the law; and, however small in importance these three particular passages may be in themselves, the line taken by the defendants renders the question one of importance to the plaintiffs, and they are entitled to ask for the decision of the Court.

With respect to the quality of the matter copied, the passages pirated are taken in their entirety for the very purpose for which they were used by *The Times*—namely, to convey intelligence or information to the readers of the paper. It is not a case of the selection of a part or quotation, or an extract. The defendants cannot justify what has been called the literary larceny of a book or chapter of an author by showing that there are many other books or chapters by the same author from which they have not taken anything. In *Carey v. Louman* (1 East, p. 358) an old itinerant by Pittison had been republished by the plaintiff with some corrections and additions of his own, and it was held that there the plaintiff was entitled to sue in respect of such corrections and additions, though there was not any copyright in the bulk of the work. In *Sweet v. Benning* (16 Common Bench, page 59) the head notes only of certain law reports were taken, and in *The Trade Auxiliary Company v. The Middlebrough Protection Association* (40 Ch. D., 244) it was held that the appropriation by one paper of a very small part of the contents of another ought to be restrained by injunction, and that was affirmed by the Court of Appeal. So, too, in the later case before me in the same volume.

The principal ground upon which the defendants attempt to justify what has been done is the alleged existence of a well-recognized general custom—a universal mutual understanding of journalists, a tacit convention to which *The Times* was a party—that one paper may copy from another without asking permission, and that the consent of the proprietors of the paper copied from may be taken for granted if four conditions are observed.

The first of those conditions is that the source from which the quotation or information is taken should be duly acknowledged; and in connexion with this I may say that several of the defendant's witnesses state that it is an advantage to one newspaper to have extracts from it quoted by another if the source from which they come is also stated. This may be so in some cases; but I doubt whether any jury would believe that it was an advantage to *The Times* to have its articles or paragraphs copied by the *St. James's Gazette*; and I do not myself believe it. But, however this may be, if the alleged condition was observed, only seven out of 22 passages taken refer to *The Times* as the source of information, and not one of the paragraphs numbered 5, 7, or 14 does so. As to those, therefore, the very first of the four conditions upon which the justification is said to rest fails the defendants.

Further than this, even a strict compliance with such conditions would not amount to a legal excuse at all. A man cannot justify the taking of what he has no right to take by stating whence he has taken it, though he may thereby avoid the additional dishonesty of passing off as the product of his own labour what really is cribbed from another.

In *Pike v. Nicholas* (5 Ch. Ap.) the learned Judge, Vice-Chancellor James, says (p. 260):—"The plaintiff has a right to say that no one is to be permitted, whether with or without acknowledgment, to take a material and substantial portion of his work, of his argument, his illustrations, his authorities, for the purpose of making or improving a rival publication." See also *Campbell v. Scott* (11 Simons, 31) and *Scott v. Stanford* (L. Rep., 3 Eq., 718).

The second condition put forward as a thing to be required is that the paper copying and the paper copied must not be direct rivals or competitors, as, for instance, two evening newspapers in the same town; but when it is remembered that the second editions of *The Times* are published later than, and may be forestalled by, the earlier edition of the *St. James's Gazette*, and that *The Times* also publishes the evening *Mail* on three nights in the week, and also a weekly edition, and that the *St. James's Gazette* also publishes the *St. James's Budget* weekly, it is obvious that there is not that absence of direct competition between them which the condition in question treats as essential. In this very case the purchase was made on May 12 of a copy of the *St. James's Budget* of April 14 containing many paragraphs taken from *The Times* of the previous day, including that numbered 5.

The third condition alleged to be prescribed by the custom of journalism as allowing one paper to copy from another, is that the paper copied from has at some time itself taken matter from the other, thereby implying—it is suggested—that these two papers have agreed to an interchange of literary matter. And in support of this argument the defendants have succeeded in hunting up two occasions in the course of 12 years in which *The Times* is said to have copied, without leave, parts of articles from the defendants. One of these occasions was in 1890, after the report of the Parnell Commission, when *The Times* quoted extracts from the leading articles of numerous London and provincial papers, showing how very large and influential a portion of the Press supported the views they had advocated, and in favour of which the Commission had reported. The essential feature of this

was that the names of such paper should be put prominently forward; and I should have thought that the papers quoted would all have preferred to have their views stated in their own language rather than by way of paraphrase or summary, which *The Times* might unquestionably have done. The other case was the publication of a summary of the report of the German doctors relating to the illness of the Emperor Frederick, which occurred four years ago, and the exact explanation of which is not now forthcoming. The defendants do not allege that they have any copy right in either of those articles, and, even if the facts had been exactly as they suggest, I do not see what legal ground they have for complaint. But, assuming that *The Times* had been entirely in the wrong on those two special occasions, it is idle to say that they afford any evidence whatever of an agreement that the *St. James's Gazette* might appropriate the contents of *The Times* for all times and to any extent; and it is especially idle to rely, as Mr. Low does in paragraph 5 of his first affidavit, upon these two occasions in 1885 and 1890 as the foundation of a belief on his part that the defendants might copy from *The Times* as they pleased, when he also admits that this systematic copying commenced when the *St. James's Gazette* was established in 1880 and has been continued on a large scale and uninterruptedly ever since.

The attempt to show that *The Times* agreed to this journalistic practice of copying, from the fact of its having taken extracts from other papers than the *St. James's Gazette*, is a ludicrous failure; for *The Times* has shown that in 13 out of 16 instances adduced by the defendants the explanation is complete, most of them being cases in which the matter was inserted in *The Times* at the express request of the other papers, specially communicated to them in order that they might insert it; and the few others are trivial matters, doubtless susceptible of easy explanation at the time.

With respect, therefore, to three of these four conditions, the existence of which the defendants say justifies them in believing they had a right to copy from *The Times*, their case breaks down altogether.

But even if all the alleged conditions had been complete, what the defendants have done with respect to articles or paragraphs in which *The Times* has copyright is wholly incapable of justification in point of law. The plea of the existence of such custom, or habit, or practice of copying as is set up can no more be supported when challenged than the highwayman's plea of the custom of Hounslow-heath. It has often been relied upon as a defence in such cases, but always has been repudiated by the Courts. In one of the early cases, *Wyatt v. Barnard* (3 Ves. and B. 771), the defendant relied on "the usual practice" among publishers of magazines to take articles from each other; but Lord Eldon pointed out that such a custom could not control the law. In the most recent case I recollect, *Maxwell v. Somerton* (22 W. R. 313), where the general custom of provincial papers to make such extracts from other papers was relied on, Vice-Chancellor Bacon said that the injunction must go against the defendants, as they had done acts of which the plaintiff could legally complain. Lawful use for reviewing was right, but unauthorized copying of whole articles was illegal, and the custom of trade which had been alleged was no justification for breach of law.

The defendant's counsel also made a point that the paragraphs 5 and 14 were only stated in *The Times* to be from "Our Correspondent," whereas some other paragraphs in *The Times* were said to be from "Our Own Correspondent." Similarly paragraph numbered 7 from the United States was in *The Times* only signed "Dalziel," while other articles in *The Times* from Australia were signed "Dalze (*The Times* Special)," and it was said that there was a difference in the form of expression, and the paragraphs said to be from "Our Own Correspondent" and *The Times* Special Correspondent were respected, and not taken. There is no distinction whatever between these phrases of which I can take notice, as none of the witnesses for the defendants suggest that there is in fact any difference or distinction in meaning between them; and I am satisfied they would have done so if there had been anything in the point. And there is a further answer to the argument—namely, that it is inconsistent with the real facts of the case, for the defendants took matter signed as "Our Own Correspondent." For instance, N. 6, extracted from the Paris article of *The Times*, did bear that signature.

The result is that the defendant is entirely wrong. With regard to Mr. Rudyard Kipling's article, the interlocutory order must be continued. With regard to the other paragraphs, I do not think any order necessary. Their interest has passed away, and they will not be repeated. It has not been shown that any damages resulted to *The Times* from the illegal appropriation of this article, and I do not think it necessary to observe the form of giving nominal damages.

THE CODES.

We read in the *Kokkai* that the Cabinet has finally decided to advise the Emperor not to give his consent to the Bill for postponing the operation of the Civil and Commercial Codes. According to the Constitution, the Emperor's veto is not necessarily exercised in a positive manner. The provision is that when his Majesty sanctions a Bill which has passed the Diet,

the Bill must be promulgated before the next session of the Diet. *Per contra*, if the Imperial consent be withheld, then nothing need be done except to keep silence: the measure is not promulgated, and the Imperial sanction is thereby understood to be withheld. Such is the course likely, it is said, to be adopted with respect to the Codes. Meanwhile, in the interval between the present time and the opening of the next session of the Diet, a Committee of revision will be appointed to revise the section of the Civil Code relating to the law of persons and of inheritance. The remainder of the Code and the Commercial Code will be put into operation at the originally fixed time, namely, January 1st, 1893, while as for the law of persons and of inheritance, it is expected that the revision will be completed within a year. Count Oki is said to be averse to any revision, but Viscount Yenomoto endorses the above plan, since postponement on such a limited scale would not affect injuriously the prospects of Treaty Revision. The *Kokkai* adds that the composition of the Committee of Revision will probably be promulgated within a week.

THE TRAIN AND ITS GATHERED TREASURES.

"This hard world," says the *St. James's Budget*, "is full of compensations. The long trains which ladies just now insist on whisking about, despite every male person's loudly expressed abhorrence of them, are ruining the crossing-sweeping trade. Why should you give a penny to a man at a crossing when you have already provided your wife and daughters with costly machinery for the express purpose of sweeping that very crossing? They do sweep it, and all the other crossings and footpaths, and the crossing-sweepers are wasting in despair. But let them be of good cheer. Their opportunity is at hand. According to a dread letter in the *Standard*, the London pavements are in warm weather well supplied with certain little insects of a roundish flatish nature and of a rufous-like hue. We hardly like to mention it; but the metonym of these creatures, so deeply interesting to man, is emblazoned upon the proudest page of Burke and Debreit. Like the Parliament-men, they work by night, with very similar effects, only more so; and when they come out on the sunny footpath for an airing they are swept up by the ladies' trains. Given the run of my lady's wardrobe, they speedily make themselves free of her chamber: and the end is lamentation, and heavy eyes at breakfast, and much cold cream. The wise crossing-sweeper will at once hire himself out as an insecticide."

MR. ARAI SHOGO.

MR. ARAI SHOGO's expulsion from the ranks of the *Kwanto-kai* is doubtless fresh in the minds of our readers. Nothing could well have been more incisive than the terms employed by the party in severing its connection with a member who occupied almost as important a place as Mr. Oi Kentaro, the acknowledged leader. In language conspicuously laconic, Mr. Arai was told to go his way, being at the same time directed to divine the reason himself. Yet now, to our utter bewilderment, the *Kwanto-kai* has opened its arms once more to its distinguished member, and bids him return to his old love. We translated the communication conveying the sentence of expulsion, and we do the same for the letter of re-habilitation:—

SIR,—We congratulate you heartily on your good health. Last month some disagreement occurred between you and the *Kwanto-kai*, and the action of certain members gave rise to much suspicion. We therefore elected a committee of twelve to investigate the affair, and we now find that the rumours then current were fabricated by some low intrigues, purely for malicious purposes. We therefore withdraw our previous intimation severing connection with you, and beg to express the hope that you will join with us in the noble campaign to promote the policy of our association. We remain, &c.,

(Signed) Manager of the "KWANTO KAI."

This is as polite and distinct as the previous document was brusque and sententious. But why on earth did not the *Kwanto-kai* appoint

a committee of investigation at the outset, instead of firing precipitate bomb-shells at Mr. Arai's head and then begging his forgiveness?

But it seems that Mr. Arai's barque is not yet destined to ride in smooth water. The above letter was indited in the sequel of investigations held by a Committee, the members of which came to the conclusion that certain charges preferred against Mr. Arai were baseless. This conclusion, however, was not deemed satisfactory by all the members of the *Kwanto-kai*. Some of them objected, and demanded that another meeting be held to discuss the matter. A meeting was accordingly summoned for the 18th instant, but in the meanwhile the following letter reached the managers from Mr. Arai:—

GENTLEMEN—Certain baseless rumours were recently circulated about me with the object of injuring my reputation, but as I had done nothing to be ashamed of, I took no notice of the stories. Your Association, however, has taken the trouble to investigate the matter, and your just judgment has established my innocence. Nevertheless, I learn that some of your members still express doubts. It would pain me greatly did my personal affairs retard the progress of your Association. Such a result would be contrary to my earnest purpose, which is to sacrifice my individual interests in the country's cause. Hence I deem it best to resign at once my membership of the *Kwanto-kai*, a course calculated, I believe, to strengthen the union of the other members. Trusting that my resignation will be accepted, I am, &c.,

(Signed) ARAI SHOGO.

The Committee agreed to accept Mr. Arai's resignation and communicated the fact to him. But when the members assembled on the 18th and were informed that Mr. Arai having resigned, no further occasion existed to investigate his conduct, some very pointed objections were raised. It was claimed that, although the resignation had been accepted, inasmuch as its presentation had been preceded by the resolve to hold a meeting, the latter ought to proceed with its inquiries and discussion. Mr. Arai was roundly accused of cowardice in resigning so as to shirk an investigation, and some went so far as to assert that his action amounted to an insult to the Association. But the Committee remained firm, and refused to reconsider their decision.

The same day the youthful section of the *Kwanto-kai* held a meeting on their own account, and passed a resolution condemning Mr. Arai, which they communicated to him in the following letter:—

SIR,—The *Kwanto Sonen-kai* has passed the following resolution which we beg to communicate to you:—Arai Shogo has hitherto been our political associate, but in obedience to the principles of liberty and virtue we are compelled to separate from him. Therefore the members of this Association declare that they will no longer hold friendly relations with Arai Shogo.

More disagreeable still for the unfortunate Mr. Arai is a communication made by one. Shokudo Sonjin, to the *Fuyu*, the writer declaring himself ready to accept the full responsibility of his statements. He says that he was originally one of those who regretted Mr. Arai's resignation, but that reflection has filled him with doubt about the eminent Radical's integrity, whom he no longer regards as the prisoner sentenced for the Korean affair and the leader almost as renowned as Oi Kentaro. Then this correspondent proceeds to propound some queries:—Why did Mr. Arai often secretly meet Mr. Takahashi, a police inspector, at the *Tsuru-ya*, during the second session of the Diet? How, despite his well known poverty, did he manage to maintain three mistresses in Tokyo and Utsunomiya? How did he repay his debt to Mr. Hoshi Toru? How did he contrive to live in a luxurious manner from the time of the opening of the second session? Where did he obtain the sum of a thousand yen which he lent to the pro-official party at the time of the election of Prefectural Councillors in Tohigi? He alleged that he obtained the money from Messrs. Saito Keiji

and Imura Tozaburo, but Saito is as poor as a rat, and Imura had no reason to lend money to Arai. "A dark cloud rests on Mr. Arai, and he is no longer his former self." Of each and every one of this catalogue of disagreeable accusations, Mr. Arai has published an emphatic denial. Whom will the public believe?

* * *

We do not know the truth about Mr. Arai Shogo. We only recall him as the voluble Radical who poured forth his opinions about Treaty Revision in the first session of the Diet as copiously and smoothly as rain flows down a vertical board—to use a Japanese expression—and who sought to make things as unpleasant as he could for Viscount Aoki. But we have related these incidents of his recent career because they furnish an interesting illustration of what is involved for a Japanese in the word "turn-coat." Mr. Arai may not, in truth, be emulating the mighty mere that reflects images of which the petty puddle remains oblivious, but he gets the discredit of exemplifying that euphemistic simile, and we now see what is signified by discredit of such a kind in Japan.

THE "NIPPON SHUPPIN RENGOKAI."

UNDER the above title, which signifies "Union of Japanese Exhibitors," the merchants and manufacturers of Tokyo, Yokohama, Kobe, Aichi, and Ishikawa, who contemplate taking part in the Chicago Exhibition, have organized an association, having its head office at the Traders' Hall (*Boyeiki-Kai-Kan*), in Honcho, Ichome, Yokohama, with a branch office in Chicago. Their object is to facilitate the despatch and arrangement of exhibits, and to economise expenditure by sending commissioners and by combination. Each section—apparently local—of the Union may be represented by two commissioners at the Exhibition, who will look after the sale of articles, but the commissioners of one section may discharge this function on behalf of another. Twenty per cent. of the value of exhibits is to be collected to meet the expenses of the Union—a liberal levy, we think—in view of the fact that each section will have to defray independently the cost of packing, shipment, and freight of goods; the cost of preparing all documents connected with them; the travelling and hotel expenses of the commissioners and also of the store-keepers in the Exhibition. In fact the 20 per cent. is to be spent in a very free-handed manner, namely, three-fifths of it to be devoted to the expenses of the Union and two-fifths to go to the Commissioners.

A MILITANT POLICY.

IN certain quarters it is seriously believed that a party within the Government meditates the carrying out of a strong and militant policy against the Opposition. The projectors of this policy, whoever they may be, are represented as claiming that they would be justified in holding at the point of the bayonet what they have obtained virtually as the prize of war. It is not to be understood that any idea of a *coup d'état* is attributed to these persons; nor do they intend—so says rumour—to revive the despotic government of by-gone days. In purpose and in fact they seek to rule in strict accordance with the provisions of the Constitution; but, in order to keep the reins of power in the hands of those who took part in the Restoration, they aim at establishing such a personal hold upon the officers and men in the Army and the Navy as shall preclude altogether the possibility of any outsiders forming a Ministry capable of exercising effective control over the fighting men of the Empire. The result of such a policy would indeed be most fatal to the healthy and peaceful progress of politics in Japan. For our own part, we entirely agree with the *Nichi Nichi Shimbun* in thinking that there is not the slightest ground for apprehending a serious attempt to carry out such a programme. But, in point of fact, several well-balanced journals are disposed to give full credit to the rumour. The *Asiya* (Asia), for instance, thinks it worth while to discuss the subject in the most conspicuous part of its editorial columns. It acknowledges

that at certain important crises in a nation's career there may be some advantage in calling to the head of the State a man having a glorious war record, since martial renown operates upon the mass of people much as mesmerism does upon nervous subjects. But, continues the *Asiya*, what shall be said of a certain vain individual, who, though a soldier, can lay claim to no distinguished services, and yet not only prides himself upon being a great warrior but also on the strength of that conceit aspires to exercise absolute sway in the political world? How time-serving and contemptible are the tactics which he employs for the consummation of his great object! Just conceive the idea of forming the shadow of a political party! How can one help," cries out the *Asiya*, "spitting in the face of such a despicable person?" Our contemporary prudently refrains from giving the name of the particular personage whom it has in mind; but it furnishes hints quite sufficient to enable a careful reader to discover, without much difficulty, the object of its invective. The article is accompanied by a portrait of the Duke of Wellington; whose face, if our memory does not fail us, was recently stated by our contemporary to bear a remote resemblance to that of General Count Yamagata. Count Yamagata, by the way, is believed to be the real leader of the *Kokumin Kyokai*. The English warrior's complete failure as a statesman is held up by way of warning to "the man that resembles the Duke in features, but has nothing else in common with the great warrior." This is political satire with a vengeance.

THE "MIYAKO SHIMBUN."

ON the eve of the opening of the first session of the Diet, a substantial brick building was run up, with wonderful rapidity, in the neighbourhood of the Rokumeikan, in Tokyo. People supposed at first that it was an official edifice, connected, in some way or other, with the organization of the new system of stenographic reporting in the Houses. But the building ultimately proved to be a newspaper office. An extensive plant of machinery was soon erected, including a press driven by steam, and thenceforward, at all hours of the day and night, the rattle of rollers and the bustle of ideographic type-setting imparted an air of perpetual activity and prosperity to the place. This *Miyako Shimbun*, as the paper was called, with all its plant, buildings and goodwill is now reported to have been sold to Mr. Kusumoto Masataka for the small sum of twenty-five thousand yen. Mr. Kusumoto is a prominent member of the Radicals. He belongs to the so-called *Yakki-gumi*, or "desperate coterie," of that party. He was elected for the first Diet, but suffered defeat at the hands of a pro-official candidate who contested one of the Tokyo districts with him in the last general election. An advocate of extreme measures, Mr. Kusumoto is not satisfied with the comparative moderation of the *Jiyu-to* under Count Itagaki. He therefore seeks to score a few aces off his own bat, and by way of preliminary he has apparently purchased the *Miyako Shimbun* to ventilate his views. It appears to us that the tendency to disintegration is asserting itself more powerfully than ever among the Opposition. After a few more lurid rings like the *Kwantō-kai* and the *Kusumoto-ka* have been shaken off into space, the nucleus will be found sufficiently consistent and its pace sufficiently sober to admit of even such an improbable contingency as association with the Government.

* * *

Since the above was in type the proprietors of the *Miyako Shimbun* have publicly denied that it has changed hands. Mr. Kusumoto is said, therefore, to be looking elsewhere.

DISTURBANCES IN CHINA TOWN.

Two disturbances, which at first threatened to assume large proportions, occurred in Chinatown on Wednesday. The first arose, under the following circumstances, between 1 and 2 o'clock in the afternoon. A Japanese woman named Watanabe Wakai was walking through Owaricho with an infant strapped to her back. A constable noticing that the child was destitute

of any clothing ordered the woman to take it in doors or else put some clothes around it. This she refused to do, stating that her master, a Chinaman, had given strict orders that the child should not be dressed, owing to the heat of the day. As the constable insisted in his demand a small crowd gathered, and among them the woman's master. Without giving any warning the Chinaman struck the Japanese policeman heavily across the face, drawing blood, at the same time calling out to his compatriots to come up. They responded instantly to the call, and for some time the constable had a warm time of it; the arrival of relief from the Settlement Police Station finally allowed him to get away from the Chinese mob, who were howling around him, nearly a hundred strong. Between 11 and 12 o'clock in the evening, two foreigners attempted to enter the Chinese temple, where dancing and other performances were proceeding in honour of the Chinese Emperor's birthday. This was resented by the Chinese, who commenced to pummel and bustle the Europeans most unmercifully. Some police who went to their assistance were at first driven back, but finally order was restored and the Europeans got away.

IMPERIAL ORDINANCE.

THE *Official Gazette* publishes the following Ordinance:—

IMPERIAL ORDINANCE.

We hereby authorize the suspension of the circulation of the notes of the Thirty-third National Bank, Tokyo, and order the same to be duly promulgated. [Imperial Sign Manual.] &c.

(Countersigned) Minister of State for Finance.

IMPERIAL ORDINANCE No. 65.

The circulation of the notes of the Thirty-third National Bank of Tokyo is hereby suspended.

Notification No. 35 of the Department of Finance. With reference to the payment of the notes of the Thirty-third National Bank of Tokyo, the circulation of which was suspended by Imperial Ordinance No. 65 of the present year, it is hereby notified that the duty of paying the notes has been entrusted to the Bank of Japan, and that the notes must be presented for payment before the 19th day of the 7th month of the 28th year of Meiji (19th July, 1895.) The Government will not hold itself responsible for the payment of the Bank's notes after that date.

(Signed) Minister of State for Finance.

It will be remembered that the Thirty-third Bank became the object of sinister rumours some months ago, and that the Government immediately ordered its transactions to be suspended and an official scrutiny to be made into its affairs. The result of the examination showed that the Bank had spent the greater part, if not the whole, of the reserve which the law directs that each National Bank shall keep to secure its note issues. Hence the above decisive step has been taken. This is the first instance of the kind, if we remember rightly.

THE AMERICAN RICE CROP.

THE outlook is most encouraging, say Dan Talmage's Sons, in their Rice Crop Bulletin for June, and, judging from reports received, there is likely to be a very large crop, by far exceeding any previously made. It is well, however, to bear in mind that the seed is under ground, or at most in some instances just rising above it, and that contingencies might arise which would cause the "flower of promise" to eventuate in a harvest of disappointment. An old cynical proverb suggests that "the unexpected always happens." This we hope will prove to be the exceptional year. Advices respecting the rice crop are surprising beyond degree. Promises of last month have been fully redeemed and greatly exceeded. The acreage already in assures the largest crop ever grown in the United States, and, under ordinary favourable conditions, the outcome will be sufficient to meet home requirements and furnish some fractional amount for export. The culture has been widely taken up by cotton planters who are free and independent in monetary resources, and wherever bankers and merchants, who furnish the

latter, are of any progressive disposition. Every department, financial, commercial, and agricultural, seems to have wakened up to the fact (1) that the making of investments, based on the outcome of a single crop, partakes too much of reckless gaming—the risking of one's all on the cast of the die; (2) that safety and prosperity can only be assured by a diversity of crops; (3) that rice is among the best of crops, safer than either cotton, sugar, or tobacco, and, taking the range of the past five years, will realize in dollars and cents double that of any other grain. So far as we can learn, little has been done in Arkansas or in the upper half of Alabama and Mississippi. The temperature needed, supply of moisture, and duration of season warrant a crop on any mean level in the States just mentioned, as high as the Tennessee line, and on the same parallel nearly over to the Indian Territory—hence we still look for reports in addition to those already in hand. The missing localities are at most not likely to engage in experimental culture this year, and the outcome is unimportant as bearing on the general crop. Detailed reports note that the crop in the Carolinas and Georgia are doing finely, having fully recovered from the delay incidental to the cold weather and drought of April and May. In Louisiana there has been a phenomenal extension of crop, and its yield will be double that of all other States combined. Florida, Alabama and Mississippi report satisfactory progress. The former leads, and by artesian wells has insured a full supply of moisture, and will make a crop spite the season. Labour is reported as ample at nearly all points. Seeding is practically over along the Atlantic Coast, but will continue in the extreme South until mid-July. Total acreage planted or prepared, 272,250 acres. Estimated yield, 9,750,000 bushels—treble the amount grown prior to, and double that of any year since, the war.

CHINESE IN SAN FRANCISCO.

There are about twenty thousand Chinese in San Francisco, and among that number some two to three thousand are said to belong to various "high-binder" societies and to the low criminal classes. For the effective restraint of these rascals American methods of police and justice seem to be quite inadequate, and the consequence is that murders and other serious crimes, though of frequent occurrence, generally go unpunished. The *San Francisco Chronicle* says that the better classes of Chinese are tired of so much unrestrained lawlessness and would be glad to have their own Consuls entrusted with jurisdiction, in which case the thugs would find short shrift. Of course the United States Authorities will not agree to anything of the kind, especially when "an intelligent and well educated Christian Chinaman" gives to the *Chronicle's* reporter the following information as to how the Chinese Consul would manage matters:—

"I am sure that he would take a dozen of them out to a cemetery and decapitate them every week or two, or send them home to China for execution," said the intelligent little man. "We would all be glad to see it done, but as it is the Consul-General is powerless to do anything."

He knew just how things would be handled if Chinese procedure could only be applied. According to the principles of Chinese government the whole local Chinese community would be responsible for the behavior of its members. If a Chinese shot another, every Chinese would be interested in promptly apprehending the murderer and turning him over to the authorities. If he escaped, and the police could not find him very readily, a lot of the man's friends, and everybody else whose incarceration might be effective, would be calmly locked up in the consular prison until the culprit was produced. If a confession were wanted from the man, and he refused to tell what was wanted, he would probably be strung up by the thumbs or toes and given a hundred or so lashes, or otherwise tortured until he came to terms. There would be little delay about the loss of his head, and perhaps the execution of accomplices. A highbinder society would only last a day or two with this sort of thing to reverse it. In place of a general shielding and defence of criminals there would be a general hustling to get them.

FORMOSA.

A CORRESPONDENT of the *Amoy Gazette*, writes:—Since I last wrote, the war between the Chinese and Aborigines has broken out afresh and the country on the border has been quite depopulated of its quiet and peaceful inhabitants. From what I can gather from native sources, the commencement of the recent out-

break was the killing of a friendly native by a Chinaman, who in return for his plucky deed received the sum of \$100 from the Governor. The weather over here at the moment is very hot, the thermometer going up in the middle of the day to 97° and 98°. The railway seems practically "bust up;" trains run now by fits and starts. The engines have been worked so much that unless new ones are shortly forthcoming the trains will cease running altogether. Keelung at the present moment is a splendid health resort, the air there being purer than is to be got down here at Hobé. The new fort on the hill has just been completed, and I believe is very formidable. Mr. Victor Valazie and a party came over here in the *Formosa*, to see about giving a balloon ascent. He will not go up I hear unless he is guaranteed a certain sum. The natives up at Twaütia are dying off wholesale from cholera, so I am given to understand by a well-to-do native.

STABILITY OF OPINION.

DESPITE the interest of the subject, we do not propose to discuss in detail the remarkable arguments advanced by our local contemporaries on the subject of Japan's action towards Portugal. In our leading columns we have explained, as far as appears necessary, the most important misconception that appears to prevail. But in order to show the singular confusion of ideas that exists in one quarter at any rate, we quote the following:—

Japan Gazette, July 9th.
While we regret the position Portuguese subjects may find themselves in if Japan is able to carry out her intentions, we must certainly support her right to refuse to recognize Merchant-Consuls, as if the Treaty is worth observing at all, it is worth observing properly, and any Treaty Power failing to conform to the customary usages enacted of Treaties cannot justly complain if deprived of the privileges which that Treaty originally conferred upon its nationals.

Japan Gazette, July 16th.
Of course we do not blame Japan for endeavouring, where possible, to do away with Merchant-Consuls, but her measures can only justly be persuasive; she cannot demand as a right that men of any special qualifications whatever be appointed. Those countries who can afford to keep Legations and official Consuls, naturally for their own satisfaction do so, and all are wise who stretch a point in this direction; but it is purely optional, and the step just taken by Japan is a most arbitrary one, and one usually resorted to by Powers determined upon setting a disputed question at the point of the bayonet or stopping further diplomatic relations altogether.

NOBLES OCCUPYING OFFICIAL POSITIONS.

FROM statistics quoted by the *Yiji Shimpō* we gather that the number of peers occupying official positions is largely on the increase. On the 10th instant the total number given in official records was 112, distributed as follows:—Princes, 4; Marquises, 8; Counts, 28; Viscounts, 64; and Barons, 15. There is little doubt, we think, that the interest taken in public affairs by the nobility has been considerably augmented since the establishment of the House of Peers. The future position of titled personages depends very much on their adapting themselves to the altered state of the country. We are glad to observe various signs of activity among the rising generation. The peers evidently do not intend to be left behind in the race in which the nation is now engaged.

THE RADICALS AND THE GOVERNMENT.

No little excitement has been caused in political circles by the publication of a paragraph emanating from the Tokyo News Agency to the effect that a distinct probability exists of an agreement between the Cabinet and the Radicals, and that an understanding on the subject has already been come to by influential men on both sides. The Radical organ (*Yiyu*) is conspicuously disturbed about the story and denounces it as "a scandalous fabrication." It declares that some low intriguers have been endeavouring to sever the tie between the National Unionists and the Government and to introduce dissension into the ranks of the Radicals. The members of the *Yiyu-to*, it goes on to say, are quite indifferent who holds the reins of government. They only inquire whether the Administration is acting in such a manner as the people of the country can approve. They cannot give their support to the Government until the latter ceases to be a clan Government and becomes a Popular Government, and when that change is effected, the *Kaishin-to* also will doubtless be ready to abandon its attitude of hos-

tility. But the *Yiyu* is careful not to explain what it means by Popular Government. Content with pretty phrases, it refrains from telling its readers that the bugbear of clan Government can be removed only by admitting the Radicals themselves to power. When all their opposition is winnowed down, the one solid grain left is that they desire the Cabinet to accept its mandate from the majority of the House of Representatives; in other words, from themselves and the *Kaishin-to*. Thus their announcement that they are ready to support the Government so soon on it ceases to be a clan Government and becomes a Popular one, means nothing more or less than that they promise to support themselves when the control of State affairs is entrusted to them. We do not say this by way of reproach. Such an aim is perfectly legitimate, though opinions may differ greatly as to the prudence of thrusting it into the political foreground at this early stage of parliamentary institutions in Japan.

Passing to the question of the *Kwantō-kai's* secession, the Radical organ denies the suggestion that Mr. Oi Kentaro and his followers were driven out in consequence of a secret agreement between the *Yiyu-to* and the Government to which they could not be parties. They left, says the *Yiyu*, of their own free will, and their exit was due to "an unspeakably painful reason with which the public is well acquainted." But we can assure the *Yiyu* that we ourselves, as an item of the public, have no conception what that "unspeakably painful reason may be." We have examined everything written on the subject by the vernacular press and have carefully read the secession manifesto of the *Kwantō-kai* themselves, but truly the whole thing remains as mysterious as ever. If we were asked to say why the *Kwantō-kai* broke away, our answer must be that the pace of the Radical Party was not hot enough for Mr. Oi and his friends. They want to rush to extremes at once, and the bulk of the Radicals are not prepared to follow them. One of the most singular features of Japanese politics is the mystery apparently enveloping events that elsewhere would stand out in a clear atmosphere. This state of affairs is certainly not due to any studied reticence on the part of politicians themselves. It is due, we believe, to a much simpler fact, namely, that the issues at stake are still too nebulous to permit frank explanation. We more than doubt whether the members of the *Kwantō-kai* are themselves quite clear as to what they want, or what course they intend to pursue.

Another rumour circulated is that the *Yiyu-to* and the *Kaishin-to* can no longer work in couples, and that their separation is inevitable. This story the *Yiyu* describes as a device of the Choshu statesmen to promote the disagreement which they desire. It declares the union of the two parties in opposition to be firmer than ever.

The *Nippon* and the *Nichi Nichi*, on the other hand, are disposed to believe the rumours as to an understanding between the Radicals and the Government. The former expresses the opinion that some of the statements may be more or less true, and that if folks read them carefully and dispassionately they will discover what portions are trustworthy and which of the present Cabinet Ministers has been instrumental in concluding the arrangement. As for the *Kaishin-to* organs, some of them strongly deny the Tokyo News Agency's allegations, while others hold their peace.

The most curious incident of the affair is that the News Agency has addressed to all the newspaper offices with which it communicates the following letter:—"We beg to express our regrets and convey an apology for sending the paragraphs entitled 'the Government and the *Yiyu-to*' and 'the *Yiyu-to* and *Kwantō-kai*.' They were communicated to us originally by a correspondent, but subsequent investigation has shown that they were entirely fabricated by him."

Original from

bori-cho, Nichome, Tokyo, and that the general meeting is to be in October. One point, however, may be referred to, namely, that no one belonging to a political party is to be an ordinary member of the Association, but, if he desire to join, must be content to do so as a special member. This restriction must reduce the regular membership to a very small number if the intention be strictly enforced.

SILK IN MEXICO.

THE *Moniteur des Soies* says that Mexico is well adapted to the culture of the mulberry and to the rearing of the silkworm, owing to its excellent climatic conditions. The idea of cultivating the silkworm first originated in the minds of some Spanish monks, who had visited the extreme East, and found, on returning to Mexico, that it was as suitable to this industry as China itself, and they planted mulberry trees in considerable numbers. After a time these plantations were neglected, until M. Chambon, a Frenchman from the Ardèche, assisted by the Mexican Government, took them in hand. The greatest advantage that the Mexican silk grower has over his Chinese and European rivals is due to the complete renewal of his mulberry plantations; for, in this country, the trees are young, well selected, and spaced out in lands costing only a nominal sum. In addition, the Mexican grower having everything to learn, only devotes himself to the modern scientific aspect of the question, and is not hampered by tradition or routine. The proximity of the United States is an inducement to Mexico to become a silk-producing country, as unbleached silk is admitted free into the United States, while European tissues are practically excluded. The rapidity with which the industry of silk weaving in the United States is developing, coincident with the almost complete failure of sericulture, opens a vast field to the Mexican grower.

SILK.

MESSRS. DURANT AND Co.'s Circular thus refers to the new silk crops:—Since the public sales our market has been extremely quiet. All attention is now turned to the production of the new crops, of which, so far, the reports are fairly satisfactory; although the quantity of seed laid down in Italy is said to be considerably less than last year. The export of White Silk from Shanghai is generally estimated at 60,000 bales, and the Japan crop is expected to be about the same as last year. But seldom has a campaign opened with stocks of the raw material on the Continent so much reduced, and considering the present extremely low range of prices, coupled with a very large Continental and American consumption, it seems as though the new season should be profitable both to the importer and consumer.

THE "SOSHI" AND HIRANUMA.

THERE is a detachment of *soshi* whose self-imposed titles are the *Seigi-ha*, "Righteous Section," and the *Tenchu-gumi*, "The Divine Executors Band." The latter title was frequently adopted in feudal days by men who felt called upon to avenge some great wrong. The ease with which powers of attorney are obtained from heaven in this country is astonishing. There is an old Chinese saying, long current in Japan:—*Ten ni kuchi nashi hito wo motte iwashimuru*. "Heaven has no voice of its own. It speaks by means of men." This adage embodies a very convenient doctrine for those who are anxious to invest their actions with a dignity to which they have no kind of genuine title. A case in point is reported in the *Kokkai Shimbun*. The *Seigi-ha soshi* have just addressed a very solemn epistle to Hiranuma, his son, Hachitaro, and his household, of which we furnish a translation:—"We are men whose duty it is to tread the paths of justice, to destroy what is false and establish what is right. For a series of years you, father and son, have been acting in a wicked manner to the Imperial subjects who are our brethren, and to the noblemen who guard the throne of His Imperial Majesty. Take notice, that in the name of the community whose rights you have infringed, and as a punishment for the acts of cruelty and

injustice in which you have taken delight, within ten days from this time we shall kill you in Heaven's stead. There will be no regret, either in Heaven or on earth, that the heads of such villains as you are severed from your bodies. This punishment you have brought on yourselves. To this end we consign you.

Dated, July 17th, 1892.

Signed and Sealed with the Blood of the Members of the Righteous Section of Japanese Imperial Soshi.

* * *

On the principle that the dog that barks seldom bites, we should say that the authors of the threat, had they meant business, would not have given publicity to their plot before its execution. It is stated that Mr. Hiranuma, in consequence of the strong public feeling against him, has decided to retire from business altogether. It is further asserted that the Public Procurator's speech, reported in these columns some days ago, has had the effect of alienating a large number of Mr. Hiranuma's business friends from him, so that it looks as though his retirement was not altogether voluntary.

DEATH OF DR. SCUDDER.

A TELEGRAM in a San Francisco paper announces the death of Dr. Scudder, as follows:—"Dr. Henry Martin Scudder, the physician, charged with murdering his mother-in-law, Mrs. Mary Dunton, in order that his wife might inherit her property, died at an early hour in the morning from an overdose of morphine, supposed to have been taken with suicidal intention. He had been allowed small doses of morphine to induce sleep, and it is supposed he saved them until he had enough to produce death. Nothing in his demeanour during the evening indicated any intention to end his existence, as he seemed more cheerful and talkative than usual. The murder created a sensation in the city, owing to the prominence of both of the parties. Mr. Dunton was the wife of the venerable Editor Dunton of the *Spirit of the Turf*, and Dr. Scudder was the son of the well-known clergyman of that name."

THE HONGKONG REGIMENT.

In the course of a "Chat about the Hongkong Regiment," says the *Singapore Free Press*, Major Barrow, the Commandant, said of the composition of the corps:—

It is entirely a Mussulman Regiment. That is to say, the men are all followers of the Prophet. But there is a great difference between them and the Sikhs of the artillery here. The Sikhs are Hindoos, and in many respects there is considerable variance between the two classes. They will not eat together or intermarry. Then again, a Mussulman abhors the flesh of the pig; the Sikh would think it sacrilege to eat beef. Again the Mussulman is not allowed to drink spirituous liquors; the Sikh objects to tobacco. So you see that though from the same country they are really, in many respects, two different classes of people. The regiment consists of two companies of Pathans and six companies of Punjabi or Hindustani Mussulmans. The Pathans are, as many of you know, practically the same as the Afghans. They speak the same language; they belong to the same race, and they have nearly all the same customs; the only distinction is that these particular Pathans belong to tribes which inhabit British territory. The Punjab Mussulmans are mostly from the Himalayas or Salt Range. The Salt Range lies south of Rawul Pindi and is the great source of the salt supply for all India. They are, as a rule, entirely illiterate, and I do not suppose to per cent. can read and write. When recruited they are as a rule taken straight from the plough, and have never seen any really big town. I will give you a few examples of their ignorance. When I told one of my native officers that we would be fourteen days on board the ship, he said, "Well, I suppose we shall tie up every night to the bank." This officer I may tell you formed his ideas of a ship from the big boats he had seen on the Indus, and a sea he seemed to imagine was something like a very broad river. Again, when we were going into Bombay the train ran straight into dock, and as we had had a very hot night in the train the moment the men were let loose numbers of them rushed down the steps to the sea and began to drink. I need hardly say they soon stopped this attempt to quench their thirst. Of course, it must be explained that none of the men had ever seen the sea before.

QUELFPART.

A DISAGREEABLE item of intelligence is reported from Quelpart in the columns of the *Kokkai*. Some Koreans are said to have invited three Japanese to a feast, and having plied them with liquor until they were stupid, set upon them with swords and stabbed two of them to death, inflicting severe wounds on the third. The

murderers were quickly arrested, and strong representations were made by the Japanese Consul. It is added that much excitement exists among the Japanese at Ninsen. Certainly it is much to be desired that the question of Japanese fishing in Korean waters were placed on a clear and satisfactory basis, for these frequent troubles among fishermen may at any moment involve embarrassing results.

AN ERRANT FOREIGNER.

THE *Nichi Nichi Shimbun* says that a Canadian, whose name, according to the *Kana* translation, seems to be Henry Tobant, started the other day from Yokohama to proceed overland to Kobe without a passport. He took the railway for guide, but whether he walked throughout or rode part of the way, we are not informed. At any rate when he came to Washizu station in Shizuoka Prefecture, he was arrested and sent back to Yokohama under escort. Probably the unfortunate man never conceived the necessity of having a passport. One does not generally think of asking official permission to go to a place whither a railway runs.

COLLISION IN THE BITTER LAKES.

LLOYD'S Agent at Suez, says the *London and China Express*, telegraphs, under date of June 4, 5.40 p.m., as follows:—"British steamer *Crown of Arragon*, bound from Barry Dock to Singapore, has been in collision with German steamer *Tritos*, from Odessa, in Section Great Bitter Lakes, Suez Canal. The latter sank a few minutes after the collision. The former has nine plates bent in, bows holed, stem badly damaged, and peak full of water. The holds, however, are all right." The *Tritos* is a steamer of 1,679 gross tonnage, built in 1882 at Flensburg, where she is owned.

A CORRESPONDENT OF THE "NEW YORK HERALD."

ACCORDING to the *Hochi Shimbun*, a certain Mr. Newman, a correspondent of the *New York Herald*, has amused the readers of that journal by relating an incident which occurred during his visit to Yokohama, or which he dreamt of on his way to San Francisco. According to this enlightened globe-trotter, an American and a German doctor of Yokohama have been realising large sums of money by operating on Japanese eyes to make them resemble those of Europeans. "Though," says the *Hochi*, "such stories are written for the sake of the amusement they afford, they contain a moral which we Japanese would do well to heed."

THE RAILWAY BUREAU.

AN Imperial Ordinance has been issued transferring the Railway Bureau from the Home Department to the Department of Communications. This seems a natural step. No branch of the public service has been better managed or has achieved more notable results than the Railway Bureau, and its transfer to the Department of Communications adds considerably to the importance of that Department.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 16th inst. were as follow:—

CONVERTIBLE NOTES.		RESERVES AND SECURITIES.	
YEN.		YEN.	
Notes issued.....	104,875,216	Gold coin and bullion.....	22,720,300
		Silver coin and bullion.....	42,833,260
		Public loan Bonds.....	14,500,000
		Treasury Bills.....	—
		Government Bills.....	22,000,000
		Other securities.....	—
		Commercial Bills.....	8,741,756
	104,875,216		104,875,216

Of the above total issue of notes, the sum of yen 4,172,902 is in the treasury of the Bank, yen 17,000,000 has been transferred on loan to the Government, and yen 83,702,314 is in actual circulation, the latter showing an increase yen 63,226 as compared with yen 83,639,088 at the end of the previous week.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the

Original from

16th inst. as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Day	Gold Coin. (Per 100 Yen.)	Pound Sterling (Per 100 Yen.)
11th.....	141.000	A.M. 6.9565
12th.....	141.000	A.M. 6.9374
13th.....	140.500	A.M. 6.9565
14th.....	141.000	A.M. 6.9818
15th.....	141.500	A.M. 6.9818
16th.....	141.500	A.M. 6.9818
Averages.....	141.083	6.9650

The above averages show for gold coin an increase in value of yen 0.583 per cent., and for the pound sterling an increase of yen 0.0315 as compared with the previous week.

VISCOUNT SANO AND FORESTRY.

THE new Minister of State for Agriculture and Commerce, Viscount Sano, evidently proposes to address special attention to the question of forestry. In a speech delivered to the Woods and Forests officials of the Department, he has dwelt with much insistence on the necessity of protecting and providing for the increase of the timber of the country. Incidentally he mentions that some years ago—doubtless when he was himself at the head of the Department of Finance—Professor Dr. Wagner was sent throughout the empire to examine the state of the forests, and on his return he reported that Japan was many times less richly equipped in this respect than Germany. Thenceforth the policy of the Government has been to encourage afforestation. We venture to think, however, that the measures adopted have not yet been largely successful. By way of illustration, Viscount Sano's attention may be directed to a letter which lately appeared in the correspondence columns of this journal, drawing attention to the fact that the valley of the Watarase River is being gradually stripped of all its timber, and that the effects of the destruction are likely to be disastrous.

THE CHINESE REPRESENTATIVE.

OWING to the death of the Countess Li, wife of the Viceroy and mother by adoption of H.E. Lord Li, Chinese Representative in Tokyo, it has become necessary for the latter to retire from official life during the prescribed term of mourning. Every one knows how unbending are the Chinese laws of mourning. The period of mourning for a parent is nominally three years, but in practice only twenty-seven months, during which time officials have to resign their appointments and retire from public life. Lord Li was so unfortunate last year as to lose his mother, but by a special decree from the Throne the period of his retirement was abridged to 100 days. It becomes necessary for him now again to return to China, and we can scarcely hope to see him back in Japan. It is understood, however, that his Excellency's valuable services will not be lost to his country, as the all powerful Viceroy has made arrangements for him to discharge the duties of Private Secretary at the Viceroyalty. Lord Li will be succeeded in Japan by the same gentleman who acted as his *remplacant* during his absence last year. His departure from this country will be sincerely regretted, for no Chinese Representative has ever succeeded in making himself so popular with all nationalities. Under any circumstances, however, it could not have been hoped that he would remain in Tokyo beyond the shortest period of diplomatic service, for promotion must wait on a man of his abilities.

FAREWELL DINNER TO DR. BAEZ.

ON Wednesday evening the members of the Tokyo Club entertained Dr. E. Baelz at dinner at the Rokumeikan, in view of his approaching departure for Europe on a year's leave. About fifty sat down to dinner, the chair being taken by Mr. von Walhausen, the German Chargé d'Affaires. During dinner the Naval Band played. Several Japanese were present, Dr. Baelz being not less popular among the Japanese than among foreigners, and doubtless the attendance would have been twice as large had not so many of the Tokyo residents been absent

in the hills. The toast of the evening was proposed by Dr. E. Divers, F.R.S., who said:—

Mr. Denison, our worthy Vice President, having been called away just before dinner, leaving Mr. von Walhausen to take the chair, I have been asked to propose the health of our guest Dr. Baelz. I have consented because it is to me a great honour as well as a great pleasure to give the toast, but in this unexpected position I am unprepared to say much where so much could well be said. I am sure, however, that you will allow that a speech can to-night be easily dispensed with, since Dr. Baelz has been so long among us, is so well known, and so warmly regarded by all of us and by so many others throughout the country. For many years senior foreign physician in the Medical School of the University, he has helped to train thousands of medical practitioners, and no teacher, most certainly, is held in more respect and affectionate regard by past pupils than Dr. Baelz. Throughout all the time, too, of his stay in this country he has been actively and successfully investigating medicine, more particularly in relation to Japan, and is now well known in Europe by the work he has done. I have ventured to introduce these remarks upon his professional career, because what they refer to is not likely to be familiar to many of you. For the rest we all know what a good, kind fellow he is, and can assure him of the warmth of our affection for him. Besides, in his extensive practice as a physician he comes at times to hold our lives in his hands, and we know we can then trust him thoroughly to pull us through. Gentleman, let us drink the health of Dr. Baelz, wishing him a pleasant time at home and expressing the hope that he will have a happy return to us next year.—(Applause.)

Dr. Baelz, who on rising received an ovation, said:—

EXCELLENCIES AND GENTLEMEN—I cannot sufficiently thank you for your kindness in assembling here to-night in such numbers, despite the great heat, to say good-bye to me, and for the cordiality with which you have driven my health. Were this really a farewell meeting, were I about to take my final departure from a country where I have made so many good friends and spent so many happy years, it would be to me a sad occasion indeed. But I am glad now to be able to recall without pain all the kindness and consideration I have received at your hands and the pleasant times we have had together, because I can look forward to renewing these delightful experiences, and can say farewell with the comforting assurance that this chain of friendship will draw me back to you soon, and that I may count on adding some more links to it in our renewed fellowship. My return cannot be too soon for me, I assure you, and I thank you heartily for the delightful experience you have given me this evening, an experience which I shall always treasure as one of the greatest honours and happiest memories of my life.—(Loud applause.)

"Auld Lang Syne" was then sung, Messrs. Milne and Macmillan leading, and the party rose at 10 p.m.

NICARAGUA AND JAPAN.

THE Tokyo News Agency reports that the preliminaries for concluding a treaty of amity and commerce between Nicaragua and Japan have progressed materially, the draft treaty having been prepared some two or three days and submitted by H.E. Viscount Enomoto to the Cabinet on the 22nd instant. The treaty is said to be virtually the same as that concluded with Mexico by Count Okuma, that is to say, a treaty which contains no extraterritorial clauses nor imposes any restrictions on the trade, travel, and residence of Nicaraguan citizens in Japan. The draft, when approved by the Cabinet, is to be forwarded to the Japanese Representative in Washington, who is empowered to negotiate with the Nicaraguan Government. The present expectation is that ratifications will be exchanged by about November, and that the treaty will go into operation from next March.

THE RAILWAY BUREAU.

FOR some time, says the *Kokkai*, there has been talk of transferring the Railway Bureau from the control of the Home Office to that of the Department of Communications. Count Goto and Mr. Kono busied themselves particularly to bring about the change, believing it to be in the interests of the public service, and considering, also, that the natural place for the Railway

Bureau is in the Department of Communications. Now that Mr. Kono has become Minister of Home Affairs, the consummation of the project has been greatly facilitated, and the *Kokkai* expects that it will be officially announced in a few days.

A NEW METHOD OF BETTING.

EVERYONE, says "Atlas," in the *World*, whose feelings are not swayed by the pull of their pockets must be glad that so good a sportsman as Lord Bradford has at last won the Blue Ribbon of the Turf. Unluckily for his friends and relations, knowledge of his over-sanguine nature made them pay no heed to the "chance" he spoke of, and fifty to one was obtainable about Sir Hugo on the course. Mr. Toole won 500*l.* over the horse, which he selected as being "at the longest price"!

MATCHES.

THE Tokyo News Agency, publishes a statement received from the Japanese Consul at Tientsin to the effect that the total quantity of matches imported into that place during 1891 was 515,136 (?) gross, valued at 482,964 yen. Only a portion of these were Japanese, but the Consul is of opinion that if greater care were exercised by the Japanese manufacturers they might ultimately monopolise the whole trade. At present Japanese matches are sold more cheaply than Austrian, but the latter appear to be counted of better quality.

THE "MIYAKO SHIMBUN."

It is announced that Mr. Inamo Noboru, Manager of the *Miyako Shimbun*, resigns his position, and that Mr. Yamanaka, head of the staff, is to be replaced by Mr. Nozawa Toshimoto. But no change of policy is admitted in connection with these events. Whether the alteration of *personnel* explains or confirms the rumours recently circulated about the paper, it is difficult to say.

LOCAL GOVERNORS.

THE following changes in the staff of local Governors are announced:—

NAME.	NEW POST.	FORMER POST.
Mr. Narabara Shigeru.....	Governor of Okinawa.....	Court Councillor.
Mr. Maruoka Kanji.....	Governor of Kochi.....	Governor of Okinawa.
Mr. Saisho Hirotake.....	Governor of Tottori.....	Governor of Kochi.
Mr. Nishimura Ryokichi.....	Resigns.....	Governor of Tottori.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

THE Ministerial problem occupies much space in the columns of the vernacular press. The crisis is not yet over apparently. Since preparing our last weekly summary, things have taken an unexpected turn. When the Camera Statesmen dispersed, upon discovering that their conditions were unacceptable to the Cabinet, it was universally believed that henceforth the so-called strong party in the Government, supported by the *Kokumin Kyokai*, would gain an uncontested ascendancy in the deliberations of the Ministry. Such a view of the situation was quite natural at the time, considering that the breaking up of the *Kuromaku* conference had been principally due to the opposition of Viscount Takashima, and others usually included among the leaders of the strong party. But before the lapse of a few days, a complete change took place in the aspect of affairs. Instead of the expected ascendancy of the strong party, the Cabinet is now, if we may believe the papers, almost entirely in the hands of the moderate party led by Count Goto and Mr. Kono. How such a sudden change has taken place, it is at present impossible to know with certainty. But according to rumour, everything is ascribed to a daring and adroit manoeuvre of Count Goto. While the Camera Statesmen, so runs the story, were deliberating about the Ministerial question, Count Goto kept very quiet, leaving it for others to oppose the interference of their elders. But when

Original from

it was known that the *Kuromaku* conference had been for ever broken up, he at once called on Count Matsukata and succeeded in extracting certain pledges from the Premier as to the course of policy to be adopted in the future. From that moment the Minister of Communications felt his ground secure, and at once set himself to carry out his plan by getting Mr. Kono, Minister of Agriculture and Commerce, transferred to the Home Office, and Viscount Sano, Privy Councillor, appointed to the portfolio of Agriculture and Commerce. Under such circumstances, Mr. Shirane's continuance in the Home Office was of course out of the question. Great things are rumoured about Count Goto. His object is alleged to be, not merely to oust the so-called strong party in the Government, but to deal a final blow to clan influence. Others say that his aim is to crush the power of the Choshu statesmen. Indeed, we have now the strange spectacle of a Cabinet in which there is no Choshu element. Mr. Shirane wielded no inconsiderable amount of influence in the Cabinet, but he is gone, and there only remains General Okazawa, Vice-Minister of War, to represent Choshu. He is of little consequence, however, from a political point of view. Whatever may be the object of Count Goto, there seems to be little doubt that at present he is the most powerful member of the Cabinet. It is stated that Viscount Takashima, Minister of War; Viscount Kabayama, Minister of the Navy; and Count Oki, Minister of Education, are far from being satisfied with the turn which things have taken, and that of late they do not attend Cabinet meetings. It is thus feared that a serious split may take place in the Cabinet.

Under the circumstances, thoughtful observers are inclined to doubt the stability of the Cabinet. It is even rumoured that a very important change may take place before the opening of the coming session of the Diet. The *Fiji Shimpō*, undoubtedly a great authority in these matters, repeats its observation that the present arrangement is only temporary, and that a change of Cabinet may take place even before the end of the present year. Our contemporary is convinced that the elder statesmen are only watching a favourable opportunity for organizing a coalition Ministry, composed of all the great statesmen who co-operated in the Restoration, not even excepting Count Okuma and Count Itagaki. Before surrendering the Government, which they all took part in establishing, into the hands of their juniors, the elder statesmen will, in the *Fiji's* opinion, come together once more to make common cause against the aspiring youngsters.

The Opposition journals, especially those of the *Kaishin-to*, seem to think that the Ministry has determined to follow an entirely new policy towards the Opposition. It is even stated by some of these papers that the Government has agreed to adopt the programme of the Opposition. The *Nichi Nichi Shimbun* finds it difficult to agree with such a view of the case. But the manner in which our contemporary writes plainly indicates that its purpose is, not so much to expose the absurdity of the allegations of the Opposition papers, as to draw the attention of the Cabinet Ministers to the importance of a firm and consistent policy on their part.

There is a significant article in the *Fiji*, over the signature of Mr. Hoshi Toru, President of the House of Representatives, entitled "On the Present Cabinet." The distinguished writer deplores that nowadays the whole attention of the Cabinet Ministers is engrossed by the policy to be pursued toward the Diet. No other subject seems ever to engage the serious thoughts of Ministers. In a sense this state of things is gratifying to the pride of the Diet; but nothing can be more deplorable from the national point of view. The Government has duties to perform which are of vastly greater importance than the management of the Diet.

Among the questions demanding the Cabinet's attention may be mentioned the development of industry, encouragement of navigation and trade, setting in order the Military and Naval administration, completion of the defences of the country, and so forth. But none is of more urgent importance than the question of Treaty Revision. The Treaty Revision Committee appointed by the Government does not seem to have made any progress with its investigations. Mr. Hoshi admits that the Revision of the Treaties is an extremely difficult matter; but he does not think it impossible to accomplish it if the Government be strong enough to obtain the support of the nation. There is also the Korean question inviting immediate attention. A great deal depends upon the manner in which the Government at this important juncture shapes its policy towards the Balkan peninsula of the East. Not only are administrative affairs at a standstill, but the Government's policy on grave national questions is undecided. Is such a Government, asks the writer, capable of undertaking the difficult task of Treaty Revision and of dealing with the Korean question? Mr. Hoshi hopes that these observations of his may be duly considered by those now in power.

Great excitement has been caused, as already noticed, by the rumour of an alliance between the Government and the Radical party. The nature of the quarrel from which this report came led the majority of the metropolitan papers to attach importance to it; for the Tokyo News Agency, whence the story emanated, is generally supposed to be under the control of the Cabinet, or at least of a certain section of it. Not only has the assertion been flatly denied by the Radical organ, but it has also been withdrawn by the News Agency itself. Other papers, however, refuse to dismiss it so easily. Three hypotheses are advanced; first, that the rumour was fabricated by "the cunning Choshu statesmen" to sow seeds of dissension in the camp of the Opposition; secondly, that it originated with certain members of the Cabinet who are not at all pleased with the ascendancy which Count Goto and Mr. Kono have obtained in the Government; and thirdly, that it is in the main true. The first two opinions are confined to the Opposition organs, while the third is generally advanced by the independent section of the press. It is believed by the latter that there exists some sort of understanding between an influential Minister of State (needless to say that Count Goto is referred to) and leading members of the *Fiyu-to*. The new programme which the Radicals are about to make public is expected to be much more moderate than their existing one; while, on the other hand, the Cabinet is reported to be meditating a conciliatory policy towards the *Fiyu-to*. It is quite possible that some of the Tosa members of the Radical party, who are supposed to be not unfriendly to Count Goto, may, upon certain conditions, take office; but it is incredible that the *Fiyu-to*, as a party, will become an open ally of the Government. The *Nichi Nichi* insists that, whatever may be the truth about the reported alliance between the Government and the Radical party, it is a fact that the recent conduct of both is calculated to arouse public suspicion and doubt. Our contemporary earnestly hopes that Ministers of State will take prompt measures to effectually dispel the gathering mist of popular perplexity.

Mr. Kono's appointment to the Home Office was at first greeted with delight by the Opposition papers, especially the *Kaishin-to* organs. The Home Office has long been regarded as the head-quarters of clan influence, and especially of Choshu elements. The Opposition papers welcomed the new Minister of Home Affairs as the only man who could be expected to introduce a thorough change into his Department, and to effectually break up the species of political league which half a dozen influential Governors are believed to maintain for the preservation of Clan Government.

He was in particular entreated to meet out due punishment to local authorities who had impaired the rights and interests of the people by actively interfering in the last general elections. The *Mainichi Shimbun* was even sanguine enough to expect him to remedy all the evils alleged to prevail in the Government. It is scarcely necessary to remark that the expectations of these papers have little chance of being gratified. It is already observable that the Progressionist organs feel no small amount of chagrin on finding that their high hopes are not likely to be realized. One of them, the *Hochi Shimbun*, cries out, almost in as many words, that after all Mr. Kono is not independent enough to free himself from the benumbing effect of his environment. The event which has so suddenly chilled the ardour of fond expectancy on the part of these papers is the recent change of posts between a few local Governors. "What we demand," they say "is not a mere interchange of posts, but the positive punishment of objectionable local authorities." The Opposition journals infer that the object of Mr. Kono's transfer to the Home Office was merely to try to conciliate the Popular Party by means of the usual childish policy of patch work (*biko* 補綴).

As to the abrogation of Consular jurisdiction in the case of Portuguese residents, we stated in our last weekly summary that the vernacular press had unanimously approved the justice and propriety of the course taken by the Japanese Government. Several articles have since been published, and we find that all the papers advise the Government to stand firmly by the position it has taken, and never to yield to Portugal, whatever pressure she may bring for the recovery of the lost privilege. The press avails itself of the present opportunity to urge upon the Cabinet the importance of speedily proceeding with the task of Treaty Revision. If the Government adopts a strong policy for the recovery of the national rights, it may count upon the effective support of the nation. Several papers also devote space to exposing the absurdity of the views that have been ventilated on this subject in the columns of certain foreign local journals. The *Nichi Nichi Shimbun's* article on this subject deserves special notice.

The *Kokkai* has a somewhat peculiar historical essay on Portugal. It is a lamentable coincidence, says our contemporary, that the year which has witnessed such a signal manifestation of Portugal's impotence should happen to be the four hundredth anniversary of the allotment, by Pope Alexander VI., of all the non-Christian lands in the eastern hemisphere to the arms of mighty Portugal. It is also strange that the country which first carried the seeds of European civilization to this Empire should be the first to lose her prestige. Such a fall in a Kingdom's fortunes cannot be viewed without pain. Portugal's policy, says our contemporary, has been to avoid contact with any Power stronger than herself and to direct her energy against weaker nations. This, in the *Kokkai's* opinion, is the cause of her decline. Not that the Portuguese individually lack great qualities; on the contrary, they possess such qualities in plenty. Their high aspirations of former days are shown by Camoens' "Os Lusíadas." Good lessons may be learned from Portugal's history; and our contemporary recommends the Authorities to show equal courage and decision in dealing with stronger Powers.

The vernacular press continues to bestow much attention upon the Korean question. The papers urge the Government to adopt a decided policy towards the peninsular Kingdom. The *Fiji Shimpō* writes on the subject at considerable length, recommending the Government to shape an active policy, and thus divert into a foreign channel the nation's energy, now being wasted in useless struggle of internal politics. Our contemporary enters into so many details that it may be desirable to give its article fuller notice from

THE ELECTIONS.

IN the Parliament of the United Kingdom there are :—

English members	465
Welsh members	30
Scotch members	72
Irish members	103

Total 670

The division of these, according to parties, on the eve of the general elections now in progress, was as follows :—

English, Welsh, Scotch. Totals.			
Conservatives and Liberal Unionists	323...	5...	28 ... 356
Gladstonians	142...	25...	44 ... 211
	465	30	72 567

Ireland.	
Conservatives	17
Parnellites	31
Anti-Parnellites.	55

Total 103

Now our latest returns, as telegraphed by Reuter, are :—

Conservatives	228	} 268
Unionists	40	
Gladstonians	215	} 257
Anti-Parnellites	42	
Parnellites	7	

532

Hence there are 138 constituencies still to be heard from. What are these constituencies? Probably the majority of them are Irish and Scotch. It will be observed that the Liberal Unionists have succeeded in carrying only 40 seats against 64 which they held at the time of the dissolution: the great loss has been on their side, which looks as though the constituencies had rebelled against CHAMBERLAIN and HARTINGTON'S desertion of their old leader. Setting aside these questions, however, it seems to us that the undetermined constituencies are probably divided thus :—

Scotland	72
Ireland	39
England and Wales	27

And of these it may be anticipated that Ireland will give the Gladstonians 37, Scotland will give 44, and England and Wales will give 15. Thus the final result would be :

Conservatives and Liberal Unionists	310
Gladstonians and Irish Nationalists	360

But in this calculation we include the whole of the Irish Nationalists among Mr. GLADSTONE'S followers, whereas it is possible that REDMOND'S Section may vote with the Conservatives. Apparently that section is not likely to carry more than 10 or 12 constituencies. Even supposing, therefore, that they join the Conservative camp, GLADSTONE would still have a majority of from 26 to 30. We can scarcely conceive, however, that when the House of Commons divides on the question of Home Rule, any Irish Nationalist, be he Parnellite or anti-Parnellite, will venture to vote against GLADSTONE. Hence the picturesque old man—and we strongly suspect that the romance connected with his age and courageous perseverance has had more influence upon many voters than any political reasoning—will find himself at the head of a party out-numbering its opponents by 40 or 50. Of course under such circumstances

he will attempt to carry Home Rule, and the chances of his success are at least as great as the chances of his failure. It is not easy to decipher exactly what his Home Rule programme is, but we read it to be something of this kind :—first, a Parliament and a Cabinet in Dublin; secondly, the Customs, Army and Navy, and Viceroyalty permanently under Imperial control; thirdly, the Constabulary temporarily—say for 5 or 7 years—under Imperial control, and then placed under the Dublin Authorities; fourthly, the Judiciary, Magistrates, and local government under the Irish Parliament; and fifthly, a certain number of Irishmen—say 40 or 50—sitting in the House at Westminster to discuss and vote on Imperial (not English, Scotch, or Irish) questions. We should then see TIM HEALY either Prime Minister or Lord Chancellor of Ireland. Probably he would prefer the latter, as he would doubtless become a peer of the realm, and die as staunch a Conservative as they make them. But we might also see Ulster take the field. Those thirty thousand men that sang the Covenanters' Hymn and "God Save the Queen" are terribly in earnest. Nothing was more impressive about their proceedings than the quiet self-contained speech of the leader of the Orangemen. A dog that bites does not bark, and we know what the bite of the Orangemen means. Thirty thousand of them would march through Ireland from end to end, just walking over the Ribbonmen and Parnellites, unless the red-coats interfered. From that kind of "battle, murder, and sudden death" we may well pray "Good Lord deliver us." And it is all for the sake of giving the Grand Old Man another chance before he gets both of his feet into the grave. Party Government is a charming institution. From that, too, we are inclined to pray "Good Lord deliver us!"

THE HYOGO HOTEL CASE.

OF the extent to which faith in individuals is carried among foreign trading communities in the East, in other words, of the preponderating value that attaches to credit, a striking example is furnished by the Hotel case recently tried in H.B.M.'s Court for Hyogo and Osaka. Mr. W. JOHNSON lived in Kobe almost as long as the place had been open to foreign residence. During that time he was successful in business. He started the *Hyogo News*, and contrary to the general experience of foreign journals in Japan, the paper proved a money-making concern. He started the Hyogo Hotel, and that too seemed to be a lucrative affair. Above all, throughout the period—nearly a quarter of a century—covered by these ventures, he steered a perfectly straight course through all the devious paths of trade and traffic, so that, in 1891, he enjoyed the reputation of a successful business-man and the credit of a strictly honorable

dealer. A merchant with such a record behind him in the East can do what he pleases. He could command confidence and wield influence anywhere, but his power is especially great in the small foreign communities at the open ports of China and Japan, where everybody knows everybody, and where, in consequence, there exists a marked tendency to play the game of "follow my leader." In 1891 it occurred to JOHNSON that the Hyogo Hotel might be profitably converted into a joint stock enterprise. Yokohama had furnished examples with apparently happy results. He therefore approached the owner of the land on which the Hotel stood, and found him willing to sell for a sum which, if invested at 5 per cent., would produce approximately the revenue then derived from the land. This meant something like a hundred and thirty thousand dollars per acre, but the site was good and the sea-frontage valuable. Adding to the price of the land and buildings a certain sum for good-will, furniture, stock, and so forth, an aggregate of \$175,000 was reached, and JOHNSON proposed that this should represent the capital of the company. He prepared a prospectus declaring that the Hotel might be reasonably expected to pay 15 per cent. annually on the above capital, and without the least difficulty several of the leading merchants of Kobe associated themselves with the venture, agreed to purchase shares, and to lend their names as provisional directors. They made no scrutiny into the processes by which JOHNSON had reached his estimate of 15 per cent. Having perfect faith in his business capacity and integrity, they accepted the estimate without question, contenting themselves with a somewhat perfunctory inspection of the buildings, the furniture, and the stock. It is possible that these gentlemen were more or less influenced by collateral considerations: they may have detected an opportunity of extending their own business by supplying the Hotel's regular wants. That would have been fair enough in its way. But undoubtedly the main factor that moved them was faith in JOHNSON, while the public was equally influenced by faith in the names of these provisional directors. Thus the whole transaction was completed on a broad basis of confidence. After the lapse of a year, however, a disastrous discovery was made. It was found that a fatally weak link had existed in the chain of trust. The manager of the Hotel, JOHNSON'S employé, had deceived his master, and the Hotel, instead of producing a net monthly revenue of \$2,000—which it should have done in order to give a return of 15 per cent. on \$175,000—had been earning less than a twentieth of that amount during eleven months preceding the formation of the Company. The discovery seems to have astounded JOHNSON at least as much as it astounded any one else. He at once came forward, and

offered to manage the Hotel in the Company's interests for 5 years, guaranteeing a minimum of ten per cent. on the capital fund during that time, and offering sufficient security. This proposal the shareholders refused, and a week afterwards JOHNSON shot himself. Legal proceedings were then instituted against his estate by the Company, who claimed rescission of the deed of sale and other relief, on the plea that JOHNSON had wilfully misrepresented the value of the property when he offered it originally for sale. Now there is no doubt that JOHNSON'S estimate of the prospects of the Hotel was erroneous, and in determining his moral responsibility for the error, two questions at once present themselves: first, as to the hypothesis that he was himself deceived by his Manager, what object could have influenced the latter to render false returns of the earnings of the Hotel; secondly, is it reasonably conceivable that JOHNSON could have been so far misled as to imagine that an enterprise, which in reality brought him only \$88 a month, was furnishing an income of about \$2,000. As to the first question, there is a simple answer: the Manager, being paid according to the profits, had a direct interest in magnifying them. As to the second, the explanation appears to be that JOHNSON, being habitually careless about accounts, and having actually made large profits out of the Hotel in former years, may readily have accepted the statements of his Manager with reference to a period of a few months. The latter assumption disturbs the faith previously placed in JOHNSON'S business capacities, but it is proverbial that men who deserve trust are themselves trusting. On the other side of the account have to be set three items. First, JOHNSON sold the goodwill at a very moderate figure. Admitting that he believed the Hotel to be worth an income of from ten to twenty thousand dollars annually, he certainly gave no evidence of a grasping disposition in his method of capitalizing that income. Secondly, he took one-third of the stock himself, and never attempted to "unload," as he would have done in all probability had he been seeking to exploit the public. Thirdly, so soon as the deceit practised by his Manager was discovered, he came forward frankly and made an offer which proved his faith in the future of the Hotel, and his strong desire to do justice—an offer, the refusal of which must now be a bitter retrospect to the shareholders. Casting up the two sides of the account, and remembering the high character for integrity borne by JOHNSON during twenty-five years of active business life, it is impossible not to conclude that the balance is strongly in favour of his probity throughout. Still, if the Company chose to test this question in a Law Court, they were not without grounds for making the venture. But they went a great deal further. Not only did they charge JOHNSON

with deliberately deceiving them as to the earnings of the Hotel, but they also alleged against him that he had misrepresented the value of the land, the state of the buildings and the furniture, and the quality of the stock. This latter contention imparted an unfortunate complexion to the affair. The shrewdest folks may easily become victims of culpable negligence practised by one whom they trust in respect of information to which he alone has ready access. But when, eighteen months after effecting a purchase, practical men of business come into a Law Court and pray for relief from the consequences of their own negligence, the incident becomes comical. The land on which the Hotel stood, the buildings of which it consisted, the furniture with which it was equipped, and the stock with which it was supplied—all these things were open to be examined and assessed by the Company at the time of acquiring them. It is entirely unbusiness-like and absurd that their purchasers, eighteen months after acquiring them with open eyes, should complain that they had kept their eyes closed, and claim that they ought to be indemnified for not having duly exercised their powers of vision in their own interests. But the whole affair was in keeping: from the extreme of trusting JOHNSON implicitly, the Company passed to the opposite extreme of distrusting him *in toto*. The cold analysis of a skilled Judge and the conscientious verdict of an intelligent Jury combined to defeat the Company at every point, and to rehabilitate the memory of an unfortunate man, who, after a long career of untarnished honour, found nothing but a pistol bullet to save him from the companionship of intolerable disgrace. It must remain a subject of perpetual regret that JOHNSON'S straightforward and liberal offer of reparation was not accepted. Things might now have been very different.

BEQUESTS OF ART TREASURES.

THE Americans are a remarkably liberal and public-spirited people. Time and again one reads of valuable collections of works of art donated by wealthy collectors to Museums. Most of the new or old Museums in the great cities of the Republic appear to be engaged in filling their cases with objects of vertu, and most of the monied Americans seem to be occupied assisting the performance. But we are occasionally constrained to wonder what can be the object of the process. To furnish the museums with beautiful examples of art, will be the ready reply of most persons, and a satisfactory reply it is, doubtless, so far as it goes. We imagine, however, that the Museums aim at something more. We imagine that they desire to instruct as well as to attract the public. Such, at any rate, is the purpose kept in view by directors and curators of Museums in other parts of the world, and as one means

of achieving it, no pains are spared to establish the authenticity of the specimens displayed, to arrange them intelligently and to catalogue them correctly. In America, however, it seems to be a matter of indifference how far the public are misled by the contents of a museum, or how ridiculous the Museum's descriptions may appear in the eyes of people possessing any expert knowledge. A case in point is the Metropolitan Museum in New York. It is generally reported that this Museum possesses a quantity of exquisite and valuable specimens, and the press informs us that the rich assemblage has now been increased by the generosity of the late Mr. E. C. MOORE, who bequeathed to the Museum his collection of objects of vertu obtained from nearly all parts of the world. A leading New York journal prefaces its description of the collection with the following words:—

To be a collector of art objects which have an immediate as well as a historical and chronological value, implies that the collector must have a mind trained to a point of education in art matters to be able to distinguish at a glance the real from the bogus and determine instantly the value of the object, from all the different standpoints of chronology, history, advancement in the particular school from which the object springs, degree of civilization of the people from among whom the object is taken, and last, but not least important, the pecuniary value of the object itself, whatever it may be. Few collectors there are who possess all these attributes, as many with fine artistic temperaments will be found paying enormous prices for absolutely worthless articles, bogus imitations of the antique and attractive only for their flashy gaudiness or hideous grotesqueness.

The Metropolitan Museum of Art in Central Park is peculiarly fortunate in recently coming into possession of a priceless collection of art objects gathered from every portion of the globe by a man who possessed all the virtues of an infallible judgment as to the age, artistic worth, and commercial value of each article, without any of the shortcomings or faults which many collectors have.

After such an eulogy one is justified in expecting that the donated collection will contain nothing which is not authentic, and which does not satisfy the simple condition of being what its catalogue description represents it to be. But the accounts published by the press show a very different state of affairs. A flower vase of Kutani porcelain, the picture of which enables us to state with certainty that it was made within the past 15 years at the kiln of TAKENOUCHI KINSHO or MATSUMOTO SAHEI, is attributed to the seventeenth century, and this glaring error is supplemented by the still more absurd statement that "in the days when this pottery was made in Japan these vases were used in carrying water for the Shoguns, a bail being placed in the ear-rings." Then we have a picture of a jar "representing a fountain at which two women are drawing water." This is "supposed to antedate the sixteenth century," though it evidently belongs to the era of modern forgeries. Similar antiquity is assigned to a cup of Satsuma faience, the compiler of the catalogue being evidently ignorant of the elementary fact that no such faience was made in Satsuma before the seventeenth century. Reading on, we find the following:—

Undoubtedly the gem of all the pieces is an open work rose leaf jar about ten inches in height, decorated in gold, blue, and red glaze. This is finely traced with flowers, and has upon the open work of the jar a pheasant in full flight. This is the famous Inari ware of the sixteenth century, considered so valuable and esteemed so highly in Japan, and which is very rare in the present age.

It is a small matter that the "pheasant in full flight" is not a pheasant at all, but a crane.

Hōo, though the blunder illustrates the cataloguer's extreme ignorance of Oriental art motives. Much more startling is it to be told that such a jar dates from the sixteenth century, and that old Imari ware is very rare in the present age; the truth being that no specimens of the kind were produced in the sixteenth century, and that old Imari ware is the only fine porcelain in Japan which cannot yet be said to have become rare. But the crowning absurdity of the catalogue is reached when we are informed that "the Japanese collection contains several rare and valuable specimens of peach-blow ware, supposed to have been made in the sixteenth century." We find it perplexing to conceive ignorance so gross. There never was a specimen of peach-blow ware, or of anything resembling it, made in Japan until men like MAKUZU and TAKEMOTO set themselves, within the past five years, to produce partially successful imitations of this beautiful Chinese glaze. If any estimate of the genuineness of the rest of the MOORE collection may be deduced from these descriptions of the Japanese portion, the Metropolitan Museum must have an interesting and amusing group of shams exposed in its cases and on its shelves. The uses of such assemblages of specimens are not easy to apprehend. They serve chiefly to deceive the public by conveying a wholly false impression of the art they profess to illustrate.

JAPAN AND PORTUGAL.

WITH respect to the question between Japan and Portugal, we observe the prevalence of a misapprehension fatal to anything like distinct understanding of the situation. It is again and again asserted that the question lies between merchant Consuls and professional Consuls, and by way of corollary to this false impression it is stated that Japan, to be consistent, must now proceed to take towards all Powers represented by trading Consuls the same step that she has taken towards Portugal. But the facts are very different. Portugal is held to have abrogated her treaty privileges, not because she employs merchant consuls, but because she does not employ any Consuls invested with proper judicial authority. Nobody has ever been found to defend the system of trading Consuls on its own merits. The only excuse offered for it is that minor Powers with small interests in Japan cannot be expected to incur the expense of maintaining salaried judicial officials. To such an argument the simple reply is that Powers so circumstanced ought to hand over their jurisdiction to the trained official Consuls of some of the Great States. There are numerous precedents for that course in Japan, and were it adopted by all the lesser Powers, the Japanese would be deprived of one very

grave cause of just dissatisfaction. But although complaining that merchant Consuls cannot be considered competent judicial officers, and that to entrust to them the exercise of the jurisdiction of which Japan has been deprived by the treaties is to neglect the constructive obligations imposed by those instruments, Japan has never insisted upon any practical application of this contention. Her procedure towards Portugal has not been based upon any such grounds. Had Portugal nominated, at the outset, merchant Consuls at the various ports, and invested them with the same degree of judicial authority possessed by the trading Consuls of other small Powers, Japan, doubtless, would have made no protest, nor taken any step such as she has now taken. But Portugal did nothing of the kind. The trading Consuls appointed by her after the conclusion of her treaty with Japan were not entrusted with judicial authority as are the trading Consuls of other States. Their functions did not extend beyond those of a committing magistrate. Before punishing a breach of the law or administering justice in a civil suit, they had to place themselves in communication with the Governor of Macao, from whom alone they could derive authority to exercise judicial functions for the purposes of any case. An attempt has been made to condone this singularly defective system by adducing the fact that the Supreme Court in Shanghai is the tribunal of appeal for cases tried before HER BRITANNIC MAJESTY'S Court in Japan. It is astonishing that such confusion of ideas should exist. The British Court in Japan is fully equipped in every sense. It is competent to render direct decisions in all civil suits, and is invested with power to pronounce even capital sentences in criminal cases. That litigants desiring to appeal from its judgments must carry their pleadings to a tribunal separated from Japan by hundreds of miles of sea, is undoubtedly a hardship and a defect. But the difficulty is not to be mentioned in the same breath with the original Portuguese system, under which the course of justice had to be delayed altogether until reference could be made to an authority at a much greater distance from Japan than Lisbon is from London. Such a system was plainly open to the gravest objections, and Japan objected as long ago as 1882. This fact must not be forgotten. It must not be supposed that the manner of exercising Portuguese jurisdiction in Japan came under international discussion for the first time a few months ago. It came under international discussion in 1882, and Portugal then agreed to appoint a Consul-General in Tokyo. Even in carrying out this agreement, however, she failed to amend all the defects previously existing, for the Consul-General's jurisdiction was limited to the Tokyo district, and reference to Macao still continued to be a necessary preliminary to

the exercise of judicial functions by any of the trading Consuls at the other ports. A resulting miscarriage of justice in 1886 directed attention once more to the system, and in consequence of representations made by the Japanese Government, Portugal introduced certain reforms in 1887. Briefly stated, these reforms were that the trading Consuls at the ports were reduced to the status of Vice-Consuls; that the Consulate-General in Tokyo became the tribunal of reference and the enabling authority, instead of the Governor of Macao, and that the Consul-General was empowered, in cases of any gravity, to proceed to the place and conduct the trial *in loco*. Thus in 1887 for the first time Portugal organized in Japan a system of jurisdiction which, though it shared with the systems of some other minor Powers the grave defect of being administered by men without any legal qualifications, was at any rate nominally competent to secure the preservation of good order and to render justice between suitors. We must observe, too, that the establishment of this system having been the outcome of Japanese official representations, Portugal was under the obligation of not abolishing or radically altering it without due reference to Japan. Portugal, however, ignored not only this obligation, but also the obligation, constructively imposed on her by treaty, of providing an efficient substitute for the jurisdiction of which she had deprived Japan. She resolved upon the abolition of the Consulate-General in Tokyo; did not communicate her resolve in any way to Japan, and made no provision whatever to reconstitute the system of jurisdiction which, by this step, would be altogether dislocated. Japan protested, but her protests seem to have been treated with complete indifference. She saw that Portugal was about to upset all the judicial arrangements made, after official consultation, five years previously, and she necessarily objected. Finding, however, that her remonstrances received no attention, she finally announced that, in the absence of any machinery for the judicial control of Portuguese subjects in the Japanese empire, she herself should assume jurisdiction over them after a certain date. Portugal might have averted this result with the greatest ease. She had only to intimate that steps would be taken to reconstruct a proper system; or that the judicial control of her subjects should be entrusted to the competent Consuls of some other Power; or even that she desired delay. The matter was in her own hands. But she neglected it altogether, and when, on the eve of the date fixed, the Japanese Representative again invited the attention of the Foreign Office in Lisbon, the only notice he could obtain was that Portugal would answer in due time. It will be plain from this narrative of simple facts that Portugal has been deprived of her extraterritorial jurisdiction in Japan, not because she en-

trusted its exercise to trading Consuls, but because, having removed the machinery which she had agreed to establish for the purpose, she neglected to provide any substitute, despite the strong remonstrances offered by Japan. Whatever may be asserted to the contrary by ill-informed writers, it is nevertheless a fact that, prior to the issue of Japan's recent Ordinance, there did not exist in this country, for the judicial control of Portuguese subjects, any arrangements that could be recognised as reasonably competent even when judged by the standard of Powers employing trading Consuls only. We do not imagine that any thinking person will be found to pretend that Japan should have folded her arms in the presence of such a flagrantly defective state of affairs. Prior to 1886 she could plead ignorance of the exact nature of the Portuguese system, but thenceforth she possessed the knowledge of experience, and it would have been deliberate self stultification for her to tacitly condone in 1892 an abuse which, in a less accentuated form, she had taken international steps to correct in 1886. Again we say that Portugal might have averted this unpleasant conjuncture with the greatest ease. One word from the Government at Lisbon prior to the 14th of July would have induced the Japanese Government to hold its hand. But Portugal apparently did not think the contingency worthy of a word, though it had cost the Japanese Government a good many despatches and telegrams. And, so far as we can ascertain, Portugal, recognising that the case has gone against her by deliberate default, now refrains from offering any remonstrance.

SHAKESPEARE IN GERMANY.

IF the glory of SHAKESPEARE was, during the Puritan period, temporarily eclipsed even in England, we need not be surprised to find that among the nations of the Continent he was for a long time considered a barbarous bard. This opinion was largely based on his violations of generally accepted rules, such as his mingling together of tragic and comic elements, and his disregard of the dramatic unities. With LESSING and WIELAND, SCHILLER, and GOETHE, Germany's classical period began, and with it began also a fuller appreciation of SHAKESPEARE'S genius. In this respect LESSING was the forerunner of a new era, while SCHILLER and GOETHE were not behind him in he esteem in which they held the Avont bard, though neither of them would permit German authors to be seized by Anglo-mania after both had so essentially contributed to free the literature of their country from the dominion of French models. The power of SHAKESPEARE'S genius was not to be underestimated. BYRON, for instance, fully recognised the necessity of guarding his literary

individuality against SHAKESPEARE'S overwhelming influence. How serious, even for a GOETHE, seemed the danger of a new god from beyond the channel being set up in place of the dethroned idols from the banks of the Seine, may be seen from the following very remarkable confession, words that are a greater tribute to the "Myriad-minded" than the most fulsome eulogy could possibly have been:—"SHAKESPEARE," says GOETHE, "in even too rich and powerful. A productive nature ought not to read more than one of his dramas in a year, if it would not be wrecked entirely. I did well to get rid of him by writing GOETZ and EGMONT; and BYRON did well by not having too much respect and admiration for him, but going his own way. How many excellent Germans have been ruined by him and CALDERON! SHAKESPEARE gives us golden apples in silver salvers. We get, indeed, the silver salvers by studying his works; but, unfortunately, we have only potatoes to put into them." For a long time the friends of SHAKESPEARE were without any organization in Germany, but in 1864, at the three hundredth anniversary of his birth, the German Shakespeare Society was founded under favourable auspices, and with the special countenance and support of the art-loving Grand-Duchess SOPHIA of Saxe-Weimar. This society has ever since been the centre of the admirers and students of the English bard, and possesses the finest SHAKESPEARE library in Germany. At its last annual meeting, held in Weimar as usual, it was announced that the German EMPEROR, the Prince-Regent of Bavaria, and the Grand-Duke of Baden had become members, and thus the society now numbers on its roll no less than twelve sovereigns and princes. Of its recently published popular edition of SHAKESPEARE'S works in German, no less than 17,000 copies have been already sold. The society's orator at its last meeting, Dr. KLUGE, of Jena, laid considerable stress on the copious vocabulary of SHAKESPEARE, whose works contain 20,000 different words, against only 9,000 of the Iliad and Odyssey, a fact chiefly due to SHAKESPEARE'S wonderfully detailed acquaintance with all the various phases of life, especially with hunting, for he gives above a hundred names of birds alone. His influence on the German language was also dwelt upon, and a list of German words derived from SHAKESPEARE'S works as translated by KLOPSTOCK and WIELAND was given.

TALK ABOUT THE "JIYU-TO."

MR. OI KENTARO'S section, the *Kwanto-Kai*, has the good fortune to attract a great deal of attention in its passage from the ranks of the *Jiyu-to* to independence. The latest explanation of the secession comes from the Tokyo News

Agency, which says that there is believed to be a deep reason for the step taken by the *Kwanto-Kai*. Mr. OI and his followers were practically at one with the *Jiyu-to* for all essential purposes, and the impulse on their part to secede, as well as on the part of the Radicals to promote their secession, did not originate with Count ITAGAKI, nor yet with the managers of the *Jiyu-to*, nor yet with the extremists outside the party, but with certain leading members of the *Jiyu-to*, who, having entered into private relations with some of the statesmen in power, saw the advisability of extruding the uncompromising element of the party. As to the nature of the agreement, the Agency says nothing, and indeed it has now withdrawn the story as baseless. But we cannot absolutely accept the withdrawal, and at any rate a very curious and important issue is involved in this rumour, supposing it to be credible. Close observers have from the first foretold that the course of Japanese politics must ultimately reach a point where a separation would occur among the statesmen of the *Meiji* era, one section allying themselves with the Opposition of the time, and the other joining hands with the nominal supporters of the Government. Not until that occurred, said these students of events, could any political party be regarded as possessing competence to assume the administration of State affairs at any moment. In other words, not until that occurred could the country claim to be equipped with political parties worthy the name. This prediction, always seeming to be well founded, appears now to be on the eve of fulfillment. The Radical Party has of late undergone a process of disintegration which may be regarded, not unreasonably, as the elimination of its most violent elements. Mr. OI KENTARO takes with him the "desperate coterie" (*yakhi-gumi*) and leaves behind him the men who, after the prorogation during the last session, consented to resume business quietly, and declined to follow the war-to-the-knife tactics of the *Kaishin-to*. Much more unlikely things have happened than would be an alliance between this purified *Jiyu-to* and some of the *Meiji* statesmen. But which *Meiji* statesmen? A line of demarcation seems to be gradually defining itself between those now in office and those out of office. It is becoming daily less difficult to conceive that men like Count ITO and his numerous supporters, might form themselves into a camp excluding a considerable section of the politicians who have hitherto worked with him. There is this perplexing element in the outlook, however, namely, that Count ITO, Count INOUE, and their friends are understood to be conservative in the sense of denying the country's fitness for party government, and advocating complete absence of connection between the Cabinet and any political party. Neither with the *Jiyu-to*, therefore, nor yet

with the *Kaishin-to*, nor yet with the *Koku-min-Kyokai* can we expect to see Count ITO openly allied. Given, on the one hand, divisions growing constantly more solid between political parties, and on the other, divisions seeming to develop themselves between the *Meiji* statesmen, we appear to possess elements out of which it ought to be possible to construct a result without much trouble. But for our own part we experience great difficulty in conceiving any issue consistent at once with these happenings and with the principles assigned to the leading statesmen of the era. It is, at all events, a situation full of interest, and its outcome, which cannot now be very distant, will throw much light on the probable working of representative institutions in Japan.

"BLAINE'S DEFEAT."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your editorial, entitled "Blaine's Defeat," in this week's *Mail*, you make the following statement:—"Somebody once said of Blaine, 'We honour him for the sake of the enemies he has made.'" I think you are somewhat in error in this statement. At the Democratic Convention held in 1884, in Chicago, at which Mr. Cleveland was nominated, language like the above was used, but it was applied to Mr. Cleveland and not to Mr. Blaine. I happened to be present at the time, and was impressed with the occurrence. It was as follows:—At the time General Bragg of Wisconsin had the platform and was seconding the nomination of Mr. Cleveland. Tammany Hall, under the leadership of Mr. Kelly, their Grand Sachem, assisted by several younger lights, Grady, Cochran, et al., had been bitterly opposing Mr. Cleveland, endeavouring in every way to prejudice his interests. Mr. Grady, a young New York lawyer, had just finished a speech in which he had bitterly denounced the New York Governor. He was followed by General Bragg, who was equally strong in his praises of him. Right in the midst of Gen. Bragg's speech Mr. Grady jumped to his feet and said: "But Mr. Cleveland has enemies," "Yes," replied the old soldier, without a moment's hesitation while pointing his finger at the Tammany Hall delegation, "and we love him for the enemies he has made." The application was obvious and the effect produced was tremendous. It was some while before the old hero could proceed with his speech.

I always couple the above incident in my mind with another that occurred at the Convention, probably the same day. It was as follows:—Gov. Abbot of New Jersey was on the floor making a speech, when some man in the gallery shouted out, "louder." The Governor courteously recognized the request and raised his voice; but again the man shouted out "louder," and again Governor Abbot responded to the request. But the man was not satisfied, for, for the third time, he cried out "louder." This time the speaker stopped, and, pointing his finger towards the man who had raised the cry, he said: "I believe that when the Apocalyptic Angel shall stand with one foot on sea and the other on land, and shall declare that time shall be no more, some damned fool from Chicago will cry out 'louder!'" It is hardly necessary to say that the disturber subsided.

Yours, &c.,
Kobe, July 11th, 1892.

"CHINESE CHARACTERISTICS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As one interested in Chinese matters I read with regret, in your yesterday's issue, the paragraph headed "A Silly Person." Some remarks are there made upon, and a few extracts quoted from, a work which, although its title is not given, I take to be the "Chinese Characteristics," by the Rev. Arthur H. Smith. While admitting that you have not seen the volume in question, your article goes on to say:—"Our notion is that

Mr. Smith will endeavour to limit its circulation to remote districts of Europe, for if it comes out here where the Chinese are known, he will be laughed at as heartily as he deserves. His silly facetiae cannot even aspire to be caricatures of the people whom he so grossly misrepresents. The man is evidently an ignorant prig who does not hesitate to base monstrously ridiculous generalizations on his own equally monstrous ignorance."

I find it hard to believe that this well-known work has not yet penetrated to Japan, and that it has not been favourably received here by those who know the Chinese character. For in China—where it may be assumed the Chinese are as well known as they are in Japan—since the articles which were afterwards embodied in this book first appeared in the *North China Daily News*, Mr. Smith has been generally recognized as a high authority upon the Chinese national character, this book as the standard work on the subject. If my memory serves me right, a reference to the files of the now defunct *Chinese Times*, of some three years ago, will show that so high an authority on China as Mr. Alex. Michie asks that the valuable articles then appearing in his contemporary should be put before the public in book form. Mr. B. H. Chamberlain also—surely his opinion on this subject is of value—in "Things Japanese," under the heading of "Japanese People," does not hesitate to recommend "Chinese Characteristics" as reading to residents in Japan "by way both of likeness and of contrast."

I venture to hope, Mr. Editor, that a further study of this work, and a consideration for the authorities I have mentioned, will lead you to modify your dictum of yesterday.

I am, Sir, your obedient Servant,

SINENSIS.

Tokyo, July 14th, 1892.

[We have already explained that our knowledge of Mr. Smith's book was derived entirely from the review in the *St. James's Budget*, a fact which we were careful to note by way of peace to our first comments. Having now procured the book itself, we find that the London journal's review was exceedingly misleading. One example will suffice. The *St. James's Budget* writes as though "intellectual turpitude" were included by Mr. Smith among the attributes of the Chinese race in general. So far this is from being a true reflection of Mr. Smith's view that he actually commences his chapter on "Intellectual turpitude" with the following words:—"In speaking of 'intellectual turpitude' as a Chinese characteristic, we do not wish to be understood as affirming it to be a peculiarity of the Chinese, or that all Chinese possess it. Taken as a whole, the Chinese people seem to be abundantly able to hold their own with any race now extant, and they certainly exhibit no weakness of the intellectual powers, nor any tendency to such a weakness." This is precisely what we ourselves claimed, and it was because Mr. Smith, as misrepresented by the London reviewer, seemed to base a charge of general intellectual turpitude on grounds absurdly slender, that we advanced one of our objections. The fact is, apparently, that the *St. James's Budget* did great injustice to Mr. Smith, and that we, accepting its review as fair and truthful, were betrayed into forming an erroneous impression of his work.—Ed. J.M.]

THE STYLE OF THE BEST LAWN TENNIS PLAYERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A description of the style of play at the Irish Championship Tournament will, I hope, be interesting to tennis players in Japan. The very best play is to be seen at Fitzwilliam Square, for the tournament attracts not only local players but also the strongest from England, and it has now come to be regarded as the most important annual event in the tennis world. An account of the various matches may be read in the *Field*, and I give merely a description of style.

The server stands near the middle, and not at the extremity, of the base line, and invariably serves overhand. Although the service is so swift that the striker-out stands on his base line, hardly any aces are scored directly off service. The racquet is held at the very end, and the ball is struck flatly—I mean that there is no screw. There is a great deal of volleying, and the beautiful placing necessitates a good deal of movement. There is no such thing as a rally in which each player stands on the base line and returns the ball to the feet of his opponent. Some players play much at the net, and in general, a player, having served a difficult ball or given a difficult return, will run forward to the net, especially if his adversary be back at the base line. Some of the most "killing" strokes were those of Stoker, a tall man, who standing at the net would smash the ball down and away with such violence that it would rebound to a height of several feet. But there was no more beautiful play than that of Renshaw, the final victor, who, while perhaps not making more wonderful strokes than others, was remarkable for his ease and grace, for his accurate judging of when to come forward to the net, and when to stand back, in fact for the skill with which he placed himself as well as the ball. When a player would be at the net, his opponent frequently attempted to return the ball high over his head. Sometimes a ball was quietly dropped over the net, instead of being driven with force.

Towards the close of the tournament the matches assumed a somewhat international character, Renshaw being pitted against Pim, and W. Baddeley against Stoker, in each case an Englishman against an Irishman. Renshaw and Stoker were victorious, then Renshaw beat Stoker, and then defeating Lewis, last year's champion, became champion for this year. In the double matches, when one served, his partner stood at the net, and in the ensuing play the players volleyed much, seldom standing much behind the service line.

There were also ladies' matches single and double, and though they played well enough to make short work of us out in Japan, their play was tame compared with the gentlemen's. Their placing was excellent, and some of their strokes were forcible, but their weak point was their slowness in moving about the court. Some of them served underhand. As for their dress, which ladies would like to hear about, I can only say that the favourite costume was a short dark skirt and white bodice, both simply and loosely made so as not to impede motion or breathing. The weather was on the whole favourable, and the square, like all city squares and parks now, was looking lovely with the lilacs, laburnums, and hawthorns in full bloom, and the lawn a perfect green.

One point in style I omitted to mention above, as those with whom I discussed the play did not agree about it, namely, when to strike the ball. It seemed to me that it was generally struck at the height of its bound, but others insisted that the player preferred to wait till it began to drop.

Hoping that you are now having plenty of jolly games,

I remain, yours very truly,

J. N. S.

Dublin, May 30th.

THE N. R. C. AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The racing members of the Nippon Race Club are anxiously awaiting the time when that august body, the committee, in the plenitude of its wisdom, will be ready to vouchsafe to them the skeleton programme for the autumn meeting. They have been waiting for it quite long enough, and not a little ill-feeling has been engendered by the fact that, in spite of members having taken the trouble to evolve programmes in the nature of suggestions, the committee is still apinely indifferent. Members are desirous of seeing a programme, however meagre in details it may be, in order to base their training upon it, and in view of the warring elements in the Club, it may be as well for the committee to take steps at once.

Yours faithfully,

A MEMBER.

July 21st, 1892.

CHRISTIAN INFERENCES AND DEDUCTIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should like to call your attention to an insinuation made by Mr. G. T. Smith in a letter appearing in your columns on the 23rd June, which, as it is to some extent a reflection upon yourself, seems to call for notice. He there remarks that, "any half-fledged student . . . could write such an article (as that written by 'Freethinker'), and by changing his *nom-de-plume* every few weeks, he could convey the impression that there are a number of men of education who hold such views among the readers of the *Mail*." How a half-fledged student can convey the impression of being a man of education, Mr. Smith, who is perhaps an authority, may be left to explain, but the insinuation evidently is that you, Sir, are in the habit of inserting letters from a correspondent who frequently changes his *nom-de-plume* in the course of the discussion. I remember that, a little more than two years ago, you rebuked in very severe terms a correspondent who, if I mistake not, was a missionary, for attempting this very *ruse*, remarking that only consideration for the cause represented by your correspondent prevented your making his name public. It therefore seems only just that you should definitely state that such a method of controversy is never permitted in the columns of the *Japan Mail*, or if no contradiction appears controversialists like Mr. G. T. Smith will assert that your silence proves the insinuation to be justified.

The more I read of Mr. Smith's arguments the more astonished I feel that any man possessing the most elementary code of morality can employ such unscrupulous methods of controversy. In his latest letter he returns to an observation which he had made previously, that Mr. Ingersoll "drinks and swears," and he gives this on the authority of

Original from

an "infidel" paper called *The Truth*, edited by a man named Bennett, who once, at least, says Mr. Smith, "stood in the criminal's dock, in New York City." Now I have already in a previous letter, to which Mr. Smith has discreetly refrained from replying, convicted that gentleman of employing the *suppressio veri, suggestio falsi* style of argument with regard to Thomas Paine, and if I am not mistaken it reappears again in his remarks concerning Mr. Ingersoll. First of all, is Mr. Smith quite sure there is now or has been within the last twenty years an "infidel" publication in New York named *The Truth*? Though an Englishman, I have some acquaintance with free-thought publications in the States, but cannot recall one with this title. Will Mr. Smith kindly give an exact reference to this publication and the number in which the remarkable statement he quotes appears? If he does not I shall enter into communication with Mr. Ingersoll, and he may be assured that the matter will not be allowed to rest. In passing, I should like to call attention to the way in which Mr. Smith refers to Mr. Ingersoll as a "criminal lawyer," in the hope, apparently, that the word "criminal" will, by careless people, be taken in the same sense as if it qualified "grocer" or "missionary." And with regard to Mr. Bennett's once standing in the "criminal" dock, will Mr. Smith kindly tell the readers of the *Japan Mail* whether he was not charged with exactly the same offence preferred against the founder of Christianity, namely, blasphemy against the prevailing religion? Mr. Smith has assailed the Japanese for being indifferent to Truth. I am afraid he is scarcely a judge. He seems to have but the most distant, and bowing acquaintance with the lady.

In a recent letter headed "A Disclaimer," the Rev. T. S. Tyng appears to think that there is no particular need of the Christian community publicly condemning such tactics as those employed by Messrs. Smith and Snodgrass in their attacks on so-called "infidels." I am sorry to hear it, even though in the end these methods assist in discrediting Christianity. One likes to be able to respect one's opponents whatever controversial differences may arise. The late Mr. Charles Bradlaugh, the well-known Secularist, took a much higher view of his responsibilities, and was most severe in condemnation of any conduct which was likely to bring discredit upon the party, either political or religious, to which he belonged. However, this is a matter which more closely concerns those who are within the pale of Christianity than those who are outside of it.

It is curious to notice that Mr. Tyng inclines to the belief that what is good in the lives of those who reject Christianity is owing to their Christian environment—an argument, by the way, which cuts the throat of that other argument, so frequently employed by missionaries, that Japanese Christians are, in consequence of their belief, better than Japanese Buddhists or Shintoists, for evidently the Christian in this country must be affected by his environment. But I can hardly believe Mr. Tyng is serious when he says that Christianity can show "great national communities, living under the influence of their principles, and by them impelled, in generation after generation, to charity and purity and peace," &c. Charity and purity and peace! Peace! with Christian Europe an armed camp and Christian America voting large sums in her turn for armaments! Purity! with the "Maiden Tribute of Modern Babylon," with its loathsome revelations of life in the greatest Christian city in the world still fresh in the memory! Charity! with history showing the numberless sects of Christianity ever at each other's throats, and only united in hatred of the heretic! Truly Mr. Tyng's reading of history and knowledge of what goes on around him must be curiously confined. Civilization may be said to have commenced from the moment unbelief was born—from the time that men began to reason on what was right and wrong, instead of allowing the records of a semi-barbarous people to decide for them.

But Mr. Tyng has overlooked what seems a necessary corollary of his "environment" argument. If a Christian environment influences unbelievers for good, how is it that it has no correspondingly effect on bad believers? Mr. Tyng will scarcely assert that there are no unbelievers who act evilly, and yet he argues that unbelievers are quite probably influenced by an environment which has little apparent influence for good on many of those who most thoroughly believe. Christian controversialists seem driven to take up the most curious positions in defence of their creed. But Mr. Tyng is wise enough to see that to take up the position that an evil life necessarily reflects upon the creed of the evil liver might be a dangerous one. There have been too many instances recently of lapses from morality on the

part of prominent Christians, for such an argument to be quite safe.

What would Messrs. Snodgrass and Smith have said had Mrs. Montagu been an unbeliever instead of a sincere Christian? She acted up to her Bible, and, thoroughly believing that to "spare the rod" was to "spoil the child," treated her children with such severity that one of them died under her hand. Commenting on the matter the London *Daily Graphic* says that: "She seems to have been sincerely attached to her children, and her rigorous treatment of them appears to have been due rather to the austerity of her religious convictions than to any lack of motherly instinct." In other words, we have here an instance of what would occur if the teachings of Christianity were rigidly carried out. That, at least, substituting "infidelity" for Christianity, would have been the argument of Mr. Snodgrass had Mrs. Montagu been an unbeliever. In the early part of this year England was horrified by another case of systematic cruelty towards children—this time by a Protestant clergyman in Ireland, the Rev. S. G. Cotton, the scene of the children's martyrdom being the orphanage at Curragh. He also, it appeared, had construed too strictly the passages in the Bible advocating austerity towards children, and found himself the subject of a criminal trial in consequence. Curiously, but a short time before these cases a Bishop, presiding at a meeting of the Society for the Protection of Women and Children in Manchester, said he believed that in most of the cases of cruelty towards children taken up by the Society, the parents of the children held Secularist opinions. Called upon to confirm this, the Rev. Mr. Waugh, the secretary, stated that it was quite correct, thinking perhaps that the remark would not be reported. But it was, and for some time the columns of the Manchester papers were full of indignant letters of protest, in which Dr. Dunkley, the well-known "Verax" of the *Manchester Examiner*, took part. The report of the society was examined, and found to contain no such statement, and eventually the Bishop—I forget at the moment who it was—made a sort of apology, while the reverend secretary said nothing. The latest report of the Society for the Protection of Women and Children is again silent. It could hardly advance the falsehood again after the cases of Mrs. Montagu and the Rev. Mr. Cotton. Whatever opinion may be held of the Rev. Mr. Waugh, there is no need to accuse the Bishop of deliberately propagating falsehood. He simply took no trouble to ascertain that what in his opinion ought to be true was true—a mistake into which Christian controversialists too often fall.

What do Mr. Snodgrass and Mr. Smith think of the case of Mr. Hastings, one of the most religious members of the House of Commons, who was recently sentenced to a term of imprisonment for ruining two ladies by appropriating trust-moneys to his own use? And what of Captain Verney, another intensely religious member of the House of Commons? Captain Verney was in the habit of presiding at Social Purity meetings and religious meetings of the Exeter Hall type, and yet was not long since sentenced to a year's imprisonment for inveigling a young girl to Paris and endeavouring there to take advantage of her unprotected state, while it was proved at the trial that this was not by any means the first attempt this scoundrel had made at the abduction and ruin of English girls. Perhaps he thought that compared with the act commanded in Numbers, xxxi. 17-18, forming part of his standard of faith and morals, his action was a very venial and innocent one. But what would Mr. Smith and Mr. Snodgrass have said had he been a prominent unbeliever instead of a prominent Christian?

When, still more recently, the desk of Mr. Jaeger, the clerk who robbed Messrs. Rothschild of such a large sum of money, was opened, it was found to contain nothing but a Bible. What does Mr. Snodgrass infer from this? What would he have inferred had a free-thought publication been found therein? What does Mr. Snodgrass say to a suggestion that Mr. Jaeger had been studying that story in which the Israelites were commanded by Jehovah to "borrow" from the Egyptians "jewels of silver and jewels of gold" without the slightest intention of returning them? Deeming, too, who has lately been executed, he also, it appears, was a very religious man, and regularly attended church about the time he was busy burying his murdered wife and children under a layer of concrete. Up to the last the papers report that he diligently studied his Bible; perhaps he could not understand how it was that David, with all his murders, could be there held up as a pattern—"a man after God's own heart"—while in these latter degenerate days people get hanged for acting similarly. Perhaps he thought it a curious and contradictory world which could profess to use as a standard of faith and morals the imperfect teach-

ings and unsound ethics of a book long since outgrown.

At any rate, I commend these eminent Christians to the notice of Mr. Smith and Mr. Snodgrass, and they will find that the details of their lives are founded on far better authority than the libels on Thomas Paine by Bishop McIlvaine, who, as I am astonished to learn, is considered by Mr. Tyng "a very careful and fair-minded writer." I have not seen the book referred to, but if the extracts given by Mr. Snodgrass are fair samples of the Bishop's fair-minded and careful writing, it would be interesting to have a definition of what Mr. Tyng means by the words he uses. Mr. Tyng is quite mistaken in believing that "most of the counterbalancing evidence which has discredited Cheetham was not accessible" at the time (1831) Bishop McIlvaine wrote. Cheetham's book is, a recent writer has put it, "so gross in its aspersions, so patently malignant in its general drift, that no reader of average judgment, unless much swayed by prejudice, can well suppose it to be a true record;" but, more than this, its falsehoods were exposed almost as soon as the book appeared by contemporaries of Paine, and yet this "fair-minded writer," Bishop McIlvaine, repeats it all as if it had never been contradicted, as if one person living at the time the book was published had not secured damages for libel against its author, and as if the discredited falsehoods were proved facts. This notwithstanding, Mr. Tyng still speaks of him as "careful" and "fair-minded." Zeal for creed carries men to strange lengths.

Yours, &c.

July 17th, 1892.

[Correspondence by the same person using different names of plume and writing on the same subject has never been admitted to these columns.—Ed. J.M.]

SECLARIAN.

YOKOHAMA TOWAGE COMPANY, LIMITED.

The second annual ordinary general meeting of shareholders of the Yokohama Towage Company, Limited, was held in the Chamber of Commerce on Friday week, Mr. O. Keil in the chair. There were also present Messrs. R. M. Varnum, J. Lindsley, T. M. Laffin, S. D. Hepburn, M. Andreis, T. L. Brower, G. Charlesworth, H. M. Arnold, and A. Weston.

Mr. BROWER was appointed minute clerk.

The CHAIRMAN said that he need not read aloud to them the notice calling the meeting, as they had all received it. He would do the same with the minutes of the last general meeting, which also would be within the recollection of those present, by so doing he should save time. He would feel obliged if some gentleman would propose the adoption of the minutes.

Mr. CHARLESWORTH—I propose their adoption. Mr. ARNOULD—I second them.—Carried.

The CHAIRMAN—The next business before us, then, is the presentation of the Directors' report and balance sheet. These have been in your hands during the week for your study, and you are, I feel sure, fully acquainted with them. It is a matter for regret that the working of the company for the past year does not show a better result. The year before there were 58 tows, but only 42 last, while the average earnings have fallen from \$53 odd to \$43. The accounts are before you gentlemen for passing or approval. It is for you to decide whether you will pass them or not.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the year ending the 30th June, 1892, accompany this Report.

The business of the year under review cannot be called satisfactory, as against 58 tows in the previous year there have been but 42 tows in this year, and the average earnings per tow have decreased from \$53.58 in 1890-91 to \$43.88 in 1891-92, resulting in a loss of \$90.03 in the year's working.

The suspension of the New Oriental Bank Corporation, Limited, has unfortunately locked up the \$687.52 deposited therein.

The tug-boat *Yokosuka Maru* has been put in thorough repair and is now in good working condition.

The Directors desire to express their thanks to Mr. Donald Fraser, who has kindly audited the Company's Accounts.

The term of service of the present Board of Directors expires, and, as they do not seek re-election, a new Board will have to be appointed.

Yokohama, 5th July, 1892.

R. M. VARNUM,
T. L. BROWER, } Directors.
O. KEIL,

O. Keil, } Directors.

I have examined the foregoing accounts and compared them with the vouchers of the company, and certify them to be correct.

Yokohama, July 5th, 1892.

D. FRASER, Auditor.

Mr. LINDSLEY—I will propose the adoption of the accounts and report.

Mr. ARNOULD—And I will second.—Carried.

The CHAIRMAN—I have a few remarks to make in addition to the report that has been presented by the Directors. You all know that during the entire year we have tried, 10 or 11 times, to dispose of the tug-boat *Yokosuka Maru*, but without success. We have tried to sell her in nearly every port of the East, from Tientsin to Amoy, from Tokyo to Nagasaki, but our endeavours have not proved fruitful. At the present time we are trying to dispose of the boat again, to some men who wish to obtain her. But it was only this week that we saw the intermediary between the vendors and buyers, and a definite arrangement—perhaps I am a little too far advanced in saying definite yet—but on Monday next we shall have an answer from them, and most probably a definite offer. I will read you the resolution passed at the last general meeting—"The Directors shall have power to sell the *Yokosuka Maru* at such a price as they think adequate without reference to a general meeting of shareholders." We had hoped to have disposed of the boat before this meeting, but as we have not accomplished our desire we must leave it to our successors to do for the general benefit of the company. The out-look for our business is difficult to foretell. It was spoken of most hopefully last year, especially after having had 58 tows, and it was then said that as every sailing ship would of necessity require towing in, our prospects were bright. But it has not turned out as predicted, indeed, the other day, a ship came in who was more in a position of towing the tug than the tug of towing her.—(Laughter.) In conclusion, I think the thanks of the company are due to various shareholders who have kindly given us valuable suggestions. Mr. Hepburn particularly, has come forward with some valuable suggestions, and on behalf of my co-directors I thank him. The suggestions were all acted upon as far as it was possible, although no profit was derived therefrom. There has been some misunderstanding between the shareholders and the Directors during the year, but these are all settled now, and all is again peace and quietness. I shall be glad to answer any questions that may be put to me. If there are no questions requiring answers, then the next business is to elect a new board of Directors. Will some one be good enough to make a proposition so that it can be put to the vote.

Mr. LINDSLEY—As the sale is pending, Mr. Chairman, I propose that the present Directors retain office until the matter is settled, or the boat disposed of in one way or another.

The CHAIRMAN—Mr. Lindsley, you are very kind, and your proposition is really a vote of confidence, but the Directors have made up their minds to resign, and resign they must. It will be better for the company to elect three new Directors—men who are conversant with the business, which we are not.

Mr. ARNOULD—I think that as we are to have an answer by Monday, the meeting had better adjourn until next week, or until the boat is sold. There is, I think, no necessity to elect a new directorate. I will put this as a proposition, as I think that to elect three new Directors will do no good.

The CHAIRMAN—It is easy enough to get three men—practical men—from among the shareholders.

Mr. HEPBURN—I will propose Messrs. Charlesworth, Arnould, and Captain Weston.

Captain WESTON—I must decline the honour.

Mr. BROWER—I propose Mr. T. M. Laffin.

Mr. LAFFIN—I must decline.

Mr. HEPBURN—I hope the secretary has noticed that I proposed Mr. Charlesworth?

Mr. BROWER—Oh yes.

Mr. CHARLESWORTH—I decline, but beg to propose Mr. Hepburn.

Mr. HEPBURN—But I can't serve.
Mr. ARNOULD—I still think, Mr. Chairman, that it would be best to adjourn.

Mr. LAFFIN—I will second your proposition.
The CHAIRMAN—Mr. Arnould has proposed and Mr. Laffin seconded that the meeting stand adjourned till some day next week, will you kindly signify your approval in the usual manner.

Mr. LINDSLEY—I propose as an amendment that the Directors be empowered to sell the boat.

Mr. ARNOULD—That is understood.

The CHAIRMAN—That proposition was made at the last general meeting and stands good.

Mr. LINDSLEY—Oh! then that is all right.

The motion for adjournment was then put and carried unanimously.

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The adjourned annual meeting of the Yokohama Engine and Iron Works, Limited, took place on Thursday afternoon, in the Chamber of Commerce, there being present Messrs. J. F. Lowder, Chairman, J. Rickett, O. Keil, A. T. Watson, C. Charlesworth (secretary), R. J. Kirby, G. A. Fraser, S. D. Hepburn, J. H. Curtis, Dr. Van der Heyden, and C. Guisanni.

The CHAIRMAN said in opening the proceedings that he did not think it necessary to wait the usual half hour in the hope of more shareholders putting in an appearance, as there were seven now present. He would therefore proceed to the business which was before the meeting, namely, the receiving of the report and accounts and the election of two directors in the place of those who had retired by rotation. He should refrain from reading to them the report and accounts as they had been in the hands of the shareholders for a week past, and doubtless all present were familiar with the figures, but he should take the opportunity of making the usual explanation which accompanies the Directors' report. It would be known to all present that the Yokohama Engine and Iron Works Company was the pioneer of the limited liability companies which had sprung up in Yokohama in recent years. During the four years that the company had been in existence, the Directors had always been enabled to present to the shareholders a most satisfactory report of the business done by it at the end of every twelvemonth. During those four years, too, the average dividend they had paid had been 10 per cent. But now, for the first time in its history, the Directors came before the shareholders almost empty handed, except for the interim dividend of 3 per cent. which they had paid last December, for the first six months of the year's working. The company was now in a position which of late, unfortunately, had been common to all companies and persons in the East. The universal depression in trade, which had amounted to an almost entire stagnation in business, was the cause of the falling off in their receipts for that year. They would be able to appreciate this more if he read to them the figures of this year and compared them with those of last. Their gross earnings this year had been \$63,876, against \$96,237 in 1891. This was a loss on the working account alone of \$30,000 odd, which really meant all their profits. The Directors could not blame themselves for this state of affairs—they did not blame their servants, as the losses they had incurred were entirely due to the depression in trade. They had done all they could, but they could not bring work into the Company's hands which did not offer itself. The Directors, however, had looked at the situation fairly and had done what could be done to retrieve their position, and this they found could only be effected by exercising the closest economy. They had set about it by reducing the expenditure in every way. Seeing how the business really stood, the Directors resolved, and he hoped it would meet with their approbation, to discontinue the Kobe branch. The Kobe branch had been in existence for four years, and for those four years it showed a loss of over \$4,000 per annum alone, from the time of its inception. By closing the Kobe branch, therefore, they would effect a saving of \$4,000 a year. The Directors also had seen their way to reducing the wages of the staff in Yokohama by about \$400 a month when we meet next time, therefore, we ought to be able to show figures accounting for a saving of between \$8,000 and \$9,000. You will see from this, that your Directors have been engaged in bettering the company's position, and that next year they hope to be able to present you with a more encouraging balance sheet. You will see from the report that we are indebted to our Bankers to the amount of \$77,809.01. This looks a large sum and is a very large sum, but there need be no fears entertained about it. Our buildings at Kobe are a very valuable

property indeed, and if the sale of them is not forced we hope to be able to realise, if not the full sum of our overdraft, at least a considerable amount of it. If the sale of property can be accomplished by degrees we hope to see our indebtedness to the Bank materially reduced. This was, he thought, all that he had to say, and if any questions were put to him he would do his best to reply to them, if there were no questions they would proceed to their other business.

ACCOUNTS.

The Directors beg to submit the annexed Statement of Accounts for the year ending 31st May, 1892. They regret that owing to a considerable falling off in the amount of business for the year a loss is shown on working account of \$3,374.01, which, with the Interim Dividend of 3 per cent. paid for the half-year ending November 30th, 1891, shows as per Profit and Loss Account, a Debit Balance of \$7,124.01. This amount has been written off the Reserve Fund, leaving a balance at the credit of that account of \$10,225.99.

Kobe Branch—Since the beginning of the present year there has been very little business done, and prospects for the future not being at all encouraging, your Directors decided to close the Branch; this was done at the end of May.

Directors—In accordance with Article No. 74 of the Articles of the Association, Messrs. Lowder and Hepburn retire from the Board but offer themselves for re-election.

Auditors.—Messrs. O. Keil and D. Fraser retire, but offer themselves for re-election.

G. CHARLESWORTH, Secretary.

E. & O. E.

G. CHARLESWORTH, Secretary.

We have examined the foregoing accounts and compared them with the books and vouchers in the possession of the Company, and find them to be correct.

D. FRASER,
O. Keil, } Auditors.

Yokohama, July 6th, 1892.

The CHAIRMAN—I may add that the Directors are very well pleased with the prospects of the Yokohama Engine and Iron Works. They had some little handicap to contend with at the beginning of their financial year, but this was now removed. They would remember that when the company started they had for manager, Mr. Kilday. But after a while he left their service, it being his intention to leave Japan. The Directors accordingly sent to an eminent engineering firm in Edinburgh, or Glasgow, he did not remember which, for a competent man to fill the post of manager. A man was sent out; he was fully qualified and competent, and the Directors were very well pleased with his ability, but he suffered from the disadvantage of not being familiar with the ways of the East. He was not sufficiently energetic and suffered also from not possessing a large circle of acquaintances, a requisite to such a business position. Well, he had been engaged for a year on trial, fortunately for the company, for at the expiration of that period it happened that Mr. Kilday expressed a wish to be taken back in their service as manager, and they re-engaged him.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Under his *régime* the Yokohama Engine and Iron Works were giving every prospect of success.

Mr. J. A. FRASER—As no one deems it desirable to ask any questions, I will move that the report be adopted and the accounts passed.

Mr. WATSON—I will second.—Carried *nem. con.*

The CHAIRMAN—The next business is the election of two directors. Mr. Hepburn and myself retire by rotation, but we offer ourselves for re-election, and as there are no other names substituted for ours, I think it would be in order to put our names to the vote and re-elect us.

Mr. J. RICKETT—I propose the re-election of the retiring Directors—Messrs. Lowder and Hepburn.

Mr. KIRBY seconded, and the motion was carried.

The CHAIRMAN—I have great pleasure in moving the re-election of Messrs. O. Kiel and Donald Fraser as Auditors of the Company, and I have no doubt their election will be unanimous.

Mr. CURTIS—I second them.—Carried.

Mr. FRASER moved a vote of thanks to the Chairman for presiding and also for his explanation, and the meeting closed.

REVIEW.

Kiusei Saigai Ron (The Economic Struggle with Distress), by Dr. PAUL MAYET. Translated into Japanese by D. Aoyama.

THE nineteenth century is remarkable for two great political movements, which though logically separate and even inconsistent, are yet in many respects bound closely together. The first is the struggle for individual liberty, the other for greater equality, or, as judged by one of its chief manifestations, socialism. The former struggle, from the number of martyrs who have died and suffered in its cause, and also on account of its practical success, has long been deemed respectable; the latter, however, has but lately acquired that precious badge. But though delayed, this last and highest touch of middle-class morality has come with a rush, and at present even a prime minister can say that we are all socialists now-a-days. The most popular magazines, and some of the highest names in science and art, are associated with measures that from the old *laissez faire* point of view would be called socialistic. The old charge that any given political act was in conflict with the freedom of the individual and private property has no longer the power of killing; more evidence must now be produced to show why, in spite of the sacred character of individual liberty and free contract, a given measure is inexpedient.

Individual liberty and free contract are somewhat like the young man who starts out full of hope to make his fortune and startle his friends by his achievements: they have not quite fulfilled the promises of their early admirers. They have done wonders no doubt, as much of the material progress of this century is called upon to testify. But they have not given the mass of people more leisure, or the labouring classes as a whole a competence. And therefore students of political economy or of social science have met the complaints of the poorer classes half way, by proposing better measures for distributing and using the wealth of society than private property and free competition have brought about.

Dr. Mayet's work on the Struggle with Distress is an evidence of this new—if it can now be called new—tendency. The real nucleus of his present essay is indicated by the title, viz., the struggle which the great mass of people have with the contending forces against them. Especially the Japanese farmers, the patient, enduring hard-working class of Japan, the backbone of the nation, are in an unfavourable situation. Floods, typhoons, earthquakes, fires, high taxation, are their enemies, and they are not making headway against them as they ought. The increasing competition of the *Meiji* period has demanded qualities from the farmers which too often they do not possess. Private initiative and self-reliance in the midst of adversity are not sufficient to overcome the obstacles which are set against them, and between the tax-gatherer, and usurer, and the hostile forces of nature, not a few of the farmers are pushed to the wall. What are called the working classes, the farmers, the day labourers, the small shop-keepers, suffer in Japan from a variety of causes which have scarcely a parallel in any other civilized country. Is there any fundamental measure that will relieve these classes from their present position of risk and distress, and at the same time afford a secure basis for other reforms? To this question Dr. Mayet answers, Yes. The measure needed is a system of

national insurance against the various losses by fire, flood, typhoon, earthquake, etc. Such a system of insurance would on the one hand prevent the extreme poverty of individuals, on the other it would immensely benefit the industrial and farming classes by diminishing risk and strengthening credit, and would thus extend to them some of the advantages that the same classes in the nations of Europe and America enjoy.

Dr. Mayet begins his essay with the old text that misfortunes are often blessings in disguise. "Nearly all the present civilization of Japan," he says, "is owing to the wise use she has made of the calamities that have befallen her from time to time." It is to be expected that so accurate a student of Japanese history will not fail to give interesting examples of this statement. He points out the fact that fruit trees were planted by order of the government to prevent disasters from floods; barley and other grains were added to rice to escape the dangers of a single crop; colonization of sparsely settled districts was undertaken in consequence of local famines; the great Nakasendo, as well as other roads, was constructed after one of the great famines; artificial banks for rivers, storehouses for rice, the introduction of draught animals and a hundred other necessary measures of the old Japanese civilization can always be traced to the work of the Government after some great disaster. Thus one improvement followed another until Japan was enabled to shut up her ports for 250 years and yet not suffer radically from her seclusion. In this introductory chapter Dr. Mayet gives numberless illustrations of his first statement, that Japan owes nearly all her present prosperity as a nation to the success with which she encountered calamities.

What has been accomplished in the *Meiji* era? Much. There have been introduced into cultivation new kinds of vegetables, giving greater variety and certainty to the general crop; foreign breeds of horses and cattle have been imported; the Hokkaido has been settled to a hopeful extent; farmers have been freed from feudal burdens; the land tax has been reformed; agricultural and technical schools have been established; scientific surveys have been carried out; canals and rivers have been improved; railroads have been constructed; steamboats now run in all directions; besides we can mention such useful and indispensable factors of modern civilization as chambers of commerce, cheap post and telegraph, and many other innovations. All these reflect great honour on the *Meiji* period of Japan, but they do not, in Dr. Mayet's opinion, touch the core of the difficulties that Japan is suffering from.

Dr. Mayet gives the following as a very incomplete list of calamities during the *Meiji* era: Heavy crop failures in 1868, 1869, and partial failures in 1878, 1884, and 1889; destructive typhoons in the years 1835 and 1880; disastrous floods in the years 1885, 1886, and 1890; heavy fires in Tokyo in 1871, 1876, and 1881; a great eruption of Bandaisan in 1888, and lastly the terrible earthquake of last year. Besides these there have been three cholera epidemics, a rebellion, and a vast number of smaller calamities which, on the whole, affect the fortunes of a vast number of people. Since his essay was written there has been an extraordinarily destructive fire in Tokyo. Such fires are more than an economic loss; by their interruption of business, their destruction of all ordinary relations, and the opportunity they offer for pillaging, they may be said to constitute forces that work distinctly for barbarism.

The social disturbance wrought by these calamities—perennial floods, typhoons, earthquakes and fires—is not insignificant, it is enormous. Japan can never hope to be a country whose economic well-being is on a generous scale unless she finds some means of obviating these losses. Even at present many people live in a state of hopeless indebtedness, from which a life time of arduous labour cannot relieve them. Nor can any measure relieve them that does not establish credit firmly, and abolish the extraordinary risks on loans. Higher rates of interest prevail to-day in Japan than in any Western nation, partly at least because the risk is so great. The only measure that would meet all the requirements, diminishing risk, re-vivifying credit, abolishing extreme losses from natural calamities, and thus putting Japan on a commercial footing with foreign nations is a system of national insurance.

Are private activity and interest, to which so much is left in the West, sufficient to meet the wants of the case in Japan? To this question Dr. Mayet answers a decisive No. Charity and private interest cannot touch the greater calamities, and in the smaller ones they do not exert themselves. In the great fire of Tokyo in 1876, when more than 30,000 houses were burnt, the ridiculous sum of 2,932 *yen* was distributed. Another example is the late earthquake, when over 90,000 houses were totally destroyed and

over 33,000 partly so. Dr. Mayet enters into long and complicated calculations to show the utter insufficiency of private relief for this disaster; in comparison with the total loss and distress all private aid must always be insignificant. Nor is the present system of the so-called famine relief fund, at present the only large means of relief, adequate to meet the demands of the people. In the first place this fund can only be applied to extraordinary crop failures or others calamities, and not even then to compensate losses proportionally. It is in fact only a temporary expedient to alleviate the worst cases of distress, and does not meet the less severe, but constant losses from season to season, by flood, fire, typhoon, or earthquake. Local calamities which scarcely find a paragraph in the newspapers and are not known beyond the provincial boundaries, affect the fortunes of a very large number of people. Anyone who is intimately acquainted with Japanese life knows that there are hundreds of people affected year by year, whose property too often finds its way into the hands of the usurer or rich landowner.

One of the greatest benefits of a system of national insurance over the present haphazard system is not directly mentioned by Dr. Mayet, although he hints at it here and there. The present system can never be reduced to a mechanical rule, as it were; it will always cause political strife between parties and different districts of the country. We have an example of this in the last session of Parliament, where there were endless bickering and misunderstanding between the Government and Parliament as to the proper disposition of the relief funds for Aichi and Gifu. Nor can we ever hope that such contests will cease. Under the present system, where the relief is not adequate or proportional, there will always be a party of attack; the Government, no matter in whose hands it is, will suffer, and the victims of disaster will not be assisted, as they ought to be by the Government, in such a way as to avoid political difficulties. As an officer of the Government said to the writer on one occasion when the grants for the relief of the earthquake sufferers were under discussion: "It would be an immense gain both to the Government and the people if this whole system of relief could be reduced to a mechanical or business rule, in which there was no suspicion of favoritism, jobbery, or unfairness of any kind." Now Dr. Mayet's plan of national insurance is precisely such a system. Insurance is preëminently a matter of rule and business. All property is valued beforehand and the amount of damages is not difficult to fix, especially where over-valuations are not made. As we shall see, over-valuations are not a source of danger in national insurance as in the case of private companies, and therefore, the former is greatly to be preferred for fairness and security. We have no hesitation in saying that Dr. Mayet's plan, if successfully carried into practice, would work much more smoothly in a time of calamity than the present system and would be a great relief to the Government.

All insurance is based on the principle that losses, though they may be absolutely great, are relatively small in proportion to the whole mass of property insured. Thus let us take the case of earthquakes which are so striking a feature in the past history of Japan. To paraphrase Dr. Mayet. (1) "The destruction of houses by earthquakes is small in proportion to the whole number in Japan. The 120,000 houses destroyed in the earthquake of last year are only one sixty-fifth part of all the houses in the Empire. (2) Such calamities occur at comparatively rare intervals and thus the losses, spread over a number of years, could be met by a national earthquake insurance premium of a trivial amount."

These last remarks bring us face to face with the fundamental question of a national insurance system, viz., its cost to each household and the general method of its application. Dr. Mayet takes into consideration the various kinds of losses in order, their amount, and the necessary cost of each.

Fire is the greatest single source of loss to Japan, and yet, great as it is, it is only 30 per cent. of the total loss. Japan is probably unique among civilized nations in having so many and such heavy losses besides the one great cause of fire. Dr. Mayet takes the most available information as to the number of houses burnt:—"In the three years 1875-8 there were destroyed on an average by fire annually 30,910 houses, and in the eight years 1881-8 an annual average of 40,497. To guard against any under-estimate let us take the larger average; then the annual premium for every 100 *yen* of loss would be only 32½ *sen*."

Again, in the nineteenth century there have been 22 earthquakes, which Dr. Mayet divides into three groups: the first group contains 7 earthquakes in which 80,000 houses were destroyed on an average;

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

second group, 7 earthquakes in which 5,000 houses were destroyed on an average; and the last group, 11 earthquakes in which 2,000 houses were destroyed on an average. Allowing for mistakes and discrepancies, we can safely estimate that in every ten years one house in every sixty-five houses is destroyed by earthquakes. To insure against this kind of risk there would be required only 15 *sen* and 4 *rin* premium for every 100 *yen* of property insured.

Scarcely a year passes without the destruction of several thousand houses by typhoons and floods. In this respect the number destroyed is very variable from year to year. A computation based on the years 1881-1886 brings the average number destroyed in this way to 32,260 houses, and based on the entire 24 years of *Meiji*, to 30,833 houses. For every 100 *yen* of property insured against this form of risk there would be required an average premium of 41 *sen* and 7 *rin*. Therefore, for every 100 *yen* of property insured against loss by fire, earthquake, typhoon, and flood there would be required a total average premium of 1 *yen* 9 *sen* and 5 *rin*; and the principal condition of making this system of insurance successful is that it should be adopted generally and at once over the length and breadth of the country.

In regard to reserve funds and the cost of managing this undertaking there would be no special difficulty. Some of the disasters like earthquake, would occur only at long intervals, during which the paid-in funds would draw compound interest; no particular provision for reserve would be necessary. To meet the cost of management there would, however, have to be an additional charge, which in Japan, where salaries are small, would not be heavy. A liberal estimate, Dr. Mayet thinks, is 25 *sen* per 100 *yen*. This would bring the total cost to 1 *yen* 34½ *sen* per 100 *yen*. His general conclusion is that every house in Japan could be insured against loss by fire, earthquake, storm, and flood at an average premium of 1 *yen* 34½ *sen* per 100 *yen* of property insured. In what way this system of insurance can be carried into practice and what its effect would be are best told in Dr. Mayet's own words.

"The quickest and most general extension of insurance is a law making it obligatory. The obligatory method is even at present adopted in the most civilized countries of the world, whenever they wish to carry out quickly a general system of insurance. In the last century fire insurance was compulsory in certain European countries, and compulsory insurance is still practised in parts of Europe. Why should not Japan adopt a system that was adopted in other States, such as Prussia, Austria, Saxony, Baden, Switzerland, Norway, Denmark, France (Law submitted June 28th, 1890), and Italy.

"Without insurance no one is certain of his property. The insecurity could not be greater than if no police or armed force existed in a country beset by bands of robbers bent on plunder. It is questionable whether robbers would plunder so many thousands of houses as are yearly destroyed by fire, flood, and earthquake in Japan. The Japanese people would not endure roving bands of robbers, and they therefore cheerfully submit to the cost of police, justice, and prisons. Why, then, do they submit to a robbery of individuals by the acts of nature? Why is there not sufficient public spirit to protect the individual from ruin by dividing his loss with the whole community.

"Insurance is a prerequisite of the security of property, of secure mortgage and of cheap credit. Even in the large cities, where loanable capital is most abundant, the rate of interest on real property is high. According to the *Résumé Statistique*, Vol. IV., section 63, the rate in the large cities was as follows:—

Loans on real property.	Rate of monthly interest in Dec. 1887.		For the year.
	Per cent.	Per cent.	
Amounts 100 to 500 <i>yen</i> .	1.27	15.24	
Below 100 <i>yen</i>	1.45	17.40	

As most of the loans are made on houses, and as the rate in the country is much higher than in cities, we may put it that the average rate for mortgage loans is at least 18 per cent. Why is the rate so high? Because there is no insurance of houses and consequently no security. Every day may bring an earthquake, a flood, or a fire that may destroy the security of the creditor. If a system of insurance were established, house-mortgage banks could easily be founded and the rate of interest would in consequence quickly fall.

"And it is largely because this description of mortgage-loans prevails so extensively in Japan that a fall in the rate of interest is so important both to the borrower and to Japanese industry as a whole. The high rate of interest on mortgages is one of the great reasons why it is so high in

every other kind of loan. According to statistics we have the following facts:—

At the end of the year.	In	Loans on house- mortgage.	Number of ken omitted.	Average for the Empire at the same rate per ken.	
	<i>Fu.</i>	<i>Ken.</i>	<i>Yen.</i>		
1883	3	19	30,214,000	11	52,693,000
1884	3	19	40,818,000	1	47,790,000
1885	3	37	34,733,000	3	37,137,000
1886	5	23	25,294,000	17	41,617,000

From these figures, since there is a great reduction noticeable in a period of four years, one would be apt to draw a favourable conclusion. This would be a great mistake, however. Those who are familiar with the condition of the farming classes in Japan can tell a different story; they know that this falling off in the total amount of indebtedness is not due to repayment of the principal, but to failure of payment. The property mortgaged has but two often fallen into the hands of the creditor, and in this way thousands of once independent Japanese have become despoiled of their property; they have turned into wage-earners or have increased the crowd of *jimikisshamen* in the large cities. The total amount of property that has thus fallen into the hands of the creditors is a very large amount; according to the most available statistics, it was over 16 million *yen* in 1894, over 8 million *yen* in 1885, and over 10 million in 1886, or a total of over 35 million *yen* in three years. Instead therefore of a decrease in the total amount of indebtedness, we ought to look for an increase in the normal condition of things. Had the borrowers been able to extend their loans under favourable conditions, at lower rates of interest, the amount of their indebtedness, instead of decreasing at a ruinous cost, would have augmented at probably the same rate, and instead of 41,817,000 *yen* as the total amount we would have 77,318,000 *yen*, all employed in productive enterprises." This is not a fanciful picture as many can testify. There is plenty of evidence that a large number of hardworking, steady Japanese farmers have lost everything through inability to pay interest on loans contracted at usurious rates of interest. Indeed, well-informed Japanese writers assert that it is a regular policy pursued by certain money-lenders, to foreclose at a time of distress on the property of the mortgagor. The latter is ruined, while the former fattens on the spoils.

"If the Japanese people were aware that insurance is a means of assistance in time of distress, they would themselves establish it. The significance of insurance in the civilized nations of the West ought to be better understood. Insurance is one of the most important supports of the material existence of European and American people, both of the individual and society from the cottage to the palace, from the workshop of the village workman to the enormous factories and warehouses of commercial centres. Japan is still wanting in this outgrowth of civilization, in this moderator of distress, in this foundation of the common well-being. Her trade and industry suffer from usurious rates of interest from want of solid credit. The want of insurance is a national calamity. The climate of Japan is peculiarly subject to typhoons, to excessive rainfall, and to earthquakes. If this is so, the institutions of the country must adapt themselves to the natural conditions. Consequently it is a most superficial and untenable objection to a system of national insurance in Japan, to hold that Japan does not need what Europe does not as yet possess. What is meant by adaptation to the circumstances of Japan, if not this,—retaining and carrying into practice the core, the essential ideas, of Western civilization, though their outward form change? That the want of a system of insurance is a national calamity is proved to the thoughtful observer by daily experience, but to everybody with the greatest distinctness by the occurrence of such a stupendous and heart-rending disaster as the earthquake of the 28th of October of last year."

The remainder of Dr. Mayet's work is taken up with the practical application of a system of national insurance, the various details connected with rates, administration, etc. All these are most interesting, but too long for criticism. Dr. Mayet divides all houses into nine classes, the insurance premium rising slowly with the number of inhabitants in each town or city. Thus in Tokyo, where the danger from fire is greatest, the rate is naturally the highest, but in no case is the premium-rate higher than the rates of private insurance companies. As examples he gives the following:—

1. A village cottage with thatched roof, whose insurance value is 30 *yen* would have to pay an annual premium of 49 *sen* 2 *rin*.
2. A house in Hakodate (53,000 inhabitants) with tiled roof, appraised at 40 *yen* would pay annually 91 *sen* 6 *rin*.
3. A house in Yokohama (122,000 inhabitants) in the Japanese portion, with tiled roof, the walls

of wood, valued at 60 *yen*, would pay annually 1 *yen* 50 *sen*.

4. A house in Tokyo in the district of Kojimachi, with tiled roof and board walls, valued at 100 *yen*, would pay annually 2 *yen* 51 *sen*.

5. A *doso-bukuro* in Tokyo in the most dangerous part of the city, say in Nihombashi, valued at 1,000 *yen* would pay 2.03 per cent. premium or 20 *yen* 30 *sen* annually.

All of these premiums are less in amount, according to Dr. Mayet, than those of foreign fire insurance companies. But the latter would insure only against fire while the former, though less, would insure as well against earthquake, flood, typhoon, etc. But in order to give these low rates the insurance must be compulsory and national, that is, must not spend its resources in salaries for agents or in large dividends. The system must be worked for the benefit of the people.

If, however, there is a strong objection to a compulsory national insurance, for fear of injuring vested interests or for any other reason, a compromise could easily be arranged. It could be provided that the first half of the value of the house be insured compulsorily under the national insurance system, while the other half be left optional to the owner to be insured either in the government, or in private insurance companies. Such a compromise would in no way be a hindrance to the development of private insurance companies. On the contrary, as the compulsory national insurance system would educate the people to the idea of insurance, as they would then see its benefits brought before them, as a practical object lesson, there is reason to believe that private insurance would have a more rapid growth than ever. Moreover, private insurance would then necessarily be free from many of the disadvantages and imperfections usually accompanying it, as over-valuation would be impossible. It would therefore be profitable from every point of view to Japan to establish a system of national insurance.

Such, in rough outline, is the plan which Dr. Mayet offers to alleviate the distress which the Japanese people now have to endure. The system is radical and far-reaching, and, like all radical systems, there are many objections that can readily be brought against it. The most obvious objection is that this system would throw a burden upon certain people or districts out of proportion to the benefits derived from it. It will be said that the districts that suffer from flood, fire, or earthquake are more or less limited both in number and area, and the others cannot be expected to bear the losses of the suffering districts. Is it fair to demand by compulsion regular premiums from people whose property is not likely to be damaged by inundations, or fire, or earthquakes? Even a compulsory system of insurance must have the assent of the great masses of people; it must commend itself to the interests of all or nearly all; at this stage of civilization there can be no successful legislative measures which are objectionable to the people. Compulsory insurance therefore cannot be forced upon the Japanese people by a few statesmen who see the advantages that would follow to the whole commonwealth; the system must attract the self-interest of each individual or at least of the great majority of individuals of the entire country. Is this original and fundamental reform not likely to be opposed by the masses of property-holders because they would fail to see how they could be benefited?

This theoretical objection to Dr. Mayet's plan that the system would impose unequal burdens on different parts of the country and that consequently some people could derive greater benefits than others, is not altogether well founded. As he points out, no part of Japan is wholly free from liability to loss from some sort of damage. Earthquakes are wide-spread and hardly less destructive in one part than another; inundation and fire are equally diffused, and it is not likely that these disasters will cease to be less frequent or less wide-spread in the future than they have been in the past. Japan is peculiarly subject to a great variety of calamities, and corresponding measures must be taken to meet them. Moreover, the whole tendency of modern times is to mitigate the extremes of fortune and to strengthen the bonds of society by diffusing its wealth. Individualism and competition are too severe in their action and tend to separate the distance between rich and poor. They fail to attain their object. In Germany the Workmen's Insurance Act is evidence of the socializing tendency of the State; in England there are numerous evidences that the State interferes in private competition, and in the United States a large party are in favour of measures even more radical in this respect than a national insurance system. It is in harmony with the simplest dictates of morality and religion that such measures as tend to

the general good, to the fairer distribution of wealth, and to the amelioration of the condition of the masses of society should be promoted by every means in the power of society. In this respect the State is a most powerful agent for good. If Dr. Mayer's proposal to remedy the existing distress in Japan does not meet with a ready acceptance from the people and statesmen of Japan, at least one good reason may be given, namely that it is a little too far in advance of the times. The Doctor claims that the whole drift of modern legislation, nay civilization, is in favour of its acceptance, and that he must be blind to the signs of the times who refuses to listen to these great measures of social amelioration because they interfere with individual initiative or private competition.

METHODIST EPISCOPAL CONFERENCE.

The ninth annual session of the Japan conference of the Methodist Episcopal Church convened in Goucher Hall Aoyama, Tokyo, on Thursday.

The regular conference examinations for the younger preachers were held on Wednesday, and the evening of that day was devoted to the conference sermon preached by one of the Japanese members.

The presiding officer for this year is Bishop W. F. Mallalien, D.D., who arrived on the steamer *Gaelic* just in time to reach Aoyama at the hour appointed for the opening session on Thursday morning.

The introductory services were succeeded by the administration of the Lord's Supper first by the Bishop to the presiding elders and then, Rev. J. H. Cowell taking charge, to all present who were thus willing to profess their faith in Christ.

The Bishop having addressed the conference with kindly words of greeting, the regular organization was completed by the election of Revs. I. H. Cowell and S. Kimura as secretaries, and the appointment of various committees. Rev. Dr. Daniells was introduced to the conference and invited to occupy a seat with the members. Most of the 64 members and probationers answered to their names at the roll call.

The Ladies of the Woman's Foreign Missionary Society held the first session of their conference in the Hall of the Girl's School at 200 p.m. This conference has twenty-four members, not including the wives of missionaries who also attend.

Under the lead of Dr. Daniells, a daily Pentecostal service is held at 4.30 p.m. the first service was well attended and proved to be a season of spiritual profit to many. The leader has had wide experience as an evangelist and is a firm believer in the necessity of every Christian having constant and intimate communion with the Holy Spirit.

In the evening the Missionary sermon was preached by Rev. W. S. Worden, M.D. After the sermon there was a general discussion of Mission work.

Friday morning's session opened with the customary half hour prayer meeting, after which the regular business was taken up, the main feature of the morning's work being the reports of the presiding elders, of whom there are seven. Rev. J. W. Wadman's report gave an account of the work in the Aomori District which includes the northern end of the main island. The Hakodate District was represented by Rev. J. Wier. This district includes all the work of the Methodist Church in Hokkaido. Rev. I. H. Correll then reported from the Nagasaki district which includes all Kyushu. One interesting item in his report was an account of an evangelistic tour in the Loochoo Islands during which he baptized the first Christian convert to those islands on the 29th of last December. Rev. W. S. Worden reported the work of the Nagoya district, which covers the region devastated by the terrible earthquake of last October. That he could report progress in spite of such disaster was most encouraging. The Sendai District was reported by Rev. S. Matsumoto. All the reports so far indicate progress. The borders of the work are enlarging and its strength is increasing. There has been a special blessing of God on the workers in Kyushu, and it is earnestly hoped that its influence may spread until it reaches all parts of the Empire. The Pentecostal services every afternoon promise to be no small factor in helping forward the desired consummation in the Methodist Episcopal ranks.

At 2 p.m. the Ladies held their public anniversary. Condensed reports of their work were read in English and Japanese and short addresses were made by Revs. Cowell and Matsumoto.

The evening was devoted to an animated discussion of the topic, "The Christian Church in relation to Japanese Customs."

Saturday's session was opened with a most earnest prayer meeting. When business was taken up the reports of Districts were continued. Rev. C. Bishop reported for the Tokyo District in the place of Rev. J. Super, who is temporarily absent. The Yokohama District, which includes the mountain region of Shinjuku, was represented by Rev. G. F. Draper; this ended the roll of Districts. In connection with these reports the character of each fully ordained man is passed upon and if a pastor he reports the number of baptisms on his charge during the year and the missionary funds collected by him.

Rev. Y. Hiraiwa and Hon. S. Ehara, of the Imperial Dist., were introduced to the Conference as paternal delegates from the Methodist Church of Japan (Canadian Mission), Rev. Mr. Taft of the American Baptist Union was also introduced. Each of the above gentlemen gave a short but effective address of pleasant greeting and were responded to in appropriate terms by Rev. S. Matsumoto and Bishop Mallalien.

There was an adjourned session in the afternoon the main business of which was the hearing of the reports of examining committees. There were five candidates for admission into full membership and ordination as deacons. They had been on trial for at least two years and their examinations were favourable; being called forward they were addressed by the Bishop in an eminently practical talk, impressing upon them the importance of the step they were taking, the high privilege of being a minister of the gospel in the Methodist Episcopal Church and the need of being filled with love and perfectly consecrated to the Master's service.

The Pentecostal service proved again to be a time of spiritual refreshing. It was followed by a social, got up by the Japanese, but greatly enjoyed by all. In the evening a platform meeting was held, Rev. T. Otake and H. B. Johnson being the speakers.

Yesterday's (Sunday) services were of extraordinary interest. The Japanese have been holding five o'clock a.m. prayer meetings with great profit, but the first regular service on the programme was the Methodist modification of the *Agapé* of the primitive church—the Love feast. A large number of persons, both Japanese and foreign, bore clear witness to the truth of Christianity and knowledge of sins forgiven. This meeting alone would prove to any candid observer that the work of Christian missions in Japan is a grand success.

At ten a.m. Bishop Mallalien entered the pulpit and, taking for his text the words, "I am come that they might have life and that they might have it more abundantly," (John, 10: 10.) preached a plain, practical and very eloquent discourse on life. He expressed the hope that he might help to make this verse one of the spiritual treasures of those who heard him. He dwelt on the authenticity of John's Gospel and its great value as supplementary to the other Gospels. These are Christ's words. Notice the scope of His thought in the context where He speaks of himself as the Good Shepherd. It is not for the Jews alone but for "any man." I am glad he did not leave the Saxons out, nor the Africans, nor the Japanese. He would shepherd all the races. What a privilege to proclaim the Gospel to this congregation and feel that there are none here who may not be saved. Life is a short word but of great meaning, in fact indefinable. So are many other words. I asked a prominent electrician to define electricity. His reply was that if he had twenty years of life before him he would willingly give ten of them to be able to answer the question satisfactorily. In like manner the efforts of biologists to define life are vain. The most stupid of utterances is the saying that matter possesses all the potencies of life. It has not been proven. The only honest position of the unbeliever is that of the Agnostic. "I do not know." Consider two points. First—Life always comes from life. God being the original source. Second—Life has three characteristics. It always appropriates; always assimilates; always develops. Man assimilates in a three-fold way; mentally, physically, and spiritually; and it is what we assimilate, not what we appropriate merely, that gives us strength. The human race would not have been propagated without Christ's redemptive work for He says "I am come that they may have life." Notice the words "more abundantly." Even the physical life of Christian nations is better preserved than that of heathen nations. The Lord by His Gospel has given humanity an uplift, and has written over life's portals *plus ultra*. This is true intellectually also, many a ten-year-old child of the present Christian age has a broader range of vision than the heathen philosophers of old. Most especially is this true spiritually. The Christian has a knowledge unattainable by a heathen or American sinner. We know these great spiritual truths and

sometimes I think there is no man so happy as I am. I was perfectly conscious of Christ's presence here this morning, while I communed with Him and asked His help in presenting the word to you. This world does not end life; for God's people it is more abundant hereafter. God's plan was not death, as is proven by Enoch's example, who, walking with God stepped off—deathless, into the great beyond. When Christ calls, how earth and sea will thrill at his voice. Then will be complete the glorious victory over death; a more abundant physical life. Intellectually also we shall continue to develop. We have not reached the end of any thing in science. Our unfulfilled intellectual hopes will be fulfilled yonder. So also in spiritual life; we have the little rill here, and the great river of life yonder. Our spiritual growth will be unhindered there. I now have such visions of spiritual things as I never dreamed of in my early experience. What will the heavenly development be? We do not yet realize the power of this salvation.

These are a few broken thoughts from the powerful discourse which needed to be heard to be fully appreciated. Rev. I. H. Correll interpreted at the close, with great efficiency.

At 2 p.m. Rev. K. Miyama preached and the ordination services were held, there being one candidate, Rev. T. Beckwith for Elders', and five Japanese for Deacons' orders. The service led at 4.30 by Rev. Mr. Daniells showed no diminution of interest, but rather a marked increase in power.

The services of the day were closed by a most excellent sermon in the evening from Rev. Dr. Cochran, on the words, "And everything shall live whither the river cometh" (Ezek. 47: 9.) interpreted by Rev. S. Ogata. All felt that it had been a day of "good things," a veritable feast, and sincerely trusted that its influence may be permanent and deep in the hearts of many.

The session of Monday morning was largely occupied with routine work, important but hardly of general interest. The Revs. H. H. Lowrey, of the North China Mission of this Church, G. E. Dienst, of the Evangelical Association, and Eber Crammy, of the Canadian Methodist Mission, were introduced to the Conference. Mr. Lowrey gave a succinct account of the work in North China, reporting over 2,000 members in the churches connected with the Mission he represents. In spite of opposition and interruption of labours, on account of the late rebellion, there has been a constant growth.

Mr. T. Noda gave a short account of his efforts to spread the news of salvation from sin among the thousands that annually visit the popular summer resort of Oiso. He distributes large numbers of tracts and leaflets, and, through the kindness of Dr. Whitney, has borrowed a tent which he has pitched in the convenient locality near the sea shore, so that he may hold services where the people are most apt to be found. He asked for help in carrying on his meetings and for financial aid.

The Board of Church extension reported small collections during the year, but that it had been able to assist in the erection of two churches; the method being to loan small sums of money to aid such churches as are trying to build houses of worship, the sum to be repaid in ten annual installments without interest.

Twelve young men presented themselves as candidates for admission on trial, and were addressed by the Bishop, in a very pointed but kindly manner, concerning their need of a personal religious experience if they would lead and teach others.

At two o'clock p.m. the Temperance Anniversary was held; the chief speaker being the Hon. T. Ando, a most earnest and enthusiastic supporter of total abstinence.

The half-past four meeting was so directed by Dr. Daniells as to be specially helpful to the candidates for admission on trial, though his words were full of instruction and food for thought to every Christian labourer.

The topic of the evening meeting was "Christian Work." Revs. M. Yamaka and J. W. Wadman gave practical and suggestive addresses which were followed by a general discussion.

The early part of Tuesday's session was occupied with a statement of the condition of the Scripture Readers' Union. It has over eleven thousand members scattered in eight hundred places from Sapporo to Loochoo. About one third of them are not Christians. Probably the daily readers of the portions of Scripture designated by the Union is between twenty and thirty thousand, as there are many who unite with the regular members in the readings. The Union is interdenominational, its sole object being to foster a careful study of the Bible. To aid in this work it has several publica-

tions which were brought to the attention of the Conference, and the preachers were urged to aid the Union in its practical efforts to spread a knowledge of God's word.

Considerable time was occupied by the reports of the delegates to the General Conference, the legislative body of the Methodist Episcopal Church. Its regular quadrennial session was held last May at Omaha, U.S.A. Mr. V. Ninomiya, the lay delegate, made his report in person, but Rev. J. Soper, the clerical delegate, not having yet returned, reported by letter.

The twelve young men, who presented themselves for admission on trial the previous day, were received after their characters and examination were reported as satisfactory. Even with this large addition to the working force, more men are urgently needed to supply the growing demands.

The Rev. Dr. Cochran, of the Canadian Methodist Mission, was introduced to the Conference.

The afternoon and evening were devoted to religious services and committee work. There was a sermon at two o'clock by Rev. S. Kurimura, and the Rev. Mr. Daniells led two pentecostal services, one at half-past four and again at eight o'clock.

Wednesday morning was largely devoted to the reports of various committees.

The Rev. J. A. B. Scherer, of the American Lutheran Church was introduced, and addressed the conference in a few well chosen words.

There was considerable difficulty in deciding on the locality of next year's session. After consultation with the Ladies' Conference, it was finally voted that they should meet in Nagasaki. The statistical report was presented, and from it the following items are taken:—

No. of Members and probationers.....	3,795
No. of Baptisms during year (adults).....	430
No. of Sunday School Scholar.....	4,187

Amounts raised by the native Church, for—

Church building and repairs.....	Yen. 2,544.86
General expenses.....	2,516.43
Pastoral support.....	1,801.82
Other benevolent purposes.....	1,634.86

Wednesday afternoon and evening were occupied by committee meetings and religious services.

Thursday morning the hearing of reports was continued. Among them we may notice a report in favour of a thorough revision of the hymnal. In connection with this, Bishop Mallie offered three prizes of six four and two yen each for the three best hymns to be written during the coming year by members of the conference; and a similar set of prizes to the lay members of this or other Methodist churches in Japan. He added five yen more to be given to the writer of the best of the six prize hymns.

The report of the *Gokyo*, a weekly paper published in connection with two other Methodist bodies as a religious weekly, was listened to with interest. Its subscription lists represents a circulation of 480, and as this is not large enough to enable the paper to meet its running expenses, all the ministers were urged to make greater efforts to increase it. This paper is doing a work of great importance to the Methodism of Japan.

In connection with the report of the Publishing Committee of the conference, Mrs. Dr. Draper offered a prize of five yen for the best tract presented to the committee for publication. The Rev. C. Bishop offered a similar prize of ten yen. In the Ladies' Conference the same prizes have been offered.

The memoirs of two workers who have died during the year were read before the conference.

In the afternoon session the hearing of reports was continued. That of the educational committee represented fourteen institutions in different parts of the Empire, girls schools largely predominating. That part referring to the Tokyo Ei-wa Gakko Aoyama was especially encouraging, a notable feature being the addition of an industrial department where students may help themselves and feel that they are earning their education, instead of receiving it gratuitously.

The Japanese holiday on the 23rd of November was fixed as a day of Christian thanksgiving. The Bishop addressed the conference on the need of working and praying for a special Divine blessing, and on his suggestion the 30th September and 1st and 2nd October were set apart as days of special prayer; the church at home will be requested to unite in these special petitions for blessing on the work in Japan.

The minutes were read, and, after the singing of a hymn and prayer, the Bishop spoke a few words of cordial thanks to all, and of earnest exhortation to the members of the conference. He then read the appointments and the conference adjourned *sine die*.

The following are the appointments so far as they concerned the foreign portion of the body:—

Aomori District—J. W. Wadman, Presiding Elder. Hakodate District—J. Soper, Presiding Elder.

Nagasaki District—L. H. Coriell, Presiding Elder; H. B. Johnson, E. R. Fulkerson, F. T. Beckwith, Instructors in the Chinzel Gakkwan.

Nagoya District—W. S. Worden, Presiding Elder.

Sendai District—S. Matsumoto, Presiding Elder; Sendai, J. G. Cleveland.

Tokyo District—J. C. Davison, Presiding Elder; C. Bishop, Publishing Agent. Ei Wa Gakko—President, V. Houda; Theological Department, J. Wier, Dean; M. S. Vail, G. B. Norton, Instructors. Collegiate Department—J. F. Belknap, B. Chappelle, Instructors, and of those who are not members of conference, J. O. Spencer, Miss J. S. Vail, and Miss H. S. Alling, Instructors.

Yokohama District—G. F. Draper, Presiding Elder; F. Ohlinger, Missionary to Korea.

THE USES OF BAMBOO IN JAPAN.

The second meeting of the first Session of the Japan Society was held on the 12th inst., says the *London and China Express* of May 20th, at the Society of Arts, John-street, Adelphi, when a paper was read by Mr. Charles Holmes, F.L.S., a member of the Council of the society, entitled "The Uses of Bamboo in Japan." Mr. F. T. Piggett, vice-chairman of the Society, presided, and there was a crowded attendance. A special feature of the evening was the exhibition of Mr. Holmes's varied and comprehensive collection of Japanese articles made of bamboo, to which additions were for the evening by Dr. Anderson and Mr. Larkin. This interesting collection which has been exhibited at Warrington, is to be transferred to the museum at Kew. The Chairman, in introducing the lecturer, said that the only surprising thing was that Mr. Holmes was the only person who had really touched the subject in the way of collecting utensils made of bamboo, because one's first and last notions of Japan were connected with it. He supposed that in the whole vegetable kingdom no plant was put to so many and varied uses. He should have thought it was easier to say in Japan what was not made of bamboo than to attempt to catalogue the articles which were made of this remarkable plant.

The Lecturer, who was received with applause, said that among the products of nature utilised by man there was perhaps no one that had been so extensively and variously employed as the bamboo. Travellers who had visited those parts of the world where the grass grew had made frequent reference to multitudinous services it performed as food, medicine, in construction of houses and bridges, weapons of offence and defence. In household and personal requirements, it played a more or less notable part. To enumerate in detail all its many uses in various parts of the world, from Burma to Madagascar, from China to Brazil, would be well nigh an endless task. Some idea of its great economic value might be gathered from an examination of the purposes to which it has been applied by the Japanese to supply their everyday wants. In prosecuting their inquiries they soon found that in comparison with the Chinese and some of the races of India, the Japanese had almost neglected its use in such important objects as houses, bridges, and boats. There was nothing in Japan like the native houses in India and Burma made from ground to roof entirely of bamboo, or like the elaborate bridges made of stout bamboo which exist in certain portions of China, or like the fishing boats at Formosa, where hull, mast, and cordage are all of bamboo. It was not far to seek this comparative neglect on the part of the Japanese. Constructions made of bamboo in India were very cheap. Good roomy houses, for instance, could be built for twelve shillings, but unfortunately they were not very serviceable. Two or three years was the measure of their endurance, and to last even this time they required a good deal of mending and patching up. Bamboo, with all its excellencies, was not suited to structural work in outside, exposed situations. Fortunately for Japan, it was not only favoured with bamboo but an abundance of excellent timber, the latter being so much better adapted to all important structural work. Therefore it was naturally preferred for such purposes. Nevertheless, the Japanese house builder used bamboo as an adjunct. In China paper was made of bamboo. In Japan bamboo was not used for paper making, a superior kind of paper being produced from another grass. The Japanese used sheets of bamboo in place of writing paper. In India a white mineral matter drawn from the bamboo was used for medicinal purposes. In Japan, however, it was not so used. It was necessary, he thought, to point out a few of the differences of the use of bamboo in Japan, as compared with other neighbouring countries. They were thus able to see that the Japanese by no

means slavishly copied their neighbours in the use to which they put this material, but that they followed their own ideas, and only made it applicable to such uses as were suited to their own purposes and conditions of life. There were many varieties of bamboo indigenous to Japan. One species, only a few inches in height, covered the uncultivated portions of the country, very much to the detriment of pasturage. Some varieties grew to the height of 30 or 40 feet, with stems six or seven inches in diameter, and there were many species of intermediate growth. The peculiar properties which rendered bamboo especially valuable to man's use were its great strength, flexibility, and lightness, the hollowness and boxlike cavity of its stem, and the ease with which it could be split into long, even, flexible lengths. It had, moreover, its excellence as an article of food. Collectors of Japanese objects of art know how frequently the labourer was portrayed either digging up the bamboo shoot or carrying it on his back for his wife to cook and prepare for himself and family. Opinions varied greatly on gastronomic subjects, and many dishes favoured by the Japanese required, to say the least, much education on the part of the European palate to appreciate.—(Laughter.) But the bamboo shoot, when well boiled, was by no means to be despised by a hungry man, whatever his nationality might be. The uses of bamboo might conveniently be put under three general heads: implements employed in agriculture and the trades; secondly, household utensils; and thirdly, objects for general use. Mr. Holmes then went on to describe in some detail the various implements made of bamboo which were used in the preparation of rice, tea, silk, &c., in weaving and dyeing, in baskets for trades and for fishing. Many of the articles, which the lecturer explained, were exhibited to the audience. Bamboo was used in a variety of ways—in the kitchens in the service of tea, in the arrangement of flowers, and in general house household requirements. Mr. Holmes thought it surprising that with the many ideas which Europe had taken from the East it had not adopted bamboo for smoking. The tiny Japanese pipes were generally supplied with a bamboo stem; the bowls and mouthpieces were usually of metal. Women's pipes—for, said Mr. Holmes, ladies smoke in Japan, and he created a little diversion by adding: "The same as they do here"—have a longer stem, and the cases in which they are kept are artistically made of bamboo. He then went on to speak of the use of bamboo for musical instruments and for toys. Coming to the personal use of bamboo, he instanced fans, umbrellas, and hats as, perhaps, the most important. The Japanese umbrella was the most classical form of a very necessary object. We all knew the appearance in London or Paris of a multitude of black or sombre umbrellas in the streets. It was not in any way gratifying to the aesthetic sense, but in Kyoto, where the imported gingham had not yet been introduced, the use of the native umbrella seemed to lighten the highways in pouring rain as with a ray of sunshine. The lecturer then proceeded to give some miscellaneous uses of bamboo in Japan. Amongst other things he described the *nomi tori*, which the lecturer caused some amusement by translating "flea-catcher." This ubiquitous little insect, he added, was to be found in Japan as elsewhere. He exhibited the article to the audience, and it certainly looked, as it appeared to the lecturer the first time he saw one, more suited to catch rats and mice than fleas. The little bars of bamboo are half an inch apart, but the lecturer explained that the fleas were caught by smearing the bottom of the trap with bird-lime, and the only object of the bars was to keep the clothes of the susceptible native, in whose sleeve it was secreted, from touching the bird-lime. In conclusion the lecturer said the Japanese were truly lovers of the bamboo. Their artists never tired of depicting its graceful form, or poets of praising it, while metallurgists, lacquer-workers, and potters fashioned their wares in imitation of it.

The Chairman having invited a discussion. Mr. Okoshi, Japanese Consul in London, after complimenting the lecturer upon the interest of his paper, said that one curious thing was that the bamboo could be grown in private gardens. Still more curious to the European, perhaps, was the fact that bamboo was used as a family name in Japan. He could mention about thirty different family names called simply Bamboo. In other cases some adjective from the shape of the bamboo was prefixed, as Mr. Inside Bamboo, Mr. Middle Bamboo, or Mrs. Bamboo Under.—(Laughter.) The bamboo was so extensively used in Japan that some of them were even born Mr. Bamboo.

The Rev. S. Coode Hore said that the symbol of the bamboo, according to the Japanese, expressed in English—Just Judgment, Noble Heart, and Devoted Sentiments.

Mr. Jackson, as Curator of the Royal Gardens

Original from

at Kew, who hoped to have charge in future of this marvellous collection of bamboo products, said he was glad of the opportunity of congratulating Mr. Holme upon his success in collecting such a comprehensive series of bamboo articles. The exhibition of these objects would popularise and make more general the knowledge of this wonderful series of plants of which the bamboo formed a part. He thought the public were to be congratulated upon the acquisition of such a rare collection.

Mr. F. Satow asked the lecturer whether bamboo was used in the schools of Japan in a similar way that a kindred product was used in this country, and whether it had the same stinging qualities. —(Laughter.)

Mr. Holme said that he would reply to the question at once. The Japanese were very gentle with their children, and the bamboo was not used in that particular manner. In China, however, the case was different. He believed there the bamboo was used to inflict very great cruelties.

The Rev. S. Hore said that in one of the classical books of China, he thought the Shi King, there was a reference to the ancient classical birch.

Mr. Larkin said that in the year 1877 he had rather an unpleasant experience of one of the uses of the bamboo, which had not been mentioned by the lecturer. The Japanese Government had remitted the taxes of the land into a tax of coin—that was to say, the taxes gathered in rice were substituted for a tax in coin. The peasants were unable to furnish the coin to the extent required, and they were very perplexed and rose in rebellion. He happened to be in the neighbourhood at the time, and he noted that their arms consisted of bamboo spears, and most formidable weapons they were. The spear was pointed like a lance, and heated to a degree of hardness that it would go through the bodies of two men with a good thrust. As he ran in his flight to the sea, he saw the Japanese peasants thrusting the bamboo spears into the houses and killing many men.

Mr. A. Dioso, honorary secretary of the Society, said that one use of the bamboo had not been mentioned that evening. It was really of Chinese origin. In the province of Kiuhsiu, on the Inland Sea, the custom prevailed in summer of having in each house one or several bamboo cylinders made of plaits of bamboo, which people took to bed with them for the sake of coolness. There were no beds in Japan; the people slept on mattresses covered with quilts, and in hot weather these were sometimes inconveniently hot. Two plans were adopted to obviate this—one was to have a cord attached to the quilt, which ran over a small hook in the ceiling, so that the sleeper could raise the quilt from his body at pleasure; but the mode most frequently adopted was to have this bamboo cylinder under the bed-clothes to keep the quilt off the sleepers. It was about the size of a human being, and each person took this to bed with him.

The Chairman, in closing the discussion, said he thought some attention might be advantageously given in Europe to the use of bamboo for musical instruments, more particularly the organ.

Mr. F. Satow proposed a vote of thanks to the lecturer, which was seconded Mr. F. T. Edwards, and carried unanimously.

Mr. Holme, in acknowledging the compliment said, with regard to the spear in Japan, it was made of a class of bamboo that was solid throughout. It was common enough in India, but it was very rare in Japan, and only occurred in a small district. That was why he had made no reference to the use of bamboo as a weapon.

NEW ORIENTAL BANK CORPORATION.

OPINIONS OF THE PRESS.

The catastrophe has been expected any time these last six or eight months, and, in fact, the bank could not have lived so long as it has done but for the fixed deposit system. In its origin it was an attempt to build a new institution upon the ruins of an old, without clearing those ruins away. Besides its losses through banking in the East, the concern is understood to be heavily locked up in house property in Melbourne, and it has never got clear of the old bank's commitments in Mauritius, where its difficulties and those of the Oriental Bank Estates Company have lately been aggravated by pure misfortune. The immediate cause of the stoppage was the steady withdrawal of the fixed deposits as they became due.—*Standard*.

Stoppage of payment is at last announced by the New Oriental Bank Corporation (Limited). For about eight years past it has been conducting a business which was started in the year 1884 on

the ruins of the old Oriental Bank. During the period of its activity it had obtained a large connection, and, until last year, appeared to be in a flourishing condition. To a number of good people—Anglo-Indians and Scotchmen connected with the East—the suspension will be a matter of surprise, but to City men there is nothing surprising about it. The Bank is known to have been exposed to a good many risks. Beyond incidental losses, there has been the fall in silver, which has not only depreciated the assets of the bank employed in the East, but has crippled the financial strength of its customers, and so, indirectly, affected the bank itself. Its credit having fallen, there was a natural disposition to withdraw deposits.—*Daily News*.

The failure of the New Oriental Bank Corporation (Limited) is in some respects the most serious financial disaster that we have had for some years past, excepting, of course, the liquidation of Messrs. Baring Brothers, which was exceptional. The institution has been in existence for barely eight years, and at the date of the last balance sheet it had banking assets amounting to £10,801,000. It has, of course, suffered, in common with all Eastern banks, from the heavy depreciation in silver and the Eastern exchanges; but it has also had troubles of its own through failures and unwise business on the part of its managers abroad; and while its credit for some little time past has been much discussed in banking circles, its depositors have been gradually withdrawing their deposits.—*Chronicle*.

The failure of the efforts which have been made to save the New Oriental Bank Corporation from suspension will cause a very wide widespread feel of regret, not only because of the serious gap made in the financing of our trade with the Far East, but also because the catastrophe is so obviously due to conditions over which ordinary business prudence and ability could have no control. It is an open secret that the Bank has been embarrassed to some extent by the withdrawal of deposits in consequence of the loss of confidence which has followed the decline in the gold price of silver. Such conditions must have embarrassed an institution whose capital is locked up to a considerable extent in silver-using countries. The difficulty of rapid realisation of assets, great under any circumstances when there is a run on deposits, is of course very much greater when the currency in which they are realisable is itself a factor of uncertain value. Moreover, the Bank has had to face the consequences of the recent disastrous hurricane in Mauritius, as it has played a leading part in the finances of the island.—*Manchester Guardian*.

It is only fair to those at present acting as managers, to say that the suspension of payments is more the result of the bad management in the early years after the reconstruction than of the mistakes which the existing executive have made. For example, the bank was involved by the former managers in the Gatling gun business to the extent of £100,000, and it may be said escaped fortunately with a loss of only £12,000, and money has also been sunk in sugar estates in Mauritius, and over £700,000 is believed to be locked up in building land in Melbourne. Coming to more recent blunders, by no stretch of the principles by which joint-stock bank managers are understood to be guided could the payment of £20,000 in connection with participation in a Persian lottery loan speculation be held justified. It is a mistake, in fact, to assume that because this bank has lost money by sending gold deposits to be employed in the East, other India banks are in the same category. The better class of Indian banks have been careful to avoid exposing themselves to a similar loss through the depreciation in the Indian exchange. This has been avoided by keeping the rupee deposits at the Eastern branches and the gold deposits here. If the operations happened during a particular period to throw the balance of cash more to one side than the other, the manager would pause in his commitments pending an adjustment. It should be pointed out to those who have insured their deposits in the New Oriental Bank (Limited) with other companies that they should enter into no negotiations with the bank respecting their claim, or the contract with the insuring company becomes void.—*Times*.

Although the New Oriental Bank was known to be in a tottering condition, the official announcement of its collapse comes at a most inopportune moment. The financial world is not in such a strong condition as to be able to bear any diminution of public confidence in the stability of securities.—*Globe*.

THE DOOM OF PARIS.

M. Louis Gallet, in the *Nouvelle Revue* for March 15th, gives a vivid picture of what may conceivably happen to Paris 1,200 years hence. It describes prophetically how, at that epoch, the Eiffel Tower was the only existing relic of nineteenth-century Paris, and even that was subject of dim traditions, no *savant* being able to explain the name with certainty.

All northern Europe had been depopulated by the advance of the Polar glaciers—Germany no longer in existence, Russia had spread out over the whole of Asia; the United States of Europe, whose capital was Marseilles, included all the remaining nations. South of the Mediterranean were the United States of Africa, with Algiers as their capital. Paris was as gay and pleasure loving a city as in the old days, in spite of the increasing rigours of the climate. There was scarcely any poverty and no illness—all possible microbes having been catalogued and exterminated, or rendered harmless by preventive measures—the doctors' occupation was gone. Their place was taken by scientific chemists and professors of physiology. The art of preserving health and appearance had been carried to such perfection that very few people appeared to be old, and the population, as a whole, was remarkable for looks. These Parisians—a composite race—consisting of the select survivors of the great northern catastrophe—cared nothing for art or literature, and very little for music; though, occasionally, monster Wagner concerts were given in vast halls. There were no museums, picture galleries, or public libraries. The very language was constructed on the labour-saving principle, and formed a species of spoken shorthand, consisting almost entirely of nouns and adjectives.

No one read anything but the daily papers, and these were reduced to the smallest possible size. Political news, or the latest events of the day, were indicated in a few words. All comments were suppressed, nothing but bare statements of fact being allowed. The old-fashioned argumentative journalists had been displaced by reporter-gymnasts, the most distinguished of them being the one who had the swiftest *àronet* and could reach the scene of events soonest. There was hardly any street traffic. A few electric vehicles were to be seen, but the *àronets*, or improved balloons, worked by sails and screws, were a much more popular means of transport. They were of all sizes, from the large ones with ten rows of screws, of which there was a regular service taking the place of trams and omnibuses, to the small private ones, gilt and ornamented like royal yachts. When plying by night, and showing various-coloured lights, they glittered in the sky like a rain of stars.

Then people were happy and knew it—which is rare. As long as no one spoke to them of God, or death, or love, which brings trouble—or the family, with its affections and trials, which are subversive of all peace—they were content, passing through life with a philosophic selfishness and making it as enjoyable as their riches would permit. When the cold became excessive, the lower classes took refuge in the winter gardens—immense glass palaces, artificially heated, while the rich started in their *àronets* for Algiers, or even Lake Tchad, which by this time was surrounded by delightful villas. Either could be reached in a few hours; and many of these winter visitors were in the habit of returning to Paris once a week to attend to their business.

For some years past the cold had perceptibly increased in mid winter, and the snow had fallen more abundantly than in former times. Some exceptional snowstorms had been photographed in which the flakes appeared to touch one another and form a solid mass. But these storms were of short duration, and the snow had been melted by means of chemicals discharged from an apparatus specially designed for the purpose, and drained off through the sewers into the Seine. This year, however, after a week of exceptionally mild and spring-like weather, the sky was suddenly covered with clouds so dense that the summit of the Eiffel Tower was no longer visible. The public *àronets* after a time ceased to run, but a few private ones were still about.

The police then prohibited all traffic till the weather should change. The temperature was mild. A smart breeze sprang up,—then a whiteness was perceptible at the zenith, and the snow began to fall slowly in larger flakes, so that in one hour it was over 60 centimetres deep in the streets. The melting-machines at once set to work, and streams of water poured into the Seine. The snow continued all night, and in the morning it became evident that what had been looked upon as an event was going to prove a disaster. The policemen working the machines were nearly worn out, and at midnight, when a pale daylight was struggling

through the grey sky, it was discovered that the supply of chemical salts was exhausted. The snow fell all day; it was now impossible to make headway against it, and by the evening every door in the city was blocked. Towards midnight, a sudden gale from the north scattered the clouds and cleared the sky, the thermometer dropped far below freezing point, and the drifts soon became a solid mass of ice. All who could, left their houses by the windows or balconies and made for the *aéronef* stations. There was a frantic struggle in front of the sheds; there was now neither right nor law, neither servant nor master; the stronger thrust the weaker out of the way and trampled them under foot.

The *aéronefs* were launched—some disappeared from view in the gathering clouds, others fell as if pierced with visible arrows. Through the *faubourgs* extended black lines of people trying to escape on foot. . . . They were all frozen to death before they had gone more than a kilometre, and the snow, once more falling thickly, soon buried them without leaving a trace. Within the city, all who remained of its six million inhabitants, had crowded into the square where stood the Eiffel Tower. The snow was already half way up the arches which supported the first floor. The city had already disappeared. There was no sound or movement of anything living in the air. There was a cry, "The Tower! The Tower!" Many had not even thought of this refuge. The lift would not work—clanked by the frozen snow. There was a rush for the stairs, and a fearful struggle in the narrow passage. Men seized each other by the throat, by the hair, revolvers were fired with scarcely a sound in the very air. At last the strongest made their way into the narrow ascent and climbed up and up, while the curl of the snow around them rose almost as quickly.

When day dawned there were a few frozen corpses still clinging to the bars on the platform of the electric lantern. Paris was dead.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 17th.

The following numbers have been elected to the House of Commons:—

Tories	260
Unionists	50
Liberals	268
Irish	74

London, July 21st.

The Liquidator of the New Oriental Bank Corporation states that the creditors' claims will very likely amount to £4,500,000, and that they will receive at the utmost fifteen shillings in the pound.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, July 20th.

The *Omi Maru* has arrived here and been placed in dock. The survey shows that the principal damage the vessel has sustained is forward on the starboard side, the port side being slightly injured sixty feet from the stem. It will be necessary to renew twenty-five plates and straighten a few beams.

The Court-martial on Commander McCurley has been concluded, but the sentence of the Court has not been made public. It has been stated, however, that the finding was favourable to Commander McCurley.

Nagasaki, July 21st.

The finding of the Court-martial here has been promulgated. Commander McCurley is suspended from duty for one year on full leave pay. Lieut.-Commander J. W. Rich, late of the *Palos*, has been appointed commander of the *Alliance*; and Lieut.-Commander John J. Hunter, late of the *Marion*, has been appointed Commander of the *Palos*. A number of short service men are being drafted from the

Alliance and will leave shortly for home by way of San Francisco.

[FROM THE "SINGAPORE FREE PRESS,"]

London, July 1st.

The Right Hon. W. E. Gladstone, speaking at Edinburgh, declared that he had never retracted a syllable of his Irish proposal of 1886, and he leaves it to a Liberal government to settle the question as to the retention of Irish members in the British Parliament.

[FROM THE "EL COMERCIO,"]

Madrid, July 2nd.

Riots of greengrocers and hawkers have invaded the centre of Madrid and they force the stoppage of all business.

They attack the Police and the latter are obliged to open fire, resulting in several rioters being wounded.

The return of the Royal party will be deferred, should the rioting continue.

Later.

Their Majesties the King and the Queen returned from Aranjuez and were received with acclamation.

The rioters in the Toledo Street have destroyed the slaughter house in order to prevent the issue of meat. They have destroyed all lamp-posts in the lower parishes. The firing of the troops has wounded many.

The Bourse continues paralyzed and speculators support the strike.

Madrid, July 3rd.

The additional municipal import on the hawkers, which has been the cause of the rioting, has been suspended. Madrid quiet.

M. Tschigorin had first move in the first game.

A protest has been issued by the Scottish Home Rule Association against the misuse of national names, and drawing attention to certain articles of the Treaty of Union between Scotland and England, showing that Scotland and England entered into a Union upon perfectly equal terms, as both surrendered their separate names in favour of a joint title—viz., Great Britain. But of late years, it is stated, there had sprung up an evil habit of using, both in the press and on the platform, the words "England" and "English" for the "British Empire" and the "British people." This habit was an insult and injury to the Scotland people, and an offensive piece of arrogance on the part of all those who used the terms, and against this insult to the Scottish people the Association entered the following protest from

PASSENGERS.

ARRIVED.

Per Japanese steamer *Mike Maru*, from Kobe:—Mr. Denys Larrieu, Mr. Miura, and Mr. J. Shimomura in cabin; 9 passengers in steerage.

For Otaru: Miss Rosina Smith in cabin; 8 passengers in steerage. For Hakodate: 1 passenger in steerage.

Per Japanese steamer *Sagami Maru*, from Otaru and ports:—Captain F. Devenish in cabin; 25 passengers in steerage.

Per German steamer *Nuernberg*, from Hongkong:—Dr. Runkwitz, Mr. A. Epler, Mr. and Mrs. Bowden, Mr. Ying Chee, and Mr. Ah Yow in cabin; 32 Chinese in steerage.

Per British steamer *Ancona*, from Hongkong via ports:—Mr. Jones, Miss E. Jones, Messrs. David Kennedy, Borlokoff, Kornkoff, Simerman, Pearce, Forchuey, and J. W. Nicolle in cabin. Disembarked at Nagasaki: Mr. Chas. Chamberlain, R.M.L.I., in cabin. Disembarked at Kobe: Misses Falcouer, Benham, Ricketts, and Wood (2) in cabin.

Per British steamer *Empress of India*, from Hongkong via ports:—Mr. F. B. Aubert, Mr. G. C. Benton, Mr. T. Brown, Rev. Mr. and Mrs. Broadram and family, Mrs. Butler, Rev. Mr. and Mrs. Brown and family, Rev. Mr. and Mrs. G. Chapman, Mr. Chambers, Rev. Mr. and Mrs. G. Campbell and family, Mr. and Mrs. G. Clarke, Mr. and Mrs. Cole, Mr. Cho Tai Ying, Mr. Ching Yung Peng, Mr. M. B. Drunell, Mr. J. C. Edmonds, Dr. Edkins, Miss K. Tristram, Mr. and Mrs. Fagg, Mr. W. G. Gibson, Mrs. Miss, and Master Hanner, Mr. Hawes, Mr. A. H. Heath, Miss Howe, Mr. E. Knaut, Mr. F. H. Lorenz, Miss L. Lovell, Dr. and Mrs. Matier, Dr. and Mrs. Mills and family, Mr. H. A. J. Macray, Mr. J. MacKenzie, Dr. Noble, Mr. H. Ogilvie, Mr. Pander, Captain Ratallick, Mr. J. Schild, Mr. T. Stewart, Miss She Me Yun, Mr. O. Stibel, Mr. and Mrs. Theodore, Colonel Wilbraham, Mr. H. S. Wilkinson, Mr. Wei Loong Ching, Miss Wu Ida, and Rev. Dr. Vincent in cabin; Mrs. Blachford and family, Mrs. Burke, family, and amah, Mr. F. W. Chamberlain, Mr. Lueng H. Nom, Miss W. Kusuzi, Mr. Wm. Spiers, and Mr. P. R. S. Vincent in second class.

Per Japanese steamer *Higo Maru*, from Kobe:—Messrs. T. Honda, R. Kazikawa, and A. H. Boltenheim in cabin; Mr. G. Mori in second class, and 37 passengers in steerage.

Per Japanese steamer *Wakanoura Maru*, from Otaru and ports:—40 passengers in steerage.

Per British steamer *Devawongse*, from Hongkong via ports:—Mr. J. A. Reynolds in cabin. For Victoria: Mr. P. A. Nicolle in cabin. For Canadian ports: 36 Chinese in steerage.

Per Japanese steamer *Yamashiro Maru*, from

Kobe:—Mr. Tatsuoka Shorin in second class and 41 passengers in steerage.

Per French steamer *Salasie*, from Marseilles via ports:—Mr. G. Mitsukuri, Mr. Sakata Sadakatsu, Mrs. Morioka Kin, Mrs. Woomay, Mr. Biegnot, Mr. and Mrs. Griffith, Mr., Mrs., and Miss J. Bredon and amah, Mr. Odon Vinals, Rev. H. B. Price and family, Mr. O. Rizetti, and Mr. Goldstein in cabin.

Per Japanese steamer *Nagato Maru*, from Otaru:—For Hakodate: Rev. J. Bachelor in cabin. For Oginohama: Captain T. H. James in cabin. For Yokohama: Mr. and Mrs. Haight and infant, Messrs. S. Iwata and H. Wakabayashi in cabin; 42 passengers in steerage.

DEPARTED.

Per British steamer *Oceanic*, for San Francisco via Honolulu:—Miss Ethel Hawkins, Mr. G. C. Greenhill, Mr. H. Jaeger, Mr. I. Sorokin, Mr. and Mrs. H. Allen, Mrs. A. Carter, Mrs. J. Sherwood, Rev. W. K. Azbill, Mr. and Mrs. Schwabach, Mr. C. H. Wilson, Mr. E. Rochette, Miss Cross, Mr. R. M. H. Woodburn, Mr. and Mrs. Deakin and son, Dr. S. Porges, Mr. and Mrs. J. P. P. Collaco, Rev. and Mrs. O. H. Gulick, Miss Gulick, Mr. P. T. Susman, Mr. L. Bouquet, Mr. A. M. Vivier, Miss Brittan, Mrs. Howell, Mrs. J. Susman, Messrs. F. W. Jaeger, C. H. Hinton, H. N. Read, S. Mylius, G. H. Johnstone, Wm. Hassland, and J. Rissmier in cabin.

Per French steamer *Natal*, for Shanghai via Kobe:—Messrs. Remedios, W. J. Robinson, E. Andreis, Odon Vinals, Mrs. Yano Katsu Messrs. Utera, Stuart Smith, Salliey, Caillol, Lacaze, de Fancouval, L. Hodney, Mr. and Mrs. Reynaud, Mr. Swithinbank, Mr. A. Norkett, Miss Burnett, and Mr. J. Sarda in cabin.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Mr. Blumenstein, Mr. J. C. Benson, Rev. Mr. Britten, Rev. Mr. and Mrs. Bassett, Rev. Mr. and Mrs. Brown and family, Rev. Mr. and Mrs. Brandon, Mr. H. Bishop, Mr. Brown, Mrs. Batten, Mr. and Mrs. Cole, Mr. C. A. Cheekoff, Mr. Wei Long Ching, Mr. and Mrs. Chapman, Lieut. Curry, R.N., Mr. Chambers, Mr. and Mrs. G. Clark, Mrs. Campbell and family, Mr. and Mrs. Dickson, Mr. D. De Vitre, Mr. De Guerville, Mr. T. G. Dolbissheff, Lady Grey Egerton and maid, Miss Egerton, Mr. Evans, Mr. J. C. Edwards, Mr. Edkins, Miss Gooderham, Mr. and Mrs. Gardiner, 3 children, and amah, Mr. Gibson, Mr. Giles, Miss Goldie, Mr. A. H. Heath, Rev. Mr. and Mrs. Hargreaves and child, Mr. A. T. Hall and servant, Mr. G. W. Hill, Lieut. Hall, R.N., Mr. Hewitt, Mr. Hawes, Miss Howe, Miss Wu Ida, Mr. Irwin, Miss K. V. Johnson, Prof. Janson, Mr. and Mrs. Keswick, Mr. Lowe, Mr. and Mrs. Landon, Miss Landon, Mr. and Mrs. Leary, Miss Lund, Captain Lewis, Mr. Ley, Dr. Muller, Mr. Moffett, Mr. T. Mackenzie, Mr. H. R. Miller, Madame Meyerhoff, Mrs. W. R. H. Martin, Master L. T. Martin, Mr. H. A. J. Macray, Lieut. Moggridge, R.N., Rev. Dr. and Mrs. Mills and 3 children, Dr. and Mrs. Matier, Mr. A. L. Norrie, Dr. Noble, Mr. and Mrs. H. Pfaff, Mr. Chen Yung Peng, Mr. Pander, Miss Rothweiler, Mr. Savage, Mr. Strachan, Mr. Sutherland, Mr. Lespiard Stewart, Mr. Strauss, Miss Thompson, Mrs. Turnure, Miss Turnure, Mr. and Mrs. F. R. Trowbridge, Master E. K. Trowbridge, Mr. and Mrs. Theodore, Mr. S. W. Uojenin, Mr. Vogel, Rev. Dr. Vincent, Mr. Wilkinson, Miss Shie Mei Yu, and Mr. Cho Tai Yen in cabin; Mr. Budd, Mrs. Burke, 2 children, and amah, Mrs. Blachford and 4 children, Mr. Blundell, Mr. Chown, Mr. Hoskins, Mr. Kikuchi, Mr. Roubothan, Mr. Spiers, Mr. Tweedale, and Mr. Vincent in second class.

Per German steamer *Nuernberg*, for Hongkong via ports:—Miss Forder and 3 children of Mr. Barrie, Mr. Chung Sing, Mr. and Mrs. Hoechter, Mr. Th. Sansen, and Mr. Th. Truka in cabin; 17 Chinese on deck.

Per Japanese steamer *Kobe Maru*, for Kobe:—Mrs. J. F. Lowder and maid, Mrs. Patton, Mrs. Hinton, Miss D. Fitzgerald, Major-General Palmer, R.E., Captain Devenish, Messrs. F. H. Loring, W. Whymark, H. J. Marshall, A. Asano, and F. Faichney in cabin; Messrs. Miyokuchi, Kiyoki, Ninomiya, Shigeoka, Namsu, and Oyama and child in second class. For Shimomaki: Mr. and Mrs. Imadate and Mr. H. Rumschottell in cabin. For Nagasaki: Dr. H. N. and Miss Cobb, Mrs. H. H. Barnett and son, and Miss Vincent in cabin; Mrs. Taka, Messrs. Maruyama and T. Silverman in second class. For Shanghai: Messrs. H. Sylva and F. B. Aubert in cabin and 79 passengers in steerage.

Per British steamer *Ancona*, for Hongkong via ports:—Mr. Stanbury, Captain Reynolds, Major and Mrs. Selfe, Captain and Mrs. Palmer, Mrs. Cavendish, Captain and Mrs. Douche, and Miss Thompson in cabin.

REPORTS.

The British schooner *Esmeralda*, Captain Harrison, reports:—Left Guam the 29th June at 6.30 a.m.; had strong winds with heavy squalls. Anchored off Rota the 30th at 10.30 p.m. and left the 1st July at 7.30 p.m.; had fresh breeze with terrific squalls and rain. Anchored off Saipan the 2nd at noon and left same night at 11 p.m.; had moderate winds and fine weather. Anchored off Pagan the 4th at 5.30 p.m. and took in cargo and left same night at 10.30 p.m.; had moderate winds with rain and squalls to Fatsizio; thence light southerly winds and calms to Iro-saki; from Rock Island to Kanon-saki moderate N.E. winds with rain; thence to port fresh breeze; off Futsu passed schooner *Norma* bound out. Arriving at Yokohama the 16th July at 9 a.m.

The Japanese steamer *Mikie Maru*, Captain MacMillan, reports:—Left Kobe the 15th July at noon and arrived at Yokohama the 16th July at 6 p.m.; had light to moderate variable winds throughout the passage and rain off Omai-saki.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Otaru the 12th July at noon and arrived at Hakodate the 13th at 8.30 a.m.; had light easterly winds and pleasant weather to Tsugaru Straits; thence to port we encountered dense fog. Left Hakodate the 14th at noon and arrived at Oginohama the 15th at 10.45 a.m.; had fine pleasant weather to 10 p.m. on the 14th; thence thick misty weather to port. Left Oginohama the same day at 2.10 p.m. and arrived at Yokohama the 16th July at 3.30 p.m.; had fresh northerly and north-easterly winds with overcast cloudy weather throughout the passage.

The German steamer *Nuernberg*, Captain B. Blanke, reports:—Left Hongkong the 11th July at 11 a.m.; had light variable winds and fine weather. Arrived at Yokohama the 17th July at 7.32 a.m.

The Japanese steamer *Hiogo Maru*, Captain Pender, reports:—Left Kobe the 18th July at noon; had light variable air and fine weather throughout the passage. Arrived at Yokohama the 19th July at 6.50 p.m.

The Japanese steamer *Wakuraura Maru*, Captain Thompson, reports:—Left Otaru the 15th July at noon and arrived at Hakodate the 16th at 7.32 a.m. Left the 15th at noon and arrived at Oginohama the 18th at 0.35 p.m. Left at 2.45 p.m. the same day; passed Imboye at 7.5 a.m. on the 19th and arrived at Yokohama the 19th July at 7 p.m.; had light variable winds, smooth water, and fine weather throughout the passage.

The British steamer *Devawongse*, Captain Anderson, reports:—Left Kobe the 19th July at 6.12 a.m. and arrived at Yokohama the 20th July at 11.20 a.m.; experienced light variable winds and smooth sea with heavy southerly swell.

The Japanese steamer *Yamashiro Maru*, Captain Brown, reports:—Left Kobe the 20th July at noon; had light air and fine weather, with high southerly swell throughout the passage. Arrived at Yokohama the 21st July at 6.40 p.m.

The Japanese steamer *Nagato Maru*, Captain Elestrand, reports:—Left Otaru the 18th July at noon; had light variable winds and fine weather throughout the passage. Arrived at Hakodate the 19th at 5.30 a.m. and left the 20th at noon; had moderate S.E. winds and mist, which continued to Oginohama, where arrived the 21st at 10.46 a.m. and left at 2.30 p.m.; had moderate southerly winds and overcast sky; off Imboye, heavy S.E. swell coming up, wind freshened and hauling round to the eastward; heavy sea off Noshima. Arrived at Yokohama the 22nd July at 4.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

Very little has been done in the way of buying during the past week, and the market remains pretty much as last reported, but quiet. There has been a demand for Shirtings, and a moderate business has been put through at previous prices, but other Cotton Goods have been dealt in sparingly and Woollens have been almost neglected; in Yarns, the quantity sold has been trifling. The Midsummer Bon generally checks business for a time, and as that festival has now passed, more activity may be looked for shortly. Sterling Exchange is quoted 2/10½ for Bank on demand. Sales for the week comprise 250 bales English Yarn, 10,000 pieces glb. Shirtings, 2,500 pieces Washed Shirtings, 1,000 pieces T-Cloths, 200 pieces White Shirtings, 1,000 pieces Indigo Shirtings, 1,000 pieces Tinkey Reds, 200 pieces Victoria Lawns, 150 pieces Velvets, and 1,000 pieces Mouseline de Laine.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ yds. 32 inches	\$1.55 to 2.15
Grey Shirtings—9½ yds. 32 inches	1.85 to 2.50
T. Cloth—7½ yds. 24 inches	1.30 to 1.50
Indigo Shirtings—12 yards, 44 inches	1.30 to 1.55
Prints—Assorted, 24 yards, 30 inches	1.50 to 2.00
Cotton—Italians and Salteenus Black, 34 inches	0.10 to 0.15
Velvets—Black, 35 yards, 22 inches	5.60 to 6.65
Victoria Lawns, 12 yards, 32 inches	0.55 to 0.70
Taffetas—12 yards, 44 inches	1.45 to 2.25
Turkey Reds—1.15 to 2½, 24½ yards, 30 inches	1.15 to 1.20
Turkey Reds—2.4 to 2.8½, 24½ yards, 30 inches	1.25 to 1.35
Turkey Reds—2.12 to 3½, 24½ yards, 30 inches	1.40 to 1.50
Turkey Reds—3.4 to 3.8½, 24½ yards, 30 inches	1.55 to 1.65
Turkey Reds—4 to 4.8½, 24½ yards, 30 inches	1.80 to 2.05

Nos. 10/14, Bombay	55.00 to 65.00

METALS.

Market has not reopened, buyers continuing to make various excuses for their inactivity. Meantime, holders are not anxious, being sustained in their position by higher prices at home and lower exchange.

	PER POUND.
Flat Bars, 4 inch	\$2.85 to 2.90
Flat Bars, 1 inch	2.95 to 3.00
Round and square up to 4 inch	2.85 to 3.00
Nailrod, assorted	Nom.
Nailrod, small size	Nom.
Iron Plates, assorted	2.95 to 3.15
Sheet Iron	3.55 to 3.80
Galvanized iron sheets	6.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

With deliveries averaging over 5,000 cases per day prices are maintained. Fresh arrivals are said to be near at hand, but the vessels are apparently delayed.

QUOTATIONS.

	PER POUND.
Chester	—
Comet	\$1.57½ to 1.60
Devoe	1.52½ to 1.55
Russian Anchor	1.52½ to 1.55
Russian Moon	1.50 to 1.52½

SUGAR.

Market unchanged. There has been some inquiry for Refined Whites, but Browns seem neglected at the moment.

	PER POUND.
Brown Tahiti	\$4.20 to 4.30
Brown Datong	3.30 to 3.40
Brown Indon	3.40 to 3.50
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was of the 15th instant, since which date settlements on this market are 1,033 piculs, divided thus:—*Hanks*, 136 piculs; *Filatures*, 680 piculs; *Re-reels*, 153 piculs; *Kakeda*, 58 piculs; *Oshu*, 6 piculs. In addition to these figures, direct shipments have been 56 bales, which brings the total business of the week up to about 1,100 piculs.

Influenced to some extent by the falling exchange, and also by the good demand from Lyons, our market has been very active at full rates. From our statistics it will be seen that purchases and shipments for Europe still predominate over those for the United States, all of which seems to be some confirmation of the rumours as to short crop in Italy.

True *Shinshu* silks are beginning to arrive, also *Kakeda* sorts, and we now only require prime *Oshu Filatures* to make our list of silks on offer complete.

The quality of present arrivals of *Shinshu Filatures* is good. With regard to *Kakeda*, color and quality are fair, but the size is very irregular and in some cases runs very full; probably this fault will be remedied as the season advances.

There have been four shipping opportunities since we last wrote. The American mail, *Oceanic*, on the 16th instant, took 110 bales for the United States; the French mail *Natal*, July 17th, took 420 bales for Europe; the Canadian mail, July 18th, *Empress of India*, had 277 bales for the New York trade, and the German mail, July 19th, *Nuernberg*, took 69 bales for Genoa in transit. These departures bring the present export up to 1,618 piculs, against 1,709 last year, and 990 at the same date in the previous season.

Hanks.—The large business in these continues, buyers taking practically everything which comes in and buying considerable parcels of old staple besides. Ordinary *Hachofu* has been freely taken at \$475, new staple; old *Shinshu Hanks* are said to have been done as high as \$520, with other parcels at \$515 and \$505. New *Maidashi* and new *Shinshu* have not yet arrived.

Filatures.—The principal trade has been in this class, many parcels being taken for Europe and high prices have been paid. No. 1 silks, 10/12 deniers, \$720; other grades, \$710, \$700, \$690, \$680, &c., down to \$640. In American sorts, good *Shinshu* marks have been done at \$685, \$680, \$675 and \$670; indeed, as high as \$690 is reported for some *Matsumoto* brands.

Re-reels.—Not a large business in these; buyers ask for good silks, which are scarce; medium grades are plentiful but neglected; *Five Girl* chop, first and second quality mixed, is reported sold at \$645. An inferior parcel of *Turtoise* was done at \$635; some common *Bushu*, \$602½; something a little worse in quality at \$595.

Kakeda.—These are now coming in pretty freely and apparently find ready buyers on the basis of \$620 for No. 1 *Horsehead*. A few boxes No. 3 *Horsehead*, common quality and very full size, have been placed at \$560; on the other hand, *Daruma* has been done at \$645. The bulk of these purchases would appear to be for Europe.

Oshu.—One small parcel of medium *Hamatsuki* has been done at \$480, and that closes the record for this week.

WASTE SILK.

Rather more doing, chiefly in old fibre. Settlements for the week are 175 piculs, divided thus:—Noshi, 140 piculs; Kibiso, 24 piculs, *Rosekwa-ta*, 11 piculs.

The chief portion of these settlements is in old fibre, and what little has been done in new Waste is hardly sufficient to determine quotations. A few sample piculs of new *Filature Kibiso* have passed the scales at prices ranging from \$90 to \$85. These look fairly cheap, when we compare them with last year's figures; then prices were about \$10 higher and exchange very much higher, also.

There have been three shipping opportunities since we last wrote, the *Oceanic* taking one bale, the French mail 16 bales and the German mail 9 bales. These departures bring the present export up to 847 piculs, against 112 piculs last year and 627 piculs to the same date in 1890.

Pierced Cocoons.—Samples of *Shinshu* crop are now coming in; we hope to report on the quality next week.

Exchange has experienced another fall in sympathy with a fresh decline in silver at London. We quote:—LONDON, 4m/s. Credits, 2/11; Documents, 2/11; 6m/s. Credits, 2/11; Documents, 2/11; New York, 30d/s. U.S. \$70½; 4m/s. U.S. \$71½; PARIS, 4m/s. fcs. 3.70; 6m/s. fcs. 3.73.

Estimated Silk Stock, 22nd July, 1892:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	130	Cocoons	120
Filatures	780	Noshi-ito	2,280
Re-reels	990	Kibiso	1,620
Kakeda	145	Mawata	56
Oshu	155	Sundries	124
Taysam Kinds	—		
Total piculs	2,200	Total piculs	4,200

TEA.

Considerable activity in Tea, but buying is only partial. Some of our shippers appear to anticipate lower prices for the grades on offer, and are holding off accordingly. Should this continue long there may probably be a slight reduction in quotations, stock of second crop leaf being ample, and holders somewhat anxious to be moving.

	PER PICUL.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a transportful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

YOKOHAMA: SATURDAY, JULY 30TH, 1892.

SUMMARY OF NEWS.

A NEW Russian Minister has been appointed to Japan.

MORE than one hundred and sixty foreigners are now staying at Nikko.

FRESH dissensions have occurred in the Cabinet, but their outcome is still uncertain.

THE Japanese man-of-war *Yayeyama Kan* left Jinsen on the 23rd instant for Quelpart.

THE *Naniwa Kan* and the *Takachiho Kan* arrived at Kobe on the 21st inst. from Hakata.

PRINCE IWAKURA, President of the Peerage Bureau, and family, proceeded to Dzushi on the 22nd inst.

PRINCE DE CARIATI, formerly Italian *Chargé d'Affaires* in Japan, has been decorated by H.I.M. the Emperor with the Third Class Order of the Mirror.

THE traffic between the Isobe and Yagogawa Stations has been suspended, in consequence of damage to the railroad caused by the severe rains of the past few days.

THEIR Imperial Highnesses Prince and Princess Komatsu (junior) proceeded to Numadzu on Saturday. H.I.H. the Emperor Kuni has left Tokyo for the western capital.

THE promoters of the Johoku Tramway Company have been permitted by the Government to lay lines of tramway between Mito and Ota (4 *ri*) in Ibaraki Prefecture.

THE net profits of the Shinagawa Electric Light Company, Tokyo, during the past half-year amounted to yen 2,774,701, of which yen 458,928 was set apart as a reserve, yen 270,000

as remuneration to officers, and yen 2,000,000 as a dividend to be declared at the rate of 5 per cent. per annum, yen 45,773 being carried forward to the new account.

THE Communications Department intends to construct a new light-house at Rijiri in the Kitami province and another at the Shiokubi Point in Toshima province, Hokkaido.

THE members of the Central Tea Traders' Association have decided to despatch deputies to the World's Fair, and have elected Messrs. Ito Kumao, of Kyoto; Yamaguchi Tetsunosuke, of Chiba; and Ito Ichibei, of Shizuoka, for the purpose.

THE Minister of State for Education proposes to erect an industrial school in Osaka. The construction of the buildings will be commenced in the next fiscal year, the school being opened in the following year. The cost is estimated at yen 93,000.

TRAFFIC on the Maiko and Suma section of the Sanyo Railway line and the Yuki and Kowashima section on the Mito Railway line, which was interrupted in consequence of damage caused by the recent heavy rains, was resumed on the 26th inst.

OWING to the recent incessant rains the Saka-wa, Minami-tama, Sagami, and Banui river in Kanagawa Prefecture, have overflowed, and many bridges have been washed away. The embankment to the length of 120 *ken* (one *ken* = 6 ft.) has been broken at Soga-mura in the Ashigara-shimo District.

DETAILS of the damage caused by the recent severe inundation in Okayama Prefecture state that the total number of houses submerged was 5,000, persons drowned over 110, houses totally destroyed 500, houses partly damaged 600, and houses swept away 200. An extensive area of cultivated land was also rendered useless.

THE regular general meeting of shareholders of the Tokyo Gas Works Company was held at the Bankers' Club on the 24th inst. the chair being occupied by Mr. Shibusawa Yeiichi. The total revenue during the first half of this year was yen 50,252,505, and the expenditures amounted to yen 29,327,924, leaving a profit of yen 20,924,581. A dividend was declared at the rate of 8 per cent. per annum.

THE returns of the damage by the recent severe gale in Nitta District of Gumma Prefecture are as follow:—Houses totally destroyed, 104; houses partly damaged, 8; lives lost, 5 men and one woman; persons injured, 30; out-houses blown down, 46; sheds damaged, 15; godown ruined one; shrines destroyed, two; temple destroyed, one; and one school partly damaged. Several bridges were also carried away.

A VIOLENT gale, unprecedented in point of severity for many years, was experienced in Tokushima Prefecture on the 23rd inst. The wind blew from the south-eastern quarter with the velocity of 74 miles per hour, while waves rolled into Tokushima, inundating a large number of buildings. The tempest lasted until the following morning. The persistent rains of the past few days have caused the rivers to overflow, and some 41 corpses have been discovered.

THE half-yearly general meeting of the shareholders of the Mitsui Bank was held on the 20th inst. The total receipts during the past half-year were over yen 200,000, of which, after deducting sums for miscellaneous expenses, yen 40,000 was set apart as a reserve, yen 30,000

for the payment of doubtful debts, yen 32,000 as remuneration to officers, and yen 80,000 as a dividend to be declared at the rate of 8 per cent. per annum, yen 4,000 being carried forward to the new account.

A TELEGRAPHIC message from Osaka reports that the Osaka Shosen Kaisha's steamer *Inagawa Maru*, which left Hyogo on the 23rd inst. at 5 a.m. for Tamashima, in the province of Bitchu, was caught in a strong tempest off Harima-nada, and totally wrecked off the shore of Shodo Island, at 11 o'clock the same forenoon. All of the 24 passengers with the exception of two persons, and the whole of her crew except a sailor and fireman are missing. The mails and other cargo were lost. The *Setsu Maru* has been despatched to the spot. The *Inagawa* was built in 1890, and her gross tonnage was 952 tons.

THE Emperor, attended by H.I.H. Prince Fushimi, Marquis Tokudaiji, Grand Chamberlain; Viscount Hijikata, Minister, and Mr. Hanabusa, Vice-Minister for the Imperial Household; Viscount Nishiyotsutsuji, a Chamberlain; Mr. Tanaka, a Secretary of the Imperial Household Department; Dr. Aiso, an Imperial Court Physician; and Lieutenant Hirohata, an Assistant Chamberlain, proceeded to the Military College on the 23rd inst. The Imperial Party arrived at the institution at 9.10 a.m. After a short rest, the Emperor witnessed the drill of students of the Infantry, Artillery, and Cavalry Departments, under the command of, respectively, Katsura Takeichi, Hishida Kikujiro, and Kita Shintaro, Graduates of their corresponding courses. His Majesty also attended the ceremony of conferring diplomas on the Graduates and listened to lectures by Katsura Takeichi, a Graduate of the Infantry, and Hishida Kikujiro, Graduate of the Artillery Departments. Amongst those present were Viscount Takashima, Minister of State for War; Lieutenant-General Miyoshi, Chief Military Inspector; Lieutenant-General Kawakami, Vice-Director of the General Staff Office; Major-General Shigeno, Inspector of Colleges and Schools; Major-General Kuroda, Inspector of the Field Artillery, and several other gentlemen. The Emperor left for the Palace at 11.20 a.m.

THE Import trade appears to be much the same as recently reported. Sales of Yarns have been small, and though the demand for Cotton Goods has not been extensive generally, there have been large purchases of heavy Shirtings. Woollens have scarcely been looked at, though enquiries are made for goods to arrive. Very little doing in Metals beyond a few retail bargains, Wire Nails being the article most in demand. Nothing special to report in Kerosene, but a fair trade at late rates continues. Two arrivals reported this week, and several vessels are close to destination. In the Sugar market Browns are dull, and prices somewhat easier; but Whites have improved in value, and the trade for these is good at hardening figures. The Silk business has been brisk, and prices are well maintained. The destination of the bulk of shipments has been the States, though Europe took a fair quantity of the purchases of the week. The real "Shinsius" show good quality and colour, and during the next few weeks the very finest of the prime "chops" are expected to be placed upon this market. A fair business has been done in Waste Silk early in the week, though slackness has set in in the last few days. The scarcity of the best grades of Tea has sent prices up from one to two dollars per picul, but there is a good supply of common second crop. Exchange has fluctuated with silver in London, and remains very low.

EDITORIAL NOTES.

THE GRADUATION CEREMONY OF THE "MEIJI JO-GAKKO."

THE fifth semi-annual graduation ceremony of the *Meiji Jo-Gakko* took place on the evening of the 19th instant in the hall of that seminary at Shimo-Rokubanchō, Kojimachi-ku, Tokyo. Established eight years ago through the exertions of one lady, the late Mrs. Kimura Tō, who combined the best qualities of a genuine Japanese woman with the aspirations of the Christian creed, the school at once began a prosperous career and has since made steady, through unostentatious, progress, until it now occupies a unique position, not only among Japanese female schools, but in the wider sphere of general female education and social reform. The high rank attained by the school is no doubt in a large measure due to the zeal of the Principal, Mr. Iwamoto Yoshiharu, a man scarcely thirty years of age, who has consecrated his life to the cause of female education and social reform. The *Jo-Gaku Zasshi* (Woman's Magazine), the first journal of the kind in Japan, is regarded as the organ of Mr. Iwamoto and his disciples of both sexes. The school is apparently conducted on strictly economical principles, and whenever its income from fees does not suffice it is indebted to the generous contributions of about a dozen Japanese Christians. The basis of education is strictly upon liberal Christian principles, but special care is taken to instruct the pupils in their national literature and history, as well as in English and all the useful branches of knowledge commonly taught in schools of the kind. There are two principal courses, the Higher and the Ordinary, the former extending over two years and the latter over three. To the Ordinary course are admitted only such girls as have passed through the higher primary school or attained a corresponding degree of proficiency; the Higher course is open only to graduates in the Ordinary course. Besides these courses, there are the Teachers' course, the Stenographic course, the Fencing course, and the Musical course. An Elective course is also provided for pupils of advanced age.

The ceremony commenced at a little past 7.30 p.m. The Principal, Mr. Iwamoto, briefly but clearly reviewed the past history and the present position of the school. He laid special stress upon the fact that, although Christianity is the basis of the education given in his school, religious propagandism does not constitute an object, nor is any preference shown to any particular denomination. The aim of the school, he declared, is to equip pupils for the duties which they will be called upon to discharge as wives and mothers. He claimed credit for endeavouring to avoid the extravagances of the extreme schools of thought on the subject of female education. His address was followed by singing and reading of essays. The latter were three in number, all in Japanese of really admirable excellence, the fair essayists being Miss Hara Mine, graduate of the Ordinary course, Miss Yoshioka Toshi, graduate of the Teachers' course, and Miss Hirose Tsune, graduate of the Higher course. Then came performances on the *koto* by Misses Shijo Kane, Anayama Matsu, and Hidaka Mitau, graduates of the Ordinary course. After these performances, diplomas and certificates were presented by the Principal to the graduates in the various courses; there being 3 in the Higher course, 27 in the Ordinary course, 6 in the Teachers' course, 3 in the Elective course, 7 in the Stenographic course, 11 in the Fencing course, and 4 in the Music course. The Principal then spoke a few words of advice to the happy recipients of diplomas; and Miss Matsui Man addressed them on behalf of the students. A valedictory address was then delivered by Miss Sakaki Natsu, graduate of the Higher course, who in touching terms thanked the members of the faculty for their unceasing zeal and kindness in teaching and guiding the pupils. After a recess of some ten minutes, the guests were treated to an interesting display of the pupils' skill in the use of halberds (*naginata*) and in the art of *yawara*. It is claimed for these exercises,

as taught in the school, that they are highly beneficial, not only to the health of the pupils but to the steadying of their minds. So far as the use of the halberd is concerned, we entirely agree with Mr. Hoshino, the teacher of these exercises, as to its beneficial effects; but as to *yawara*, we are perplexed to understand how the study of sleight of hand can contribute to a young lady's useful accomplishments. A performance on the *Satsuma ōwa*, connected with a stirring scene in the history of the heroic and loyal family of Kusunoki, by Mr. Yamashita Risuke, brought the evening's programme to a successful conclusion at a few minutes past 11 o'clock.

TOKYO WATER WORKS.

It seems that the Tokyo Water Works have at last reached the stage of practical inception, for tenders for supplies of iron pipes have been invited from twelve foreign firms, of which five are British and three American. The specifications—with regard to the manner of compiling which some not very flattering remarks are made—call for tenders under two different conditions, namely one for delivery of the pipes in Japan, and the other for delivery at the place of manufacture. This dual requisition is not easy to understand. If Japan were to take delivery at the place of manufacture, she would have to accept all the risks of bringing out the pipes, and would moreover have to provide for their inspection before shipment. Of late years she has persistently and prudently refrained from anything of that kind, and has stipulated for delivery of all her foreign purchases at this side. Except as a matter of curiosity, therefore, she might apparently have dispensed with the alternative estimate in the present instance. The specification stipulates that every pipe must have certain ideographs cast on it, in addition to a number; a precaution, doubtless, against theft. This call for tenders puts an end to the controversy, so ardently carried on by silly patriots, who advocated either that the iron pipes should be manufactured in Japan, or that the material should be pottery—the latter proposal an engineering absurdity, and the former a piece of wild extravagance. Osaka is manufacturing some pipes for her own use, we believe. It is not denied that they cost more than imported pipes, but there is some incomprehensible talk about using up scrap iron, keeping money in the country, and so forth. In short Osaka is bent upon purchasing her own experience out of her own pocket, and since she pays the money, she is entitled to make the choice. We have not heard where the tenders for the Tokyo pipes are to be opened. In the case of Yokohama, sealed tenders had to be sent from England, and were not opened until they reached the hands of the Governor of Kanagawa, who then made his selection—a method that obviated all possibility of "squeezes." It is to be hoped that the Tokyo authorities have followed that wholesome example.

THE RECENT CHANGE OF LOCAL GOVERNORS.

It will not unnaturally be concluded by the public that the recent changes of local Governors is to be regarded as a result of the complaints preferred by the Opposition about the procedure of these officials in the last general elections. Coming immediately after the appointment of Mr. Kono to be Minister of State for Home Affairs, and the transfer of Mr. Shirane from an important executive post to a sinecure—measures which are generally taken as indicative of a disposition to conciliate the Opposition—the changes of local Governors are bound to be construed in the sense of an admission that the Opposition's accusations of official interference were not entirely baseless. The *Nichi Nichi Shimbun* takes some pains to combat any such inference, and asserts that the changes are quite independent of the elections; but truly we cannot see why any contention so radical need be seriously advanced. In the first place, no sober-minded person will believe that officialdom was entirely immaculate in the elections. Such a cry of indignation as the Opposition raised cannot possibly have been wholly groundless. There

must at least have been indiscretions on the part of some Governors. At all events, the people believed that there was indiscretion, and there resulted, in some cases, a mood of indignation not by any means conducive to the smooth discharge of local administrative functions. The Central Government has to take note of these things. It would be governing very ill did it persist in imposing upon the inhabitants of any Prefecture a Governor whom they had learned, rightly or wrongly, to dislike and distrust. One duty of a Governor is to contrive that he shall be neither disliked nor distrusted, and, if he fails in that duty, his removal becomes imperative. We cannot see why it should not be frankly admitted that the recent changes of Governors are a direct sequel of the agitation about official interference in elections. If the Cabinet, making the changes at such a time, expected them to be construed in any other sense, it must be remarkably confiding.

BUDDHIST MARRIAGES.

BUDDHISM has always shown a tendency to adapt itself to the spirit of the age, and to supply deficiencies in its own ritual by borrowing from other creeds. The latest instance of this, we gather from the pages of the *Bukkyō*, has reference to the method of conducting marriage ceremonies. Two cases are given in which the marriage rites were conducted in quite a new fashion. One took place in Harima on January 15th, and another in Tokyo on June 6th. On the latter occasion the famous Shimaji Moku-rai was the officiating priest. The address delivered to the married couple resembled in form that used at Christian ceremonies. The happy pair were told that their union was the result of recondite causes; that its source was to be traced to a previous existence. The marriage was to be regarded as one of the Divine methods of propagating virtue. "I pray," said the priest, "that your mutual relations may be as close as those of fish and water, that the harmony between you may be as perfect as that of the *kin* and the *koto* (the harp and the lyre). I pray that your lives may ever show the gratitude you feel to your four benefactors (Divinity, parents, superiors, and country). In the presence of the Divinity whom we worship, and of the congregation now assembled, I charge you not to break the vow made here to-day." It will be seen that the above contains in the main all the elements of the Christian ceremony. In both the Buddhist and Christian ceremonies marriages are said to be divinely ordained, and their object is said to be the promotion of virtue. In both ceremonies the married couple are exhorted to live together in harmony, and in both ceremonies, in order to show the binding nature of the marriage vow, they are reminded that it has been made in the presence of God and of assembled friends. Christians may say that the allusion to a connection of marriage with a former life is not warranted by Christian doctrine. But when carefully analysed there is little difference between this notion and the Christian one that "marriages are made in heaven." In both doctrines the idea of predestination is present, in both cases the agents are represented as fulfilling divine decrees.

SECRET LANGUAGE.

LOVERS of the curious among students of the Japanese language might make an interesting collection of words and phrases used exclusively by certain classes. *Jinrikisha* coolies, thieves, and small traders, all have their secret codes which are unintelligible to the uninitiated. We have paid no special attention to the subject, and are indebted to a Japanese friend for the following specimens. *Jinrikisha* drawers, when conversing together as to the fares to be charged, frequently employ the following equivalents for the words in ordinary use. For 1 cent, *oji*, 2 cents, *jiba*, 3 cents, *yami*, 4 cents, *dari*, 5 cents, *genko*, 6 cents, *ronji*, 7 cent, *seinan*, 8 cents, *bando*, 9 cents, *kiwa*, 10 cents, *dote*, 15 cents, *dote-gen*, and 20 cents, *furi-kan*. Some of these terms originated with the *Kago* bearers. For instance, the term *dote* represented the fare they used to charge for taking a passenger to

the Yoshiwara *dote*, and *kiwa*, 9 cents, the charge for any place near. *Furi* was used as the equivalent of 2 in Tokugawa days, hence *furi-kan*, 20 cents. Some words in use among pick-pockets and thieves are, *kan*, in the sense of taking, *takai*, to indicate impossibility of securing an article; *yabai*, as an equivalent of *abu-nai*; *gata* for official; *dekureru* for *kiwotsukeru*; *dekiga mawatta* for a detective is on the look-out; *sage* for onward appearances; *kamaru* for come, and *doroku* for *bonyari*, a state of brown study, or reverie, in which pick-pockets take a deep interest.

A SERICULTURAL ASSOCIATION.

THE sericulturists of the south have formed an association which appears to be of considerable magnitude. Its members are drawn from Kwansei and Kiushu, and it held a meeting on the 16th inst. in the Chamber of Commerce rooms in Kobe. The prefectures of Shiga, Faku, Shimane, Ishikawa, Nara, Hyogo, the towns of Osaka and Kyoto and so forth were represented, and experts from the Department of Agriculture and Commerce, as well as from the Hyogo prefectural offices, were present. The meeting decided that a document of programme and principles drawn up by delegates assembled at Nara should be rescinded, and that application be made to have the organization of the Association promulgated by ordinance or notification; also that steps be taken to compile rules for combining the various silk guilds in the prefectures and cities of Kwansei. A committee of five was elected to prosecute this programme, and a scheme of general rules for the *Kwansei-Sangyo-Kai* was drawn up. We need not reproduce these rules, but may mention that the office of the association is to be in the rooms of the *Shinyei Kaisha*, Sakaye-cho, Sancho-me, Kobe, and that the establishment of an inspection warehouse in that town is also contemplated.

THE YAMAGUCHI ASSOCIATION.

FOR many years a semi-literary and semi-political Association has existed, known as the *Bocho Gakuyu-kai*. The term *Bocho* represents the two provinces, Suwo and Nagato, of which the prefecture of Yamaguchi is composed. The members of the Society number some 600. Among them we find the names of such men as Counts Ito and Inouye and Viscounts Sugi and Shishido. As is usual with such bodies, the sentiments and views of the older and younger members of the association are at variance. Divers signs of friction have displayed themselves from time to time, but not until recently has the tension been so strong as to lead to open conflict. The society has for some time published for circulation among its members a monthly journal. The last number of this publication, issued on the 7th instant, contained a violent attack on Counts Ito and Inouye and other statesmen, under the title of "The False Prophets." The magazine has been suppressed, but the discordance between members of the party still continues, despite the efforts of Count Yamada and others to bring about an understanding.

THE "NICHU NICHU SHIMBUN" AND THE "TOKYO SHIMPO."

By the cessation of the publication of the *Tokyo Shimpō* the *Nichi Nichi Shimbun* is a great gainer, since it secures as editor the services of Mr. Asahina Chisen, hitherto editor of the former journal. In announcing the fact, which it does with natural satisfaction, the *Nichi Nichi* explains that the department of editorial paragraphs is to be under Mr. Tsukahara, the general business of the office being managed as heretofore by Mr. Koshiyama Tachisaburo. It is a departure in the right direction to find a Japanese journal publicly naming the person responsible for its miscellaneous items. Up to the present editors have too often showed a disposition to think that their responsibility ceases with the leading articles, and that if something erroneous or disgraceful appears in the miscellaneous columns, they can escape the blame by pleading ignorance. Mr. Asahina publishes a brief statement in connection with his entry into the *Nichi Nichi's* staff. The gist

of what he says is that the policy of the *Nichi Nichi* has hitherto been virtually identical with the policy of the *Tokyo Shimpō* under his control, and that he will continue to follow the same lines.

* * *

The *Fiji Shimpō* refers to the demise of the *Tokyo Shimpō* in an interesting article. Our contemporary repeats what we have often ourselves noted, namely, that among the vernacular newspapers there never yet has been a genuine supporter of the Government—a Government organ in short. There have been newspapers which reflected the sentiments of this or that particular Minister, but not one that espoused the Government's cause as a whole. An example of this can be adduced from very recent experience. When Cabinet Ministers were employing all their rhetoric and arguments to induce the Diet to reject the Bill for postponing the operation of the Civil and Commercial Codes, the *Tokyo Shimpō* and the *Nichi Nichi Shimbun*, which were supposed to be edited in support of the Government, did not hesitate to advocate the Bill in the strongest terms, and to urge the imperative necessity of revising the Codes before putting them into operation. These two journals, therefore, were not concerned to assist the Government, but devoted themselves to ventilating the views of a coterie of statesmen outside the Government. The *Fiji* says that there was lately talk of establishing a genuine Government organ, but that the project was wisely abandoned, because, with things as they are now, to get the name of being an official organ is to lose subscribers, and without a wide circulation the influence of a newspaper is small. We do not doubt the correctness of the *Fiji's* view, but it only confirms the old adage that logic has no home among the masses. Every one of the party organs in Japan at present is subsidized. Not one of them is self-supporting. Yet people read these papers as though they contained expressions of independent and unbiased views, whereas, if they suspect a journal of receiving pecuniary aid from the Government, they call it a paid advocate. The truth is that no journals are so utterly partial, so irrevocably enslaved to the constituents for whom they cater, as are the so-called party organs. The measures of an Administration, supposing it to be honest and fairly capable, are conceived with a view to the country's good and are based upon the fullest information obtainable, as well as upon recognised legislative principles. They are not framed for selfish purposes or aimed at the retention of political power, and a newspaper can endorse them with perfect conscientiousness. But the arguments and measures of a political party in opposition are prompted by one unvarying motive, the overthrow of the Government. Any journal published in the interests of such a party is absolutely pledged to condemn the Administration's acts, and to find some means of proving them faulty. There is no literary slave bound by such inelastic shackles as the slave of a political party in opposition. A salient example is furnished by a section of the foreign press in Japan. The newspapers constituting that section are implacable foes of every Japanese Cabinet which seeks to effect Treaty Revision. To give weight to their hostility, the most effective method is to condemn and sneer at everything Japanese, irrespective of its merits or of their own competence to criticise it. In pursuing this role they find themselves in touch with the superficial and the truculent elements of the foreign community, and for the support of these elements they cater unceasingly. They dare not adopt an independent and impartial line for one moment. If they chance to stray from the track of perpetual condemnation and ridicule, they are rudely recalled to it, even at the expense of publicly eating their own words. No stronger proofs of their unhappy subservience could be adduced than their inartistic efforts, in season and out of season, to proclaim their own independence, and their besetting tendency to attribute mercenary motives to all who disagree with them. We take these journals to be a type—though a very degraded

ed type, it must be admitted—of party organs in general. Independence, such as the *Fiji Shimpō* has itself attained, is of course the ideal condition of a journal. But in the Japan of to-day independence can be secured only at the cost of colour. If a journal gives to the Government even such support as the *Tokyo Shimpō* and the *Nichi Nichi Shimbun* gave—support liable at any time to be converted into opposition, as was the case with respect to the Civil and Commercial Codes—it is at once called a *Go-yo Shimbun*. If a journal espouses the Government's cause at all, it is suspected of receiving official aid. Independence is a synonym for condemnation of everything done by the Cabinet, unless it be the almost colourless independence of the *Fiji Shimpō*. In other words, an editor must make up his mind that no step can be right if taken by the statesmen who have governed Japan successfully for the past twenty years, and whose practical and moral competence to administer the empire's affairs is beyond dispute. To oppose these men is to be an independent patriot; to support them is to be a mercenary renegade. A queer state of affairs, in truth. But the home of logic is not with the masses.

RELIGIOUS CONGRESS AT THE WORLD'S FAIR.

THE REV. JOHN HENRY BARROWS, D.D., chairman of the general Committee on religious congresses in connection with the World's Fair, reports a most favourable response to the plan of holding a Parliament of Religions from August 25th to September 3rd, next year. From Iceland to Australia, scholars of all religious faiths are looking forward with great interest to this phenomenal convention. A large representation is promised from Japan. The journals and missionaries and many of the native scholars of India, are discussing the plan with growing interest and favour. The Hon. Rai Maya Das, a British commissioner, and magistrate of the Punjab, writes that incalculable good will come from this conference, in a free country of the representatives of various religions. The Hindus of Madras think that the Parliament will mark an epoch in the moral history of the world. Among the recent additions to the advisory council are Dr. Waldenstroms, of the Swedish Parliament; Dr. Hjattalin, of Iceland; the Bishop of Sydney, New South Wales; Dr. Blodgett, of Peking; Dr. Frommel, court preacher, Berlin; Mr. Mokurai Shimaji, a leading Buddhist scholar, of Tokyo; Professor James Bryce, George William Curtis, Thomas Wentworth Higginson, Dr. H. H. Jessup, of Syria; George W. Cable, Professor A. B. Bruce, of Glasgow; President Dwight, of Yale; President Schurman, of Cornell, and the eloquent Mr. Mozoomdar, of Calcutta.

THE HIOGO HOTEL.

An extraordinary meeting of the shareholders of the Hiogo Hotel was held on Wednesday at the Municipal Hall, Kobe to decide: (1) The desirability of appealing against the judgment in the case of the Hiogo Hotel, Limited, against Bond and others. (2) The desirability of winding up the Company voluntarily by Special Resolution under Section 117, Subsection 2, of the Ordinance of 1865. (3) The desirability of winding up the Company by an Extraordinary Resolution under Section 117, Subsection 3, of the Ordinance of 1865, on the ground that it has been proved to the satisfaction of the Shareholders that the Company cannot by reason of its liabilities continue its business, and that it is advisable to wind up the same. (4) To consider the advisability and feasibility of subletting the Hotel at a profit to the Company.—The chairman of the Board, Mr. E. H. Hunter, presided, and in his opening speech, as reported in the *Kobe Chronicle*, remarked that since the 5th of February last Mr. Creagh had worked against the company and Mr. Hughes, another promoter of the concern, had followed suit, yet they seemed to think that shareholders had nothing to complain of. A good deal had been said and written about the word "compromise," but the only offer of compromise which had ever been made was when Mr. Tison verbally offered, on behalf of Miss Bond, to release \$15,000 worth of the shares of

the late Mr. Johnson, not indeed to settle the whole action, but leaving the Company free to proceed against the other defendants. Mr. Tison made this proposal to Mr. Litchfield, who replied that if he talked about \$60,000 he would be nearer the mark. This was the beginning and end of the offers which had been made, and it had never been committed to writing. If the litigation had been one which the release of \$15,000 worth of vendors' shares could have settled, it ought not and never would have been entered upon. On the day after the last general meeting on February 5th Mr. Creagh emphatically remarked, "If by holding up my little finger I could bring about a settlement, I would not do it," this statement being made to the Company's solicitor and afterwards repeated on several occasions. The directors had at all times been open to reasonable proposals. Before Mr. Johnson died he had made a reasonable proposal, and a settlement would doubtless have then been arrived at, but for Mr. Johnson's suicide, an event which no one could have foreseen. He could only wish that Johnson had had better counsellors about him, some friend on whom he could have relied, so that he could have been better guided, instead of being allowed to drift away into a sea of trouble and so commit the rash act which the directors had never ceased to deplore. The Chairman completely exonerated Mr. Johnson from any blame in the drawing up of the prospectus, for when he found that there had been mistakes made he was ready and willing to do the right thing. The business of the Hotel was not profitable by any means, and his (the Chairman's) individual opinion was that they would eventually be forced to wind up. If Mr. Creagh and Mr. Hughes were willing to back up their evidence by coming forward with some proposition for taking over the whole concern, and working it for the benefit of the Company, and the satisfaction of the shareholders, their proposition would receive every consideration at the hands of the directors. The directors did not favour an appeal against the jury's finding, but upon the other items on the notice paper they would be glad to have the views of shareholders and would welcome an addition to their number.—Mr. Lucas, Chairman of the Shareholders' Committee having given an exhaustive resumé of the whole proceedings since the first private meeting of shareholders on 26th Nov., 1891, down to the present time, said: Recent events had in no way affected the opinion first expressed, and the Committee still felt, as they did then, that the shareholders were the victims of the most wilful and deliberate deception and negligence which ever attended the floating of a public company. Having referred to several points that had been discussed both before and after the trial, Mr. Lucas said there was overwhelming evidence to prove that the late Mr. Johnson stated, in the presence of Mr. Hughes and others, that he decided to turn the Hotel into a Company because it was a losing concern. If attention had, at the trial, been drawn to these and other important points, so much stress could not have been laid on the magnanimity of poor Johnson's offer to run the Hotel for a period of years. Mr. Creagh was mainly responsible, as solicitor to the Company, for the reprehensibly loose terms under which Mr. Dyer, the former manager, was engaged, and for the ill-advised manner in which he was discharged, involving the Company in an unnecessary expense of \$5,000. No proposals for a compromise had ever been received by the Committee, and there was no foundation whatever for the statement made by Counsel for defendants that in response to overtures to plaintiffs the Shareholders' Committee replied that if \$60,000 were offered, proposals might be favourably considered. Mr. Lucas concluded by moving that the meeting stand adjourned till an early date, to be fixed by the Directors and Shareholders' Committee, which would probably be some day in next month.—Mr. Th. de Berigny seconded the motion.—Mr. Kobayashi (J. K. de Becker), said that if no more evidence could be adduced than the miserable materials produced before the Court in the late case, an appeal would be useless. As

to the second and third points it seemed unwise to so act until every other legitimate means had been tried. With regard to the fourth proposition, if that could be done, it would be the best way out of the trouble, but who was going to undertake such a forlorn hope? Having criticized pretty freely the prospectus and the motives which led to its compilation, as well as the evidence given at the trial, the speaker concluded: The public has been preyed upon the last two or three years with share companies in Japan which have only proved a fiasco, and it is time an example should be made of persons who countenanced or lent their aid to bolstering up such concerns. An attempt should at least be made to fix the responsibility of the position on the Provisional Directors, who could not escape the charge of gross carelessness and neglect in office, at least. They had no expert's opinion, they could have had no reasonable ground to believe the statements made to them when they said that they investigated nothing and took everything on trust and hearsay. They had no official documents to help to substantiate their statements, they allowed Mr. Johnson to make an extra \$4,000 out of the Company, and altogether they had misled the public so seriously that he believed the shareholders had the elements of a very strong case behind them which should be worked up in the interests of common fairplay and justice.—(Applause).—Mr. Creagh, in reply, stated that up to the time when he quitted the Board he had done his best toward effecting a compromise. With regard to Mr. Dyer's agreement, that was effected by Major Hooper, in San Francisco, and he had nothing to do with it whatever. As to Mr. Dyer's discharge he still considered it to be a judicious thing.—A conversation arose as to whether a compromise had ever been suggested. Mr. Lucas having no recollection of it, while Mr. F. Walsh said that he himself had suggested to Mr. Lucas that Miss Bond was willing to compromise for £25,000 worth of shares, and Mr. Creagh added that if the suggestions had been met in a proper spirit they would have resulted in an authoritative offer. Mr. Walsh said he must contradict the statement made that Mr. Johnson had no knowledge of the counter-proposal made by the Shareholders' Committee. On the morning he left Kobe he received a letter from Mr. Drummon in which the gist of the proposal was given. One hour afterwards he made his will and two hours after he left Kobe.—After further conversation upon the question of the compromise, Mr. Penney said that Mr. de Becker had thrown out a suggestion with which he must express his total disagreement. He had said that the company ought to proceed against the provisional directors, but such an action would be most unfair. The directors had gone into the business with the shareholders, they had worked without remuneration to make the hotel pay, and it would be decidedly unfair for the shareholders to turn round and try to fix the whole responsibility upon them. He was in favour of their dropping this talk about law and concentrating their efforts upon improving the hotel. He suggested various improvements at slight cost, and, upon being asked, expressed his willingness to serve as a Director.—The meeting soon afterwards adopted the motion for adjournment and dispersed.

THE EARTHQUAKE DISASTER PREVENTION COMMITTEE.

THE *Official Gazette* contains an announcement that Professor John Milne has been appointed in connection with the work of the Committee of Investigation for the prevention of earthquake disasters. We are curious to learn what this means. The actual words used are:—*Shinsai yobo chosa-kwai no chosajigyo wo zokutaku su*, which, literally translated, signifies "entrust (or commission with) the work of investigation of the Investigation Society for the Prevention of Earthquake Disaster." Elsewhere such an announcement appearing in an official gazette could only be read as conferring upon the person indicated competence to conduct and direct investigations. We trust that it may be similarly interpreted in this country, for if so it would

indicate a wholesome departure, in one quarter at any rate, from the groove into which too many Japanese of the rising generation have fallen—the groove of imagining that they are much cleverer than any foreign expert, and that the sooner the foreigner's aid is dispensed with, the more honoured will the nation be. It would be truly too absurd, if a man, whose reputation in connection with earthquake investigation is world-wide, did not receive practical credit in the very country where his labours have been carried on, but after the remarks made by Mr. Nakamura Yaroku and other members of the House of Representatives, we are prepared for anything. It may be confidently hoped, however, that the Imperial University will set the good example of demonstrating that the genuine votaries of science know no distinctions of nationality.

A word about the title of the above society. We translated it originally "Earthquake Prevention Society," and this title provoked some criticism, the critics not unnaturally contending that to prevent earthquakes was a rather tall programme for any association of human beings to propose to themselves. Probably the difficulty would have been avoided by the more liberal translation of "Earthquake Disaster Prevention Society." The word used is "*shinsai*," or earthquake calamity, and the idea of the title is evidently to suggest the prevention not of earthquakes themselves, but of the disasters they cause.

MILITARY RAILWAYS.

"THE War Department," says the *Kokkai*, after mature deliberation has decided to recommend the following system of railway, as necessary for strategic purposes:—

CHUO SYSTEM.

A line from Hachioji in Kanagawa Prefecture to Kofu.

A line from Kofu, *via* Iwafuchi in Shizuoka Prefecture and Uyeda, Matsumoto, and Shiojiri in Nagano Prefecture, to Nagoya.

LINKS CONNECTING THE CHUO WITH THE HOKURIKU SYSTEM.

A line *via* Gifu and Takata to Tsubata.

Lines connecting the Hokuriku with the Ou systems.

A line from Shibata in Niigata Prefecture *via* Aratsu and Wakamatsu to Koriyama.

OU LINES.

A line from Shirakawa in Fukushima Prefecture, *via* Sendai, to Koshiida.

A line from Aomori *via* Hiromaye to important places in the north of Morioka.

SO-BU LINE.

A line from Utsunomiya in Tokyo *via* Chiba to Kisarazu.

KIN-KI LINKS.

A line from Kyoto, *via* Sonobe to Maizuru, and a branch line from Sonobe *via* Fukuchiyama, and Shinoyama, to Himeji.

A line from Hachioji in Nara Prefecture, *via* Gojo, to Wakayama.

SANYO LINE.

A line from Mihara in Hiroshima Prefecture *via* Hiroshima, Tsuwano, and Yamaguchi to Bakan.

SHIKOKU LINES.

A line from Tokushima, Takamatsu, Marugani, and Kawanoye to Inaji. A branch line from Kawanoye to Kochi.

KIUSHU KOCHI.

A line from Kokura in Fukuoka Prefecture, *via* Iizuka, Kurume, Yamashita, Kumamoto, Udo, and Kajiki, to Kagoshima.

THE CAMERA STATESMEN AND THE CABINET.

"THE public," says the *Nichi Nichi Shimbun*, "have always imagined that an inseparable relation exists between the Camera Statesmen and the Cabinet, and that in every important contingency the advice of the former is sought by the latter. But careful reflection will show that there is a dividing gulf between the two. Personal friendship, indeed, has always existed, but in respect of political affairs the Cabinet Ministers never took counsel of the Camera Statesmen, except on the occasion of the Otsu incident, when the Emperor proceeded to Kyoto in person, and all the *Kurozaki* Statesmen repaired thither to assist in settling the trouble. For the rest, the Camera Statesmen have never done anything to aid those in power, yet the latter have been persistently called mere puppets

or reflections of the former, and the responsibility of everything is laid upon the shoulders of the *Kuromaku* coterie. The Cabinet Ministers, though charged with the duty of administering the weighty affairs of the State, are counted mere lieutenants. On the one hand, they are insulted; on the other, the Camera Statesmen are placed in an embarrassing position. Hence, at the recent conference, the Camera Statesmen definitely declared that thenceforth all connection between them and the Cabinet must be severed. The *Kuromaku* Statesmen never wielded any real power, but were always held responsible for measures of which they knew nothing, and when, to avoid this troublesome state of affairs, they left the capital, the public at once charged them with shirking the embarrassments of the nation. It was of course impossible that the personal intimacy between the *Kuromaku* Statesmen and their former colleagues could be severed at once, and of this fact the Opposition took disingenuous advantage to attack the Camera Statesmen by accusing them of interfering in, and saddling them with responsibility for, the doings of the Government. But the Camera Statesmen have now made it quite clear that, even as a point of friendship, their opinions must not be consulted in future. The Opposition have thus lost a weapon of attack. One of their organs, it is true, has tried to save the situation by alleging that Count Matsukata retains office on condition that at a time of crisis Count Inouye will come to his aid. The story is a baseless fabrication. Such a promise was not likely to be made at a moment of complete separation. Count Matsukata has announced his resolve to grapple with all difficulties, and there is nothing in his record to suggest that he dares not make the attempt without an ally in the rear. The term '*Kuromaku*' must henceforth be dropped from the vocabulary of the Opposition."

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

THE 103rd half yearly meeting of this Company was held at the Company's offices, 122, Leadenhall Street, E.C., on the 4th June, Sir Thomas Sutherland, K.C.M.G., M.P., in the chair. The Chairman, after a few prefatory remarks said: We are able to declare our usual interim dividend at the rate of 5 per cent. upon the preferred stock, and at the rate of 7 per cent. upon the deferred stock, and I am not without hopes, notwithstanding a considering number of features of a discouraging kind, that we may be able at the close of this year somewhat to enlarge the figures of the division which we now propose on the deferred stock.—(Applause.) At the same time, it is hardly necessary for me to point out to you of what you are no doubt fully aware, viz., that that great boom in our commercial affairs which took place some three or four years ago appears at the present moment to have reached its maximum, and now to be in more or less a state of recoil. I am glad to say that we have abundant evidence, however, that the internal state of trade in this country is still exceptionally good, and even the external trade, the foreign trade, the export and import trade, in which we as shipowners are more particularly interested, would still be considered in a highly satisfactory condition, even if it shows a certain recoil from the high figures which had distinguished it during the last three or four years. In the year 1887 the total amount of the exports and imports of this country was £643,500,000. In the year 1890 the total amount of the same exports and imports amounted to £749,000,000, showing in the course of three years no less an increase than that of £106,000,000 sterling. Eighteen months ago, we were in the fortunate position of being able, not only to declare a dividend of 13 per cent. upon our deferred stock, but in the still more fortunate position of being able to carry £85,000 to our reserve account in order to strengthen that important department of your affairs. In that year (1890) the freight receipts of the Company rose to the considerable figure of £1,250,000, a larger amount than the Company had ever earned in simple freight in any previous

year of its existence, and you will not be surprised to find that there has been a falling off since that date. Last year we announced that our freight receipts had diminished from the high point to which they had attained by something like £80,000, and now I am sorry to say that we have further receded. We have receded, in comparison with the year 1891, up to the present not so largely altogether in the matter of freight, and not at all, I am happy to say, in the matter of passage money, but we have receded by a combination of lower freight and lower exchanges to the extent of nearly £80,000 per annum as compared with the year 1891. Thus at the present moment our freight and exchange operations are really about £160,000 below the very satisfactory point to which they had attained eighteen months ago, viz., at September 30, 1890. I need scarcely say that this is owing to no fault of yours or of ours. The speaker, having referred to the great falling off in the values of freights and the glutting of the Colonial and Eastern markets, combined with the low rates of exchange, as the reason for the decrease in their returns, stated that at the present time there were 1,000,000 tons of shipping laid up in Great Britain, unable to find profitable employment. He then proceeded to refer with satisfaction to the fact alluded to in the report, namely, that the passenger traffic is maintained if it has not increased, although as against the maintenance of that passenger traffic we have the great disadvantage of receiving a large portion of our revenues in silver, and thereby lose a considerable amount of advantage which otherwise we should have gained. I need scarcely tell you that silver has, during the last six months, again "gone to the dogs," and that the rate of exchange in India, after rising to the respectable and creditable figure of 1s. 8d. the rupee, has sunk down to the utterly disreputable and unpardonable figure of something like 1s. 3d. After mentioning that the cost of the company's coal was now 10 per cent. cheaper than it was ten years ago, the chairman continued: It becomes necessary for me to refer very briefly to that paragraph in our report that speaks of the painful and unfortunate loss which we have sustained through default and forgery on the part of a man who was an agent of this Company. You will, no doubt, ask in your own minds how it is possible that in a well managed company such an occurrence as that could possibly have taken place without it being discovered sooner. Well, the story is an exceedingly sad one, and it is a sad one for me to have to have to allude to, because it is the story of a man whom I have known intimately, and who for 35 years filled an honourable position, with the confidence of everyone around him. It is the story simply of a man who lost himself apparently in a vortex of speculation, and who had recourse to forgery and to theft in order to retrieve his position. It is not the story of a man's extravagance or anything of that kind. It is simply the fact that this man, so well trusted, and I may say so well loved, gave way to a terrible temptation in order to retrieve losses which he had unfortunately incurred. The question I assume you to ask is, how such a thing can possibly have happened? Was there any visible or outward sign to the minds of the Directors that something was not quite in order? I will say that there was not only no outward and visible sign here, but that there was no outward and visible sign in the Colony in which he was your representative, for at the very time these things were happening, Mr. Woodin was appointed a director of the largest bank in China. At the very time that these forgeries were being committed his reputation was so high and so unassailable that he was placed, by universal acclamation, in that most honourable position. Had we any cause to be dissatisfied with the conduct of our affairs by this man? I say we had no cause whatever. We had written on one or two occasions complaining of the dilatory manner in which certain accounts had been rendered, and urging that these accounts should be sent forward with greater dispatch, but the explanations which we received were not only credible but

carried conviction to our minds, for we knew the agency had been somewhat overworked, and we knew he was one of those slaves to absolute labour, who would never ask for an addition to his staff if he could possibly dispense with it. Therefore the matters upon which we had any cause of complaint were matters of the most trifling character, and the explanation upon that point was abundantly satisfactory, because when the accounts arrived they were apparently in absolute order. How did this thing occur? It occurred in two ways—I may say in three ways. In the first place he had been himself for many years before he was appointed the agent of the Company the cashier, and he chose, with no dishonest motive I am sure, after being appointed to the superior position, to retain in his own hands the duties of cashier which he discharged for so many years with perfect integrity. That was one of the means which undoubtedly facilitated his subsequent operations. The next step in the history was his opening a second banking account, not in his own name, but in the name of this Company, a second and a secret banking account, whose existence was totally unknown to every member of the staff of that agency. By the manipulation of this account and a private account of his own in a different bank, a clever and ingenious manipulation as we now perceive it to have been, he contrived temporarily to get into his possession certain amounts of money which he represented to his staff as having been paid for supplies to certain suppliers, but which had not been paid. But the mere existence of this second account and its clever manipulation would never have allowed him to obtain the use of that money for more than a very limited time, but for a third and most important circumstance which enabled him to use our funds in a manner that I shall now describe. Some three or four years ago this Company sold to the Government of the colony of Hongkong a certain property of which they were the owners. A portion of the purchase money of that property remained for some time in the hands of the Government at a very respectable rate of interest. We were only too glad to leave that purchase money in their hands. Now, after that money had been in the hands of the Government for a certain number of months—I am not sure I am speaking correctly in saying it was in their hands for upwards of a year, but at all events for a certain number of months—we received a telegram from our agent asking whether we should be willing to allow that money to remain on deposit with the Government for a longer period. I need scarcely say we replied in the affirmative. That telegram was a forgery and a falsehood; the Government had paid the money, and the Government never asked for the money to be allowed to remain with them any longer. When the documents and correspondence came to England in which the particulars of this application and the reply of the Company were given, we found letters, purporting to be copies of letters received in the first instance from the Government to the agent, asking that the money might be retained, and from the agent to the Government saying he would refer the matter to his Directors and then send a reply; and then a further letter saying he had referred the matter to his Directors, and that the Directors were willing to comply with the wishes of the Government. I regret to say, as you are now aware, that all those documents were absolute forgeries to give an air of verisimilitude to this operation, and not only were these documents forged, but this man forged the initials of his chief assistant, of the man next to himself, our confidential employé, in order to prove that this was a veritable application. I shall not dwell further upon this matter. The result, I need scarcely add, is that it has consigned this man to a felon's cell, after a service with you certainly of 30 years of absolute and complete integrity. Now, how was this discovered? He was a man, as I have told you, a very glutton for work, and honest work. He was a man of iron constitution. For years he had never been absent from his post of duty; he had been the first to arrive in the morning and the last to leave at night.

The strain of his own misdeeds at last broke down this iron constitution, and he was compelled to ask for leave of absence to proceed to Japan, and although he had, by all modes and measures of a secretive character, done his utmost to conceal what he had done from the eyes of those who would be left behind, not 24 hours had elapsed before the chief assistant at the agency discovered something of a suspicious character which led him to make inquiries. His inquiries led him to the bank, where for the first time was disclosed the existence of this unauthorised second banking account, and from that moment the whole story became more or less clear. I am quite sure that there were no steps that we could have taken to avert this misfortune, and we do not hold responsible at all any member of the staff by whom the Hongkong agency was worked at that time for circumstances which they could not possibly avert in any shape or form. The chairman, in conclusion, made mention of the new addition to the fleet and the expiration of the Royal Italian mail contract. The dividend motion was carried, and Mr. H. E. Saunders, Q.C., was elected one of the company's auditors.

DISTURBANCE IN ISHIKAWA PREFECTURE.

A RIOT of a somewhat serious character is reported from Ishikawa Prefecture. It appears that for some time a question of gradually growing acuteness has divided the people of the Nomi District with respect to recovering from the police a house in the Yamada Division, used by the latter as a station. On the 22nd instant at about 7 a.m., a number of men, who had worked themselves into a state of excitement over this problem, violently entered the police station in Yamaguchi Division and began to make a disturbance. The police, however, got the better of them without much difficulty, and arresting five, proceeded to escort them to the station at Arai. On the way a rescue was attempted by several hundred villagers, but the police stuck to their prisoners and managed to get them into the lock-up at Arai. The rescuers, however, were not to be gainsaid. They forced their way into the station, and being by this time some six hundred strong, succeeded in carrying off one of the prisoners. The report says that the police did everything in their power to appease the mob, but that the rioters becoming more and more violent, it was finally necessary for the constables to use their swords, which they did with such effect that one man was killed, two severely wounded, and several others received slight hurts. Eight constables were wounded. In the meanwhile other constables and commissaries had come to the scene, and the disturbance was finally quelled.

The rioting lately reported from Ishikawa Prefecture was renewed on the 24th. The police were escorting two of the ringleaders, who had been arrested on the occasion of the first disturbance, from Yamaguchi to Terai when about forty men, armed with cutting weapons, made their appearance and attacked the escort vigorously. A constable and one of the assailants were wounded, and one of the prisoners was rescued. With regard to the origin of these disturbances various stories are circulated. A leading vernacular journal alleges that attempts made by the police and the local officials to influence, in a pro-Government sense, voting for members of the Prefectural Assembly, is responsible for the trouble. According to this authority, the Radicals resented the conduct of the police, and adopted such decisive measures to signify their resentment that a collision ensued. Arrests made by the police led to attacks upon police-stations and to cuttings and wounding, and altogether the behaviour of the constables as well as of the local officials is represented in a decidedly bad light. The Governor, too, is said to have been waited on by a Radical deputation, the members of which protested against what was going forward, but the Governor pleaded his recent arrival in the Prefecture as an excuse for ignorance, and fur-

ther denied that any instructions warranting interference had been issued by him. On the other hand, official telegrams from Kanazawa put a very different complexion on the affair. They attribute the blame to the machinations of the Radical Club in the Nomi District, which endeavoured to exercise illegal pressure upon voters, and, being thwarted by the police, incited the *Yifu* partisans to make a raid upon the police-station. It is evidently out of the question to form any idea as to the exact circumstances of this unfortunate affair. Many arrests have been made—some accounts put the number at 30, others at 80 or 90—and as a searching investigation will doubtless be held, judgment must be suspended for the moment.

ELECTIONS IN HONGKONG.

HONGKONG conceived the idea—novel we believe—of taking a test vote to show how the Colony is disposed towards the parties now fighting for supremacy at the polls in England. The following is the result:—

The result of the polling to show the sympathy of the British residents with the different political parties now contending at the General Election in the United Kingdom was declared on Saturday evening, after the voting papers had been scrutinised by Messrs. Playfair and McCallum. Mr. H. E. Pollock acted as referee. The following is the result of the poll:—

Conservatives	218
Liberal Unionists	29
Gladstonian Liberals	95
Parnellites	6
Anti-Parnellites	2
	350

Eight votes were rejected. A telegram announcing the results was despatched to London.

This seems to us to be a capital scheme. British subjects residing in the East have lost nothing of their keen interest in home politics. Their exile forbids them to record their votes at the polls, but there is no reason why their voices should be altogether silent. Results such as that telegraphed from Hongkong must exercise more or less effect on public opinion in Great Britain. Two hundred and forty-seven votes for the Salisbury Government against one hundred and three for the Gladstonians, is very significant. Why should not Her Majesty's subjects in Japan follow this good example? We shall be glad to receive and tabulate any votes sent to this office, and if our local contemporaries do the same, the sentiment of Yokohama, Tokyo, and the interior may easily be obtained, when we do not doubt that Baron Reuter's Agent will gladly telegraph it home. The Greater Britain ought to make itself heard in such important crises.

CRUELTY TO ANIMALS IN CHINA.

WE take this from the *North China Daily News*:—

Last week Mr. James Acheson published in the *North-China Daily News* a communication on "Cruelty to animals" which has elicited an interesting leader in this morning's issue of the *Shen-pao*. Its editor, Mr. Hsia Tsu, writing in his own name, commends Mr. Acheson for calling attention to the plucking of pigeons alive by a Chinaman, and then launches into the subject of cruelty to animals in general—a theme on which moral reformers in this country are fond of expatiating, dwelling particularly on retributions which follow maltreatment of brutes, birds, and fishes, and sometimes, of mosquitos and other insects.

Mr. Hsia relates two examples that are new to me. A certain monk, who not only violated his vow of sparing animal life, but subjected animals to torture in order to render them toothsome, once roasted a tortoise alive by placing it in an oven which had an aperture through which it could thrust its head. When the animal, writhing in torture from heat and thirst, thrust out its head, his reverence poured soy and liquor down its throat, so that in eating he found it of delicious flavour. Now mark the retribution! Soon after his monastery took fire, and the stairs being in a blaze, he managed to escape the fire for a few moments by thrusting his head through a hole in a wall which opened into a soy store room. That condiment being the only liquid at hand for his relief it was syringed at his head and into his mouth until his body was consumed. He died, in short, in the same manner as the tortoise.

The other case was that of a hunter who maintained himself and family by shooting animals; he was punished in the person of his son, whose body was filled with ulcers, and in the centre of each ulcer was a fleshy protuberance, exactly like the shot which he employed in the chase.

Anecdotes like the above are fabricated from time to time, as cautions and deterrents, and perhaps they exert some influence, yet, while teachings of Buddhism and Con-

fucianism are opposed to endamage of animals, in no country is callous indifference to animal suffering greater than in China. Mr. Hsia cites several of the numerous examples that might be adduced confirmatory of his remarks. Purveyors of epicures and gourmets have various devices for imparting piquancy to animal food, in one example the breast being sliced out of a living fowl, and grilled the poor bird being left to writhe and leap, instead of receiving promptly a *coup de grace*. In another example we find the feet of living geese grilled, the bird being encaged during the operation, which is not completed until its oil has flowed down, saturating the feet, rendering them a much coveted delicacy.

It is not long since that the District Magistrate of Shanghai issued a proclamation aimed at suppressing cruelty to ducks that are brought to market, which shows that though Chinese statute law takes no cognizance of such offences, yet common law comes in for the protection of animal life. It is only necessary therefore that the Municipal Police be instructed to bring before the Mixed Court cases like the plucking alive of pigeons, to have the offender mulcted by the Chinese Magistrate, whenever the incumbent may be. I recollect hearing, many years ago, several native scholars joining in praising the administration of British law at Hongkong, when I informed them that a Queen's Road shopkeeper (a Chinese) had been fined for nailing a live rat to a board which he exposed to public view.

With these evidences of Chinese aversion to cruelty to animals, and innumerable others that might be adduced, what editor Hsia adds on the subject of cruelty to animals will seem incredible, but I only state facts that are recorded in Chinese books, and which have been communicated to me by travelling eye-witnesses.

In the north asses flesh *à la mode* is obtained from the wretched animal while it is still alive, by boiling! One shudders to hear of steaks cut from living animals as practised from Abyssinia to Szechuan, but suffering thus inflicted is trifling compared to that to which donkeys in the north of China are subjected.

The animal is fastened to stakes, boiling water is poured on as much of the body as there may happen to be demand for, the hair is removed from that portion and more scalding water applied until that much becomes edible. No more is sliced out than customers present require, from time to time as purchasers presented themselves the operation is resumed—the poor beast living for several days under the scalding and vivisection. All accounts concur in praising the flavour of this viand, which is prized by all, religious vegetarians alone refraining from its use.

Although belief in metempsychosis probably had most to do in causing abstinence from animal food in India, aided by a climate which rendered abstinence easy, it is not unlikely that gentle and humane natures like Shikamuni revolted at like sufferings inflicted on animals for food, and went to the opposite extreme of vegetarianism.

D. J. MACGOWAN.

Shanghai, July 11th.

ERRATIC JUDGMENTS.

ACCORDING to the *Asian*, they are nearly as bad off at race meetings in India for judges as they are for starters:—"Obliquity of vision in the judge's box causes unpleasant comment, as the verdict in the last Civil Service Cup amply proved. India, however, has a monopoly of such mistakes though not long ago we recorded a comic decision given in the colonies by a judge who had lunched not wisely but too well, and, when asked for his verdict in a race in which a bay and a grey passed the post locked together, sapiently hiccupped 'Shikewald's won.' Another curious *fiat* now reaches us, and this also comes from the Antipodes. At a recent race-meeting in Australia, the principal event of the day was won by a short head, but the judge, who, by the way, is one of the most respected men in the district, gave it a dead heat. A personal friend of the judge owned the horse that had really won, and he was not slow to tell his judge-ship that his horse had won by a couple of feet. To the owner's surprise the judge replied: 'Well, Bill, I know he did; but what is two feet in a two mile race? We'll have it over again.'

TORNADO IN SAITAMA PREFECTURE.

A TORNADO is reported from Saitama Prefecture. It occurred on the 23rd instant at 8.30 a.m., and had its origin in the Divisions of Nara and Nagai, whence it passed, *videlicet* the Onuma Division to Tosbu. Two persons were killed, about forty injured, and some forty houses were overthrown. There are trifling variations in the published accounts, but the majority of the vernacular journals agree as to the above.

It will be seen that the Saitama storm is spoken of as a purely local affair, but it is curiously synchronous with the typhoon which struck Japan on the 22nd instant, and which has been enveloping us with its rain-skirts during the past three days. This typhoon made its appearance in the neighbourhood of Formosa about the 19th instant, and thence travelling

in a northern and eastern direction, passed over Japan, striking Kiusiu on the 22nd; thence made its way to Okayama (in Bizen), where it did much damage; and then, taking a more easterly direction, crossed the north of Shikoku, developing great force at Tokushima, where it unroofed houses and caused the sea to inundate the town. Crossing to the Kii promontory, it passed up the Kii channel and struck Tsu and Yokkaichi with considerable force, reaching Nagoya early on the 23rd instant, and thence travelling by a route not yet clearly indicated, to Hokkaido, where it made itself felt at Sapporo on the 24th instant. No shipwrecks or loss of life at sea is yet reported. Saitama Prefecture (Musashi) lies quite out of the apparent track of this storm, yet we have the curious coincidence that while the typhoon was raging in Nagoya, the tornado was devastating Saitama. From the weather now experienced in Tokyo and Yokohama, it would seem that the typhoon is hanging about still.

VOTING BY ELECTRICITY.

THERE appears to be a probability of the Japanese Diet's being furnished with a complete novelty in parliamentary procedure. Some leading electricians, we read in the vernacular press, are discussing a device for rapidly obtaining the sense of a legislative assembly by means of electricity. After the problem had been variously debated, Mr. Yamakawa Gitaro, an assistant Professor in the Imperial University, set to work, and has now invented a machine which he has submitted for inspection by the Secretaries of the House. The idea of the instrument is to enable a member to record his vote without leaving his seat. Nothing could be simpler than the device. At one side of the dais behind the President's chair, a board would be let into the wall, measuring about 15 feet long by 5 feet deep. On this board would be written numbers from 1 to 500, and under each number would be a ball, also numbered. The balls would be movable by electricity, the connection being established (or severed) by pressing a button at the side of each member's desk, whereupon the ball corresponding to the desk would fall and roll at once into a counting box. After the "ayes," had voted in this way and their number been ascertained, the "noes" would similarly manipulate their buttons. Balls remaining *in statu quo* after the voting would represent absent members, or members declining to vote. To conduct a closed ballot a curtain would be dropped before the board, and after the balls had rolled down and been counted, they would be returned to their places by electricity. A second machine gives the number of each ball as it rolls into the counting box, and thus the names of the voters can be recorded. It is added that Mr. Yamakawa has been working at this invention since March, and he hopes to improve it still more. The machine exhibited by him to the Secretaries was capable of working nine balls only, but with that number its action is said to have been admirable.

YOKOHAMA FUJIN JIZENKAI.

THE half-yearly report of the Yokohama Jizenkai, for the past 6 months of 1892, has just been issued, and from it we translate the following, which may prove of interest to our readers:—Much valuable assistance has been received by the committee during the past six months that cannot be reckoned in dollars and cents. A gift of four large water-tanks proved very useful, especially during the time we were waiting for the completion of the hospital well. The concert, given in the Public Hall on May 23rd, the proceeds of which have enabled us to pay all bills up to the present, was the result of Mrs. Lindley's kind interest, and of those who took part and made it so attractive. The band of the "King's Daughters" has assisted at various times with gifts of *fusuns*, bottles and other necessities, and to all these kind friends we are very grateful. The next aim on the part of the society is to secure a permanent income by means of annual subscriptions, which would enable the hospital to assist as many persons as possible.

The support of seven beds is promised at five *yen* per month, and the subscriptions of five *yen* per year almost amount to the cost of the support of one more. The proceeds of the festival on the evening of July 4th amounted to a sum sufficient to support two beds for one year, but the money must be used instead to pay for the very excellent well just completed. The money received from paying patients helps those who are too poor to pay for themselves, but it is every desirable to secure for the hospital the support of as many more of its twenty ward-beds as possible, so that the Jizenkai need not discontinue its own legitimate work of relieving general distress, in order to meet the deficiencies of the hospital's income. To any one who donates a yearly subscription of five *yen* or more, tickets will be given, entitling the holder to enter any poor Japanese—whose disease is not contagious—into the hospital, for one month per ticket.

ARA NINOMIYA, } Hon. Treasurers.
G. W. VAN PATTEN, }

THE LATE COUNTESS LI.

THE Tientsin correspondent of the *Shanghai Mercury* writes as follows of the death of Countess Li, wife of the Viceroy and mother by adoption of Lord Li, now representing China in Tokyo:—

I regret, as everyone Foreign and Native regrets, to have to record the death of the wife of the Viceroy Li Hung-chang, better known as Lady Li, whose name stood in the front rank of the few remarkable women in China of whom Foreigners hear nowadays. The blow to His Excellency is a most serious one, the deceased lady was also a favourite of the Empress Dowager, who had the highest regard for her, and communication between these two most remarkable women of their day in China was constant and uninterrupted to the last. The deceased lady was often consulted in matter of importance by the Empress, who had a very high opinion of her wisdom on affairs of which most women, and especially most women in China, know nothing, and in which they seldom take any interest. Lady Li's death has thrown a gloom over the entire place, and the Viceroy feels her loss most acutely. The flags at the various Consulates here, and on the steamers in the river, were put at half-mast, as a mark of respect to the deceased, and the Consular body have addressed a letter of condolence to His Excellency in his bereavement.

A friend, who was intimately associated with Lady Li, says in reference to her death:—"The Countess Li died yesterday. I have indeed lost a friend. She was a noble-minded, large-hearted woman. The poor will miss her. In her they had a friend. In the South she supported several charitable institutions. She was in many respects a remarkable woman. There was an individuality of character about her rarely met with in ladies of any nation. She had not been well for some time, and took domestic medicine. On the 23rd June she sent for her own private lady physician, Dr. King, and from the 24th, Dr. King with Dr. Irwin and Dr. Liu saw the pa-

tient twice daily. During the week preceding her death, Dr. King was with her constantly, and stayed three nights at her bedside in the Yamen. She had continued fever, but until Saturday, 3rd inst., there was no cause for apprehension, when her temperature increased suddenly, and she became delirious. She recognized Dr. King at 5 a.m. on Sunday, 4th inst., and said, "I have been very ill, but am better now." After that she did not seem to recognize anyone. It was touching to see the grief of the family, especially of her venerable husband the Viceroy. Her constitution was never strong, and she had many serious illnesses, and at last succumbed to what would not have been at all serious had she been of more robust mould.

THE "IDEAL SOSHI."

SOME little time ago, while strolling down one of the streets of the capital, our eyes were attracted by a book hanging in a conspicuous position in one of the shops, the title of which was "A Treatise on *Soshi*." Interested to see what could be said in favour of the existence of a class of men whom public opinion holds in deserved contempt, we purchased the volume. To our surprise we found that the author was no defender of rowdiness, and no advocate of modern *soshi* ways. The *soshi* of this treatise is not the rough, ragged, and dirty youth, who, club in hand, struts the streets of the capital in search of employment, but the dignified and public-spirited *samurai* of days gone by. It has often been remarked that nothing that is totally bad lasts long. The germ of goodness contained by many of the bad things of the world preserves them from total destruction. The term *soshi*, to the modern newspaper reading public, is associated with violence, intimidation, and cowardice, but if the author of the treatise we are about to notice is to be relied on, the modern *soshi* is a usurper, a man who has dragged an honourable name through the dirt, and earned all the contumely with which he is regarded by society.

The author of the treatise is one, Saito Shun-ichiro, an Oshyu man. The volume consists of some 200 pages. It contains a preface by the Korean, Kingyoku Kin, the burden of which is the need of cultivating independence of spirit. The strong can face difficulties unaided. "The lion paces the forest alone and seeks for no companion." There is a good deal of repetition in the book, so that we need only give the gist of its contents. The subject is thus divided: (1.) General remarks (2.) The relation of *soshi* to Society, (3.) *Soshi* and the spirit of the age, (4.) The duties and responsibilities of *soshi*, (5.) The *soshi* of Old and New Japan, (6.) *Soshi* abuses, (7.) The relation of *soshi* to the State, (8.) *Soshi* principles and methods.

(1.) The introductory remarks are pessimistic in the extreme. The country is represented as on the verge of ruin. At home the nation is split up into factions and unable to effect necessary reforms. Abroad it has lost respect, and the recovery of jurisdiction is still in the distance. The people are poor, and groan under heaven-inflicted calamities—earthquakes, tempests, floods, and fires. But the worst feature of all has still to be mentioned: the nation is unconscious of its own maladies, while carrying about with it the elements of dissolution. It points to its artificial civilisation as a proof of its strength. The spirit that appears to be cultivated is one of meekness, forbearance, and general contentment with things as they are. The foundations of the social organisation are rotten and must be replaced with new material.

(2.) The relation of *soshi* to society is not what it should be. Instead of being a pillar to the State, the position occupied by the modern *soshi* resemble that of the Nihilist in Russia or the Socialist in France. Instead of being independent State servants, the modern *soshi* become the slaves of individuals. The real *soshi* should be among the foremost promoters of progress.

(3.) The real *soshi* leads instead of following the spirit of his age. With him should originate all reform movements. He is a man of the type of the early American settlers, of

Luther, Lafayette, Sakura Sogoro, and a host of other heroes. From him society should obtain its tone and the nation its strength. Instead of soaring to these heroic heights the modern *soshi* grovels in the dust. Instead of acting as a leader, he is content to sell his soul to the highest bidder.

(4) Though, as his name implies, the function of a *soshi* demands a certain fierceness and severity of character, it must be borne in mind that this trait should be balanced by other mental qualities. He must never fail to distinguish between what is right and what is wrong. He must remember that he is responsible for his conduct and that it is not for him to act violently for his own personal gratification. If he acts with due regard to what is right and proper, then the element of fierceness, which is the essential constituent of his character, like thunder and lightning, will conduce to clear the air of society and give fresh life to the nation.

(5) Though the spirit which actuates the modern *soshi* should not differ from that which permeated the life of the *samurai* of olden-time, the weapons and methods employed should not be the same. The tongue and the pen must replace the sword and the spear. The leading characteristic of the ancient *soshi* was the delight he took in shedding blood. He regarded wounding and killing as the most entertaining of pastimes. In a verse composed in those days, the gratification obtained from the sight of blood streaming from some wounded man, is compared to the pleasure afforded by the sight of red maple trees. Here is the original—

Aki nareba,
Koki moenji wo mo
Chirami nari
Waga utu tachi no
Chi-kemuri wo miyo.

There were, no doubt, some ancient *samurai* who put their weapons to improper uses, who loved violence for its own sake. But such conduct was condemned by the public opinion of those days. With all his fierceness, the ancient *soshi* was a far nobler man than is to be found in the ranks of the modern aspirants for his fame. The modern *soshi* is of opinion that acts of daring and bloodshed are in themselves meritorious; that destruction, irrespective of the character of the thing or person destroyed, is meritorious. Such men as Akai Keisho (the man who stabbed Itagaki), Shimada Ichiro (the assassin who killed Okubo), and Nishino Buntaro (the murderer of Viscount Mori), are unworthy of a place among Japan's heroes and benefactors. They were assassins of a barbaric type, and should ever be regarded as such.

(6) Instead of the term *soshi* being one of respect it has become one of reproach. There are three reasons for this. (a) Modern *soshi* live bad lives. (b) They are idle theorists who prattle about things of which they have no practical knowledge. (c) They have no aim beyond earning a livelihood.

(7) The relation of *soshi* to the State ought to resemble that of planets to the sun. The State is the orb around which the rapidly travelling planets revolve. Every statesman should have associated with him a number of ardent progressive spirits, ready to assist him in carrying out reforms and enlightening the nation, and not, as is the case now, for the purpose of supporting weak arguments with physical force.

(8) For an example of what should be the principles and methods of *soshi* we are to turn to the pages of universal history. In all countries there have been men who have thrown away their lives in the public service: some by fighting their countries battles, others while pursuing peaceful vocations. The leading feature in the lives of such men has been their devotion to a cause and their renunciation of all selfish interests for its sake. If the heart be devoted to the State, the methods of furthering the State's interests will suggest themselves as time goes on. Mr. Saito's ideal *soshi* is evidently a hero of

the highest type, but we venture to think he is a man to be dreamt of and prayed for, rather than to be encountered during the present century. It is, however, gratifying to know that the *soshi* have an ideal, though their case affords another proof of the adage that a bad imitation of the best often proves to be the worst.

THE LADIES OF JAPAN AND THE WORLD'S FAIR.
UNDER the energetic and clever management of Mrs. Potter Palmer, successful efforts have been made to enlist the interests of the ladies of various countries in the Chicago World's Fair. Queen Victoria has promised to send something made by her own hands, and other Sovereign ladies of Europe have also allowed themselves to be interested. When Mr. A. B. de Guerville was in Japan, he carried an invitation from Mrs. Potter Palmer and the Ladies Committee to the Empress, and the United States Legation having duly conveyed the message, it is now stated that her Majesty has evinced much interest and that her active participation may be anticipated. Several Japanese ladies have also taken up the matter, the most enthusiastic being Marchioness Mori. The News Agency says that a Ladies' Committee has been formed, and that it will work quite independently of the Commissioners in the Department of Agriculture and Commerce, the ladies themselves furnishing funds to pay all expenses.

Later intelligence says that the ladies of Japan have formed a most influential association for the purpose of representing their sex at the Chicago Exhibition. The association is called *Nippon Fujin-kai*, and its general purpose is to collect objects representative of female work and send them to the Ladies Section in the World's Fair. They have, of course, no relations with any other Society formed in Japan for forwarding specimens of the country's industries, nor will they include in their list any object which is not a *bona fide* production of women's hands. The Association is divided into three sections; first the section of general business, which attends to all correspondence, translations, advertisements, publications, matters of account, collection of necessary articles, packing, carriage, insurance, and so forth; secondly, the section of investigation, whose function is to compile and prepare all documents and illustrations bearing upon the various employments of women, their education, their literary productions, and the charitable works carried on by their efforts, and thirdly, the section of exhibits, which has to do with determining, choosing and collecting articles for exhibition, preparing lists of them and deciding their manner of arrangement. Detailed rules have been compiled on to the duties of each component of the sections, or committees, but into these we need not enter. The following is the composition of the Association:

PRESIDENT.

Princess Mori.

MEMBERS OF THE EXHIBITS COMMITTEE.

Princess Iwakura, Marchioness Hachisuka, Marchioness Nabeshima, Countess Toda, Viscountess Kabayama, Mrs. Samomiya.

MEMBERS OF THE INVESTIGATION COMMITTEE.

Marchioness Mayeda, Countess Matsukata, Viscountess Yenomoto, Viscountess Takashima, Mrs. Kuki, Mrs. Hayashi.

MEMBERS OF THE BUSINESS COMMITTEE.

Countess Ito, Countess Oyama, Countess Goto, Viscount Hijikata, Mrs. Mutsu, Mrs. Hanabusa.

ASSISTANT MEMBERS OF COMMITTEE.

THE PULSE AND EARTHQUAKES.

MORIOTA HOTAN relates in the pages of the *Fusoku Gwaoh* that when, the great earthquake of 1855 took place in Edo he was serving Yamada Seisuke. To the surprise of Morita, Yamada entered his house after the worst shock had passed, and commenced calmly to put his things in order. On being asked whether he was not afraid of another bad shock, he replied in a de-

cided manner: "There will be no more bad shocks." From Yamada Morita learnt that whenever any calamity sufficiently serious to endanger life is at hand, irregularity in the pulse indicates the fact. When things are in their normal condition, says Mr. Morita, the pulse of the wrist and that on the right side of the chin should repeat at the same instant. When anything endangering life is about to occur they do not beat together. Mr. Morita states that for 37 years he has used this test and never found it to deceive him. When some years ago a tidal wave submerged the house in which he was residing in Sagami, he had, by the use of this device, ascertained beforehand that danger was at hand, and had removed all his goods to a neighbouring hill. Mr. Morita calls on medical men to explain this phenomenon. We recommend him to read the wonderful passage in "Martin Chuzzlewit" where Tigg Montague is about to enter the grove where he meets his death.

THE POLICY OF THE NEW "NICHU NICHU SHIMBUN."

JUDGING by the first article which the *Nichi Nichu Shimbun* publishes under its new editor, Mr. Asahina, the paper is to be henceforth in opposition. The article sets out by noting that as yet the portfolio of Justice remains unallotted, and that the delay in finding a successor to Viscount Tanaka makes the public suspect dissensions in the Cabinet. It then refers to the question of the Civil and Commercial Codes, with regard to which it describes the Government's attitude as one of hesitation, and it notes that the changes in the *personnel* of the Department of Home Affairs, as well as in that of local Governors, combined with the mysterious action of Viscount Takashima, have given rise to many rumours. Again, the Railway Council has been established by Imperial Ordinance, and the Railway Bureau has been transferred to the Department of Communications, but the President and Committee of the former remain unappointed, and the Director of the latter is said to be disposed to resign. Further, the News Agency, supposed to be an organ of the Government, announced, and then contradicted the announcement, that an alliance had been effected between the Cabinet and the *Fuyu-to*, but people seem more disposed to remember the original statement than to credit its contradiction. Altogether the *Nichi Nichu* thinks that the political world is suffering from a kind of panic at present, and that defective administration is to blame. "There are many ways," it says, "of governing a country, and the way now adopted may be called a Matsukata method, but a constitutional government ought not to leave the nation in doubt as to the policy of the administration. We believe that Count Matsukata is not a man to alter his policy readily, and, inasmuch as the only change in the Cabinet is the entry of Viscount Sano, there ought not to be any doubts as to the official programme. The fact that such doubts exist shows that the Government does not possess the confidence of the nation, for confidence checks rumour before it has time to spread."

This change of front on the part of the *Nichi Nichu* must be taken, we presume, as one of the first results of the definite separation of the Government and the Camera Statesmen. The Cabinet Ministers are made to feel that those whose hands were formerly with them are now against them. Such splits in the higher ranks of officialdom are all features of the development of constitutional institutions, and especially of government by party. When each political party, or group of political parties, possesses the adherence of a section of the men whose administrative ability has been proved by practical experience, the country will have taken a long stride towards the consummation which the *Fuyu-to* and the *Kaishin-to* desire.

The hesitation charged against the Cabinet with regard to the fate of the Civil and Commercial Codes does not appear to be entirely fair. The only provision relating to the manner of imposing the Imperial veto on a Bill, may be call-

ed a negative provision. It is contained in the 32nd Article of the Law of the Houses which says:—"Bills which, after having been passed by both Houses of the Diet and presented to the Emperor, may receive His sanction, shall be promulgated before the next Session of the Diet." Hence it follows that the mere fact of non-promulgation is equivalent to the imposing of the Imperial veto; or rather to the withholding of the Imperial sanction, for the law does not recognise anything in the shape of active interposition of the Emperor's veto, neither does it prescribe any formula for such a procedure. Every day that passes without the promulgation of the Bill for postponing the Codes must, therefore, be taken as a confirmation of the rumour that the Bill will not receive His Majesty's sanction. The silence of the Government on the subject is perfectly consistent with a firm resolve not to sanction the Bill at all. Evidence of vacillation or hesitation will not be furnished, we think, unless the Bill is now promulgated. Forty-six days have elapsed since the passage of the Bill through both Houses became an accomplished fact, and if, after that long interval, the Bill be declared law, the nation will certainly have a right to ask what the Government was doing in the interval.

FOREIGN POACHERS.

THE *Hochi Shimbun* contains a circumstantial account of the doings of foreign poachers in the northern seas of Japan. It is given on the authority of one Inouye Chojiro, who is said to have been an eye-witness of what he describes. On the 26th of April, we read, five sailing vessels, of about 150 tons each, entered Atsugashi harbour in Kushiro. They had the appearance of being American schooners, and were evidently on a poaching expedition. Shortly after entering the harbour, a party of men armed with hunting rifles landed, and fired shots to intimidate the people. The schooners seem to have lain in Atsugashi until the 30th of April, when they sailed out to a distance of about 30 miles, and on May 1st launched seven boats, each carrying one hunter and manned by two sailors. The hunters had double-barrelled guns which they loaded with heavy shot. At 7 o'clock in the evening the boats returned to the schooners, each having taken about thirty seals, which they proceeded to salt. These operations were carried on for some fifty days, the boats going to a distance of from 15 to 20 miles from the schooners, but not losing sight of them. It used to be supposed, says the *Hochi*, that the poaching operations of foreign schooners were confined to the seas in the neighbourhood of the Chishima Islands, but it now appears that their field extends to the seas several miles off Kushiro. "The boats of our Marine Products Company do not go more than about three miles from the Chishima Islands, and the consequence is that their annual take is only a hundred seals or thereabouts; a result which, if compared with 2,500 taken by the American schooners in 50 days, amounts to only two days' catch. A seal's skin, according to the rates now ruling in the market, is worth from 15 to 20 yen, so that, on the hypothesis that the foreign vessels engaged in poaching average twenty yearly, and that they take 3,000 seals each, Japan loses about a million yen annually."

The *Hochi's* method of calculation is very liberal. Even if we assume—a most unwarrantable assumption—that each of the seven boats engaged in poaching off the Kushiro coast look an average of 30 seals every day during fifty days, the total catch is only 10,500 which gives an average of 2,100 per schooner. But everybody knows that a sealing schooner considers itself very fortunate if it makes a catch of anything over a thousand seals in the season, and that vessels so lucky as to take 2,000 or 3,000 are few and far between. We greatly doubt whether twenty thousand seals in all are taken yearly by foreign poachers in Japanese waters, and twenty thousand seals signifies about 300,000 yen, not a million yen as the *Hochi* suggests. We say this not to minimize the wrong, because every-

one agrees that this poaching is inexcusable, and that Japan would be right in adopting strong measures to stop it. But nothing is to be gained by exaggerating the evil and needlessly exciting the public about it.

SIR EDWIN ARNOLD'S POEMS.

THE "Light of Asia" is at last to be put on the stage as an opera. We say "at last" because this prospect, which seemed on the verge of realization last year, was supposed to have been subsequently abandoned owing to difficulties not likely to be readily overcome. What happened in the sequel, as well on the steps which have now revived the project, may be gathered from the following interview between a representative of the *Pall Mall Budget* and Mr. Isidore de Lara, who has written the score of the new opera:—

"I first set Sir Edwin Arnold's poem to music in the form of an oratorio, or sacred cantata. The work was to have been produced in London during the spring of last year, but when Signor Maurel heard it he suggested that it would make a very fine opera, and said that he saw in it great opportunities for displaying on the stage certain manifestations of the human mind that have never perhaps been portrayed on the lyric stage. I submitted the matter to Sir Augustus Harris, who asked me to make an opera of my cantata. Of course, it was necessary for Covent Garden to have it turned into Italian, and in the remarkably short space of ten days Signor Mazzucato translated it into 'La Lucella Asia.' The opera was then rehearsed, and great trouble was taken by all concerned. Everything would have gone smoothly if Signor Maurel had not declared at the last moment that he was not ready with his part."

"I recollect. Then followed the exchange of letters in the newspapers, in which you pointed out that it was for you to decide whether the work had been sufficiently rehearsed or not."—"This occurred at the end of the season," continued Mr. De Lara, "so nothing could be done last year. Sir Augustus Harris, however, offered to produce 'The Light of Asia' this season, and I found myself in a terrible dilemma. After what had taken place I didn't like to ask Mr. Maurel a second time to create the role of Buddha, and it was very difficult, after his action, to approach any other artist. At that moment M. Lassalle saw the part, expressed himself pleased with it, and most kindly offered to sing it himself."

Mr. De Lara is deeply sensible of the kindness shown to him in a difficult moment by M. Lassalle, and he appreciates also his good fortune in having such interpreters as Mme. Eames and M. Plancon for the other leading parts. When the veteran composer Botto was told that Signor Mancinelli was going to conduct the work at Covent Garden, he made a remark that will probably come to the conductor's knowledge for the first time when he reads these lines. "I congratulate M. De Lara," he said; "I have never heard any man conduct the prologue of 'Mephistopheles' like Mancinelli." Mr. De Lara is an Englishman born and bred, and his "Light of Asia" bids fair to carry English music to the Continent. We haven't a hearing here now, and if the composer succeeds on his merits, Sir Augustus Harris and all who have had a hand in getting the work through in face of immense difficulty will share in the credit of having done something towards getting an introduction for English art to the Continental opera houses.

"How came you to think of setting so philosophical a work to music?" I asked. "When I read Sir Edwin Arnold's poem it impressed me very much. It seemed to offer great opportunities to a musician, because it deals with the metaphysical side of Indian philosophy, and I have always thought that music is the art par excellence for the expression of metaphysical ideas."

"If I remember rightly, your work is remarkable from the fact that there is no tenor part in it?"—"There is no tenor part in the opera, because it appeared to me that the profound melancholy so implanted in Buddha's nature was more suited to the baritone voice. I have tried as much as possible to give special characteristics to the different natures. Buddha when he sings does so in calm, measured tones, having in this the characterizing features of the contemplative man—a nature that is more impressed by things divine than by things human. The part of Yassafora, which I am pleased to say will be taken by Mme. Eames, contains music of a more sensuous and human character. That allotted to M. Plancon is also distinctive."

"In what school is your work likely to be classed?"—"My idea in undertaking any work is to sit down without any preconceived notions of adopting any particular school, or of showing oneself a disciple of this or that master. It seems to me that any man who sets a subject to music, be it a cantata, an oratorio, or an opera, should first become thoroughly imbued with the sentiment of the poem he is putting to music, and then all he has to do is to give his expression of that sentiment without trying to please men of one temperament or another temperament. He ought to express his impressions according to his own

particular feelings, and when he has done this, he has, in my opinion, done all that can be asked of him."

During his present stay in Japan Sir Edwin Arnold has written a drama which will probably be brought out by Mr. Henry Irving at the Lyceum, and if it does not prove a success the fault will certainly not lie in the thrilling character of the plot, or in the splendid diction of the poet. Sir Edwin has taken the story of Kesa-kozen for his theme, a story of noble heroism on the part of a girl of only 16, which derives additional sentiment from the fact that it is set in a historical frame of unique interest in Japanese eyes. Kesa-kozen, or Atoma, as she is more properly called, sacrificed her life to save that of her mother and to avert calamity from her husband. The story is too long to be told here, but the gist of it that Atoma contrived, by a deliberately conceived device, to divert the hand of an assassin from her husband to herself, the assassin being her disappointed lover. The plan which she adopted as well as the issue are of the most highly dramatic nature. Rendered into such verse as Sir Edwin Arnold can write, and produced by such actors as Irving and his company at the Lyceum, the drama ought to take London by storm. We have seen it stated in the vernacular press that the name of the drama is to be "Azuma." But we doubt the accuracy of this assertion. "Azuma" is itself a title sacred to the memory of another heroic woman, Tachibana-no-hime, the wife of the celebrated Prince and warrior Yamatodake. In the days of the Emperor Keiko, Prince Yamato, after having brought Suruga to submission, proceeded against "the eastern barbarians," as the insurgents in Kazusa were called. He had taken with him in his war-ship his beautiful and much loved wife Tachibana. In the sea off Kazusa the ship was caught in a tempest which threatened to swamp her, when the Princess Tachibana, crying out that for her sake the God of the sea had sent this storm and that she should give her life to appease him, jumped into the waves and perished. Tradition says that the wind lulled immediately, and Yamato-dake, coming to shore, carried his arms successfully all through the district, and thence pushed up to Yezo. But on his return journey he entered Shinanu province, and having ascended the Unui Pass, looked eastward towards the place where the body of his wife lay under the sea. Overcome with sorrow, he cried *Azuma haya* (alas my wife), and thenceforth the provinces on which he had gazed in this moment of pain, were called "Azuma." Thus this name is already consecrated to the beautiful and heroic Tachibana-no-hime. In old Japanese, "azuma" signified simply "my wife," but it has come to be associated with the memory of Tachibana, and we should hope that Kesa-kozen may be immortalized in Sir Edwin's drama under her own name of "Atoma," a beautiful and melodious appellation.

THE TYPHOON IN KOBE.

THE *Kobe Chronicle* speaks of the model settlement's sufferings in the recent typhoon in the following terms:—"Kobe has been very fortunate in escaping any damage by the first typhoon of the season, the centre of which apparently lay far to the north. On Thursday afternoon it commenced to blow freshly from the north-east, and the wind steadily increased in force all that night and during the next day. On Friday evening and throughout the night the wind had risen to a gale, blowing in great gusts that made the best-built houses on the hill shiver. But it remained steady in the north-east, and, as Kobe is fairly well protected by the hills when the wind is in that quarter, no damage was done, though the few vessels lying in the bay took every precaution against danger. Towards morning the gale subsided, and heavy rain commenced to fall, lasting all day Saturday and the greater part of yesterday."

DISPLACED CONSTITUENTS.

An amusing story is told in several of the vernacular papers concerning the return to his constituency of a member of the Diet belonging to

the Prefecture of Saga. The course taken by this member during the last session of the Diet was distasteful to his constituents, and they chose an odd method of showing their displeasure. There is a Japanese tree called *buppu* which emits a vile odour. Branches of this tree were collected and hung under the eaves of the houses of the village through which the member had to pass on his way to his home. He arrived at night. As he wended his way through the village, some of the branches of *buppu* were ignited so as to increase the offensiveness of the odour. This tree is regarded as a disinfectant and is often used, with what effect we are unable to say, as a preventative of cholera. Hence, while the unpopular representative was passing through the village, the discontented constituents shouted: "Cholera! cholera!" The story goes on to relate that, instead of treating the whole thing as a joke, the member grew very angry and has actually gone the length of bringing an action for libel against the man who supplied the villagers with branches of the malodorous tree.

THE NATIONAL UNION.

THE National Unionists (*Kokumin Kyokai*) held a meeting on the 21st instant, when the question was again discussed whether the association ought not to be registered as a political party. Some members were in favour of that step, urging that as the Association was a political party and nothing else, the best plan was to call it by its true name; but others combated this contention, and the latter view finally prevailed. The meeting then proceeded to consider a statement of motives which was passed in the following terms:—"The empire of Japan has been ruled over by a Sovereign peerless throughout the world for over two thousand five hundred years. During that long period, the country, though its prosperity varied greatly, never once suffered disgrace at the hand of foreign States, and never once forfeited its independence. This result is due to the august majesty of the Emperors and to the loyalty of the people. From the Middle Ages, however, having no foreign wars to occupy their attention, the stout men of the empire seized upon different portions of territory and fought, each for his own hand. Thus the feudal system came into existence, and for the sake of fidelity to the chief whom they immediately served, men forgot the existence of Japan. This tendency gradually passed into a national custom. Even now, after the Restoration, the people are still swayed by local sentiment, and give little thought to the welfare of the empire. Some indeed claim that they are working in the cause of the State, but in reality they are devoted to their own interests. Men who are truly engaged in promoting the welfare of the country are as scanty as morning stars. The prosperity of the empire can never be achieved under such circumstances, and the conviction is a source of constant pain to us. Looking at the world around us, we see that the aggrandizement and decline of nations depend entirely upon the strength of their armaments, and the development of their commerce, manufactures, agriculture, and so forth. The competition is of the keenest. The law of the survival of the fittest is universal: the weaker inevitably become extinct. Such competition has to-day reached Oriental nations. Now by military force and by commercial enterprise, Japan is being agitated monthly and daily. Never since the foundation of the empire did such a multiplicity of State affairs present themselves for the management of the Administration. If we consider the condition of the country, we find that commerce is still undeveloped; that the military equipment is incomplete; that countless urgent works are left untouched; and that the only business of politicians is to engage in party squabbles, the interests of the nation at large being entirely lost sight of. The idea of pitting ourselves, in this enfeebled state, against the might of foreign Powers is painful. It behoves the men of Japan to ponder well over the condition of the country, to abandon party squabbles for the sake of the national welfare, and to cooperate harmoniously for the

increase of the national power. Nothing can be more urgent than the adoption of this course. At the same time, a mere announcement of harmonious cooperation will not appeal to those who are seriously considering the improvement of the country. Some practical method must be adopted, and the establishment of this association is for the purpose of contriving such a method. The term "harmonious cooperation" does not signify that all must be engaged in the same affair," but merely that all must have a common aim, and that each must carry on the work with which he is occupied in such a manner as to promote general progress, social order, and national development. Difference of locality or variety of occupation offers no impediment. So long as people harbouring the same intention assemble together and assist each other, individual knowledge and the common welfare will be promoted. Each affair, as it gradually progresses, becomes divided into different branches, and, therefore, each person must be content to follow his own special line; he cannot become an expert in everything. Nevertheless, unless those who choose the same branch cooperate, no good result is attainable. This is true of scientific research and of commerce alike. It is not less true of politics. No enterprise of any kind can be successful unless those engaged in it work in unison. This principle does not obtain in Japan. Scholars will not associate with practical men, or practical men with politicians; and so strong are local prejudices that if the people of two neighbouring localities are following the same route, they doubt each other and will not render mutual assistance. This abuse is a heritage of mediæval institutions. Men's minds are so narrow that they cannot discern the broad national path in which the feet of all should be engaged. Hence, to unify the nation, to educate the system of mutual assistance, and to promote general intimacy, are most important aims. To that end nothing can conduce more than free expression of individual opinion in converse with others, and the interchange of useful knowledge. The abuse of class separation may thus be diminished and the benefit of mutual assistance and cooperation realized, to the profit of all and the promotion of the national welfare. Such is the object of this Association, for which we solicit popular support. The country has been drawn into the whirl of strong competition. We have no more time for petty quarrels. If the indulgence of individual piques and ambitions postpone, year after year, the inception of great national works, what will become of the empire? The thought fills us with solicitude and has impelled us to come forward. We pray our fellow-countrymen to consider carefully the condition of the world and the state of the empire, and to give their support to our Association. We seek not our own satisfaction, but the welfare of the nation."

This is a document of unimpeachable moral quality. But it sadly lacks colour. Every political party in the empire might subscribe every line of it, and yet things would remain just as nebulous as ever. It is in vain, apparently, that we wait for that definite enunciation of political issues which is at length to afford lines of demarcation, and enable men to know on which side they stand without reference to the name of their leader. However, the National Unionists do not profess to give more than a statement of motives on the present occasion, and if their statement may be read to signify that they appreciate the importance of rescuing politics from the narrow personal element which now dominates them, their project deserves every support.

CARLYLE'S JOURNEY TO EDINBURGH IN 1866.

THERE are journeys which are immortal, sometimes in the realm of fiction, sometimes in that of fact. Helty Sorrel's journey in hope, and then in despair; the journey of Jeanie Deans to London these are episodes in the lives of the children of the novelist's brain which will be read with fresh interest for ever. The same perennial interest will probably be taken

in the journey of Carlyle to deliver his rectorial address at Edinburgh, for with that journey are inseparably connected two events full of the pathos of human destinies. The first was the final attainment of dignity, popularity, universal triumph by a genius at length liberated from a youth and long manhood of drudgery, poverty, obscurity, and all an imaginative dyspeptic's self-torture; the second was the final snapping of the chain which bound together a most remarkable man and a most remarkable woman in as painful and tragic a marriage as human history records. One of the papers in Professor Tyndall's new volumes of "Fragments," deals with Carlyle, whom the Professor knew intimately and loved for many years. He is able to give a full account of this journey; for after many debates with Mr. Carlyle, it was decided that Tyndall should be Carlyle's companion and guardian during the eventful trip. Every word that Professor Tyndall has written on this journey is delightful and instructive reading. There is a series of pictures of Carlyle, in all his vast variety of moods, which give a very complete and a very lucid idea of this strange, fitful, storm-tossed nature. And knowing, as we now know, what awaited poor Carlyle after all the blaze and tumult of triumphs, there is not an episode in the whole journey which has not its pathos and its interest. Here is how Carlyle and his companion took their departure:—"On the morning of March 29, 1866, I drove to Chesham-row, and found him punctually ready at the appointed hour. Order was Carlyle's first law, and punctuality was one of the chief factors of order. He was therefore punctual. On a table in a small back parlour, below stairs, stood a siphon, protected by wickerwork. Carlyle was conservative in habit, and in his old age he held on to the brown brandy which was in vogue in his younger days. Into a tumbler Mrs. Carlyle poured a moderate quantity of this brandy, and filled it up with the foaming water from the siphon. He drank it off, and they kissed each other for the last time. At the door she suddenly said to me, "For God's sake send me one line by telegraph, when all is over." This said, and the promise given, we drove away. It had been arranged that Carlyle should make a short stay at Frystone, the seat in Yorkshire of his old friend Lord Houghton. The welcome was warm to enthusiasm; but Frystone "was clasped as in a ring" by railroads, and their whistles were energetically active all night:—"In the morning I found Carlyle in his bed room, wild with his sufferings. He had not slept a wink. It ought to be noted, that the day previous he had dined two or three hours later than was his wont, and had engaged in a vigorous discussion after dinner. Looking at me despairingly he said, "I can stay no longer at Frystone, another such night would kill me." "You shall do exactly as you please," was my reply. "I will explain matters to Lord Houghton, and he, I am persuaded, will comply with all your wishes." I spoke to Lord Houghton, who, though sorely disappointed, agreed that it was best to allow his guest complete freedom of action. It was accordingly arranged that we should push on to Edinburgh. Carlyle's breakfast was prepared; he finally filled a bowl with strong tea, added milk, and an egg beaten up. Rendered thus nutritive, the tea seemed to soothe and strengthen him. As he breakfasted, our journey was discussed. Once, after a pause, he exclaimed, "How ungrateful it is on my part, after so much kindness, to quit Frystone in this fashion." Taking prompt advantage of this moment of relenting, I said "Do not quit it, but stay. We will take a pair of horses and gallop over the country for five or six hours. Then you shall have a dinner like what you are accustomed to at home, and I will take care that there shall be no discussion afterward." He laughed, which was a good sign. I stood to my guns, and he at length yielded. Lord Houghton joyfully ratified the programme, and the two horses were immediately got ready. The animal bestrode by Carlyle, continues Professor Tyndall, was a large bony grey, with a terribly hard mouth. He seemed disposed to bolt, and obviously re-

quired a strong wrist to rein him in. Carlyle was no longer young; *paralysis agitans* had enfeebled his right hand—for some time, my anxiety was great. But after sundry imprecations and strenuous backward pulls, the horse was at length clearly mastered by his rider, and we fleetly sped along. Through lanes, over fields, along high roads, past turnpike gates, where I paid the toll. This continued for at least five hours, at the end of which we returned, and handed the bespattered horses over to the groom. The roads and lanes had been abominable, mud to the fetlocks, not to speak of the slimy fields. Carlyle went to his room, and donned his slippers and his respectable grey dressing-gown. Carrying with him one of the long "churchwardens" which he always obtained from Glasgow, he stuffed it full of tobacco. Choosing a position on the carpet by the hall fire which enabled him to send the products of combustion up the chimney, to the obvious astonishment of the passing servants, he began to smoke. Having with me at the time a flask of choice pale brandy, of this, mixed with soda-water, I gave him a stiff tumbler. The ride had healthily tired him, and he looked the picture of content. At six o'clock his simple dinner was set before him, and he was warned against discussion. It was the traditional warning of the warhorse to be quiet when he hears the bugle sound. In the evening discussion began with one of the guests, and I could see that Carlyle was ready to dash into it as impetuously as he had done the night before. I laid my hand upon his arm and said sternly: "We must have no more of this." He arched his brows good-humouredly, burst into laughter, and ended the discussion. I accompanied him to his bedroom, every chink and fissure of which had been closed to stop out both light and sound. "I have no hope of sleep," he said, "and I will come to your room at seven in the morning." My reply was, "I think you will sleep, and if so I will come to your room instead of your coming to mine." My hopes were mainly founded on the vigorous exercise he had taken; but the next day, being Good Friday, I also hoped for a mitigation of the whistle nuisance. At seven o'clock accordingly, I stood at his door. There was no sound. Returning at eight, I found the same dead silence. At nine, hearing a rustle, I opened his door and found him dressing; the change from the previous morning was astonishing. Never before or afterwards did I see Carlyle's countenance glow with such happiness. It was seraphic. I have often thought of it since. How in the case of a man possessing a range of life, wide enough to embrace the demontac and the godlike, a few hours' sound sleep can lift him from the hell of the one into the serene heaven of the other. The question of sleep or sleeplessness hides many a tragedy. He looked at me with boundless blessedness in his eyes and voice: "My dear friend, I am a totally new man; I have slept nine hours without once waking." That night's rest proved the prelude and guarantee of his subsequent triumph at Edinburgh. At last Carlyle and Professor Tyndall arrived at Edinburgh, but here their troubles were not over. Sir David Brewster was in a dreadful state of alarm. "Why," he said to Tyndall, "Carlyle has not written a word of his address, and no Rector of this University ever appeared before his audience without this needful preparation." But Tyndall did not have any fears on this ground, "being well aware of Carlyle's marvellous power of utterance when he had fair play." What he did fear was that Carlyle might be disabled by dyspepsia and insomnia. At last the great moment came:—"The degrees conferred, a fine, tall, young fellow rose and proclaimed with ringing voice, from the platform, the honour that had been conferred on 'the foremost of living Scotchmen.'" The cheers were loud and long. Carlyle stood up, threw off his robe, like an ancient David declining the unproved armour of Saul, and in his carefully brushed brown morning-coat came forward to the table. With nervous fingers he grasped the leaf, and stooping over it looked earnestly down upon the audi-

ence. "They tell me," he said, "that I ought to have written this address, and out of deference to the counsel I tried to do so, once, twice, thrice, but what I wrote was only fit for the fire, and to the fire it was compendiously committed. You must therefore listen to, and accept what I say to you as coming straight from the heart." He began, and the world already knows what he said. I attended more to the aspect of the audience than to the speech of the orator, which contained nothing new to me. I could however mark its influence on the palpitating crowd below. They were stirred as if by subterranean fire. For an hour and a half he held them spellbound and when he ended, the emotion, previously pent up, burst forth in a roar of acclamation. With a joyful heart and clear conscience I could redeem my promise to Mrs. Carlyle. From the nearest telegraph office I sent her a despatch of three words—"A perfect triumph," and returned towards the hall. Noticing a commotion in the street I came up with the crowd. It was no street brawl; it was not the settlement of a quarrel, but a consensus of acclamations, cheers, and "bravos," and a general shying of caps into the air. Looking ahead I saw two venerable old men walking slowly arm in arm in advance of the crowd. They were Carlyle and Erskine. The rector's audience had turned out to do honour to their hero. Nothing in the whole ceremony affected Carlyle so deeply as this display of fervour in the open air. Everybody knows how the splendid triumph was marred by the sudden death of Mrs. Carlyle. Tyndall was one of the first to rush to the desolate old man with his sympathy, and here is what happened:—"I drove forthwith to Chelsea. The door was opened by Carlyle's old servant, Mrs. Warren, who informed me that her master was in the garden. I joined him there, and we immediately went upstairs together. It would be idle, perhaps sacrilegious on my part, to attempt any repetition of his language. In words, the flow of which might be compared to a molten torrent, he referred to the early days of his wife and himself—to their struggles against poverty and obstruction; to her valiant encouragement in hours of depression; to their life on the moors, in Edinburgh and in London—how lovingly and loyally she had made of herself a soft cushion to protect him from the rude collisions of the world. The late Mr. Venables, whose judgment on such a point may be trusted, often spoke to me of Carlyle's extraordinary power of conversation. In his noon of life it was without a parallel. And now, with the floodgates of grief fully opened, that power rose to a height which it had probably never attained before. Three or four times during the narrative he utterly broke down. I could see the approach of the crisis, and prepared for it. After thus giving way, a few sympathetic words would cause him to rapidly pull himself together, and resume the flow of discourse. I subsequently tried to write down what he said, but I will not try to reproduce it here. While he thus spoke to me, all that remained of his wife lay silent in an adjoining room."

ANOTHER NEWSPAPER.

ANOTHER daily newspaper is to make its appearance from the 1st of next month in Tokyo. It is to be called the *Kokutai Shimbun* (National Institution) because its object is to assist in maintaining the Imperial polity which has been handed down through so many generations. The News Agency, in announcing the project, says that the *Kokutai Shimbun's* issue has long been contemplated by the class of men designated *Keishin Aikoku*; that is to say, men who revere their Sovereign and love their country. The *Kokutai*, according to its programme, is to take the Constitution for its scripture. It professes absolute independence and equal solicitude for the benefit of all, knowing no distinction of persons or of parties.

POLITICAL UTTERANCES.

MR. OHIGASHI GUTETSU has always been something of an enigma to politicians. Public attention was first fixed on him when the Opposition elected him to the Vice-Presidency of the Lower

House in the second session. People were then uncertain whether his name should be pronounced "Daito" or "Ohigashi" and the perplexity suited his career, for nobody is yet quite sure to what camp he belongs. The *Nippon*, under the title of "Language of Heroes," now makes him say that he is not surprised at being called an incomprehensible phantom, for he has made it a rule to vote exactly as he pleased, without consideration for persons or parties. He condemns both the Government and the Opposition, but being of the opinion that no great statesman is likely to emerge upon the scene during the next five or ten years, he is disposed to devote his attention to the development of the national resources rather than to attacking the Government—a very sensible frame of mind.

* * *

ANOTHER of the *Nippon's* heroes is Mr. Toyama Mitsuru, the leader of that band of *soshis* known as the Genyosha, who were implicated in the attack on the editor of the *Fumiuri Shimbun*, and the majority of whom were expelled from Tokyo under the Peace Preservation Regulations, during the last session of the Diet. This gentleman is a pessimist. He believes that everything is in about — evil a plight as possible, and he does not believe that any reforms can be effected by the Diet. But he has great faith in the right arms of his 200 *soshis*, and as he considers that, in these days of domestic degeneracy, a patriot must work out his great designs abroad, and as moreover, the Korean refuge Kim-ok-Kun is very intimate with him, the *Nippon* thinks that his mysterious sayings may be responsible for the recent scare in the peninsular Kingdom. In truth, Korea is a species of happy hunting ground for a certain class of Japanese newsmongers and Japanese politicians. When the former have no sensational intelligence to lay before the public, and when the latter lack material to make themselves conspicuous, both alike resort to Korea. But the course of events is not materially changed by either the invention of the one side or the gasconade of the other.

MISS AMY SHERWIN.

AN admirer of Amy Sherwin, the talented singer whom many in Singapore will remember, says the *Free Press*, sends us the following note of her latest success, at which several "Far Easters" put themselves *en evidence*:—

Among the numerous musical entertainments provided this month, without doubt, that in which Madame Adina Patti appeared "for the first and only time in London this season," attracted most notice, and collected the largest possible audience in London. It took place in the Albert Hall on Saturday afternoon 14th June. Associated with the Diva in this Concert, one name appeared which is remembered with admiration and esteem in Singapore—that of Madame Amy Sherwin, and the reception accorded to both her contributions was little less enthusiastic than that bestowed upon Patti, and much more rapturous than upon any other of the Artists. Madame Sherwin's contributions were Felicien David's *Idemance* "Couplets du Mysoli (La Perle du Bresil) and Thomas' "Io son Titania." In response to the call for an encore after "Mysoli" she gave Dvorak's "Songs my mother taught me." After "Io son Titania" she was four times recalled but simply bowed her acknowledgements. The strength, purity, and sweetness of Madame Sherwin's voice in the very florid music she selected surprised many of her friends who had only heard her in smaller buildings, and altogether her success at the Concert is recognised as an artistic event—and a triumph. Next week Madame Sherwin, supported by Miss Minna Fischer and Miss Gerlin Barnard (a young contralto singer of great promise) takes the burden of Dr. Richter's Fourth Concert at St. James Hall and represent three Rhine Daughters in Act III, of "Götterdämmerung," as well as give the First Scene from "Das Rheingold."

THE "JIJI SHIMPO" ON THE CARD CASE.

In commenting on the recent Card Scandal the *Jiji Shimpō* adopts a line of argument which we have not met with elsewhere, and which we cannot but regard as unsound. After remarking that the lives of officials are not what they ought to be, and adding that their behaviour is in agreement with the general tone of society, our contemporary proceeds to argue that the fact that judicial appointments are for life, and that administrative appointments are independent of other func-

tionaries, is quite sufficient to account for the conduct which has caused so much scandal in the Judicial Department. "The custom of rendering the Judiciary independent of the Administration, introduced from the West, may suit the circumstances of other countries, but does not work well in Japan. In this country the knowledge that an appointment is for life renders an official careless as to his conduct, and hence we recommend that the old practice of placing judicial officers on their good behaviour be reverted to."

To us, it appears the *Yiji* is only regarding the question from one point of view. Liability to dismissal for misconduct is doubtless an incentive to carefulness in all employes. But it is unfair to refuse to distinguish between the public and private acts of officials, as a section of the Japanese public has been doing. The *Yiji* must know that the evils attendant on the old system were largely in excess of its benefits. It was found in Tokugawa days that the courts were entirely in the hands of administrators. No legal decision was final were it contrary to the views of the higher officials. If, in certain cases, judges were prevented from doing wrong by the fear of loss of office, in still more numerous cases the same cause hindered them from delivering verdicts which the evidence before them demanded. The famous Tenichibo trial is a case in point. Ooka was in danger of bringing disgrace on himself for the course he took during the trial, for no other reason than that the Shogun was in favour of the acquittal of the accused. Had the judge been a man of less determination he would have quietly succumbed, and a flagrant miscarriage of justice would have been the result.

EXAMINATIONS FOR OFFICIAL APPOINTMENTS.

WHAT amount of truth there may be in the allegation we cannot pretend to judge, but the *Kokkai* persistently attributes to Count Goto the design of abolishing the system of test examinations for civil and military officials. This system was inaugurated by Count Ito in December, 1885. Apart from the obvious expediency of ascertaining the qualifications of candidates for office by some effective method, there were two other important considerations which doubtless swayed Count Ito. They were the desire to remove appointments beyond the sphere of purely personal patronage, and, by throwing open the ranks of officialdom to every man of ability and attainments without distinction, to remove the reproach of clan favouritism which, even at that time, had begun to impair the Government's credit. But now, if the *Kokkai* be rightly informed, the Regulations are operating to prevent the appointment of the very men who have made the overthrow of clan government their battle-cry. For whereas Count Goto desires to give official positions to some of the most deserving among the Radicals, the Regulations effectually bar the path. Hence the Count seeks to modify or rescind the Regulations, but finds himself met by the objection that the 19th Article of the Constitution forbids such a step. "Japanese subjects," says that Article, "according to qualifications determined in laws or ordinances, may be appointed to civil or military or any other offices equally." The word "equally" here employed means, it is contended, that patronage must not be exercised to the advantage of one set of subjects and the detriment of another. To set aside the Regulations for the purpose of exercising such patronage is naturally objected to by all the officials who have satisfied the tests provided by the Regulations. We doubt whether the *Kokkai* gives a correct version, but it is at any rate to be sincerely hoped that the wholesome system of competitive examinations will not be abrogated in the interests of any particular body of office-seekers.

THE EASTERN RADICALS.

THE *Toyo Jiyu-to*, or Eastern Radicals, as Mr. Oi Kentaro and his followers call themselves, have issued a declaration of principles which is a very admirable document in the sense that it declares nothing at all. It is certainly characteristic of Japanese Political Parties, at the pre-

sent stage of their development, that they are content to take their stand on the tamest platitudes and widest generalities conceivable. As to the *soshi*-leading and plain-speaking Mr. Oi Kentaro, we did indeed imagine that when he came to announce his political principles some tangible issues would be presented. But no; he clings to the old groove in which his predecessors have walked, and publishes a platform just as well fitted to the feet of the Government itself as to those of the *Jiyu-to*. There is of course a declaration of liberal principles, followed by the orthodox profession of loyalty to the Emperor. Significantly enough, however, in the same article which contains this profession of reverential fealty, there is a promise to labour for the enlargement of popular rights and the perfecting of constitutional institutions. The Eastern Radicals are not concerned about logic: they do not trouble themselves to explain how they propose to deprive the Emperor of his prerogatives in order to convert them into popular rights, while at the same time setting to the nation an example of loyalty. In foreign affairs they promise to pursue a strong policy, and to assert the national prestige, and in domestic affairs they talk of wise measures to develop the national strength, of unremitting efforts to improve the finances and lighten the people's burthens, but how any of these most desirable results are to be achieved, they make no shadow of explanation. They merely sketch elastic outlines, and undertake to fill in the details with whatever speed or according to whatever methods the bulk of the Party may indicate after deliberation. It would have been impossible to pen a more non-committal document. Elsewhere parties are not collected or consolidated by such invertebrate methods, and we can scarcely believe that Japan will prove an exception to the rule.

REPUTATION AND INTEREST.

THE above is the title of a leader which recently appeared in the *Jiji Shimpō*. The writer makes some interesting comments on a well-known Japanese national characteristic. Here is the gist of the article. That Japan has ever been wont to hold reputation in high regard is a well-known fact. This tendency is not in itself an evil, but the question is, has it not led to an undue disregard of national interests? There are times when honour and interests clash. At such times a high regard for reputation involves a foregoing of interests. To cite a case in point. Year by year the number of Japanese who go to foreign lands increases, and among them many are by no means a credit to the country. On account of the injury such emigrants do to the national reputation, it is proposed, in some quarters, that restrictions be placed on emigration. This policy seems to us mistaken. The world is made up of all sorts and conditions of men. Good and bad are mixed. Japan is not the only country from which disreputable people have gone forth to foreign shores. Among those emigrating from various European lands there have been thousands of worthless characters, but we have never heard that restrictions have been placed on emigration on this account. It is natural that Japanese should feel ashamed when unworthy representatives tarnish her renown in foreign lands; but it is necessary to take a broad view of things, and to realise the impossibility of arranging matters so that only the good shall go abroad. It is only lately that the desire to emigrate has arisen, and the persons who are willing to go abroad are all too few. This being the case, it is most undesirable that the Government should place a variety of obstacles in the way of persons applying for permission to travel. If this policy be persevered in, there is no saying when the spirit of emigration will be developed in Japan as it has been elsewhere. The policy for the Government to adopt is to draw no minute distinctions between the pearls and the ordinary stones among emigrants; but to encourage men of all ranks and classes to seek their fortunes in foreign lands. There are not wanting writers who object to this policy, on the ground that it places

national interests before national honour. But what is to be done? Is it not idle to be prating about honour when all the world is bent on interest? This doctrine of making interest subservient to honour may do very well for individuals, but in the conflict of races it will not work. When one sees how crooked are many of the ways in which the foremost nations of the world accumulate wealth, and how every country is keen as to its interests, it is folly to talk of Japan's obligation to forego her interests for the sake of her reputation. The greatest nations have all become great by individuals and governments combining to study and preserve interests. To disregard interests indicates a lack of patriotism. The fact that military strength and mental development of all kinds depend on riches needs to be impressed on the minds of Japanese. The rich country is strong and well armed. A nation must begin by consulting its interests alone, and it will thus gain reputation. Men who do nothing but clamour about the importance of maintaining the country's reputation, and totally disregard her interests, are looking at things upside down; are putting the cart before the horse; are mistaking an effect for a cause.

The above has been the contention of the *Jiji* for many years. In the matter of emigration we are inclined to think that the Authorities have been over strict. It has to be borne in mind that such stringency as has been exercised towards a sensitive people like the Japanese undoubtedly prevents many from going abroad, and it is a mistake to think that any regulations can deter persons, bent on evil, from deceiving the Authorities and compassing their ends. Thus, while the unworthy evade the regulations, well qualified would-be-emigrants prefer to remain at home, rather than subject themselves to the severe tests on which the Authorities insist. Hence the earnestness of the *Jiji's* protest.

INCITATUS SECUNDUS.

M. BIGOT's latest addition to the comic library of this Settlement is a collection of sketches entitled "An attempt upon the Life of Incitatus Secundus, vulgarly called 'Orme.'" It is a quaint production, somewhat antiquated as to the humour of the sketches, but abundantly modern as to certain touches of blasphemy. Some of the faces and attitudes, however, are redeemingly funny, and the little volume cannot fail to furnish a hearty laugh. The French type of Englishman figures everywhere, and "Orme," from his first proud appearance in a stall beside a slumbering care-taker, until his final ride to London on the back seat of a carriage with the Duke of Westminster for *vis-à-vis* and a detachment of the Horse Guards for escort, is about as scraggy and unlikely looking an animal as they make them. M. Bigot's caricature of the exaggerated importance which Englishmen attach to horse-racing and all other contests of physical endurance and training, is perfectly fair. But we devoutly trust that Britons may always furnish material for such caricatures. We are not exactly of the same way of thinking as the late Mr. Swift, who used to say, in his own witty way, that the Briton's mania for exercise is a merciful dispensation of Providence, inasmuch as, if he didn't work off the head of steam in that way, the whole world wouldn't hold him.

ATTEMPT TO GET TO IKAO.

A CORRESPONDENT writes:—It may be of use to those who intend visiting Ikao to know that in consequence of the breaking down of the bridge carrying a tramway, Ikao can only be reached with difficulty. The tramway referred to is that between Mayebashi and Shibukawa. The river is yet in flood and it is likely to be several weeks before communication by the ordinary route is re-established. So long as the Shimbashi at Mayebashi is not carried away by the yellow waves which now rush beneath it, Ikao can be reached by a circuitous route for which the *jinrikisha* men ask a little over 20 *sen* per *ri*. You accept their proposal because you are in a fix, and then find that you cannot start until next morning. The same

Original from

kind of obstacles are met with on the Takasaki route. No sooner have you accepted the *finrikisha* figure, than you see them interviewed by a man from the hotel, and suddenly they all pick up their shafts and disappear down a side street. They are all tired, so the hotel man says; the journey will take 7 hours; you must stay the night and start in the morning. In one day I saw seven foreigners leave Mayebashi for other places, whilst, by a wire, I stopped two others from coming. Giving these people a value of 3.00 yen per head it means that in 12 hours stupid arrangements diverted 27.00 yen from Ikao to Nikko and other pastures. The half day spent whilst waiting for the *finrikisha* men to recover from fatigue is anything but lively. The streets, excepting for a few children, who having satisfied themselves by staring at you, then run away shouting *ketogin*, seem deserted. I must not, however, forget the policeman—the polite policeman with his shining sword and his spotless summer dress. He is ever present and in one day he read my passport no less than three times. The main point, however, is not the aggravation consequent on meddling “vising” of a passport, or the cries of *ketogin*, but the difficulty of reaching Ikao, which, instead of being a journey of a few hours, must now, if we follow the wishes of hotel keepers and coolies, be spread over the better part of two days.

THE PERU MINE AFFAIR.

It seems that we have not heard the last of the Peru Mining fiasco. The *Yiji Shimpō* has just published a long article on the subject, in which it is contended that though Mr. Tajima has not been legally convicted of practising deceit for the sake of obtaining money, public opinion rightly holds him morally responsible for the heavy losses incurred by the mad venture to which a number of capitalists lent their aid, for the simple reason that he visited the mine as a professional expert and as Japan's trusted representative before the enterprise was embarked on, and that on his testimony the shareholders implicitly relied. The *Yiji* notes with approval that the Public Procurator has given notice of appeal from the decision of the Court which acquitted Mr. Tajima on the plea of insufficient evidence. Our contemporary refers to the fact that it expressed doubts as to the soundness of the Peru investment from the very first, and goes on to observe that had the mine even yielded the amount of silver promised by the original promoters of the scheme, it could never have proved a success, owing to the unsettled state of the country in which it was located. Though the loss has fallen heavily on certain shareholders, the nation, says the *Yiji*, is well out of the business, for there is no knowing what complications the working of the mine might have involved. Our contemporary adds that it is most unfortunate that Japan's first experience of a big foreign investment should have been so discouraging. Far more regrettable than the loss of the 180,000 yen sunk in the Peru Mining Scheme is the depressing effect the fiasco has had on the minds of capitalists. Having burnt their fingers over this affair, Japanese investors have, during the past two years, fought shy of foreign money-making enterprises of all kinds, which, the *Yiji* considers, is highly detrimental to the interests of the country.

THE TYPHOON.

DETAILED telegrams from Okayama, on the north-east coast of Shikoku, and Nagoya, which were struck by the recent typhoon on the 22nd and 23rd instant respectively, say that in the former place several hundred houses were overthrown and as many more injured. Many lives were also lost and great destruction of embankments took place. From Nagoya it is announced that the railway between Toyohashi and Washizu has suffered damage and traffic has had to be suspended. Another telegram published by the *Kokkai* and dated at Kobe, 1.15 p.m. on the 25th instant, says that owing to violent rain during the night of the 24th-25th, the rivers Koko and Iho in Banshu overflowed and burst their banks, burying a large tract of country under water. The Kobe-Tsushima Section of

the Sanyo Railway was so much injured that traffic had to be stopped. The damage caused by inundations at Tatsuno in Banshu is also reported to be very serious. Further details of the damage done in various places will be found in our notes from the vernacular press. It is feared that another typhoon is impending, for not only does the Meteorological Observatory announce the existence of one in the China Sea, but the state of the weather at present indicates great atmospheric disturbance. If the year's allowance of typhoons would come now and be done with it, the agricultural classes would rejoice.

Details of the destruction caused by the recent typhoon continue to be received in Tokyo. In Okayama Prefecture (Bizen) the inundations resulting from the overflow and bursting of the banks of the rivers Aali and Takahashi affected five Districts—Kamimichi, Mino, Oku, Tsudaka, and Kayo—where no less than 5,000 houses were invaded by the water; 110 persons were drowned; 500 houses were completely overthrown; 600 were partially overthrown; 200 were swept away, and over 10,000 *cho* (25,000 acres of arable land) were inundated. In Kagawa Prefecture (Sanuki), two lives were lost—one man and one woman—owing to falling houses—and a school was destroyed. The unfortunate people of Gifu, also, did not escape. The carrying away of embankments in two places caused the inundation of over 70 houses, though happily no lives were lost. Tokushima Prefecture seems to have followed Okayama next in order of suffering and even to have surpassed it in some respects. The storm raged there for three days and nights—from the evening of the 22nd instant—carrying the sea far up into the town, the result being that 7,782 houses were inundated; 21 swept away; 186 overthrown; 62 partially overthrown; 6 persons crushed to death; 27 drowned; 4 bridges carried away; embankments broken in 42 places, and 2,590 persons reduced to depend on official relief. In respect of loss of life Hyogo Prefecture has the worst record of all. A telegram from Kobe, despatched on the afternoon of the 27th, says that in the Ako District 300 lives were lost and 3,000 houses either overthrown or injured. Traffic had been resumed on the railway as far as Kako river, but it was not expected that the section between Aritoshi and Mitsuishi could be opened until after the 30th instant. These returns give a total of over 17,422 houses wrecked, completely or partially, 445 lives lost, and great tracts of land buried under water. The calamity is second in magnitude only to the earthquake of last October.

DIPLOMATS IN WASHINGTON.

THE *Chicago Tribune* lately published an article containing accounts, embellished with portraits, of the Foreign Representatives in Washington. Three old friends are among the number, and this is what the *Tribune* has to say about them:—

The Ministers from France and Germany are both new men, and, singularly enough, they are both bachelors. There has not been a woman at the head of the French Legation since M. Dutrey, who had an American wife, was Minister some ten years ago. Unmarried men are, however, at a premium in Washington, where the supply is not equal to the demand.

Mr. Patenotre, the French Minister, came to us directly from Tunis. Earlier yet he had for some time been stationed in Japan. He is an unusually handsome man, well built, with an intellectual face, and manners of true Parisian courtesy. Social favours have been literally rained upon him, and he has been entertained at all the “smart” houses. M. Jules Beaufvé, an attaché of the French Legation, who has seen long service in Washington, is also a man of ability and very popular. Mr. Paul Desprez, too, who was Chargé d'Affaires before Mr. Patenotre's arrival, is a prominent figure in Washington society.

Mr. von Holleben, appointed to fill the vacancy caused by Count von Arco Valley's death, was for many years German Minister in Japan. His advent has not been made with such éclat as was his predecessor's, who created a veritable sensation when he came to America. Count Arco was a distinguished looking man of the South German type, large and of imposing presence. He wore a monocle, and was always attended by his Jäger, whose first appearance, seated in Bavarian costume, on the box of the Minister's carriage, made quite a stir.

Mr. von Holleben is rather good looking, extremely clever, and somewhat of a dilettante. He has the national love for music, and himself possesses considerable skill. Under his régime at Tokyo the German Legation, which is one of the most attractive places in the Japanese capital, was so popular that Tokyo society seriously regretted his transfer to America.

The German Legation in Washington is installed in a spacious, old-fashioned house on Fifteenth street, situated just on the edge of the business part of the town, and belonging to the Imperial Government. Its interior furnishing is left to the personal taste of each Minister, who sells or sends his goods home on his recall. The property is very valuable for business purposes, and the German Government has refused several handsome offers for it.

Mme. de Struve, wife of the present Minister from Russia, who died during a visit home some three years since, was a very interesting woman—the most brilliant and versatile, the least beautiful of the ladies of the foreign legations. Mr. Blaine once said of her, “Mme. de Struve is the most brilliant woman I have ever met.”

“Yes,” said a lady present, “I have rarely seen a more brilliant foreigner.”

“I did not say the most brilliant foreigner,” said Mr. Blaine, “but the most brilliant woman.”

In appearance she was small and slender, with clear cut, intellectual features, and keen gray eyes. A modera in every sense of the word, she kept abreast of the thought of the day, and was herself proficient in the sciences. She was a devoted mother, a brilliant woman of the world, and a tender, sympathetic friend. There was a sense of strength and power about her which was irresistible, and her bonnet was in constant circulation. While she was at its head the Russian Legation was the most brilliant in Washington. Her weekly receptions were a social feature, and her dinners feasts of wit and wisdom. Since her death, the Legation, which occupies the handsome house built by ex-Gov. A. R. Shepherd when at the zenith of his power, has not been thrown open to the gay world, save occasionally when the Secretaries have offered bachelor hospitality.

Mme. de Struve came from a gifted family. Her father was a noted Russian General and her brother, Gen. Michael Nicolas Annenkov, is the engineer who is now engaged in building a great railroad through Central Asia.

Mr. de Struve has been Russian Minister at Washington for a decade, and will probably remain here until he is promoted to an Ambassadorship. He was for a number of years a Russian diplomatic agent in Central Asia, and, like Mr. Patenotre and Mr. von Holleben, has represented his country in Japan. Much of the time since Mme. de Struve's death he has spent in Russia with his children. Mr. de Struve is distinguished in appearance, with a genial, pleasant expression, and cordial manners.

TOTAL WRECK OF THE “NORTH AMERICAN.”

THE following particulars from the *Kobe Chronicle* are to hand in reference to the wreck of this vessel:—“A telegram has been received by Governor Sufu that the *North American*, which left Kobe for New York on Friday morning last, is a total wreck on the coast of Awa in the Kii Channel. Happily all the crew were saved. The *North American* passed the Straits at six o'clock on Friday morning in charge of a Japanese pilot, who picked up a fishing boat thereabouts and left her, it is supposed, shortly afterwards. The captain must have passed Hinomisaki safely, as the *Macduff* did not see the vessel as she came in, and it is therefore thought that on getting out into the open he encountered a southerly wind, which, with the current setting N.N.W., would put him right on to the shore of Awa, where the vessel probably struck on the night of Friday on the well-known dangerous reef on that shore.”

AN ORATORICAL FEAT.

On the 24th instant Mr. Inagaki Manjiro delivered at the Kinkikan, Kanda, a lecture which in respect of length has, we venture to think, never been surpassed in Japan. The speaker ascended the rostrum at 8 a.m. and spoke fluently and vigorously without stopping until after 1 o'clock. No exhausted shorthand reporters waited anxiously for the close. These gentlemen were conspicuous by their absence. The Japanese show little enterprise in obtaining full reports of speeches. It is seldom that vernacular papers contain anything but meagre outlines of public orations, however interesting and important they may be: only in the Diet is the system of reporting well developed. The importance of accuracy, and hence the value of stenographic records, are not realised by the nation at large. From the report furnished by the *Yiji*

Shimpo we gather that in his five hour lecture, under the title of "Japan's Foreign Policy," Mr. Inagaki discussed almost every subject conceivable. Among the topics of his discourse, as given by the *Fiji*, are the spirit of the nineteenth century, the French Revolution, England as a centre of Commerce, America as a centre of Commerce, and Japan as the entrance to the Eastern Commercial world. The lecture was divided into three parts, the first dealing with the commercial, the second with the industrial, and the third with the political policy Japan should adopt. The lecturer denounced in strong terms the modern tendency to concentrate attention on politics. But there is a great lacuna in the *Fiji's* account: it tells us nothing about the listeners. How did they fare during these five hours of unending eloquence?

SUSPENSION OF THE "YOMIURI SHIMBUN."

THE *Yomiuri Shimbun* have been suspended for publishing an article which professes to give the conversation that occurred between the Minister-President of State and the Emperor on two occasions, when the latter sought audience of the Sovereign in connection with the appointment of Ministers to vacant portfolios. The purpose of the story is, of course, to bring discredit on the Minister-President by representing the Emperor as addressing to him precisely the objections which certain persons have urged against the supposed and actual procedure of the Cabinet with reference to these appointments. It would be right enough that the *Yomiuri Shimbun* should have advanced these objections on its own account, but when it has recourse to falsehood for the purpose of putting them into the mouth of the Sovereign, it forfeits all sympathy. Falsehood is the only term applicable, inasmuch as it is obviously impossible that any newspaper could be in a position to publish a verbatim report of an interview between Emperor and his Prime Minister on State questions. The *Yomiuri Shimbun* must have known that it was publishing a purely imaginary dialogue, and certainly the Emperor and the Minister-President were not well chosen as actors in such a fiction. Besides, to publish anything of the kind without official permission, is a direct violation of the letter of the law, so that the *Yomiuri* erred in more ways than one. It is difficult to see why Japanese newspapers should run their heads thus deliberately into the lion's jaws. They look foolish in the process, and do not increase the public's confidence in either their discretion or their veracity.

"YE ODD VOLUMES."

THE front page of the *Daily Graphic* for June 6th contains a picture of "Ye Odd Volumes, united once a month to form a Perfect Sette." Dr. William Murrell is in the chair and Mr. Marcus B. Huish is reading a paper, among the audience being Mr. Oscar Wilde, Mr. Alma Tadema, Professor Church, Dr. Ernest Hart, Mr. Alfred East, Captain Kawaka, Mr. Okoshi, and others. The likenesses appear to be good on the whole, though Alfred East looks a little out of tune. The *Graphic* gives the following account of the *reunion* :—

His Oddship, Dr. William Murrell, presided over a large and distinguished body of guests at the hospitable board of the Odd Volumes on the occasion of their June dinner at Limmer's Hotel, on Friday last. Interesting groups made by the guests and brethren formed very happy combinations of distinguished representatives of literature, medicine, science, politics, and art.

THE COMPANY.

His Oddship sat supported by Mr. Max Pemberton and Mr. Shultz Wilson; the vice-president, Bro. Heron-Allen, by Mr. Oscar Wilde and Colonel Chisborough, U.S.A.; the secretary, Bro. Todhunter, Playwright to Ye Sette, was the centre of a small literary circle, Mr. James Sims, Mr. Macmurdo, and Mr. Mackenzie Bell; opposite to whom was seated Bro. Marcus Huish, the Artisan, with Mr. Alma Tadema, R.A., and Professor Church on either hand. Bro. Holme, the Pilgrim, exchanged views upon the Japanese and Japan, with Mr. N. Okoshi, the Japanese Consul, and Mr. Arthur Dicosy, the secretary of the Japanese Society. Bro. Onslow Ford, the Sculptor, and Bro. G. C. Haité, the Art Critic, were with Mr. John Swan and the learned Dr. Leitner. Bro. Douglas Gordon, the Master of the Ceremonies and Remembrancer, with Bro. Lane, the Bibliograp-

her, entertained the representatives of the nation in Mr. Jesse Collings, M.P., and Mr. Murdoch, M.P., and Mr. Harborn, the New Zealand traveller, with Bro. Wilfrid Ball, the Painter-Etcher, as their *vis-à-vis*. Near Bro. East, the Landscape Painter, were Mr. Ernest Hart, Mr. F. A. Satow, Mr. J. P. Reid, and Mr. F. T. Pigott. Bro. Elgar, the Shipwright, and Bro. Villiers, the War Correspondent, sat with Sir Henry Trueman Wood and the Naval Attaché of the Japanese Legation. Bros. Davies and Venables were neighbours to Mr. Claude Pemberton and Bro. Conrad Cooke, erstwhile the Jester, but now the Mechanic to the Sette. Bros. Quaritch, Thompson, Manning, and Gervis formed a merry and noisy quartette. Mr. Ashbee and Bro. Hamilton sat with two newly-elected brothers, Yorke Powell, of Oxford University, and Herbert Ward, the intrepid African traveller, who had but just passed through the ordeal of initiation, the former as the Ignoramus, on the score of his learning, and the latter as the Wanderer, in recognition of his nomadic habits. As the feature of the evening was a paper by the Artisan, Bro. Huish, "An Apology for Japanese Art," a great number of authorities and collectors were specially invited, most of whom are members of the New Japanese Society, of which Mr. William Anderson is president, but he was unable to be present. Mr. F. Pigott, the vice-president, and Mr. Arthur Dicosy, with the gentlemen already named, represented the society of which many of the Odd Volumes are distinguished members. In response to the toasts, the Japanese Naval Attaché was called upon by his Oddship to respond for Japan, which he briefly did in his own tongue; Mr. Jesse Collings for Parliament; Col. Chisborough for America; and Mr. Oscar Wilde was called upon to respond for himself, an opportunity of which he made the most, prefacing his remarks by assuring the Sette that it was the one subject that had engrossed his attention from his earliest recollection.

JAPANESE ART.

Bro. Huish then delivered his "Apology for Japanese art." Striking comparisons were made between the beautiful fabrics for dress materials, the swords—which upwards of two millions of Japanese were permitted to carry—and the objects of everyday life in Japan at the time of Sir Rutherford Alcock's first official visit to that wonderful country, and our manufactured goods of Manchester and Birmingham of the same period. Some very beautiful examples of dresses, swords, medicine boxes, kakemonos, &c., were handed round for inspection, lent by the lecturer, Bro. Holme, and others. By command of his Oddship, Brother Haité proposed a vote of thanks. Bro. Holme seconded the vote of thanks, and confessed to a difficulty of explaining the difference between decorative and pictorial art. Mr. Alma Tadema, R.A., spoke at some length, reverting to the change which European art had undergone since the time of Raphael, and finished with an enthusiastic expression of admiration of Japanese art. Mr. Okoshi pointed out that, whereas the art of Europe was cosmopolitan, that of Japan was traditional. Mr. Ernest Hart followed, and with remarks much to the point, declared that as Japanese art influenced by the Buddhist religion and canons, they had not sought like the Greeks, to exalt the human form, but rather to debase it. Brother Alfred East thought that, before the art of a nation could be justly understood, some knowledge of the habits and natures of the people themselves was requisite. It was approaching midnight when his Oddship rose, and the Sette dispersed, to meet again, after the vacation, in October.

The menu of the evening, presented by Brother Huish, suggested the gathering of a kindred society in Japan, discussing an apology for English art!

* * *

There is evidently a disposition in London to revive the taste for Japanese art, which suffered much a few years ago from the injudicious puffing of charlatans. Mr. F. T. Pigott's admirable essays recently published in *The Builder*—incomparably the best things that have ever appeared on the subject, we venture to think—must have done much to attract public attention, and Mr. J. Conder's book on "Flower Arrangement" has also produced an effect. Mr. Pigott, we may mention, is about to bring out a Japanese Floral Diary which is sure to be good, and he has also in the press a volume on Japanese music, which is said to have excited much interest in the musical world. Then we have Mr. Bowes in Liverpool, whose books and articles have immensely helped the cause of Japanese art, while Dr. Anderson in London exercises a steady influence in the same direction. Dr. Ernest Hart, too, since his visit to Japan, has become a more than ever active and intelligent exponent of all things Japanese, and the excellent papers compiled by Mrs. Hart after her return from this country must have been widely read. Finally Mr. Huish, editor of the *Art Magazine*, is indefatigable in his efforts to arouse in others something of the keen appreciation he evidently feels himself. His

recently published little book describing a collection of Japanese art objects from a historical and ethnographical point of view, was suggested by a very original idea which the author followed out with great ability. Altogether, if Japanese art does not begin to be better understood in London, it will not be for want of clever and sympathetic exposition.

They are fortunate who have time to study the products of Japanese art closely and by some clear light. In Mr. Huish's favourite branch—sword furniture—there are perpetual delights and surprises. The more one examines these exquisite works in metal, the more one is astounded by the strength and delicacy of the chiselling and the extraordinary skill of the artisan. Sometimes one finds a figure, perhaps one third of an inch in height, the face of which is chiselled into as perfect a mirror of some emotion as could be produced by the brush of a great painter; and then again, one discovers a whole army of *Samurai* engraved within the compass of a *Kozuka's* surface, every detail of each figure and every fold of the drapery accurately depicted. It is not mere mechanical skill either: these artisans were often poets. The greatest of the Gotos—with one exception—Goto Ichijo, often surprises us by the tenderness of his pictures in metal. We saw recently a knife-haft chiselled by him. On the face, in low relief, were a line of rustic fence and a gate, with a pine tree and autumn grasses growing in front, and the moon rising through clouds behind. By some undiscernible subtlety of line, this little scene had received the impress of perfect rest and tranquillity. It was a quiet country residence where happy folks might live peacefully. Nobody could mistake it for anything else. On the back Goto had carved a verse of his own composition :—"Husband and wife sing together: their wings of love soar high into cloud-land. They sing their deathless affection, and their love-notes thrill through the twin-branched pines." What a singular design and sentiment to choose for the haft of a knife forming part of the furniture of a *Samurai's* sword! More frequently, however, a touch of comicality is preferred by the worker in metals when he departs from historical or conventional motives. In the same collection that contained the knife-haft we have just spoken of, were a *Kozuka* and *Kogai* by Toshimitsu. On the former the celebrated courtesan Takao, magnificently apparelled, sweeps along proudly and majestically, but if we turn the *Kozuka* we find this inscription on the reverse :—"Buddha sells doctrine; the sect-founder sells Buddha; the priest of later days sells the founder. And you! You sell your five-foot body to gratify the lust of men. Green is the willow; red the flower: there is plenty of variety." On the *Kogai* we find the same Takao tickling the ear of a forbiddingly stern-looking Daruma and behind this scene of quaint contrast is the legend :—"Night after night the moon travels over the surface of the lake; but never once does her heart enter the water; never once does her shadow stay there."

It is curious that the idea which occurred to Toshimitsu so many years ago, should have presented itself independently to Mr. Henry Norman in 1886. The inimitable frontispiece of "The Real Japan," a photograph grouped and taken by Mr. Norman himself, shows the beautiful little danseuse, Oyen, with her arms thrown about the neck of an appallingly austere Daruma in Bizen pottery. There is nothing new under the sun.

THE HYOGO HOTEL.

STILL, and with reason, the people of Kobe seem to be considerably excited about the Hyogo Hotel affair. To their very great credit it must be said that, almost without exception, they have refrained from saying a word against the unfortunate Mr. Johnson. They let the dead rest in peace. But they are distinctly angry with the promoters of the disastrous scheme, who, presumably through negligence, perfumctoriness, or misplaced confidence, were the means of foisting upon the public a most deceptive chattel. Espe-

Original from

cially against Mr. Creagh does the local wrath burn, because, acting as solicitor for vendor and vendee alike, he exercised a large faith which worked entirely in the interests of one party. Somebody has even gone so far as to compose and publish a piece of caustic doggerel at the expense of the unhappy solicitor. Here are three verses:—

Who with prospectus worded fair,
Invited all to take a share;
With hard earned savings few could spare?
Our Lawyer!!!

Who stuck us with a sick Hotel,
With promise fair and plotting fell—
Who worked on us this monstrous sell?
Our Lawyer!!!!

Who tried to earn a triple fee,
Acting at once for clients three,
With interests contradictory?
Our Lawyer!!!!!!

Mr. Creagh's position was certainly difficult. The only barrister, we believe, in Kobe, he was consulted by everybody, and it was perhaps not unnatural that his methods should be influenced by his peculiar position. But after all, is the Hyogo Hotel such a very bad speculation? We cannot but think that if the Company brings a little of its business ability to bear on the venture, a fair profit may yet be realized. Certainly all this unpleasant notoriety will not conduce to the interests of the enterprise.

THE RYOMO RAILWAY.

A decision on the long pending question of the amalgamation of the Ryomo Railway Company with the Nippon Railway Company was finally reached at a general meeting of the shareholders of the former Company held in Tokyo a few days ago. The committee who were appointed at the early part of the last month to make thorough investigations as to the advisability of selling the Ryomo railway to the larger company, submitted as the result a report strongly in favour of their Company's maintaining its independence. The opinion of the committee was supported by a large majority, and the scheme for the sale of the property thus fell through. It was further decided that the connection which has existed between the two companies since the opening of the Ryomo line—the arrangement under which the Nippon Railway Company has been taking charge of the maintenance of the line and the management of the rolling stock—should be severed, and that the Company be placed under an entirely independent footing. These altered arrangements are to come into effect from the 1st of October next.

THE RECENT STORM.

Kochi Prefecture has to be included in the area which suffered severely from the recent storm. A telegram despatched thence on the morning of the 27th instant, says that from the 22nd instant to the 25th inclusive, there was an unceasing downpour of rain, with the result that a large land-slip occurred in the Misse Division of Akawa District, 16 houses, 13 people, and six oxen being buried deep in the debris. One other death is recorded from a cause not described, and several embankments were washed away. When the figures of loss caused by this terrible storm are totalled, they will prove very considerable.

YOKOHAMA AND TOKYO VOTES.

It appears to be the opinion of our readers that the time has passed when any good purpose could be served by recording Conservative and Liberal votes on the part of the British community in Japan and telegraphing the result to London, as was done in Hongkong. We have nevertheless received a few votes. They are not sufficiently numerous to be worth arithmetical record, but we may say that they are almost unanimously Conservative.

SUMMER SCHOOLS.

The fashion of relieving the tediousness, to Japanese students, of the long vacation by holding classes in the hills, is we observe, becoming very prevalent in Japan. Conducted more *Japonico*, the expense involved is slight, and the results are excellent. Book-work is only carried on for about three hours a day. The rest of the time is given to recreation. Boys are social animals, and the enjoyment of a holiday is greatly in-

hanced by good company. Some of the instructors in charge of summer schools make use of the opportunity for teaching the boys how to play foreign outdoor games, and others accompany their pupils in long rambles over the hills, and employ the occasion for giving lessons in natural history or other subjects in which they may themselves be versed.

CUSTOMS RETURNS.

The following is a summary of the Customs Returns for June, showing the foreign trade of the empire for the month:—

EXPORTS AND IMPORTS.		1891.	1892.
		SILVER YEN.	SILVER YEN.
Exports	5,425,893.630	6,081,351.870	
Imports	4,507,304.060	6,009,826.730	
Total exports and imports		12,091,178.600	
Excess of exports		71,525.140	
		CUSTOMS DUTIES.	SILVER YEN.
Exports		161,898.565	
Imports		246,720.978	
Miscellaneous		9,825.483

BOMBS.

An ugly element, the appearance of which upon the political scene has been talked of recently as a possible contingency, has now been added to the troubles of the time. At eleven o'clock on the night of the 28th instant, men presented themselves, almost simultaneously, at the residences of Count Okuma and Mr. Kono, carrying deal boxes, about 4 inches deep by 8 inches long, prepared after the usual fashion of boxes containing letters. The box given in at Mr. Kono's contained a superscription saying that it came from Mr. Ito Miyoji, Chief Secretary of the Privy Council, and Count Okuma's box purported to come from Mr. Yano Fumio. As Messrs. Ito and Yano are friends of Mr. Kono and the Count respectively, the boxes were received without any suspicion and immediately, were opened when they were found to contain, not letters but dynamite bombs. The scheme of the makers of the boxes was, that some detonating substance should be ignited by the friction of drawing back the lids of the boxes, to which springs were attached, but happily in both instances ignition failed to take place. Information was at once given to the police,

who soon traced the bearers of the boxes. In the case of Mr. Kono's box, the bearer proved to have been a *jinrikisha* coolie of Nagatacho, named Hamanaka Genjiro, who said that a person like a student had given him the box paid him to carry it to the House of the Home Minister; while Count Okuma's box had been carried by another coolie, Nakamura Fusagoro, of Yotsuya, Tenomachi, who had received it from a man passing along the street. Searching investigations are now in progress.

JAPANESE ORDERS.

We have translated from the *Official Gazette*, during the past few days, several announcements of Orders which His Majesty the Emperor has been pleased to confer on foreigners, but it appears that although only now officially announced, all these honours were granted a considerable time—in some cases as much as a year—ago. Why they should not have been gazetted earlier we are unable to say.

IMPERIAL ORDINANCE.

An Imperial Ordinance has been published authorizing the expenditure of monies from the First Reserve for the following purposes:—(1) To assist the repairing of the new Shikoku Road in Kochi Prefecture; (2) to assist the repairing of the road between Oita and Nakatsu in Oita Prefecture; (3) to pay the salaries of foreign employes as provided by agreement.

THE NEW ORIENTAL BANK CORPORATION.

The local manager of the O. B. C. writes yesterday:—"I have to-day received a telegram from London to the effect that the Committee of Inspection do not recommend the reconstruction of the Bank."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Ministerial problem has entered upon a new stage of much importance. Before this appears in print the storm now menacing the Cabinet's stability may plunge the political world into a state of considerable confusion. It is now no longer a secret that the Cabinet is split into two seemingly irreconcilable sections; the one being composed of Count Goto and Mr. Kono with perhaps Viscount Enomoto and Viscount Sano; the other of Viscount Takashima, Viscount Kabayama, and Count Oki. The Minister-President, Count Matsukata, is reported to incline to neither side. It was indeed apparent from the first that dissensions were unavoidable in a Cabinet constituted as the existing one is. Well informed observers wondered that Viscount Takashima's section had not resisted more strongly the appointment of Mr. Kono to the portfolio of Home Affairs. Owing to this half-hearted attitude of the militant party, as Viscount Takashima's section is called, Count Goto and Mr. Kono were for a time able to have everything in their power. The sudden and, so far as appearances went, complete ascendancy of Count Goto made him the hero of the day, a section of the press even idolizing him as the powerful demolisher of clan Government. Opposition papers, while denying the existence of a covenant between the new Ministry, as the Matsukata Cabinet under Count Goto's ascendancy is called, and the *jiyu-to*, showed an unmistakable tendency to say good things of the Count of Big Words (大言伯), who until lately was an object of general condemnation as an alleged betrayer of the popular cause. The papers seem to have suddenly called to mind certain words which he dropped when he took office, to the effect that the most effective method of pulling down the edifice of clan Government was to attack it from within. Now, they seem to think that the great statesman is going to fulfil his own prophecy, and that in this respect he deserves the support of all enemies of clan influence. Some of the Opposition papers may not necessarily be disposed to regard Count Goto as a hero, but they certainly do seem to recognize in him a unique instrument to purge the Government of its clan elements and prepare the way for

the introduction of party Cabinets. Some of the *Kaishin-to* papers, too, have evidently been delighted with the opportunity thus afforded of dealing a blow to the influence of certain Choshu statesmen. These circumstances combining made Count Goto for the past fortnight the most popular statesman of the day. But on a sudden an ugly cloud darkened this prospect so bright for the Minister of Communications, Viscount Takashima's section, which, though evidently not pleased by the turn things were taking, had hitherto remained irresolute and uncertain, suddenly awakened into full vigour, and brought pressure to bear upon the Minister-President to remodel the policy of the Cabinet. Viscount Takashima and Viscount Kabayama threatened to resign at once, unless Mr. Kono were removed from the Home Office, and the former strong policy again adopted by the Cabinet towards the Diet. As to the cause of this apparently inconsistent move on the part of the Ministers of War and of the Navy, it is attributed to pressure brought to bear upon them by the leaders of the National Union (*Kokumin-Kyokai*). Another new factor in the situation is the presence in the capital of several of the disaffected Governors of "the desperate group," (*Gakki-gumi*), who are entirely opposed to the policy of the new Minister of Home Affairs. Whatever may be the cause, the fact is that the die has been cast, and one of three things must be done; either Viscount Takashima's party must leave the Government; or Count Goto and his followers must resign, or failing this the whole Cabinet must tender its resignation simultaneously. At all events, if we may believe reports, compromise seems out of the question.

The interminable uncertainty of the position of the Cabinet is the subject of unanimous condemnation and regret in the columns of papers of all classes. The *Fiji Shimpō* earnestly hopes that every effort will be made to reconcile all differences between dissident members of the Cabinet. It asks the Ministers not to disgrace themselves by changing a policy, whatever it be, which they decided upon only a few days ago. If the continuance of Mr. Kono in the Home Office be unavoidably inconvenient, the *Fiji* advises the Minister-President to resign the portfolio of Finance and assume the control of the Home Office in addition to his post of Minister-President.

The Opposition journals strongly criticise the inconsistency of the conduct of Viscount Takashima and his section. These papers do not hesitate to urge the Cabinet to drive out of office the disaffected minority. They remind the Minister-President of the decision with which he conducted himself during the late session of the Diet; and recommend him to show equal resolution in the present case. One of these journals even goes so far as to assure him that he need be in no anxiety so long as he can count upon the active co-operation of men like Count Goto and Mr. Kono. Turning to Viscounts Takashima and Kabayama, and Count Ōki, the Opposition organs appeal to their public spirit and personal honour to resign if they find it difficult to agree with the majority of their colleagues.

The *Nichi Nichi Shimbun* agrees with the rest of the papers in thinking it very strange that serious opposition should have arisen within the Cabinet itself against the new Minister of Home Affairs within so short a time of his appointment with the concurrence of the whole Cabinet. Whatever may be said of the new move on the part of certain Ministers, things have, in our contemporary's opinion, already reached a stage in which compromise is out of the question. The Cabinet must now take some decisive step. If the majority of the Ministers be powerful enough to drive the minority out of office, let them do so by all means. But the *Nichi Nichi* apparently entertains some doubt as to their ability to take such a decisive course. If that step be beyond their power, our contemporary calls upon the whole Cabinet to resign simultaneously, and at once to put an

end to the interminable excitement about the Ministerial crisis.

The *Kokumin Kyokai*'s manifesto has been already noticed in these columns. The appearance of the document is seized by the Opposition papers as an occasion to renew their severe attack upon the abnormal condition of that association. To all intents and purposes, the National Union is a political party, and as such ought to put itself under the scope of the Political Associations Regulations. Its members claim, however, that their association is not a political party but simply a sort of social institution; and it is apparently regarded in that light by the Authorities. The provisions of the Political Association Regulations are in some cases far from convenient; and the thought that the *Kokumin Kyokai* is evading this troublesome law with the connivance of the Authorities galls the politicians of the *Fiyu-to* and the *Kaishin-to*. Their criticisms on this subject seem only natural and reasonable.

The new Radical programme, just made public, is the subject of much comment in the press. The general opinion of the papers seems to be that the document marks wholesome progress in the political ideas of the *Fiyu-to*, since it shows a spirit of moderation and practical sense. The programme has found a most searching critic in the *Nichi Nichi Shimbun*. That journal's articles on the subject are not yet concluded, but enough has been written to enable readers to comprehend the paper's general attitude. In the first place, the *Nichi Nichi* points out, that since the Party promises to institute political investigations on the basis of the new programme, its members must be held to have hitherto discussed politics without any assured foundation for their opinions. Secondly, whereas what is most important in a political programme is that it should give ample consideration to the time, method, order, and cost of the measures proposed in it, the Radical document is conspicuously deficient in these important respects, and consequently the *Fiyu-to*'s political ideas must be characterized as crude and shadowy. Thirdly and lastly, the Radical programme is declared to be full of illogical and mistaken ideas of political science.

The Radical organ, the *Fiyu*, in writing on the same topic, observes that the policy of its Party having formerly been necessarily negative and destructive, it was not in those days possible to formulate any positive programme. Further, during the new constitutional era, the *Fiyu-to*'s hand having been fully occupied by active contests with the Government and the latter's supporters, there has hitherto been no possibility of devoting much time to the investigation of political matters in detail. But the general aim of the Party has been sufficiently well known for the past few years, and only its bitterest enemy can charge the *Fiyu-to* with having been unnecessarily tardy in instituting thorough researches into political affairs.

The *Kokkai* is one of the papers which recognize that the Radical Party's new programme indicates progress in the right direction. It congratulates the Radicals on this happy improvement. But at the same time, it draws the attention of the leaders of the Party to the vital importance of changing their cold and ungrateful attitude towards many distinguished politicians who have devoted their whole energy and sacrificed their whole property to the advancement of the cause of Liberalism. There are many men of this description who, not possessing seats in the Diet, are excluded from all share in the direction of the Party's affairs and may justly be said to be left out in the cold. This is the real cause of the secession of Mr. Ōi Kentaro and his followers. Should such a petty spirit continue to prevail among the Radical leaders, the *Kokkai* fears that the *Fiyu-to* can have little hope of ever becoming a great party. Clan influence is the avowed object of attack, but the Radicals do not seem to observe that the organization of their Party is

rapidly becoming more narrow and exclusive in spirit than Clan Government ever was, even in its most flourishing days.

The *Toyo Fiyu-to*'s (Eastern Radicals) manifesto is declared to be vague and valueless as an enunciation of a party's programme. So far as it has any meaning, it seems to signify that in every respect the Eastern Radicals' object is not different from that of their former comrades of the *Fiyu-to*. There is, however, one clause which has suggested strong suspicion to the *Kaishin-to* organs. It relates to "the protection of the poor and the working classes." What does this mean? The leaders of the new Party, says the *Hochi Shimbun*, perhaps intend to oppose the two popular measures, the reduction of the land tax and the re-assessment of the taxable value of land, on the ground that those reforms, being calculated to benefit only the land owners, are indirectly prejudicial to the interests of the poorer classes. The Eastern Radicals will probably support the Government's proposal to transfer the prison expenses to the charge of the Treasury, alleging that such a course is beneficial to the poorer elements of the people. If that be their real intention, the *Hochi* does not wonder that they can not work harmoniously with the Radicals. Such is the construction put upon the clause by the *Hochi Shimbun*, but in our opinion, the projects of the Eastern Radicals have more to do with the country's foreign affairs than with the improvement of internal politics. The spirit that prompted them, some years ago, to plan a mad scheme of revolution in Korea still remains operative.

The disturbance in the Prefecture of Ishikawa is laid by the Opposition papers to the change of the Local Authorities, especially the police functionaries. The Radicals are making much noise on the subject, because the mob consisted of members of their Party. It must be remembered that Ishikawa Ken is one of the localities where much ill-feeling is said to have been created between the local authorities and the people, by the former's alleged illegal interference in the elections of February last. Grave charges are preferred against the police in the present case. They are accused of having wantonly butchered many inoffensive inhabitants, and having treated even women and boys with insolence and cruelty. The Opposition papers call upon the Government to deal promptly with the offending parties and restore quiet to the much harassed people of Ishikawa. As yet it seems premature to form any decided opinion on the matter.

The sudden demise of the *Tokyo Shimpō* has occasioned much comment. The *Yomiuri Shimbun* regards it as a proof that the defunct journal was the organ, not of the Cabinet as a whole, but of a section of it, for its disappearance has been simultaneous with the going out of office of the leader of that section. With all its mistakes and blemishes, the *Tokyo Shimpō* enabled the public to know something of the ideas of the Government. The Cabinet is recommended to establish a new organ, for nothing can be more injurious for it than to have its motives and purposes misunderstood by the nation.

The Korean question continues to occupy much space in the columns of the metropolitan press. The *Choya Shimbun* is publishing a long series of articles on the subject, which will take several days more to reach an end. The *Kokkai* cautions its fellow journals against lending a ready ear to reports coming from the Korean peninsula, too many of them are prone to do. Large allowance must be made for the crafty designs of the Chinese and also of the rival factions in Seoul. Moreover, there are always some unscrupulous people who, in concert with speculative merchants at home, make it their business to send over exaggerated versions of passing events. Consideration must be given to these circumstances, and due caution exercised in discussing Korean affairs. This is the *Kokkai*'s counsel.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

POLITICAL MANIFESTOES.

TWO documents of political interest have just been published: they are Reports by the *Jiyu-to* and the *Kaishin-to* with reference to the last session of the Diet. Both are constructed on similar lines; the compilers cite the various measures introduced during the Session, and endeavour to show that the Government sustained a conclusive defeat on every issue with respect to which it had appealed to the country. But though following a common course, the tone of the two Reports shows a marked difference. That of the *Kaishin-to* is conspicuously bitter. It declares again and again that nothing remains for the Cabinet but to resign, and it promises that unless the popular voice be hearkened to, no Government Bill will be passed in the next session. That of the *Jiyu-to*, on the contrary, disavows all hostility to the Government, evidently seeks to convey the impression that each Bill was judged on its own merits without any reference to its source, and explains that the document is rather a vindication of the Party's procedure than an attack upon the Government. This difference of tone is a true reflection of the difference in the present attitudes of the two Parties. The *Kaishin-to* is by far the more resolute and uncompromising.

Turning from the general character of the reports to the special measures discussed by them, we find that the *Jiyu-to's* document is much clearer and more closely reasoned in this respect. Politically speaking the palm must be accorded to the *Kaishin-to* compilers, whose demonstration of the responsibilities devolving upon a constitutional government is very powerful, if read only by the light of the systems existing in such countries as England. But the *Jiyu-to's* statement has greater interest since it deals with each question independently. From it we learn, with regard to railway extension, that the Radicals are strongly in favour of adding to the present facilities, but that they aim chiefly at carrying the new lines far inland, so as to tap the goods traffic of the country and serve strategical purposes. Their dominant idea is to have a main trunk line running from the east to the west coast, with feeders passing north and south, the chief object kept in view being communication with good sea-ports. They think that the country can well afford to spend some five million *yen* annually for that purpose, inasmuch as the sums payable abroad for the purchase of material will be covered amply by the excess of exports over imports, the silk trade alone offering an immense field for exporters. We look in vain, however, for any definite statement of the reasons that induced the Opposition to reject the general scheme for the State acquisition of private railways. Such a measure ought certainly to find favour in Japan on theoretical principles

and the special circumstances of the case represent another powerful argument. But the measure is dismissed in each Report with a brief statement that it was not considered necessary. The fact is that confidence is wanting as to the manner in which the programme would be carried out, and perhaps the Opposition feel reluctant to leave to the Government the execution of an undertaking so extensive, involving such a large outlay, and adding correspondingly to the prestige and popularity of the Administration. With regard to the Bill for transferring Prison Expenditures from the charge of the localities to that of the Treasury, the Reports are most unsatisfactory. There can be no question as to the desirability of the measure. The treatment of prisoners in different parts of the empire varies greatly, and it is well established that many abuses exist, owing to the natural unwillingness of each prefecture to provide a properly equipped and adequate jail at its own expense. Besides, that the prisons should be under the management of one central authority is a principle of plain expediency. But the Reports of the Opposition dismiss these important considerations with a brief observation that there is no assurance of an improved system being introduced by the proposed transfer, and that, in all probability, the expenditure would be increased. Every one can see, however, that the real reason of the Bill's rejection is stated in a corollary to the alleged reasons, where we read that the measure would involve an appropriation of over three million *yen* from the surplus revenue "which surplus public opinion desires to see applied to the reduction of the land tax and the re-assessment of the taxable value of the land." In short, the Opposition places reduction of the agricultural classes' burdens above all reforms, and is resolved not to devote the surplus revenue to any purpose, however deserving, until that pet project is realized. In the *Kaishin-to* Report we find an interesting statement about the Prison Expenditures Bill. It is asserted that a kind of understanding existed between the two Houses, in the sense that if the Representatives passed the Bill as voted by the Peers, the latter, in their turn, would pass either the Bill for the Reduction of the Land Tax or that for Re-assessing the Taxable Value of the Land. But the Peers ultimately showed no disposition to perform their part of this bargain, and so the Representatives rejected the Prisons Bill.

Turning to the comments on the appropriation for naval ship-building, we find the Radicals avowing their belief in the necessity of increasing the Navy, but declaring that they cannot agree to any heavy expenditure for the purpose, so long as the Naval Department has no fixed policy, and so long as the naval administration is wasteful. What is meant by a fixed policy, and in what respects the administration has been wasteful, the Reports do

not explain. The figures given are that, during the *Meiji* era, 28,600,000 *yen* has been spent upon men-of-war, and that the country possesses a total tonnage of only 59,400 tons. The Naval Authorities say that this latter figure must be raised to 120,000 tons, and that the expense of the operation will be 58,000,000 *yen*, which the Radicals consider too high. They are careful to declare, however, that they do not intend to oppose the grant permanently, but only until satisfactory arrangements can be made about the expenditure. In connection with this part of the subject, one naturally looks with curiosity for the Opposition's account of the collision between the Houses. But nothing could be more disappointing. Indeed, it must be admitted that both Reports are disingenuous in this matter. Neither gives any account of the nature of the collision between the Houses, or of the fact that the EMPEROR'S decision was altogether against the Lower House. The *Jiyu-to's* Report merely says that the Naval appropriation was rejected by the Lower House but restored by the Upper; that an Imperial decision was sought, and that the appropriation was again rejected in a Conference of the two Houses. The *Kaishin-to* Report says that "the expenditure for the construction of men-of-war led to a strange collision between the two Houses, but that the trouble was settled by an Imperial decision, and that the appropriation was rejected at a conference of the two Houses." That is certainly a singular manner of writing history. It seems as though the compilers of the two Reports had agreed to throw dust of the same kind into the eyes of the public.

As to the Steel Foundry, the Opposition declare themselves not less anxious than the Government to make the country self-supplying in this important respect, but they explain, with much reason we venture to think, that they find difficulty in crediting the capacity of the Kamaishi Mines on which the Government now relies for iron. It was found hopelessly unprofitable to work the Mines in past years, and no one seems to understand what change of circumstances has materially improved the prospect now. Besides, when the Bill was originally submitted the Government admitted that supplies of pig iron would have to be obtained from abroad, but when re-submitting it, they relied upon the Kamaishi Mines. Altogether, the hesitation of the Opposition in the matter of the Steel Foundry cannot be regarded as unreasonable.

Count SOYEJIMA of course figures in both Reports. His ill-considered action in hastily proposing that a committee should be sent to Aichi and Gifu to re-investigate matters which specially appointed Government officials had already investigated, and concerning which the Government Delegates had already pledged

their faith to the House, is construed by the *Kaishin-to* and the *Fiyu-to* alike as an evidence that the Cabinet itself admitted the necessity of obtaining fuller information. There is much about this Earthquake Relief Grant in the two Reports, but no facts are adduced with which our readers are not already familiar. We learn, however, that the *Fiyu-to* and the *Kaishin-to* put forth all their strength to get the Bill rejected, and that they are much chagrined by their failure. The *Fiyu-to* confine themselves to expressing astonishment that a House containing popular representatives could have passed such a measure, but the *Kaishin-to* hint in the plainest terms that the passage of the Bill was secured by a threat of dissolution.

There is, in each Report, a very strong suggestion that the heat of the coming political struggle will be developed by friction between the two Houses, rather than by direct collisions between the Government and the Opposition. The *Kaishin-to* document does not say much on the subject, but the little it does say is significant:—"The Upper House showed utter indifference towards both of these important Bills (reduction of the land-tax and re-assessment of the taxable value of land) and rejected both of them." The *Fiyu-to's* Report is at once more accurate and more conciliatory. "These important Bills," it says, "which everyone was desirous of passing, were transmitted to the Upper House, but it either rejected them or kept them in the hands of a Special Committee. The House of Peers ought to play an independent and impartial part for the welfare of the country. Why it acted in such a manner is a question which the *Fiyu-to*, for certain reasons, are unwilling to discuss. But they hope that the two Houses will work more harmoniously together in future." Already the wholesome restraints of the bicameral system are beginning to prove irksome to politicians who seek to climb into power by a ladder of changes reaching far beyond the level of the nation's general experience, fitness, or education.

CRIMINAL AND CIVIL.

UNDER its present editorship the *Hyogo News* is a bright and pleasantly written journal, severely and often harshly critical of the Japanese, as compared with the *Hyogo News* of former times, but professing a disposition to be fair. It seems a pity, therefore, that before violently assaulting any expression of opinion opposed to its own policy, it should not take the trouble at least to read what it attacks. Some measure of discretion and equity is all the more necessary in this instance, because the majority of the English journals in Japan have organized themselves into a species of echo society. Whenever one of their number produces anything condemnatory of this country or its institutions, the others hasten to re-produce the

congenial paragraph, never by any chance noting its errors, should it contain errors, as it too often does, and never by any chance publishing or referring to refutations which may appear elsewhere. The one object kept in view seems to be the creation of an evil impression, and in pursuit of that object methods are resorted to which, if adopted between man and man, would soon relegate their employer to a despised and distrusted place in society. In view, therefore, of the prospect that whatever makes for the discredit of the Japanese and for the postponement of their recognition as a civilized nation, will inevitably receive wide circulation, it is surely not unreasonable to suggest that the common precaution of ascertaining salient facts should be resorted to before penning a hostile criticism. Mistakes cannot always be avoided, but there are some mistakes so flagrant as to merit a different name. To illustrate our meaning let us quote a paragraph from the *Hyogo News*, which, of course, has been re-produced by Yokohama journals:—

The *Mail* has a long article on the subject [dispute between this country and Portugal] which is replete with the usual sophistries. In one of its remarks it says:—"Against the notion of entrusting foreigners to the jurisdiction of Japanese Criminal Courts it is persistently alleged that, though the Japanese Criminal Code and Code of Criminal Procedure represent, with some minor exceptions, a very excellent body of laws, certainly good enough to warrant their extension to foreigners residing in Japan, yet the Magistrates and Judges administering the Codes, though they have received a legal education and though they have satisfied tests designed to ensure competence, have not had sufficient training and experience to justify foreign confidence. Yet, while this pretext is solemnly iterated and re-iterated with every semblance of grave conviction, we have before our eyes the spectacle of Western Powers entrusting judicial functions in Japan to men absolutely without legal education of any kind, and moreover engrossed in commercial affairs which constitute the business of their lives." This, on the face of it, is what the *Mail* goes on to call "supremely ridiculous," but things are not what they seem, and this is one of them. Japanese Judges would be called upon to administer laws of which they are not only entirely ignorant but which are fundamentally and structurally opposed to Oriental notions of law. They would be working a machine with whose component parts they would be utterly unfamiliar, and until a few years have elapsed fair and impartial administration of the new Codes would be impossible. On the other hand, every European subject understands to a considerable extent the laws which prevail in his own country, so much so that despite the editor of the *Mail* being so immersed in the labyrinthine mazes of Japanese topsyturvydom he could probably, if need arose, give a very fair and—provided it did not clash with the terms of his subsidy—a very impartial decision on most of the questions arising among those he was once presumably proud to call his nationals. Hence merchant consuls are by no means the absurdities the *Mail* chooses to call them. It is "supremely ridiculous" to suppose Japanese Judges can administer entirely new laws very satisfactorily at first, it is also "supremely ridiculous" to suppose that a merchant consul could not grasp the first principles of laws to which he has been all his life accustomed, and by a very brief study acquire all the extra knowledge necessary for the position.

Now the first extraordinary feature of the above argument is this:—"The Japanese Judges would be called upon to administer laws of which they are not only entirely ignorant, but which are fundamentally and structurally opposed to Oriental notions of law. They would be working a machine with whose component parts they would be utterly unfamiliar, and until a few years have elapsed fair and impartial admini-

stration of the new Codes would be impossible." What on earth is the meaning of such a criticism? Our article spoke of "entrusting foreigners to the jurisdiction of Japanese Criminal Courts;" of the "Japanese Criminal Code and Code of Criminal Procedure," and of "the Magistrates and Judges administering those Codes." The Criminal Code and Code of Criminal Procedure were promulgated in July 1880 and came into operation on January 1st, 1882. They have been in operation for over ten years and, on the whole, have worked well and been intelligently administered. What, then, are the laws of which Japanese judges "are entirely ignorant?" What are the laws "fundamentally and structurally" (whatever that may mean) "opposed to Oriental notions of law?" What are "the new Codes" which the judges could not be expected to administer fairly and impartially "until a few years should have elapsed?" Does the *Hyogo News* know nothing about the Japanese Criminal Code and Code of Criminal Procedure? Is it ignorant that they were promulgated twelve years ago, and that they have been in operation for more than 10½ years? We cannot suppose that it ignores these facts, known, as they are, to every educated foreigner in Japan. The obvious explanation is that the Kobe journal, not taking the trouble to read the article which it undertook to denounce as "replete with the usual sophistries," confounded Civil Codes with Criminal Codes, and thus penned a diatribe having no manner of relation to the subject under discussion. Yet, even in the matter of civil laws, the *Hyogo News* must be perfectly well aware that this journal has invariably maintained the necessity of not placing foreigners under Japanese jurisdiction until the new Civil Codes shall have been in operation sufficiently long to attest their smooth working, and to demonstrate the competence of Japanese Judges to administer them. Thus, in the first place, by confounding "criminal" and "civil" for the purposes of this particular article, and in the second by utterly misrepresenting our unvarying attitude towards the Civil Codes, the *Hyogo News* builds up a very pretty tirade calculated, doubtless, to mislead superficial readers, which tirade is complacently copied by other English journals in Japan, without regard to its flagrant errors and without the slightest intention of noting its refutation. To us the whole thing is interesting chiefly as showing what travesties are made to do duty for fair criticism in a certain circle of the foreign residents. Nothing short of a conviction that anything and everything tending to demonstrate Japanese disabilities and incapacity will pass muster, without the smallest scrutiny as to its truth or impartiality, nothing short of that conviction could prompt the recklessness of criticism which has become a feature of English journalism in Japan. In the context of such blunders and con-

Original from

fusion of ideas as we have quoted above, it is not surprising to read the marvellous doctrine that, inasmuch as "every European subject understands to a considerable extent the laws which prevail in his own country," "a very brief study" can enable a merchant "to acquire all the extra knowledge necessary for the position" of a Judge. This is the kind of doctrine deliberately put forward by one of the journals conspicuous for their insistence in claiming that foreigners must be carefully excluded from Japanese jurisdiction because Japanese judges, after years of special education and experience, cannot be trusted to administer the law. "A very brief study" suffices to convert an entirely untrained European merchant into a competent judge, but, in the case of the Japanese, long years of study, training, and experience confer no competence. If the glaring inconsistency and partiality of such arguments be not apparent to those using them, they are to be commiserated with, not censured. As for the other insinuations in the paragraph we have quoted, the hints about subsidies, and denationalization, and so forth, they are very vulgar and very despicable, but it would seem that such blemishes cannot be eliminated from foreign journalism in the East, and it would also seem that there is a section of the foreign community sufficiently depraved to approve them, otherwise their employment would not be so frequent. The whole display tends merely to drag the name of English journalism through the mire, and to show the Japanese that the very last expectation they can entertain is to receive anything like fair or honest judgment at the hands of the writers who nevertheless inveigh so persistently against the want of integrity of Japanese traders and the incompetence of Japanese judges.

YATOI.

READING Viscount SANO's speech on the subject of Forests, we are somewhat irrelevantly reminded of a point which has often been discussed before, but has not yet been fully understood by the public, so far as we can see. We refer to the use of the term "*yatoi*." The Minister speaks of Professor Dr. WAGNER as *On-yatoi Wagner-shi*, which is a perfectly proper appellation when used by an official in an official sense. All persons in the service of the Government who do not possess official rank are "*yatoi*." There are Japanese *yatoi* in every Department of State. For example, the son of the Prime Minister is a "*yatoi*" of the Foreign Office, not having yet qualified for a permanent official post. No method exists of officially describing these persons' position except to call them "*yatoi*." Very often, however, the use of the term in connection with a foreigner is regarded by the

latter as a rudeness, whereupon the Japanese invariably reply that they have only one term to describe an *employé* who does not possess official rank, and that, as no foreigner can possess official rank in Japan, or discharge executive functions, until he is amenable to Japanese jurisdiction, nothing remains but to call him "*yatoi*." Now that is all very true, but it does not appear to be conclusive. Consider its results. Its results are that foreigners who, in their own countries, would have honorable positions, and who, in many cases, hold official titles or enjoy literary or scientific distinction abroad, men of age and high attainments, are in Japan reduced to the level of the lowest semi-officials in a Department; *employés* who have not yet qualified to be included in the ranks of permanent officialdom, and who receive a pittance of salary proportionate to their insignificant and petty positions. Of course, so long as this contrast is before the foreigner's eyes, his gorge will unavoidably rise whenever he hears himself called or sees himself addressed in writing as a "*yatoi*." The idea that a man who in Europe would be called Professor, or Doctor, or General, or Colonel, or who even possesses the blue ribbon of science, the fellowship of the Royal Society or the membership of the French Academy, a man of mature years and proved attainments—the idea that such a man should, in any country, be relegated to the rank of unfledged semi-official juveniles who have not yet succeeded in passing the test examinations that lie on the threshold of their profession, can never be other than shocking and offensive. Moreover, there is a striking inconsistency in Japan's procedure: while adhering to the term "*yatoi*," she confers upon the men thus designated high Orders, even up to the Second Class of the Rising Sun, grants them the relative rank of *Chokunin*, gives them precedence at official entertainments, invites them to ceremonies, social and official, to which her own *yatoi* never dream of seeking *entrée*, and on the whole treats them with marked consideration and courtesy. But the unhappy term "*yatoi*," spoils everything. It is the little rift that mars all the lute's music. Is its use unavoidable? We have often asked ourselves that question and always the answer is in the negative. We do not see why in Japan, a country of proverbial punctilio and politeness, a custom should be adopted which is below the corresponding practice in Western lands. In England—of which we speak as knowing it best—if a foreign *employé* of the Government, or of any institution, occupied in his own country a rank higher than that enjoyed by him in his new service, he would be designated by the higher rank on all possible occasions. His official designation must of course be in strict conformity with his actual position, but it is tolerably certain that the "*on yatoi*" would not be thrust down his throat as

persistently and offensively as it is in Japan. Of course there always enters into the account on Japan's side the unhappy factor that her foreign *employés* are independent of her jurisdiction, and that she has consequently resolved not to give them executive functions or official rank. In truth it is the foreign *employé* that suffers most. Deserving nothing but good at Japan's hands, he it is who, being brought into closest relationship with the Japanese and having most concern with their changes of disposition, is condemned to feel the worst effects of the system under which the country writhes, and of the resentment naturally aroused by the persistent brutality and slandering partiality of a section of the local foreign press. But he might at least be saved the "*on-yatoi*" as much as possible.

CABINET CHANGES.

VERY strong rumours of Cabinet changes are again prevalent. It has been known pretty generally, since the appointment of Mr. KONO to the office of Minister of Home Affairs, that great dissatisfaction exists in the Cabinet. The nomination seems to have been regarded as an indication that the Government contemplated adopting a more conciliatory policy towards the Opposition. Some observers went even so far as to predict that an alliance, or at any rate an understanding of some kind, was in prospect between the Cabinet and the *Fiyu-to*. Whatever may have been the truth of these notions, it is tolerably certain that Mr. KONO's appointment was resented by the representatives of the *Kyoko-shugi* (strong policy). The chief advocates of no compromise, namely, the Minister of War, Viscount TAKASHIMA, and the Minister of the Navy, Viscount KABAYAMA, declined to be pacified, and absented themselves persistently from Cabinet Councils. Great efforts are said to have been made by Count GOTO to effect a reconciliation, but it is asserted that these efforts have proved abortive, and that the recalcitrant Ministers now announce their determination to resign unless a change is effected in the holder of the portfolio of Home Affairs. The Minister President thus finds himself in a dilemma. He cannot recommend the Sovereign to change an appointment made only a few days ago, the ostensible reason for change being dissatisfaction on the part of two Ministers. On the other hand, if he declines to make such a recommendation, and if, in consequence, the Ministers of State for War and the Navy persist in resigning, the difficulty of obtaining suitable successors would be almost insuperable. Under these circumstances it is alleged that Count MATSUKATA has resolved to tender his own resignation, judging that events are no longer sufficiently under his control to warrant him in retaining their direction. The Tokyo News Agency publishes these

statements with a degree of assurance that seems to vouch for their accuracy. It adds that the resignations of Mr. KONO, Viscount TAKASHIMA, and Viscount KABAYAMA would be presented simultaneously with, or immediately after, the resignation of the Minister President, and that Count GOTO and Viscount SANO might also take a similar step, Viscount ENOMOTO and Count OKI alone remaining in the Cabinet. Should this forecast prove correct, the event will rank with the Cabinet crisis of 1873, when the Korean question disturbed the Government so radically, and with the crisis of 1889, when the Ministers resigned *en masse* in consequence of the interruption of Treaty Revision negotiations. Evidently such an issue would greatly impair the confidence of the nation in the strength of the Meiji Government, and to restore that confidence no course would be possible except the return to office of the Camera Statesmen. Our own settled conviction is that the duty of Japanese Statesmen at the present juncture is to maintain an unflinchingly firm attitude towards the Opposition. It seems to us the very acme of rashness to pretend that the administrative power can safely be placed in the hands of the congeries of factions constituting the Opposition, or that the country is even approximately ready for the experiment of party government. Nobody can predict how long must be the interval of preparation or what amount of preliminary friction must be evolved before a machine so strange to the customs and traditions of the nation can be brought into smooth working order. But assuredly for the present the Government is bound to stand firm, and to insist that the privileges voluntarily conferred by the EMPEROR on the people, shall not be arbitrarily and radically extended by political agitators until the people's fitness for the extension is assured. Everything goes to show that this belief guided Count MATSUKATA'S policy throughout, and it is scarcely credible that his ideas should ultimately have undergone an alteration such as that suggested by the present revolt of Viscounts TAKASHIMA and KABAYAMA. However, it is idle to indulge in conjectures when a very few days must solve the problem definitely. Whatever may be the fate of Count MATSUKATA'S Ministry, there will remain to him the credit of having played a resolute, patriotic, and disinterested part during a difficult and trying period.

A telegram from Tokushima announces that, according to the investigation made on the 25th inst., details of the damage caused by the recent storm were as follows:—Houses destroyed or swept away, 2,000; persons drowned or killed, 150; horses and oxen drowned, 20; and houses submerged, 20,000. The loss of bridges and the damage to embankments have not been ascertained. Over 25,000 persons, rendered homeless, are receiving out-door relief.—*Choya Shimbun.*

CORRESPONDENCE.

THE EARTHQUAKE COMMITTEE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to express hearty approval of your paragraph in regard to the appointment of Professor Milne "to perform services in connection with" the Earthquake Disaster Prevention Committee. I was much surprised when the roll of that Committee was announced and contained only Japanese names. Afterwards it appeared that he was appointed in the above manner. Is the Japanese Government going to stop at this? Why not do the honourable and manly thing and put Professor Milne among the Committee itself? It is not merely that his name as investigator deserves that place; it is also because he will do a good part of the work of the Committee, as everybody knows. Why get the benefit of it and refuse him due credit? Every friend of Japan wishes that a more candid policy should be pursued in this case.

Yours, &c.,

W.

HOTELS IN THE INTERIOR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having just returned from a trip up country, I should like to express my disgust at the amount of impertinence one has to put up with in travelling in those parts of Japan frequented by foreigners. I think it may do some good to ventilate the subject, as it may happen that the matter will receive some notice at the hands of the Japanese press, and thus perhaps things may be altered for the better.

The particular point of complaint is that very often a foreign traveller arrives at an inn and neither the inn-keeper nor the assistants take any trouble to make him welcome, whereas they would be bowing and scraping to any native *gorotsuki* even, who might happen to claim board and lodging. It is a most singular study to watch the manner of reception of a Japanese and of a Foreign guest—one is bowed in politely with every mark of respect, is ushered to his room, given tea and cakes, and asked whether he will take a bath. In fact, he may be some dirty lout of a fellow, but he is treated as a customer and an honoured guest.

On the other hand, directly the foreigner appears the cries of welcome cease and a crowd of waitresses stand grinning and making remarks about him, while the waiters and other men-servants simply stare and make no offers of assistance, and when spoken to, reply in a style which no Japanese would ever dare to address to any of his own countrymen. If they happen to be wearing a "hachimaki" they will not remove it for the foreigner, whereas not one of them would stand covered in that way before a Japanese gentleman.

The so-called "Seiyo-ryori" establishments are particularly objectionable, and notorious for the "cheeky" treatment of their foreign guests, and the exceedingly impertinent familiarities taken by the servants in even going so far as to catch hold of customers, must make the hair stand up on the heads of serious and respectable Japanese gentlemen.

The intolerable difference and distinction drawn between Japanese and Foreign guests is most conspicuous, and is altogether unwarrantable, especially when it is considered that the Foreigner is charged far more than the native, even when he has complied with all Japanese etiquette and paid a handsome "cha dai."

I will admit that in Europe travellers are overcharged, but the Hotel proprietors treat the guests with consideration and the greatest respect. In continental Europe the more bowing to and general attention you get, the more you pay—in Japan the less attention you get and the more "cheek" you receive, the more you pay!

Now, Mr. Editor, as you know, I have had some good experience, and I can speak Japanese pretty correctly and fluently, so there is no mistake about my observations, and I think you would confer a boon on the public, and the Japanese Inns also, if your would devote a leader to this subject and beat it out thoroughly, for it is a fact that a great many foreigners get perfectly sick and disgusted at the rudeness practised and the extortionate prices charged by some—indeed very many—of the Japanese Bonifaces.

The question at point is, why should persons be less respectfully treated and at the same time overcharged simply because they are foreigners, and should foreigners be treated to a slang "pidgin" phraseology by "whippersnappers" who hardly know their own language? The foreigner

is just as much a guest as his Japanese friend, he has a head, two eyes, a nose, hands, feet, tongue, &c., like unto those produced in the "Court of the Gods," and altogether the practice of carelessness as to treating him properly is without any excuse whatsoever.

One thing is certain, the custom of curtailing all polite ceremonies in receiving foreigners must do the Japanese Hotels a great deal of harm, and rob the country of one half of its charms for the traveller, for it is undeniable that the pleasant welcome which used to be given, and is still given, where foreigners are seldom seen, left a most happy remembrance in the minds of those who travelled in Japan.

It may be that the Japanese Hotel-keepers think they are doing something clever, and that they are holding up the mirror to nature and showing the foreigner his own reflected likeness. Perhaps this is so sometimes, but even if rude foreigners are found occasionally, the Japanese have no excuse for departing from their own customs and manners in their own country. Japan is said to be a "country of gentlemen"—and it is to a great extent, but if the Hotels go from bad to worse and get ruder, the result must be unfortunate in more ways than one!

Yours faithfully,

GARI-GARI MOJA.

July 26th, 1892.

"W.B.M.'s" DESCRIPTION OF THE KONJIKIDO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A friend of mine is in the habit of kindly lending me from time to time a few numbers of the *Japan Mail*, which I always read with much interest. A few days ago I read in one of your issues Mr. Dixon's *Note on Cloissonné*, and in another my attention was drawn to "W.B.M.'s" very unjust description of the Konjikido. While taking upon himself to enlighten the public as to the temple, "W.B.M." shows himself to be a very superficial observer and quite incompetent for the task. Let us see how he proceeds. In the first place, he speaks of "highly gilt Japanese records." Although what Mr. Dixon writes may not apply to the present aspect of the Konjikido, yet there is no doubt, judging from what it now is, that the temple was at one time just as he describes it (and almost as it is described in the *Ou Kwanseki Bunro-shi*, &c.), and if that be the case, the original records, written when the whole inside was really of a golden hue and in full splendour, cannot be called "highly gilt Japanese records." But this is only a trifle. What "W.B.M." says a few lines after is most remarkable and contains a flagrant and ridiculous error. He writes "The main pillars . . . are simply lacquered, and inlaid with shells (*sic*) brought from Rome by the mission sent there in 1615 by Date Masamune." I should like to know where he picked up such crude knowledge of the Konjikido. Did he not get it from some ignorant interpreter who does not understand the meaning of the Chinese art-word 螺鈿¹ (pronounced *Latin* or *laden*)? Well do I remember on one occasion when visiting the place with a few friends how greatly amused we were at the same mistaken remarks made by a guide. Further the internal pillars are not only embellished with *laden*, but on each of there are also some traces of the images of "twelve Buddhist deities," which "W.B.M." makes no mention of and which seem to have escaped his eye. The whole workmanship comes under the epithet of *shippo-sogan* (七寶北巖),² (though it cannot be called *shippo-yaki* or *shippo-nagashi*, which corresponds to *Cloissonné*) and has existed ever since the second year of *Tennin* (1109), when the temple was built by the order of Fujiwara Kiyohira, *Oryōshi* of Mutsu. If "W.B.M." has any doubt about this and still is inclined to believe that the shells, with which the pillars are adorned, were "brought from Rome by the mission sent there in 1615 by Date Masamune," he will do well to refer to the *Asuma kagami* (東鑑), the *Ou Kwanseki Bunro-shi* (奥羽観跡聞老志), the *Hivaisumishi* (平泉志), or the *Kogei-Shiryō* (工藝志料) by Prof. Kinokawa Mayori.

Again, "W.B.M." says "The Konjikido is not a temple at all. It is a dilapidated store-room set apart for the treasures belonging to the monastery of Chusonji," &c. The absurdity of this disparaging account will easily be seen. The Konjikido, though built on a small scale, is a temple

¹ A kind of mosaic mother-of-pearl work.

² The word *shippo* was originally derived from a Buddhist term signifying seven treasures, i.e. gold, silver, amber, emerald, agate, *shōin*, and coral (pearl, tortoise-shell, crystal, &c., may be substituted for some of these treasures). Hence the works, beautifully adorned with some of these seven treasures, such as the pillars of the Konjikido as well as the *ramma* and ceiling of the Hondo belonging to the Byōdōin ■ Uji, are said to be of *shippo-sogan*.

Original from

containing some Buddhist deities such as Amida, Kwanon, Seishi, &c., as well as the ashes of three heroes Kiyohira, Hidelira, and Motohira. It is a common Japanese custom to preserve some treasures in a temple, but it cannot on that account be called "a store-room." Moreover, the expression "set apart for" conveys the most false impression. Although the building as it is, owing to its great age, is not what it once was, and though a large part of the *shippo-sagon* has fallen off, yet its workmanship shows great ingenuity, and cannot but be admired by any one who has any taste for art. Besides, the Konjikido is worth visiting on account of its history and its various associations, of which "W.B.M." shows profound ignorance, saying "it is a dilapidated store-room set apart for the treasures . . . and on that account alone well worth a visit." Thus far about the unjust description of the Konjikido by "W.B.M." I may now add a few words about the art of enamelling in Japan. Although the adornment of the Konjikido is not what is called *shippo-yaki* but *shippo-sagon*, yet Mr. Dixon's statement that the art of enamelling was known to Japan long before the close of the 16th century, is not a whit refuted by "W.B.M.'s" letter. Not only does the celebrated Gold and Silver Mirror^a (the back of which is enamel) shaped somewhat like a flower, still exist in the Shosoin^b belonging to the Totaiji, Nara, but in other places also there are sometimes to be met with articles of enamel work—things Japanese and of great age, such as the mountings of swords and the ends of *kakemono*-rollers. Indeed the art of glass making was known from a very remote period and materials to be used in enamelling as well as various kinds of glass ware are also preserved in the Shosoin. According to the *Kogei Shiryo*, a few glass beads made long before the time of the Emperor Shomu are still extant, but a great number of them seem to have been made in the reign of that Emperor, since there are so many in the Shosoin. There was at that time a jeweller at Ougori (意宇郡) of Izumo, who worked on glass very cleverly and the vessel used in melting glass is also still extant. A specimen of a very old glass ware somewhat like a 鏡, says the *Kogei Shiryo*, was dug out from the tomb of the Emperor Nintoku (313-399 A.D.) at Ootorigori of Izumi, and this with several articles of glass ware in the Shosoin proves that glass making was known in those remote periods. The art gradually dwindled during the much disturbed time between *Shohai* (931-937) and *Tenki* (938-946), and was lost in the latter period, till the first year of *Genki* (1570), when an artisan from the "Namban" settled in Nagasaki and taught how to make glass ware. It was about the same time that the art of enamelling was revived in Japan. It is highly probable that that art dwindled and lost with the art of glass making. There seems no reason for believing that the former art was for the first time introduced to Japan near the close of the sixteenth century.

I shall feel much obliged by your publishing this note in your next issue. Enclosing my card, I am, Sir, yours truly,

A JAPANESE ART STUDENT.

Tokyo, July 25th, 1892.

^a Things Japanese can generally be distinguished from things foreign, and this mirror is admitted by all great connoisseurs to be Japanese.

^b The Shosoin is the name of the celebrated treasure-store built by the Empress Koken in the eighth year of *Tenpei Shoho* (734 A.D.) for the purpose of preserving various national treasures handed down to her by the preceding Emperor Shomu (724-748 A.D.) and dedicated to the Great Buddha installed at Nara. The store being what is called *Chokufu-yakura* (store sealed up by the imperial command) was but seldom opened and its treasures were of course not permitted to be inspected until a few years ago, when their arrangement was made by Prof. Kurokawa Marjori, &c. Among them are to be found many things which are interesting on account of the exquisite æsthetic grace which they display, as well as on account of their great antiquity. Those who write about Japanese Fine Arts, it has been said by a great authority, cannot do full justice to them without once inspecting the treasures in the Shosoin.

[Has our correspondent any evidence that enamelling was used to ornament sword furniture before the time of Hirsta Donin, at the close of the sixteenth century?—Ed. J.W.M.]

There are strange chambermaids at Sheppard's Hotel in Cairo. A lady declares that the one who waited on her room and attended to all the duties of the calling, even to making the beds, was a Frenchman, dressed as if for a dinner party, with white waistcoat and dress coat, and having the air of a refined and educated gentleman. It was really embarrassing to accept his services in such a capacity. One lady, on arriving at the hotel, rang for the chambermaid, and this gentleman presented himself. Supposing him to be the proprietor, at the very least, she said, "I wish to see the chambermaid," "Madame," said he, politely, in his very best English, "Madame, she am I!"

THE GRAND HOTEL, LIMITED.

The half-yearly meeting of the shareholders of the Grand Hotel, Limited, took place on Monday afternoon in the old dining-hall of the hotel, No. 20, Bund. There were present Messrs. J. F. Lowder (in the chair), O. Kail, J. Rickett, C.K.M. Martin, Dr. Van der Heyden, E. V. Thorn, M. Russell, Captain Swain, P. Mullendorff, J. Wilkowski, G. M. Macondray, W. Mann, B. C. Howard, and J. Tounoe (sec.)

The CHAIRMAN said that the report and accounts of the past six months, up to the 30th of June, had been in the hands of the shareholders for some little time, and doubtless all present had read and considered them, therefore it would not be necessary for him to read them out now. He thought that all would agree with him that they were most satisfactory, in fact the most satisfactory report and accounts that had been submitted by the Directors to the shareholders during the three and a quarter years since the company was formed and had taken over the hotel. This was, he considered, all that was necessary for him to say to them that day upon the report and accounts, so he would now pass to something else. There was one subject he wished to speak to them about, and he desired to take the opportunity which this meeting of shareholders afforded him, to speak about it. He referred to various rumours which had come to the ears of the Directors, and which he was told existed amongst various shareholders of the company, but whose names need not be mentioned. Some members of the company, it was said, had expressed dissatisfaction at the manner in which the hotel was conducted,—of the management of the company's affairs by the Directors, and that they had disapproved of it for some time. Mr. Rickett, one of their Board of Directors, at a recent extraordinary meeting of the shareholders had invited all those persons who had expressed dissatisfaction to come forward and tell them of the nature of their dissatisfaction, but his invitation was not accepted. He (the Chairman) took the opportunity at this ordinary general meeting to repeat that invitation. Any shareholder who had felt dissatisfied at any action of the Directorate would be welcomed by the Directors, if he would come forward at that meeting and state the reasons of his dissatisfaction or make any suggestions for improvement. This invitation was made in all earnestness and seriousness. The position of the shareholders and directors were the same and identical in every respect. Therefore, if any of them were dissatisfied let them come before them and say so, for the Directors would be only too pleased to be told where they had been wrong. He could assure them that any improvements that could be made, any suggestions of whatever kind that were made by any shareholder, would be accepted with loyalty, and if the directors saw their ability to carry them out they would do so, and if they could not, then the Board would call an extraordinary meeting of shareholders together and would lay the suggestions with their objections before them. If the shareholders thought that they could elect any more able men—he would not say able,—but men who would or could devote more time to their interests, the Directors would only be too pleased for them to join the Board. But he thought they would allow that their Directors had discharged their duty fully, and that cause for dissatisfaction with their work did not exist in all honesty. He urged them not to talk behind their (the Directors') backs, but to frankly state at that meeting the nature of their objections. They all knew what a delicate thing it was to start rumours adverse to a company about the place, the harm that they did was illimitable, while the good, if any, was of no account. It was in consequence of these rumours that he (the Chairman) had devoted a couple of hours that morning to looking into the figures relating to the work of the three and a half years during which the company had been in existence. He was one of the original directors—indeed, before the company was started, one of its promoters, in company with two gentlemen, who were better qualified in business than he, and whose names would be in their minds. The idea of the promoters and the vendor, Mr. Wolff, who argued from his previous experience of the hotel, was that the business ought to pay a dividend of 20 per cent. per annum. That was their idea when the company was started, and having gone into the figures thoroughly he was in a position to say that their expectations had been a little under than over the mark. They had made a profit of 20 per cent. and over during the three and a half years of the company's existence. Where they had erred had been in thinking that the furniture was better than it was. If they had not had to pay away large sums for repairs, and write off other sums for depreciation, they would have

been able to pay 23 per cent. per annum ever since they took over the hotel. As it was they had paid annually a dividend of 12 per cent., or very nearly. That is, we have paid back to our original shareholders in the short time we have been running no less a sum than 38 per cent. of their investment. In addition, we have written off for depreciation 5 per cent., have spent in improvements and additions 6 per cent. If they would add these three amounts, 12 per cent. dividend, 5 per cent. depreciation, and 6 per improvements and additions, he thought that their original statement of the earning power of the hotel had been realised and exceeded, while the condition of the hotel was much better, besides being now completely organised. In answer to the query, why spend so much on improvements and repairs? he must tell them that those improvements were absolutely necessary. When they entered upon the management of the hotel they had at once found that they could not do as the former proprietor had been doing. The money that had been spent upon the hotel had not been thrown away. If they would compare it with the hotel of three and a half years ago, those who knew the former place would find that immense improvements had been made in every direction. It was the expression of every one, of every visitor, that it was "the hotel of the East," and he could honestly say that there was no better managed or better kept up hotel anywhere. He invited them to go into any room, any bed-room, and they would find that was ample provision for the comfort and convenience of visitors and residents; and that everything was kept up to the mark. This was due to their excellent manager, Mr. Eppinger, and not to him alone,—he was sure Mr. Eppinger would say so also—but to the whole of the staff, whom he wished to thank on behalf of his co-directors and himself. They had a most excellent matron, to whose assistance the residents in the hotel, besides the visitors, could and did attribute half their comfort, while staying there. They had, as he had said, a most excellent manager, and matron, and secretary, and attendants, while they possessed all that could be asked for in the *cuisine*. This he knew, not from what he had seen and knew of his own knowledge—he was seldom in the hotel—but from private persons, most of whom were unaware of his connection with the company. He had alluded to these things because he wished to show that the Directors were always willing to listen to suggestions for the improvement of the place; again he would invite them for an expression of their dissatisfaction, if it existed. So far from the Directors resenting any criticisms that might be passed upon their policy, they were only too willing to accept any suggestions, and he could promise them that the Board would do all in its power to carry out those suggestions. This is all he would have to say upon the reported rumours. Their business that day was to adopt the report and pass the balance-sheet, elect two directors who were retiring through rotation, and an auditor, as well as to determine the amount of the Director's fees, which had to be settled at that meeting. Having invited remarks or suggestions from those present, the chairman presented the following report and accounts:—

The Profit and Loss, Account, and Statement of Assets and Liabilities for the half year ended the 30th June, 1892, accompany this Report.

The net profit for the half year, including balance brought forward from the 31st Dec. 1891, and after providing for general expenses, Directors' and Auditor's fees, interest, and depreciation, and after writing off bad and doubtful debts, amounts to \$19,331.79 which it is proposed to apply as follows:—

In payment of a dividend of 5 per cent. for the	
half-year	\$12,500.00
Reduction of loan from Bank of C., J. & S.	5,000.00
Balance to be carried to new Account	1,831.79
	\$19,331.79

The Directors are pleased to report that under the able management of Mr. Louis Eppinger, the *cuisine* and general comfort of the hotel have much improved; and they have decided to present him with a gratuity of \$500 in recognition of his services.

The lease of the large room in the Hotel held by Messrs. Deakin Bros. & Co., Ltd. was cancelled by agreement as from the 1st July, 1892, for a consideration of \$4,500.00 for the balance of the term of 16 months. This amount of \$4,500.00 is included in this half-year's accounts, \$2,939.33 of which sum have been expended in the alterations effected as mentioned in the following paragraph, and the balance has been written off.

The six rooms at No. 14 Bund referred to in the last report, were given up on the termination of the lease, and more accommodation has been added to the Hotel by the conversion of the large room lately occupied by Messrs. Deakin Bros. & Co., into eight new and handsome bedrooms, which have always found tenants, and are by some guests even preferred to other parts of the house.

Messrs. Lowder and Rickett retire from the Board by rotation, but offer themselves for re-election. Mr. Blanc having resigned on leaving Japan, Mr. C. K. M. Martin was appointed by the Board to fill the vacancy.

Mr. Keil retires from the office of Auditor, and the Directors have much pleasure in recommending his reelection to that office.

According to Article 86 of the Articles of Association, the Amount of the Directors' fees for the current year will have to be settled at this meeting.

It is proposed that the dividend shall be payable on the 26th July, 1892, when the warrants will be issued.

Yokohama, June 30th, 1892.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

O. KEIL, Auditor.

Yokohama, July 12th, 1892.

Mr. E. V. THORN said he did not see anything to criticise in the report, while he had not heard any of the rumours spoken of by the chairman. But there was one matter of interest he should like to mention and see remedied, and that was the manner of getting their supplies. He should like to see their corporation placed in a position to get their supplies at the lowest rates. They had a well qualified manager, and he should suggest that this matter be left in his hands and that the Board authorise him to procure their supplies to the best possible advantage. That was the only suggestion he had to make.

The CHAIRMAN said, in reference to this suggestion, that up to some time ago, the end of last December he thought, the Board were under a contract for their supplies—that is, for imported provisions. Before that time they had obtained their supplies in the market. Then tenders had been asked for and were submitted to the Directors, who appointed a sub-committee of three or four to report upon them to the Board of Directors. They reported the lowest tender of a certain firm, whose name need not be mentioned, and this was accepted up to the 31st December last, and all supplies were obtained from this firm. Dr. Hall then joined the Board, and suggested that it would be better to distribute the patronage of the hotel as was done before. The Directors were not quite prepared to act upon that proposition, but Dr. Hall went round to the dealers and found that they—one and all—were willing to supply us with provisions at five per cent. above cost price. Dr. Hall's suggestion was accordingly adopted, and now our supplies are obtained from different storekeepers in the place.

Mr. THORN—Does that apply to all supplies?

The CHAIRMAN—Yes.

Mr. THORN—To printing?

The CHAIRMAN—No, not to that.

Mr. THORN—The Company's printing is a very large item—

The CHAIRMAN—Yes, it is.

Mr. THORN—And I think, therefore, that it would be as well if that were thrown open to the different officers for tender.

The CHAIRMAN—We shall give the present suggestion all consideration. I had a conversation with you, Mr. Thorn, upon this matter some time ago, and I had hoped that I had made a clear explanation to you about it.

Mr. THORN—Oh! yes, I perfectly understood.

The CHAIRMAN—Your suggestion will not be lost sight of.

Mr. WITKOWSKI proposed, and Dr. VAN DER HUYDEN seconded, the adoption of the report and accounts.—Carried.

The CHAIRMAN—The next business is the election of two directors, Mr. Rickett and myself retire by rotation; no other names have been suggested in our place, perhaps some gentlemen would propose our re-election?

Mr. O. KEIL—I propose the re-election of the retiring Directors.

Mr. THORN—I second.—Carried.

The CHAIRMAN proposed, and Mr. THORN seconded, the re-election of Mr. Keil as auditor.—Carried.

The CHAIRMAN—The next thing has reference to the Director's fees.

Mr. WITKOWSKI—I propose that they be the same as last year.

Mr. O. KEIL—I second that.

The CHAIRMAN—That is \$300.—Carried.

Mr. WITKOWSKI proposed a vote of thanks to the Directors, manager, auditor, and other officers of the company for their services.

Mr. THORN seconded.—Carried.

The CHAIRMAN, in acknowledging the vote on behalf of his co-directors, said that the post of Director of such a company as theirs was no sinecure. They were really interested as shareholders in the success of the company, and they did not work for it from a philanthropic point of view or for the pay which they received, but for their own interests as shareholders. They met once a week, every Monday, for three hours. They could take credit that they (as Directors) did look fairly after the shareholders' interests.—(Hear, hear.) If at any moment the shareholders thought fit to replace them by others of their number they would immediately make way.

The meeting then dispersed.

LANGFELDT AND COMPANY, LIMITED.

The half-yearly meeting of the shareholders of Messrs. Langfeldt and Company, Limited, was held in the Chamber of Commerce on Tuesday afternoon, Mr. O. Keil, Chairman of Directors, presiding. There were also present, Messrs. A. T. Watson, F. Retz, J. R. Merian, T. Meyerdirks, J. Feicke, J. F. Lowder, and E. Batavus.

The CHAIRMAN said it was not necessary for him to read the notice convening the meeting, or the statement of accounts and reports, as they had all been in shareholders hands for a week past; doubtless all interested had studied them. He had nothing to add to the remarks which the Directors had put in print, except that their company had suffered in exactly the same way as had every other company and concern in the East through the extraordinary depression in trade. There had been an absence of ships and consequently an absence of trade for them; but not only had their business suffered from these causes, but they had also felt the effects of the constant depreciation of silver. If it had not been for the constant falls in exchange the position of their business would have been very different at the 30th of June last. These were all the additions he had to make to the Director's printed remarks, he therefore would be pleased to answer any questions which might arise out of the following report and balance sheet.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half-year, ended the 30th June, 1892, accompany this Report.

The Net Profit for the half-year, including balance brought forward from the 31st December, 1891, and after providing for General Expenses, Auditor's fees, Interest, Depreciation and Losses amounts to—

\$4,857.55

which it is proposed to apply as follows:—In payment of a Dividend of 4 per cent. for the half year—

\$4,000.00

Balance to be carried to new account—

\$857.55

The Directors regret to have to report that Mr. A. Langfeldt, who has been aiding for some time, has decided to leave Japan for a longer period, and in consequence resigned his post on their Board, and they have appointed Mr. F. Retz in his place.

Mr. J. Feicke has been appointed Manager.

According to Article 85 of the Articles of Association the Amount of the Directors' Fees for the current year will have to be settled at this meeting.

E. & O. E.

Yokohama, July 30th, 1892.

O. KEIL, } Directors.
J. F. LOWDER, }

J. FEICKE, Secretary.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

THOS. S. BAKER, Auditor.

Yokohama, July 22th, 1892.

Mr. J. R. MERIAN—I beg to propose the adoption of the report and accounts, and in doing so wish to make one remark. Upon looking at our balance-sheet you will find the sum of \$1,600 which we have to pay as interest to our Bank for advances which it made us on overdraft. Our capital, I think, is inadequate for the large amount of business which we are doing. Our present capital is \$100,000, and out of this we owe the Bank and various creditors \$22,000, which leaves us a working capital of \$78,000. Our stock is valued at \$109,000, plant at \$5,800, and our Kobe branch plant \$15,000, in all about \$130,000. I am not making any proposition in what I am about to say, but only putting out a suggestion for our Directors. I think, in view of what I have just said, that it would be advisable to increase our share capital from \$100,000 to \$125,000. We should then be clear from all debt to our Bank, to whom we are now indebted, as well as to sundry creditors, for about \$50,000. I am not making any proposal, but I think that this \$25,000 could be offered to our shareholders to take up, in order to make us altogether free—or our capital could be raised to \$130,000 and the premium upon the additional shares be put by as a special reserve for the equalisation of dividends. This is my suggestion, and now I will move the adoption of the report and accounts.

The CHAIRMAN—Mr. Merian, your suggestion shall receive the careful consideration of the Board of Directors at an early date. It seems very feasible to raise our capital to a figure that would free us from the Bank, especially in these days when Banks are not over willing to advance large sums to individual firms; although I must say that our Bank has been very kind and obliging to us whenever we wished to obtain an extraordinary amount in cash wherewith to acquire large supplies for ships, etc.

Mr. WATSON—I second the adoption of the report and accounts.—Carried.

The CHAIRMAN—The next business is the determining of the Directors' fees, which, according to the rules, must be done at the meeting in July.

Mr. WATSON—What was the remuneration last year?

The CHAIRMAN—\$500 per year.

Mr. WATSON—I have great pleasure in proposing that the Director's fees be the same as those of last year.

Mr. MERIAN seconded.—Carried.

The CHAIRMAN—I thank you on behalf of my co-directors for that vote of confidence in us—for that is what I take it to mean. A few dollars do not make us happy, but it is a feeling of pleasure which you give us by showing your appreciation.

Original from

of our services in such a cordial manner. Our labours are most sincere and constant, for I can assure you that the post of Director of your Company is no sinecure, but means constant labour every day and sometimes night, as to which your manager, Mr. Feicke, can also tell you. Again I must thank you for the very pleasant feeling which you give the Directors in acknowledging so heartily their endeavours on your behalf. This closes the business of the meeting, gentlemen.

THE DEMOCRATIC CONVENTION IN CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, June 25th.

The National Democratic Convention was called to order at 12.40 p.m. on Tuesday, June 21, by Senator Calvin S. Brice, Chairman of the National Committee. After prayer, Senator Brice read the list of officers for temporary organization as agreed upon the day before in the National Committee, and then obtained from the Convention the unanimous election of such officers. The Temporary Chairman, Hon. W. C. Owens, of Kentucky, was presented, and made the usual introductory speech, in which he carefully refrained from any allusion to the rival candidates. On motion, the roll of States and Territories was called, that each delegation might name its representative on each of the four important committees,—Resolutions, Credentials, Rules and Order of Business, and Permanent Organization. Mr. Cable, of Illinois, then paid a very kind and graceful tribute to a political opponent by offering the following resolution which was unanimously adopted:—

Resolved, That this convention tender its profound sympathy to that distinguished American, James G. Blaine, in the heavy affliction which has befallen him.

The applause which followed the mention of Mr. Blaine's name, and the manner of the adoption of the resolution, all indicated a genuine sympathy for the Republican leader.

After receiving from the President of the World's Columbian Exposition an invitation to visit the World's Fair grounds, the convention adjourned till 11 o'clock the following morning.

That afternoon about 1,000 delegates, alternates, correspondents, and other visitors were carried, some by special train on the Illinois Central Railroad, some by steamers on Lake Michigan, to the World's Fair grounds, where they were escorted around by many of the Exposition officials. That they were astonished at the progress made in the work, and realized the prospective magnitude of the affair, is evident from one plank of the platform adopted.

That same afternoon and evening and the next morning, the four great committees were kept busy at work; but, when the convention was called to order Wednesday morning, not one of them was ready to report. While the assembly was waiting, calls were made for speeches by Mills, Palmer, Fellows, and others; but Senator Palmer was the only one that responded. Soon after, the Committee on Credentials made its report, which, as the contests were few and comparatively unimportant, was quickly adopted without debate. This was followed by the report of the Committee on Permanent Organization, who recommended the continuance in office of the minor officers of the temporary organization, and named Hon. William L. Wilson, a Congressman from West Virginia, as Permanent Chairman. As the report was unanimously adopted, Mr. Wilson was escorted to his position, and made an eloquent address. After the routine report of the Committee on Rules and Order of Business, Mr. Phelps, of Missouri presented to the Chairman a gavel, made of zinc mined in that State, and bearing the inscription: "We need no protection." The roll of States was then called for the purpose of naming members of the National Committee and of the Notification Committee. After futile attempts to call out several notables for speeches, inasmuch as the Committee on Resolutions was not ready to report, the convention took a recess till 5 p.m.

The next session did not begin till about 5.30 o'clock; but it continued without intermission till about 4 o'clock the next morning. It was expected that the session would be devoted to a discussion of the platform, particularly of the tariff and silver planks, and would then adjourn till Thursday morning for nominating speeches and balloting. Your correspondent intended to go in that evening; but, when he reached the wigwag about 8 o'clock, and found them still discussing the platform, he naturally concluded, that they would soon adjourn, and returned home. He was only one of many who made the same mistake, and thus lost the fun! For, the Cleveland managers, out of patience with

the dilly-dallying tactics of their opponents, and fearing the result of further delay, held the convention in a continuous session of more than ten hours until they had achieved victory!

It was about 6 o'clock that evening when the Committee on Resolutions made a report of the following platform:—

"Section 1. The representatives of the Democratic Party of the United States, in national convention assembled, do reaffirm their allegiance to the principles of the party as formulated by Jefferson, and exemplified by the long and illustrious line of his successors in Democratic leadership from Madison to Cleveland. We believe the public welfare demands that these principles be applied to the conduct of the federal government, through the accession to power of the party that advocates them; and we solemnly declare that the need of a return to these fundamental principles of a free, popular government, based on home rule and individual liberty, was never more urgent than now, when the tendency to centralize all power at the federal capital has become a menace to the reserved rights of the States that strikes at the very roots of our government under the constitution as framed by the Fathers of the Republic."

"Sec. 2. We warn the people of our common country, jealous for the preservation of their free institutions, that the policy of federal control of elections, to which the Republican Party has committed itself, is fraught with the gravest dangers, scarcely less momentous than would result from a revolution, practically establishing monarchy on the ruins of the Republic. It strikes at the north as well as at the south, and imperils the coloured citizen even more than the white; it means a horde of deputy marshals at every polling place armed with federal power, returning boards appointed and controlled by federal authority, the storage of the elective rights of the people in the several States, the subjugation of the coloured people to the control of the white power and the reviving of race antagonisms, now happily abated, of the utmost peril to the safety and happiness of all; a measure deliberately and justly described by a leading Republican senator as 'the most infamous bill that ever crossed the threshold of the Senate.' Such a policy, if enacted by law, would mean the dominance of a self-perpetuating oligarchy of officeholders, and the party first intrusted with its machinery could be dislodged from power only by an appeal to the reserved right of the people to resist oppression which is inherent in all self-governing communities. Two years ago this revolutionary policy was emphatically condemned by the people at the polls; but in contempt of that verdict the Republican Party has defiantly declared in its latest authoritative utterance that its success in the coming elections will mean the enactment of the Force Bill and the usurpation of despotic control over elections in all the States."

"Believing that the perpetration of the Republican government in the United States is dependent upon the defeat of the policy of legalized force and fraud, we invite the support of all citizens who desire to see the constitution maintained in its integrity with the laws pursuant thereto which have given our country a hundred years of unexampled prosperity, and we pledge the Democratic Party, if it be intrusted with power, not only to defeat the Force Bill, but also to relentless opposition to the Republican policy of profligate expenditure, which in the short space of two years has squandered an enormous surplus and emptied an overflowing treasury, after piling new burdens of taxation upon the already overtaxed labour of the country."

"Sec. 3. We reiterate the repeated doctrines of the Democratic Party that the necessity of the government is the only justification for taxation, and whenever a tax is unnecessary it is unjustifiable; that when custom-house taxation is levied upon articles of another land produced in this country the difference between the cost of the article as sold abroad, when such a difference exists, fully measures any possible benefit to labour and the enormous additional impositions of the existing tariff fall with crushing force upon our farmers and working men, and for the mere advantage of the few whom it enriches, exact from labour a grossly unjust share of the expenses of the government; and we demand such a revision of the tariff laws which will remove the iniquitous inequalities, lighten their oppressions, and put them on a constitutional and equitable basis."

"But in making reduction in taxes it is not proposed to injure any domestic industries, but rather to promote their healthy growth. From the foundation of the government taxes collected at the custom house have been the chief source of federal revenue. Such they must continue to be. Moreover, many industries have come to rely upon legislation for successful continuance, so that any change of law must be at every step regardless of the labour and capital thus involved. The process of reform must be subject in the execution of this principle to the following conditions:—

"We denounce the McKinley tariff law enacted by the last Congress as the culminating atrocity of class legislation; we endorse the efforts made by the Democrats of the present Congress to modify its most oppressive feature in the direction of free raw materials and cheaper manufactured goods that enter into general consumption; and we promise to regulate as one of the first results that will follow the action of the people in intrusting power to the Democratic Party. Since the McKinley tariff went into operation there have been ten reductions of the wages of labouring men to one increase. We deny that there has been any gain of prosperity to the country since that tariff went into operation, and we point to the dullness and stagnation, the wage reductions and strikes in the iron trade, as the best possible evidence that no such prosperity has resulted from the McKinley act."

"We call the attention of thoughtful Americans to the fact, that after the thirty years of restrictive taxes against the importation of foreign wealth in exchange for our agricultural surplus and the homes and farms of the country have become burdened with a real-estate mortgage debt of over \$1,300,000,000, exclusive of all other forms of indebtedness; that in one of the chief agricultural States of the West there appears a real-estate mortgage averaging \$105 per capita of the total population, and that similar conditions and tendencies are shown to exist in other agricultural exporting States. We denounce a policy which fosters no industry so much as it does that of the sheriff."

"Sec. 4. Trade interchange on the basis of reciprocal advantages to the countries participating is a time-honored doctrine of the Democratic faith, but we denounce the sham reciprocity which juggles with the people's desire for enlarged foreign markets and freer exchanges, by pretending to establish closer trade relations, for a country whose articles of export are almost exclusively agricultural products, with other countries that are also agricultural, while erecting a custom-house barrier of prohibitive tariffs against the richer countries of the world that stand ready to take our entire surplus of products and to exchange therefor commodities which are necessities and comforts of life among our own people."

"Sec. 5. We recognize in the trusts and combinations which are devised to enable capital to operate more than its just share of the joint product of capital and labour a nature of conspiracy, the prohibitive taxes which prevent free competition which is the life of honest trade, but we believe their worst evils can be abated by law, and we demand the rigid enforcement of the laws made to prevent and control them, together with such further legislation in restraint of their abuses as experience may show to be necessary."

"Sec. 6. The Republican Party, while professing a policy of reserving the public land for small holdings by actual settlers, has given away the people's heritage, until now a few railroad and non-resident aliens, individual and corporate, possess a larger area than that of all our farmers in the two seas. The last Democratic Administration reversed the improvident and unwise policy of the Republican Party touching the public domain and reclaimed from corporations and syndicates, alien and domestic, and restored to the people nearly one hundred millions of acres of valuable land to be sacredly held as homesteads for our citizens, and we pledge ourselves to carry out this policy until every acre of land so unlawfully held shall be reclaimed and restored to the people."

"Sec. 7. We denounce the Republican legislation, known as the Sherman Act of 1890 as a cowardly makeshift fraught with possibilities of danger in the future while all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and labouring classes, the first and most defenceless victims of unstable money and a fluctuating currency."

"Sec. 8. We recommend that the prohibitory 10 per cent. tax on state-bank issues be repealed."

"Sec. 9. Public office is a public trust. We reaffirm the declaration of the Democratic National Convention of 1896 for the reform of the civil service and we call for the honest enforcement of all laws regulating the same. The nomination of a President, as in the recent Republican Convention, by delegations composed largely of his appointees, holding office at his pleasure is a scandalous illustration of the methods by which a President may gratify his ambition. We denounce a President who federal office-holders usurp control of party conventions in which States, and we pledge the Democratic Party to the reform of these and all other abuses which threaten individual liberty and local self-government."

"Sec. 10. The Democratic Party is the only party that has ever given the country a foreign policy consistent and vigorous, compelling respect abroad and inspiring confidence at home. While avoiding entangling alliances, it has aimed to cultivate friendly relations with other nations, and especially with our neighbours on the American continent, whose destiny is closely linked with our own, and we view with alarm the tendency to a policy of irritation and bluster which is liable at any time to confront us with the alternative of humiliation or war. We favour the maintenance of a navy strong enough for all purposes of national defence and to properly maintain the honour and dignity of the country abroad."

"Sec. 11. This country has always been the refuge of the oppressed from every land—exiles for conscience's sake—in the spirit of the founders of our government we condemn the oppression practiced by the Russian government upon its Russian and Jewish subjects and we call upon our national government, in the interests of justice and humanity, by all just and proper means, to use its prompt and best efforts to bring about a cessation of these cruel privations in the dominion of the Czar, and to secure to the oppressed equal rights."

"We tender our profound and earnest sympathy to those lovers of freedom who are struggling for Home Rule and the great cause of local self-government in Ireland."

"Sec. 12. We heartily approve all legitimate efforts to prevent the United States from being used as the dumping ground for the known criminals and professional paupers of Europe, and we demand the rigid enforcement of the laws against Chinese immigration and the importation of foreign workmen under contract to degrade American labour and keep down its wages, but we condemn and denounce any and all attempts to restrict the immigration of the industrious and worthy of foreign lands."

"Sec. 13. This Convention hereby renews the expression of appreciation of the patriotism of the soldiers and sailors of the Union in the war for its preservation, and we favour just and liberal compensation for all disabled soldiers and sailors and their dependents, but we demand that the work of the pension office shall be done industriously, impartially, and honestly. We denounce the present administration as incompetent, corrupt, disgraceful, and dishonest."

"Sec. 14. The Federal Government should care for and improve the Mississippi river, and other great waterways of the Republic, so as to secure for the interior States easy and cheap transportation to the tide-water."

"When any waterway of the Republic is of sufficient importance to demand the aid of the government, such aid should be extended upon a definite plan of continuous work until permanent improvement is secured."

"Sec. 15. In support of national defence and the promotion of commerce between the States we recognize the early construction of the Nicaragua canal and its protection against foreign control as of great importance to the United States."

"Sec. 16. Recognizing the World's Columbian Exposition as a national undertaking of vast importance, in which the Federal government has invited the co-operation of all the powers of the world, and appreciating the acceptance by many of such Powers of the invitation so extended, and the broad and liberal efforts being made by them to contribute to the grandeur of the undertaking, we are of opinion that Congress should make such necessary financial provision as shall be requisite to the maintenance of the national honour and public faith."

"Sec. 17. Popular education being the only safe basis of popular liberty, we recommend to the several States most liberal appropriation for the public schools. Free common schools are the nursery of good government, and they have always received the fostering care of the Democratic Party, which favours every mode of increasing intelligence. Freedom of education, being an essential of civil and religious liberty as well as a necessity for the development of intelligence, must not be interfered with under any pretext whatever. We are opposed to State interference with parental rights and rights of conscience in the education of children, as an infringement of the fundamental Democratic doctrine that the largest individual liberty consistent with the rights of others insures the highest type of American citizenship and the best government."

"Sec. 18. We approve the action of the present house of representatives in passing bills for the admission into the union as States the territories of New Mexico, and we favour the early admission of all the territories having the necessary population and resources to entitle them to statehood, and while they remain territories we hold that the officials appointed to administer the government of any territory, together with the District of Columbia and Alaska, should be bona-fide residents of the territory or district in which their duties are to be performed. They believe in the maintenance of the home rule and the control of their own affairs by the people of the territory."

"Sec. 19. We favour legislation by Congress and State legislatures to protect the lives and limbs of railway employees and those of other hazardous transportation companies, and denounce the inactivity of the Republican Party, and particularly the Republican Senate, for causing the defeat of measures beneficial and protective to this class of wage-workers."

"Sec. 20. We are in favour of the enactment by the States of laws for abolishing the notorious sweating system, for abolishing contract convict labour, and for prohibiting the employment in factories of children under 15 years of age."

"Sec. 21. We are opposed to all summary laws as an interference with the individual rights of the citizen."

"Sec. 22. Upon this statement of principles and policies the Democratic Party asks the intelligent judgment of the American people. It asks a change of administration and a change of party, in order that there may be a change of system and a change of methods, thus assuring the maintenance unimpaired of institutions under which the Republic has grown great and powerful."

The first contest was over the tariff plank, and was precipitated by Mr. Neal, of Ohio, who offered a minority report, to strike out the first two paragraphs.

graphs of Section 3, and substitute therefor the following:—

"We denounce Republican protection as a fraud. The labour of the great majority of the American people is for the benefit of the few. We declare it to be a fundamental principle of the Democratic Party that the government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the government when honestly and economically administered."

A spirited debate followed, which bid fair to be interminable, until the Chairman of the Committee on Resolutions offered to accept that paragraph as an addition to the report. But the Radicals were not satisfied with that, and demanded a roll-call on Mr. Neal's motion to strike out and substitute. After some confusion and disorder, the roll-call showed a vote of 564 to 342 in favour of the minority report. Thus, in Section 3, the two long, straddling, contradictory paragraphs preceding the denunciation of the McKinley Bill were excised, and the one short, honest, consistent paragraph was substituted.

A delegate from Colorado then offered an amendment to Section 7 for the purpose of making it read as a more definite and specific declaration in favour of free carriage; but he failed in his purpose.

When the roll of States was called for the presentation of candidates, ex-President Cleveland's nomination was made by Governor Abbott, of New Jersey, and seconded by a number of speakers; Governor Hill's nomination was made by William C. De Witt, of New York, and seconded, among others, by Senator Daniel, of Virginia; Governor Boies was nominated by Mr. John F. Duncombe, of that State, and the nomination seconded by Henry Matterson, of Kentucky. The mention of the names of Cleveland and of Hill called forth tremendous demonstrations of applause for long periods.

It was a little after two o'clock in the morning when the nominating and seconding speeches were finished. The Hon. Bouski Cockran, of New York made a vain attempt to secure an adjournment, and delivered a fiery, powerful speech against the nomination of Cleveland and in favour of Hill; but his plea was futile.

Day was dawning when the first ballot was taken, amid wild excitement, and resulted as follows:—

States and Territories.	Votes.	Cleveland.	Morton.	Boies.	Campbell.	Hill.	Gorman.	Russell.	Whitney.	Carlie.	Stevenson.	Pattison.
Alabama	23	14	1	1	1	1	1	1	1	1	1	1
Arkansas	16	16	1	1	1	1	1	1	1	1	1	1

Total	910	673	3103	222	364	3	1	24	25	3	3	3

As only 603 votes were necessary to a choice, Cleveland was thus nominated, and his nomination was at once made unanimous by motion of Senator Daniel. Cleveland had gained a glorious victory over Tammany and other wily politicians.

When the Convention re-assembled at 2 p.m. on Thursday, June 23rd, it was the general expectation that Gray, of Indiana, would secure the nomination for Vice-President; but Tammany succeeded in knocking him because Indiana voted solid for Cleveland. Four candidates were presented:—Hon. Isaac P. Gray, of Indiana; Hon. Adlai E. Stevenson, of Illinois; Hon. Allen B.

Morse, of Michigan; and Hon. John L. Mitchell, of Wisconsin. The first ballot stood:—

States and Territories.	Votes.	Stevenson.	Gray.	Morse.	Waterson.	Cookan.	Tree.	Nitelsh.	Boies.
Alabama	23	23	1	1	1	1	1	1	1
Arkansas	16	16	1	1	1	1	1	1	1
California	28	28	1	1	1	1	1	1	1
Colorado	8	8	1	1	1	1	1	1	1
Connecticut	23	23	1	1	1	1	1	1	1
Delaware	6	6	1	1	1	1	1	1	1
Florida	8	8	1	1	1	1	1	1	1
Georgia	26	26	1	1	1	1	1	1	1
Idaho	6	6	1	1	1	1	1	1	1
Illinois	48	48	1	1	1	1	1	1	1
Indiana	30	30	1	1	1	1	1	1	1
Iowa	26	26	1	1	1	1	1	1	1
Kansas	20	20	1	1	1	1	1	1	1
Kentucky	18	18	1	1	1	1	1	1	1
Louisiana	16	16	1	1	1	1	1	1	1
Maine	12	12	1	1	1	1	1	1	1
Maryland	26	26	1	1	1	1	1	1	1
Massachusetts	30	30	1	1	1	1	1	1	1
Michigan	28	28	1	1	1	1	1	1	1
Minnesota	28	28	1	1	1	1	1	1	1
Mississippi	18	18	1	1	1	1	1	1	1
Missouri	34	34	1	1	1	1	1	1	1

New Mexico	6	6	1	1	1	1	1	1	1
Oklahoma	2	2	1	1	1	1	1	1	1
Utah	2	2	1	1	1	1	1	1	1
Indian Territory	2	2	1	1	1	1	1	1	1
Total	910	402	343	86	36	5	1	45	1

One delegate in Maine not voting.

Before the ballot was formally closed, Iowa changed her solid vote from Waterson to Stevenson, and other States tumbled over to the winning side so fast that I could hardly keep track of them. When after much confusion quiet could be restored, Stevenson's nomination was made unanimous by a loud chorus of ayes. [Hon. Adlai E. Stevenson was born in Kentucky in 1835; has lived since 1852, and was chiefly educated, in Illinois; and is a lawyer by profession. He has twice been elected by good majorities to Congress, and has three times been defeated for Congress by very small majorities. During President Cleveland's administration he was First Assistant Postmaster General. He was a Greenbacker when that party was in existence, but afterwards became a full-fledged Democrat. He is an able man.]

After several miscellaneous resolutions, including the usual votes of thanks, etc., had been passed, and a resolution to shut out the mob of spectators from future Conventions had been refused, with power to act, to the National Committee, the Democratic National Convention adjourned sine die.

LETTER FROM GERMANY.

(FROM OUR OWN CORRESPONDENT.)

Berlin, June 10th.

The interview between the Emperors of Germany and Russia is over, and the latter has returned to Copenhagen. The German and Russia Press continue making their commentaries on the Imperial visit, and its consequences. They have generally adopted a peaceful tone, pointing out that each country should now attend more to its home interests instead of almost exclusively wasting its energy upon the increase of military armaments. If we look to the political results that may come from the Imperial meeting we feel constrained to admit that, apart from the renewal, or rather the increase, of personal friendly relations between the two sovereigns, there is nothing to be noticed of importance or practical consequence. Germany being strongly bound to its partners of the Triple Alliance, is unable to connive at the least encroachment of Russia on the Balkan Peninsula, where Austria's interests would be immediately touched. It is true that Germany, on its own account, can have no special objection to Russia's development in an eastern direction where German interests are not paramount; but Germany depends on the full and unreserved support of its allies against France and is therefore bound to maintain the Austrian policy in this respect. Hence the impossibility for Germany to conciliate Russia, however great the desire may otherwise be, whilst to mediate

between the two parties, as was often attempted in former years, would be evidently a hopeless task.

The festival and national rejoicings at Nancy have equally passed off without any great results worth noticing. The fact of a Russian Grand Duke appearing on the scene at the eleventh hour, was a masterly *coup de théâtre*, but caused no special surprise here: in fact it may be surmised, that in higher quarters the fact was known beforehand. It was an able piece of policy on the part of the Russians, and they may be praised for so adroitly managing the susceptibility of the French. The Grand Duke Constantine Constantinowich was anything but a stranger to the President; he had been travelling for some time past in France and had called upon M. Carnot in Paris, but subsequently had been keeping very quiet at Contrexmille, from whence he suddenly turned up when the right time arrived. It must be admitted that the members of the French government showed in their speeches at Nancy great tact and discretion. To the Chauvinists this moderation and the want of revenge-drum-beating was a great disappointment, but to the world at large it proved the effect of the admirable self-discipline the French nation is gradually developing in its higher spheres. The speech of M. Carnot was a model of reticence; he was able to say charming things to his countrymen without hurting their German neighbour's feelings. Very remarkable was the speech of Professor Lavisse, a great favourite of the students. He was far from preaching revenge ideas, and asked, in view of the brotherly harmony existing among the students around him, whether the day would not come when human will might be strong enough to overcome human nature. This would bring together the present antagonistic elements between nations. It is a dream, the professor continued, which many high spirited men have indulged in, but we may ask, is it to be always a dream! The time has not yet come, he said, to renounce national patriotism and its consequences. The moment is not yet arrived for disarmament and the old war-flags and banners cannot yet be burned like our idols of old. They must be preserved and honoured. But it is not only the influence of commerce, industry, steam, and electricity which causes a growing desire for peace, neither will the new relations gradually developing between capital and labour be sufficient to guarantee this object: material interest can never produce moral revolutions! But the sentiment of patriotism, the love of home, is likely to effect it. This high sentiment must in the end reconcile the sections of humanity with each other, and this will produce in future international concord. In fact, the Professor's speech might as well have been given at a Peace Congress. Given where it was, it could not have been without a happy effect on the assembly, and it is to be hoped that its noble sentiments will not be forgotten by the young and ardent listeners who formed the majority of the audience.

Another national, and at the same time dynastic, celebration, the 25th anniversary of the coronation of Francis Joseph as King of Hungary, has passed off with a great deal of splendour at Buda-Pesth. The speech of the religious "primas" of Hungary was, however, not as peaceful as that of the French Professor. Speaking of the sacred crown of St. Stephen he exclaimed:—"May it shine brightly and pure on your Royal forehead; may this crown, if possible, transmit realms of peace into the four quarters of the globe, but, if necessary, may it strike the enemies of our fatherland with the strength of the sword of a thousand years' duration!" Whether this was meant for foreign foes only, or whether the unhappy Bohemian national separatists were aimed at because of late they have become very conspicuous, is not clear. The latter have, by the declarations and machinations of their party of "young Tscheks," who openly fraternize with the Russians, given new cause for apprehension. They now send deputations to France and Russia, and even go so far as to declare that the moment will soon come when their pan-slavistic enthusiasm will make them renounce their Roman Catholic faith in order to return to the Orthodox Greek Church, which their forefathers belonged to. How great the enmity of the Tscheks against the German element has become, is shown by the telegram which the Bohemian students at Vienna sent to their colleagues at Nancy. It is reported to have contained the following sentence: "You intend to fortify yourself in your struggles against your national enemy; we also struggle for our liberation from the same enemy." Thus Austria, one of the principal supports of the Triple Alliance, is suffering at home from the consequences of its heterogeneous nationalities, but the other partner to the Triple Alliance, Italy, is not without its troubles also. Parliamentary complications and financial difficulties are being heaped on the head of the new Cabinet. The problem which

Original from

the Cabinet of Giolitti was assumed to solve is almost beyond its strength. The keeping up or even increase of the military armaments, without any additional pressure on the taxpayer, is a matter of impossibility. Commerce suffers from the hostility of the French and from their tariff obstructions. Over speculation has caused a wide spread crisis in the country, and still the War Minister wants more guns and more money.

The feeling of the Italians is evidently growing more and more hostile to the French, whose restrictions have ruined their export trade. The open declaration also of the Pope, in favour of the French Republic, has added new fuel to the flames, for it is easily conjectured that the price offered for this support of the Republic is the future restoration of the Pope's secular power, in other words, the destruction of Italian unity. Italian politicians watch therefore with much interest the proximate elections in England; they fear that a Liberal government would withdraw the engagements for maritime support in the Mediterranean in case of need, on which to a some extent the future safety of Italy and the overwhelming power of the Triple Alliance depends.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, Massachusetts, July 4th.

This is the day we celebrate the one hundred and sixteenth anniversary of the Declaration of Independence. We have a good deal to boast of, but out of respect to our friends across the water we will not go into particulars. Sufficient it is that we celebrated by bells and cannon, "crackers," torpedoes, fireworks, balloon ascensions, speeches, and dinners.

Boston is much interested these days in the "goings and the comings" of "Our Willie"—Governor William Russell—who, to use a newspaper expression, is flirting desperately with Grover Cleveland. Of course if he be elected he will want a Cabinet, and wouldn't Russell look well on it? Certainly the man who had one vote for the office of President of the United States at the Democratic Convention, ought to be entitled to a high place "way up" near the highest.

Ex-President Cleveland is domiciled at Marion, a place on the southern shore of Massachusetts, where he has had a summer residence for several years. He calls his place "Gray Gables," and we hear much now-a-days about Gray Gables and the persistent wooing of "Our Willie." On his return from these visits, is heard the "good old tune," born and died before the war, "O, Willie, we have missed you!" But Willie is considered a pretty good fellow, with a laudable ambition to mount higher on the ladder of fame.

But the great topic of the day is or, was at the time, the Democratic nominations. Ex-President Cleveland was nominated for the Presidency. He received 617 votes; Hill, 114; Boies, 103; Gorman, 38; Stevenson, 16; Carlisle, 14; Campbell, 2; Morrison, 3; Patterson, 1; Russell, 1; Whitney, 1. A wigwag was built in Chicago for the use of the Convention. The "Tammany Braves" (New York Democrats) always meet in a "wigwag," so-called. The Chicago wigwag was built as a man might fence in a field and then stretch a canvass over it. The wind carried away the canvass over the wigwag, and then a wooden roof was placed on the fence-like foundation. Fears were expressed that when the Convention met and began business, the structure might collapse and bury the hopes of the Democracy—that even the clapping of hands in unions might bring down the ponderous roof. But the Convention lived to do its work and to escape. The Hill boom was short-lived. It is simply marvellous that there was any Hill boom; that Hill received 114 votes for the highest office in the gift of the people. But it may be assumed that the delegates who voted for Hill had been promised in the way of reward about everything except the earth. These delegates were to cling together and, to turn the rest of the crowd, the 114 was to be a kind of bell-wether to lead the flock right into the Hill fold, but they would not be folded in such a camp of wolves, and refused to follow, and Mr. Hill and his little boom and his 114 boomers quietly withdrew and returned to their old haunts, presumably the gin-mills of New York. Ex-President Cleveland was nominated on the first ballot. The "quick unanimity" is due, says an "organ," to the fact that there was doubt as to the safety of the wigwag, especially in a lake storm that comes and goes quickly. But at last all the candidates, Republican and Democratic, are now before the people and it now remains to elect a part of them. All parties are now resting on their oars, but after the summer vacation the active canvass will begin, and a large part of

the people will march in procession, night after night, carrying banners, transparencies, and kerosene torches. It is to be the hottest presidential election in the history of the country. The great cry of the Republicans is and will be "Protection," and that of the Democrats is not exactly "Free Trade," although it amounts to that—"Tariff for Revenue only." Adlai-Stevenson was nominated for the office of Vice President at the Democratic Convention. He was First Assistant Postmaster-general under Cleveland, and was called the "Great Headsman," from the fact that he beheaded—turned out of office—several thousand postmasters in a remarkably short time and put in Democrats. That is all the fame he can boast of and to the Democrats it is enough. As Mr. Flanagan, of Texas, remarked, "What are we here (in office) for if not for what we can get?" A few days after the Convention at Minneapolis, Emmous Blaine died suddenly in Chicago. He was an active worker at Minneapolis in his father's interest, and probably exerted himself beyond his strength. His disappointment was great at the failure of his father to secure the nomination, and this appeared to add to the disease that caused his death. He was thirty-five years, of great promise, prominent in railway circles, being at the time of his death, Vice President of the Baltimore and Ohio Railway. He was married, in 1889, to the daughter of McCormack the millionaire reaper manufacturer. The daughter had an inheritance of five of six million dollars. The sympathy of the country went out to Mr. and Mrs. Blaine in their great affliction. The campaign brings its burdens and its "crosses to bear." An ambitious publisher announces that he will publish the speeches of Ex-President Cleveland, delivered since he was President—that is, while he has been stumping the country in his own behalf. By the way, it was an extraordinary spectacle that of an Ex-president of the United States, personally bidding for another term of office—something that was never witnessed before in this country. And now it is proposed to publish what he said "on all previous occasions." A paper suggests that penal institutions secure copies and use them in the interest of discipline. To compel a man to read one of those speeches on an empty stomach would be more effective as a measure of discipline than the thumb-screw.

Since the Convention in Chicago, the city has been inundated by "excessive rains," and some streets have been navigable in boats. This was immediately after the Convention. Rain usually follows great disturbance of the atmosphere, and after "such a time" in the wigwag, it is not strange that the heavens opened and emptied the reservoirs.

We have now reached the end of the half-year. The college commencements are over, the woods are full of graduates, newly fledged, hardly fledged perhaps, and degrees of every kind and degree have been given out liberally by all institutions of learning from Harvard University to the small country college. There is no amusement now for the stay-at-homes till the campaign opens after the vacation. The "rush to Europe" is great—"beyond all precedent." It is probably true that it is cheaper to go to Europe than to stay at home.

The steamer *Trave*, which arrived in New York a day or two ago, ran down and sunk a large schooner—cut her in two and rode over her. It is said to be a fact that as soon as the large steamers are at sea, the engines are driven to their utmost capacity in the thickest fog. It is taken for granted that there is room enough at sea. But that there is not room enough, or it is not safe to drive a 10,000 ton steamer at racing speed through a dense fog as prevailed at the time when the *Trave* crashed into and sent to the bottom the schooner lying in her path. Similar accidents become more frequent every year. The *Trave*, however, stood by, lowered her boats, and rescued the crew of the schooner. As an example of navigating skill, if not recklessness, see the following:—A steamer left New York one night for a port about two hundred miles away, her course lying through two inland rivers and a sound crowded with craft of all kinds. According to report, the captain of the steamer, after he left New York, did not see anything till he reached his destination. Through the dense fog and the blackness of the night, he sailed by compass, hit nothing, made no mistakes, and reached port on time with his several hundred passengers.

John W. Foster has been appointed Secretary of State in place of James G. Blaine, resigned. Mr. Foster has had an active life, twenty five years of it in the service of the United States. He was Minister to Mexico from 1873 to 1880, Minister to Russia from 1880 to 1881, and minister to Spain in 1883. Subsequently, Mr. Foster was appointed a special ambassador to Spain in connection with the reciprocity treaty. Recently, he had charge of the Behring Sea negotiations and was the agent of the

United States to prepare the case for presentation to the arbitrators.

A new invention is attracting much attention. It is called the Double Needle Carpet Loom. It is claimed for it that a square yard of carpet may be made in one minute.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, July 2nd.

The weather, that trite and hackneyed topic, has lately been a subject of unusual interest. During the past two or three months there has been nothing commonplace about the weather, which has astonished both "the oldest resident" and the astronomer. June was an improvement over May, but was far from keeping up its old reputation as a bright and warm month. Let me illustrate the state of affairs by reference to official statistics concerning Chicago weather. Observations for twenty years have fixed upon less than 4 inches as a normal rain-fall for June; but this year the record shows 10.52 inches, an amount never exceeded in any month except August, 1885, when 11.28 inches were registered. During this phenomenal month there were ten clear days, two with only a trace of moisture, and eighteen rainy days. Another evidence that the weather of this year has been extraordinary, is furnished by a comparison with the record of 1882 when all previous records were beaten. The following table shows the rain-fall in inches during corresponding months:—

	1882.	1892.
April	6.72	2.17
May	5.52	6.77
June	5.71	10.52
Total.....	17.95	19.46

The heaviest rains came during the last ten days of June. In this city they came during the Democratic Convention, and probably proved quite serviceable in cleansing "the unwashed Democracy." The Republicans nominated their candidates in bright, clear weather; the Democrats named theirs in cloudy and rainy weather. It has, however, been suggested, that next November the Democrats will be revelling in sunshine, and the Republicans will be enveloped in clouds and thick darkness! The Prohibition Convention, too, was treated (most appropriately) to a down-pour of rain.

The rivers again began to rise during the last days of June, and to spread devastation along their banks. The Mississippi River, in particular, at Davenport, Burlington, Keokuk, Rock Island, and other places, beat the record of 40 years, and caused tremendous damage to property. The past few days, however, of clear weather have produced a subsidence, so that no further danger is apprehended.

The college commencements are now about finished, and have sent forth another big batch of young men and women to help settle the great questions of the day. The University of Michigan again stands at the head with a class of 689.

The University of Chicago has appointed 47 "fellows," and will soon name others. Among the successful applicants is a Mr. A. Asada, who intends to work in the department of Semitic languages.

Two Japanese students of Cornell University passed through here the other day *en route* for Japan, where they will spend their vacation. They fell into the hands of a reporter, who "sized them up" as follows: "They speak excellent English, wear the latest apparel, and seem to have adopted American customs in all things, even to carrying their cane head downward!"

Among the recent attractions of a dime museum of this city was a Japanese who exhibited his skill at free-hand drawing and painting.

The Scudder case will never come to trial in an earthly court, but has been brought to a fortunate, though sad, ending. The accused died in the county jail the other morning from the effects of morphine supposed to have been self-administered. The body, after a quiet funeral here, was taken to Long Island, and cremated. The entire episode is still a deep and unsolved mystery, and would better be left in oblivion.

Sunday, June 26, was a day devoted by the Baptists of America to a celebration of the centenary of Baptist missions. The church, Sunday-school and prayer-meeting services were all given up to special exercises appropriate to the occasion. The important events of the life and work of William Carey, of Andrew Fuller, of Marshman and Ward, were brought out for the purpose of emphasizing the present duty of American Baptists in the matter of missionary labour. They are trying to raise a centenary fund this year of \$1,000,000.

Rev. P. R. Swartworth, of Illinois, has just been

added to the Baptist force in Japan; and others will be named.

It used to be the custom for each Sunday-School by itself to enjoy a summer picnic; but it is now the practice for a large number of Schools to unite in an immense picnic. This simply applies to Sunday-Schools the "field day" idea of colleges, and makes a fine display. The other day, for instance, the Schools of the South Side all met for that purpose in Washington Park, and enjoyed a procession with banners, music, sports, etc.

It is the purpose of an association just organized to give the Passion Play here during the World's Fair. The principal performers will come from Ober-Ammergau, and bring with them "the original costumes and other accessories of the religious drama."

Most favourable response to the plan of holding a "Parliament of Religions" in connection with the World's Fair are being received from all quarters. Among the recent additions to the advisory council are the names of Mr. Mokuai Shimaji, of Tokyo, and Dr. Blodget of Peking. "A large representation is promised from Japan."

Congress will probably vote the extra appropriation for the World's Fair.

It is rather an amusing evidence of the interest which Americans feel in the Exposition, that there is a vast increase in the number of teachers who wish to get a school near Chicago! In no previous year have more than 10 persons taken the examination for certificates for teaching in the schools of this country; but this year about 300 have applied! The number of applicants for positions in the city schools is also large.

Increase of space has lately been granted to foreign nations in the Agricultural Building. The seven largest amounts, in square feet, are as follows:—Great Britain, 18,346; Germany, 11,875; Brazil, 7,200; France, 6,833; Mexico, 6,020; 6,020; Japan, 3,038; Argentine, 2,976.

The Canadian Pacific Steamship Company has made the following reduced rates for the World's Fair:—

On freight from China or Japan to Vancouver, \$10 per ton; on freight consigned on through bills of lading to Chicago, \$16 per ton; all exhibits to be returned free where they have not changed ownership. In passenger fares a half-rate will be made for government officials and representatives of the Exposition from their respective countries. Visitors from China and Japan will be furnished a round trip ticket to Vancouver, good returning until Dec. 30, 1893, for \$300. This is the regular fare one way.

The new Pacific Mail steamer, *Peru*, will leave San Francisco Thursday, August 4th, on its first trip to Japan and China.

President Harrison and Whitelaw Reid have been officially notified by committee of their nomination, and have formally accepted. But, of course, letters of acceptance may be expected from both gentlemen. An Illinois man, Hon. W. J. Campbell, of this city, has been chosen chairman of the National Committee, and will thus conduct the Republican campaign.

Hon. John W. Foster, of Indiana, has been appointed Secretary of State to fill out Mr. Blaine's term. He is an able and experienced diplomat: he has been U.S. Minister to Mexico, to Russia and to Spain, and he was selected by President Cleveland for a special service in Spain. He and his wife both speak Spanish.

George D. Johnstone, a prominent educator of Alabama, has been appointed Civil Service Commissioner.

We have now a misunderstanding with Canada, not only concerning seal fisheries, but also in regard to the navigation of Canadian canals. On the 20th of June, President Harrison sent the Senate a message, complaining of discrimination against American citizens in the matter of canal tolls in violation of the treaty of Washington, and recommending retaliatory measures of some kind. A few days later a communication was received on that subject from Mr. Herbert, the Canadian representative. Yesterday the President transmitted that communication, together with other documents, to the Senate, and reiterated strongly his previous recommendation; but the Senate has not yet taken any action in the matter.

Senator Stewart's free coinage bill was passed yesterday in the Senate by the close vote of 29 to 25, and goes now to the House of Representatives. This news was received with great rejoicing at Omaha, where the National Convention of the People's Party began to-day its session. The silver question, like Banquo's ghost, will not "down."

The statistics of business matters scarcely warrant the dismal croakings of the alarmists who are running the People's Party. R. G. Dun & Co. inform us, that the fiscal year closing June 30th was never equalled in our history in the volume of production and in the magnitude of domestic and foreign trade; and that the new half-year begins

with excellent prospects as to crops and trade. If we can only keep free from wild financial schemes!

The National Prohibition Convention opened June 29th in Cincinnati with a large attendance of delegates and visitors. One especially interesting feature was the number of women present, among whom Miss Willard, Mrs. Hoffman, and Mrs. Gougar were the most prominent. Professor Dickie, chairman of the National Committee, called the convention to order, and presented Hon. John P. St. John as Temporary Chairman. The Standard-bearer of 1884 was received with an ovation of applause, and delivered an eloquent address. The remainder of the morning session, and the afternoon session, were devoted to reports of committee, miscellaneous business and speeches. The Committee on Credentials reported 972 delegates present out of 1,191 as the full number. In the evening the Permanent Chairman, Col. Eli F. Ritter, of Indiana, was presented, and made a rousing speech. Up to and even during the first day's session there had been considerable feeling in favour of an attempt in some way to bring about fusion with the People's Party; but, as the impracticability and foolishness of such a move became clearly apparent, the project was not publicly broached.

In the morning session of the second day, a Southern delegate, whose tender feelings had been wounded the evening before by an illustration (in one of the speeches) from a slave market scene, procured the adoption of the following:—

Whereas, The Prohibition party is not a sectional party, but a National party.

Whereas, The issues of the late civil war were settled and settled forever, therefore,

Resolved, That it is the sense of this Convention that speakers who are accorded the honour of addressing the Convention, be requested to refrain from unnecessary reference or illustrations that could be construed as a reflection on any of the participants in the late struggle.

In the afternoon session there was a long and lively discussion over the financial and tariff planks, which are, of course, subordinate to the main issue of prohibition, but must be carefully worded. Finally, the entire report was adopted in the following platform:—

The Prohibition party, in National Convention assembled, acknowledging Almighty God as the source of all true government and His law as the standard to which all human enactments must conform to secure the blessings of peace and prosperity, presents the following declaration of principles:

1. The liquor traffic is a foe to civilization, the arch enemy of popular government and a public nuisance. It is the citadel of the forces that corrupt politics, promote poverty and crime, degrade the Nation's home life, thwart the will of the people and deliver our country into the hands of rapacious class interests. All laws that under the guise of regulation legalize and protect this traffic or make the Government share in its ill-gotten gains are "vicious in principle and powerless as a remedy." We declare anew for the entire suppression of the manufacture, sale, importation, exportation, and transportation of alcoholic liquors as a beverage by Federal and State legislation and the full powers of the Government should be exerted to secure this result. Any party that fails to recognize the dominant nature of this issue in American politics is undeserving of the support of the people.

2. No citizen should be denied the right to vote on account of sex, and equal labour should receive equal wages without regard to sex.

3. The money of the country should be issued by the general government only, and in sufficient quantities to meet the demands of the business and give full opportunity for the employment of labour. For this end an increase in the volume of money is demanded, and no individual or corporation should be allowed to make any profit through its issue. It should be made a legal tender for the payment of all debts public and private. Its volume should be fixed at the definite sum per capita and made to increase with our increase in population.

4. Tariff should be levied only as a defence against foreign Governments which levy tariff upon our bar or our products from their markets, revenue being incidental. The residue of means necessary to an economical administration of the Government should be raised by levying a burden on what the people possess instead of upon what we consume.

5. Railroad, telegraph, and other public corporations should be controlled by the Government in the interest of the people, and no higher charges allowed than necessary to give fair interest on the capital actually invested.

6. Foreign immigration has become a burden upon industry, one of the factors in depressing wages and causing discontent, therefore, our immigration laws should be revised and strictly enforced. The time of residence for naturalization should be extended, and no naturalized person should be allowed to vote until one year after he becomes a citizen.

7. Non-residents should not be allowed to acquire land in this country, and we favour the limitation of individual and corporate ownership of land. All unearned grants of lands to railroad companies or other corporations should be reclaimed.

8. Years of inaction and treachery on the part of the Republican and Democratic parties have resulted in the present reign of mob law, and we demand that every citizen be protected in the right of trial by constitution tribunals.

9. All men should be protected by law in their right to one day's rest in seven.

10. Arbitration is the wisest and most economical and humane method of settling national difference.

11. Speculations in margins; the cornering of grain, money and products, and the formation of pools, trusts and combinations, for the arbitrary advancement of prices, should be suppressed.

12. We pledge that the Prohibition party, if elected to power will ever grant just pensions to disabled veterans of the Union army and navy, their widows and orphans.

13. We stand unequivocally for the American public school, and opposed to any appropriation of public moneys for sectarian schools. We declare that only by united support of such common schools, taught in the English language, can we hope to become and remain an homogeneous and harmonious people.

14. We arraign the Republican and Democratic parties as false to the standards raised by their founders, as faithless to the principles of the illustrious leaders of the past to whom they do homage with the flag; as recreant to the "Higher way," which is as inflexible in political affairs as in personal life, and as no longer embodying the aspirations of the American people or inviting the confidence of enlightened, progressive patriotism. Their protest against the admission of "moral issues" into politics is a confession of their own moral degeneracy. The declaration of an eminent authority that municipal misrule is "the one conspicuous failure of American politics," follows as a natural consequence of such degeneracy, and is true alike of cities under Republican and Democratic control. Each accuses the other of extravagance in congressional appropriations and both are alike guilty. Each protests when out of power against the infraction of the civil service law, and each when in power violates those laws in letter and spirit. Each professes fealty to the interests of the toiling masses, but both truckle to the money power in their administration of public affairs. Even the tariff issue as represented in the Democratic Mills bill and the Republican McKinley bill is no longer treated by them as an issue upon great and divergent principles of government but is a mere catering to different sectional and class interests. The attempt in many States to swerve the Australian ballot system from its true purpose and to so deform it as to render it extremely difficult for new parties to exercise the rights of suffrage is an outrage upon popular government. The competition of both the parties for the vote of city slums and their assiduous courting of the liquor power and subservience to the money power has resulted in placing those powers in the position of practical arbiters of the destinies of the Nation. We renew our protest against these perilous tendencies and invite all citizens to join us in the upbuilding of a party that has shown in five National campaigns that it prefers temporary defeat to an abandonment of the claims of justice, sobriety, personal rights, and the protection of American homes.

The following resolution, offered by the Rev. J. G. Evans, of Abingdon, Ill., was carried:

Resolved, That we favour a liberal appropriation by the Federal Government for the World's Columbian Exposition, but only on the condition that the sale of intoxicating drinks upon the Exposition grounds is prohibited, and that the Exposition be kept closed on Sunday.

At the evening session, when the roll of States was called for the presentation of candidates for the Presidency, General John Bidwell, of California; W. Jennings Demorest, of New York; and G. L. Stewart, of Ohio, were put in nomination. The first ballot gave Bidwell, 590; Demorest, 139; Stewart, 179; and Bascom, 3; and Bidwell's nomination was made unanimous. It may be truly said, that the Prohibitionists have bid well for success! The first ballot for Vice-President gave the nomination to J. B. Cranfill, of Texas, against Joshua Levering, of Maryland, as chief rival. [General John Bidwell entered Congress from California in 1865 as a Republican, and served two terms. He went to California in 1846. Hon. J. B. Cranfill is a well-known editor, and a leading Baptist layman, of Texas. He is a very eloquent orator.]

IN U.S. CONSULATE-GENERAL COURT.

Before W. D. TILLOTSON, Esq., Consul and Judge.—TUESDAY, July 26th. 1892.

SHERWOOD AND SHERWOOD V. C. F. LOW.

This morning, the hearing of a motion filed by Mr. A. Tison, counsel for the defendant in the above case, was heard by the Consul-General in his private room. Mr. J. F. Lowder appeared for plaintiffs and Mr. Tison for defendant.

The motion was as follows:—

The defendant in this action, entitled as above, moves, on the complaint and the proceedings herein, for an order:— (1.) That the plaintiffs so amend their pleadings as to set out in the petition and on the record herein the names of the parties plaintiff and each of them according to the usual and regular course of procedure in such cases; (2.) That the plaintiffs file with the Court security for the costs and charges hereof to the amount of \$100 in U.S. gold or the equivalent thereof, according to the regulation in such case made and provided for non-resident plaintiffs, and (3.) That defendant have until ten days after compliance with said order and notice thereof to defendant in which to answer the complaint; all proceedings in this action on the part of the plaintiffs other than under such order meanwhile to be stayed.

Dated, July 22nd, 1892.

ALEXANDER TISON,
Counsel for defendant.

Mr. Tison said—I have made this motion for the purpose of asking that plaintiffs' names be more

fully set out in the petition, for the purpose of asking for security for costs and extension of time. I know that I could have obtained the first two things by merely making a formal demand, but I have brought them forward as a motion for the benefit of all parties in the case and for simplicity. Regulation 253 bears upon the question of asking for security in a case where a party is a non-resident, and the section states that \$300 is the amount to be given. In regard to the first part of the motion, it is desirable, even if there is no counter-claim that the defendant should be enabled to know the names of the parties suing him. In regard to the extension of time in which to file an answer, Counsel urged, as one of the reasons for the putting off of the hearing of the case for a while, the heat of the season and the vacation that was now general everywhere. He wished, himself, to get away for a few days. Recapitulating, he said his motion was for the names of plaintiffs to be given more fully, a security for costs, and an extension of time for making an answer to the plaintiffs' petition.

Mr. Lowder said, in reference to the first prayer in the motion, that he had been instructed to disclose that the plaintiff was one, Robert Sherwood, of San Francisco, belonging to the firm of Sherwood and Sherwood.

Mr. Tison—And the defendant, your Honour, is Charles P. Low.

Mr. Lowder—Perhaps your Honour would allow us to amend the petition accordingly by striking out "Sherwood and" from Sherwood and Sherwood, and substituting "Robert" in their place, while plaintiffs would be altered into plaintiff throughout? If your Honour would allow this to be done, it would avoid the necessity of drawing up a fresh petition. The first paragraph would consequently read "Robert Sherwood, a merchant," etc.

His Honour—It is not necessary, I take it, to make out a new petition.

Mr. Lowder—Then, with regard to the second prayer of the motion, for the security of costs, that I cannot resist, as plaintiff is living at San Francisco and the defendant is within his right to ask for such security, as the other party to the action is a non-resident. The only thing he questioned was the amount of security asked for. He thought that it could hardly be that costs to such an amount—\$300 U.S. gold—would be given in such a case like the present, that is if the case went against them. It might be hard too, for the plaintiff to find \$300 for security; he might be a poor man for instance, and might find it difficult to raise that amount. But he would leave it to his Honour to say what amount of security was right in such a case and what ought to be given.

His Honour said he had not looked closely into the regulation bearing upon the subject of such undertakings, but as he read it, it was that the undertaking was for a sum "not exceeding \$300." It looked so to him.

Mr. Lowder—In the English Court the security does not exceed \$250.

Mr. Tison—I supposed that it was the same here until I looked at the Regulations.

His Honour—In all cases which have come under my notice the undertaking given covered all costs.

Mr. Lowder—In reference to the third prayer in the petition, Regulation 19 says that the Court has power to enlarge the time of answering, but it was usual when making such an application to the Court to support it by an affidavit stating the grounds for so doing. There was no evidence before the Court as to the reason for seeking the enlargement, and although he did not wish to oppose his learned friend in any way, still he should like to have some definite reason for his asking for the enlargement of time. His learned friend had said something about the hot weather, but that could hardly be sufficient reason for the Court to proceed upon.

Mr. Tison said that he could advance another reason for his application if necessary, and drew attention to the fact that it was in April last that he wrote to the learned counsel for plaintiff about the security for costs. He thought that ten days was a very reasonable time.

His Honour said that he always had felt that the rule of granting 3 days only in which to file an answer was rather harsh, and had consequently felt disposed to accede to any reasonable request for extension. It was the custom at home to allow 30 days in which to file an answer, while it was the custom to grant 10 or 12 days even in petty actions.

Mr. Lowder thought that this would not be so if defendant was shown to have been granted reasonable time.

His Honour—I granted extension in one case similar to this.

Mr. Lowder understood that defendant was leaving for San Francisco on Thursday.

Mr. Tison—Yes, he would have left by the *Oceanic*.

After some further conversation, his Honour said he thought that, under the circumstances, and as Mr. Tison lived in Tokyo, extension should be granted.

Mr. Lowder asked if there was any form in which security was entered into?

His Honour thought that there was no special form by which the undertaking was entered into.

Mr. Lowder thereupon produced a draft form for approval, giving the names of the two resident guarantors, and, this meeting with the Court approval.

His Honour said—The motion is granted. The Court then rose.

CHINESE AND JAPANESE TRAITS.

I have repeatedly heard said, and seen it written, that the Chinese race and civilization, compared with the Japanese, are of a decidedly inferior type. Unprogressive China is supposed to be ugly, prosaic, and degraded; mechanical in temperament, sordid and practical in aim. The art of Japan, especially, is thought to shine by contrast with that of her western neighbour. It is expressly asserted that the Chinese have never been a nation of artists, poets, and idealists.

This prejudice I believe to be unfounded. Although a lover of things Japanese, I can best show the grounds of my esteem, not by using China as a foil, but by acknowledging her as the classic source of inspiration. Whatever we admire most in the island race, be it the art, the gentle manners, the poetry, the unworlly ideal,—for all these the Japanese himself pays homage to his Chinese masters. Can it be that he knows less about the matter than our Western newspapers?

Our mistake is doubtless due to a pardonable ignorance of Asiatic history. We cannot truly exhibit the contributions of a great race to the cause of the civilization by cutting, as it were, a cross-section through its organic structures. What value would attach to a comparative estimate of the Greek and Italian races drawn solely from a contrast of Florence with Constantinople in the fifteenth century? What more from a contrast of Tokyo with Peking to-day? One is the home of a civilization of hoary age, with strength spent, struggle and crisis long since passed; the other, that of a youth in experience and temper, who has never till now been forced to grapple with the deepest social problems in a life-and-death struggle. Yet a comparative biography of these two racial lives would exhibit the closest affinities between them. From it we should discover that the specific types of far Eastern civilization have rested upon a common basis of constructive ideas; that the same moving principles which dominated the policy of successive Japanese eras, the same ideals which gave life and form to their myth, their poetry, and their art, had already created structures of similar nature, but on a far vaster scale, beyond the Yellow Sea. The continental art and literature and law, hot from the mortal struggle of China to objectify her highest ideals, were received and gayly worn as beautiful jewels, or wreathed anew into lovely garlands, by the more fortunate island mountaineers. To Chinese art and culture at their best in the Tang and Sung dynasties we must yield the palm for power, dignity, truth, and spiritual earnestness. No doubt there are an elusive subtlety and a buoyant geniality in the subsequently Japanese illuminations which have a distinct charm of their own. No doubt, too, in character there is something which reminds us strongly of the modern French or of the ancient Athenians. Nevertheless, on the whole, and in spite of temperament, it may be, we are forced to say that China has played the part of Greece for the whole Eastern world. Just as all that is classic and supreme in the inspiration of Western literature and art and philosophy comes down the ages to us from its creative centre at Athens, so all that is vital and classic in Oriental culture radiates from Loyang and Hangchow; just as frankly as Rome borrowed her models from Greece, so did Japan borrow hers from China.

Having said something in vindication of the rightful claims of Chinese civilization, I wish now to consider a charge of directly opposite import, which is sometimes made by writers and travellers, for the most part English. The Japanese are accused of being the most fickle and changeable people in the world, unstable, weak in character, vacillating in policy, and are unfavourably compared with the Chinese, who are praised for their solid, reliable, and manly qualities. The prudent conservatism of China condemns the hasty radicalism of Japan. The proof of this moral superiority of the former is supposed to lie in the fact

that foreign merchants in Japan have to employ Chinese cashiers.

Now, to appreciate the mistake involved in this estimate, we must again go back to national history. Levity and change on the one side, stolidity and conservatism on the other, are not inexplicable race characteristics. In China there was no blind love for the past, no universal hatred of change or of foreigners, previous to a comparatively recent date. There was as sharp a conscious struggle of the new with the old, as full a development of great individualities, innovating statesmen, constructive philosophers, inspired poets, and original artists, in the great Sing dynasty as at any period of European civilization. Her great seaports harbored large colonies of Arab merchants; Jewish synagogues flourished in the interior; she gladly learned science and the useful arts from the Venetians. Even more recently, in the days of her decadence, she thankfully made the Jesuit missionaries her teachers.

On the other hand, it is not true that the history of Japan is characterized by fickleness, blind change, and weak innovation. In unswerving allegiance to the single dynasty of her divinely descended Emperor she exhibits the oldest political institution in all history. Her regard for Buddhism never wavered from the seventh century to the sixteenth. She grasped firmly the ideals of the Sung dynasty nearly five hundred years ago, and has perpetuated them through an unbreakable tradition to our day in the aristocratic courts of the Tokugawa régime. How near the last two centuries of solid despotism came to making of Japan a copy of formalistic China may be seen to-day in a wide streak of stupid conservatism, of which, too, the foreign merchants complain. Both races, then, have exhibited on the scale of centuries, in grand alternation or in strange mixture; the opposite traits of individuality and formalism, and their peculiar temperaments and national tendencies to-day are only final resultants of vast movements of rise and fall, of hopeful ideal, mortal struggle, and temporary exhaustion.

What now do I mean by individuality? Surely not that sickly cast of thought, that morbid self-consciousness, which is sometimes spoken of as the feeling of personality. This has been necessarily absent from creative periods, whether in the East or in the West. I mean by individuality, not the self of which we think, but the self by which we do. It is the power to produce freshly from within, to react and adapt under rapid change of environment. It transcends institution, custom, love of approbation, fear of disapproval, all slowly acting forces of sheer mass. It is spontaneous origination, the salt of social life, the last hope of a race.

The problem, therefore, of each successive Oriental dynasty has been how to preserve all its inherited ideals, whether of patriarchal socialism, of Confucian statics, or of Buddhist discipline, by bringing to their support a renewed measure of individuality before success and organization should become so complete as to establish tyrannical rules. This could be done only when the stimulus of prolonged local warfare, or the shock of foreign contact, or the incidence of new constructive philosophies and religions gave a decided change to the conditions of the problem. Only three times in the course of three thousand years of Chinese history did these favourable conditions recur. On the third occasion, eleven centuries after Christ, the statesmen, scholars, poets, artists, priests, and philosophers of the great Sung dynasty waged a final and stupendous struggle with the hosts of formalism, and created the culminating glories of China's most individualistic illumination in an attempt to fuse together the three great religions of Taoism, Confucianism, and Buddhism. The downfall of this last movement, under the Mongol conquest, was the death-knell of Chinese individuality. All subsequent efforts to revive it were too weak and scattered. In the absence of new constructive matter, babbling Confucians of the narrowest commenting school have monopolized power and education for the last five hundred years, and have covered the glow of native genius with such a crust of literary formalism that intelligence has become stunted and government itself petrified.

But in Japan, in the course of the comparatively brief thirteen hundred years of its civilization, the disruptive forces and the renewed attack have recurred at five separate times, the last of which was as recent as the second half of the eighteenth century. It is not necessary for me here more specifically to characterize these five well-defined epochs in Japanese culture. It is enough for us to know that their rapid succession was caused either by the local independence and conflict of numerous feudal centres, or by perpetual invasions from foreign theories and religions. A happy co-existence of cultures has prevented the Japanese

mental soil from becoming exhausted; though it must not be inferred from this, as is frequently asserted, that the Japanese have been only borrowers and copyists. If this were true, if there had been no fresh individuality waiting to apprehend and restate the problem for its insular uses, no mere change of atmosphere would have galvanized into life a culture. The Japanese would have passed from idol to idol with the unintelligent submission of savages, and with a benumbing indifference to principles. But in fact Japan has ever and anon renewed her youth; and to-day one can warm himself at her living fires, kindled from those which grew cold in almost forgotten Chinese dynasties.

Here, then, is the key to the contrast. In China the outbursts of creative effort grew fainter and fainter, until they finally ceased; but in Japan they followed one another with such rapidity that individuality came to ingrain itself into the people as a race characteristic. So strong had this become that it was only half-chilled and checked by two hundred and fifty years of the Tokugawa despotism, which it finally overthrew. Slowly and insidiously, during the last few centuries, China had sunk into the night of unthinking like a huge animal in a quicksand; just as the Greek intelligence sank under the formalism of the Byzantine Empire. But the underlying fact which explains the contradictory elements in the Japanese character of to-day is this: that the old free shoots of individuality, never quite cut away, are sturdily working themselves up through the thin lava crusts of the last two centuries.

We are now in a position to estimate truly the relative values of these resultant traits. It is the extreme of short-sightedness to ascribe the recent changes of the Japanese to a fickleness of disposition and a lightness or weakness of character, as if they were mere children seeking some new toy for momentary amusement; and equally short-sighted to overpraise the solid or solid traits of Chinese persistence and uniformity, as if they were grand, conscientious, and constructive moral qualities. That the mutual trust which comes from reliableness is an essential factor of our strong Western civilizations is doubtless true; and it is natural that it should be especially Englishmen, with their dogged tenacity of purpose and their lack of sympathy with alien institutions, who should most esteem this "staying" quality of the Chinese. By it, no doubt, they are better fitted to become successful business men. But, from a point of view beyond that of the foreigner who would use them as his tools, the incidence in advantage from national temper is on the other side. It is not blind, useless change that the Japanese is prone to, but the free facility to construct and reconstruct under the necessarily everchanging environment. The very scientific idea of life is perpetual power of readaptation; and the highest life is reached when this readaptation implies a synthesis of all the organs and faculties through a free presiding intelligence. Failure to change, through the increasing inertia of the constitution, is the beginning of death, and the mere monotonous repetition of a single function is the nature of an automaton.

The success of Japan in taking up and solving the unprecedented, difficult, and sudden problems of the last thirty years certainly exhibits one of the most extraordinary feats of individuality on record. She is now actually putting into operation a new constitution, granted by the free act of her sovereign, in which his absolute power and prerogative become defined in relation to the other political forces of the nation. Imagine the boldest and most intellectual of the Chinese dreaming even for a second of accomplishing such a feat! The relative immobility of the atoms of the Celestial Empire renders all projects of reform well-nigh utopian. But variability, being the very raw metal out of which civilizations are stamped, is Japan's greatest strength. I go further, and say that it is a national strength, in this sense unique, in the whole recorded history of man. It lies in this: Japan is privileged to change so rapidly that she is able to pass through every phase of a problem in practical experience *within the lifetime of a single individual*. This unique circumstance conserves all the experience of the pre-revolutionary era as a basis for intelligent reconstruction at its end. The very *samurai*, who knew the old Tokugawa system of ideas and government, witnessed the alarming shock of foreign impact; rushed forward to seize the treasures of the Western example lavishly offered; studied face to face the inner significance of European principles of organization; felt the throbs of his own national life, which refused to accept a manufactured civilization, and insisted that native ideals, necessities, and precedents should be taken into account; turned his attention back again to the national and Asiatic point of view, and studied with foreign eyes his

own past life and institutions. This person is now the pilot at the helm, who brings the wealth of his cycle of experiences to solve the conscious problems of self-evolutionary reconstruction. In almost every other historical case of a return to ideas swept away by national convulsions, several generations have elapsed, and the consciousness of the past has had coldly to be reproduced by scholars from written documents. Few men can do more than see and state one side of a question strongly. The Japanese statesman has the perplexity, but the unspeakably valuable opportunity, of seeing all sides of all questions. Let us then pardon the pent-up individuality of these Japanese, if at the moment of relief it carried them to the extreme of extravagant change. It is like the fizzing of a champagne bottle which has just forced out its own cork. But, because it fizzed, did it follow that there was bad wine within? Or, on the other hand, because Chinese customs were apparently strong as steel, did it follow that China could hammer out for herself a newly armoured ship of state? Can a machine clean, oil, and reconstruct itself? The Chinese may be splendid material in the hands of foreigners; but is it strength to have little or no power of self-determination toward rational ends? It is not nobler to be a free, self-controlling Japanese, bravely meeting the unheard-of responsibilities which his deliberate act brings upon him, even though he be recalcitrant and unusable material in the hands of his neighbors? So it is that the very weakness of Japan is her strength, and the strength of China is her weakness.

One more question concerning present Oriental traits remains for me to answer. If it really be that the strength of Japan to-day consists in her having preserved with freshness and vigour the essence of the old Asiatic and lost Chinese ideals, how comes it that she is so willing to masquerade in the custom and costume of antipodal Western races? Does not her very tergiversation prove the inferiority of the Chinese standard to that not of Europe alone, but of Japan also? Is not Professor Chamberlain correct when he says that the Japanese very much resent any praise of their finer and more delicate taste and faculties, and that they are ready to throw these to the winds for a tithe of the wealth and the physical and mechanical vigour which endow England with her supremacy?

Doubtless there are such Japanese as this; the more shame to them! But I believe that I echo the opinion of the majority of the young educated Japanese of to-day when I say that Professor Chamberlain's mistake is most unfortunate, if not offensive. His covert sneer at those who, like, Sir Edwin Arnold, have rendered the Japanese praise is a shaft not aimed in the interests of truth. How then shall I explain the double fact of their earnest adoption of Western practices, and their apparent indifference to Western appreciation of their earlier traits? In this way: first, because Western appreciation of these traits has been hitherto, for the most part, insufferably superficial. We have mistaken the monstrous and the fantastic for the genuine Japanese. We have praised the trivialities of their lightest fancy and the patient skill of their touch rather than their earnestness and their faith, the bold passion of their individuality. We have failed to see the depth of the great social issues which they have at stake. We have travelled in every way the inner harmony of their souls.

But, in the second place, though of more importance, I know that the readiness of the Japanese to undergo their present Western discipline by no means arises from love for the English type of civilization, but is a deliberate sacrifice, a momentary necessity of developing wealth and military strength, in order to preserve their national independence. This was the policy of all the great liberals who inaugurated the present era. Japan's position in the East, in close proximity to China, Korea, Russia, and England (at Hongkong), is extremely precarious. In the event of a war between any two of these nations, she would find it almost impossible to maintain her neutrality. She wants iron ships, and big battalions, and bags of dollars, to hold an even position in any one of these balances. If, in a terrible emergency, she lose the power of self-determination, what will her artistic instincts, or polite amenities, or peaceful harmonic ideals of civilization avail her? Therefore she is willing to make every sacrifice, even to the throwing away for a time of her very ideals and choicest qualities, in order in the end to restore and conserve them. No doubt, of recent years, many leading Japanese have come to perceive that the sacrifice is too great, both because the necessity is not so urgent as supposed, and because the experiment is socially too dangerous. This is shown by the popular opposition to proposed treaties and codes of law, which would probably have strengthened Japan for the moment, but, as was believed, eventually at too high a price.

Moreover, there are many Japanese and not a few foreigners who think now that it will never be possible for Japan to develop herself into a great manufacturing nation like England. The temperament, the training, and the necessary materials are, for the most, lacking. We can pardon the Japanese their quixotic desire to commit intellectual *hara-kiri* rather than be beheaded by an enemy; but that it will be *hara-kiri*, and not any very great strengthening along material lines, seems more and more clear. For the far-seeing are now beginning to recognize that, even in industrial lines, the greatest hope of Japan lies in her very genial and artistic temperament. It is along the way of the development of her indigenous art-industries that she has the greatest natural advantages over competing peoples. In her capacity to design she has stored away an enormous capital, which even the disastrous introduction of a bastard foreign system of pencil-drawing in her public schools has not wholly exhausted. It may be that, at some distant day, China will develop into a fully armed colossus which shall draw the attention of European coalitions to strategic centres far to the east of the Dardanelles and the Neva; but it is much more possible for the perfected arts of Japan, deriving inspiration from carefully nurtured refinement, unworldly ideal, and creative individuality, peacefully to invade the willing markets of the West with her laden "treasure ship of good fortune," and conquer the world by the sword of the spirit.

Thus, I believe that, theoretically and practically, it will be best for Japan to hold fast to her own ideals of Asiatic tradition. It is a solemn service which she owes to humanity. She is the last custodian of the sacred fire. She alone has the unspeakable advantage of seeing the materialistic shams with which Western civilizations delude themselves, while she appropriates their sounder materials to rekindle her flame. In bringing to pass the fusion of Eastern and Western types which, two thousand years after Alexander the Great carried the borders of Greece to India, becomes for a second time possible, and which shall create in both hemispheres a far more rounded civilization than either has ever known, Japan has the inestimable privilege of becoming our most alert pioneer. Through her temperament, her individuality, her deeper insight into the secrets of the East, her ready divining of the powers of the West, and, more than all, through the fact that hers, the spiritual factor of the problem, must hold the master key to its solution, it may be decreed in the secret council chambers of Destiny that on her shores shall be first created that new latter-day type of civilized man which shall prevail throughout the world for the next thousand years.—ERNEST FRANCISCO FENOLLOSA in the *Atlantic Monthly*.

WRECK OF THE "NORTH AMERICAN."

LETTER FROM THE CAPTAIN.

A letter from Captain Creelman has been received in Kobe confirming the news that the *North American* is totally lost, but stating that part of the cargo might be saved if prompt action is taken. Contrary to what has been stated, the underwriters have not as yet dispatched a steamer to the scene of the wreck, but await further news before doing so. At latest advices the wind was blowing very strongly from the south, and it was therefore believed that the chance of anything being saved was very remote. A foreigner who came round the coast from Kocui in a Japanese steamer the day before yesterday, and therefore passed the spot where the disaster occurred, informs us that he saw no signs of the ship, but much floating wreckage, which at the time was thought to be the remains of houses destroyed by the recent floods. He says it is quite possible, however, that the particular point where the vessel is lying was not passed until after night-fall, and as the accident was not known to those on board the steamer no look-out was kept. The sea was running very high and breaking with tremendous force on the reefs along the coast. The letter referred to above from Captain Creelman is dated July 23rd, the name of the locality being described as Otuna, Shiwagi-mura, Mikita-mura, Kaibugouri, Awano-kuni, Tokushima-ken, which seems almost sufficient of itself to wreck the ship. The cook, who is stated by the captain to have lost his life, is a Chinaman, who had sailed with Capt. Creelman for some years. The Captain says:—"The *North American* is a total wreck about a mile from this place. All saved but the cook, who jumped overboard as soon as the ship struck. Typographical errors. Sails all blown away, and

strong current to the N.W. Natives hauled us in on shore on to the rocks in a boatswain's chain and traveller. Saved nothing but underclothing. Blowing hard. If it moderates to-night may save something to-morrow." Captain Creelman further writes:—"A Japanese schooner was lost with all hands only a few hours before us in the same place, and they say here that a great many other vessels are lost on this coast. We have had a very close shave, and it seems almost a miracle that no more were lost." On the next day (the 24th) the Captain again writes:—"Last night ship went all to pieces. Some cargo has come on shore, but in a very bad state, mostly matting, some camphor oil and some porcelain. The Governor of the ken is here, with a force of soldiers saving and guarding the cargo. But I don't think there will be enough saved to pay expenses of salvage. There was no mail yesterday, as the roads were washed out. . . . Everything saved is being taking care of, and nothing taken away. No one here speaks English, and my cabin-boy acts as interpreter, and he does not speak very well. We have to go ten miles over the mountains, and then take sampans ten or fifteen miles to Tokushima to take the steamer. The gale is now over, and the sea going down so that we may be able to take sampans from here to-morrow to Tokushima. The natives are doing all they can for us, but we are a little short of clothes. The most of us are in Japanese rig."—*Kobe Chronicle*.

The match between Blackburne and Lasker has been won by the young Prussian player with the marvellous score of seven wins and three draws, Mr. Blackburne failing to win a single game.

The *Deutsche Schachzeitung* states that the Berlin Chess Club has decided to promote a match between the two champions of Germany and Russia, Dr. Tarrasch and M. Tschigorin, which is to take place before the meeting of the "Dresdner Kongress." During the preliminary negotiations Dr. Tarrasch declared that he would only play either without any stakes or for a stake of M20,000.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 24th.

It has been suggested that, even should the Marquis of Salisbury be defeated on division, Parliament should merely prorogue till February, Lord Salisbury meanwhile remaining in office.

London, July 26th.

The latest election returns are:—Tories, 262; Unionists, 52; Liberals, 274; Irish, 80. The returns from Orkney are not complete.

The Duke of Devonshire and the Marquis of Abercorn have received Garters.

The Liberal leaders hold their first conference to-day at Mr. Gladstone's house.

(FROM THE "SINGAPORE FREE PRESS.")

London, July 6th.

The Right Hon. W. E. Gladstone, speaking at Dalkeith, said that if Scotland, after mature reflection, demands Home Rule, it must be obtained, for it is her right, as also is the disestablishment of the Church.

The cholera is reported to be spreading in Russia.

London, July 11th.

The boiler of a tourist steamer on Lake Geneva exploded killing twenty-six persons.

Two thirds of St. Johns, the Capital of Newfoundland has been burned, thousands of persons have been rendered homeless, and the loss is estimated at four millions sterling.

London, July 13th.

Speaking at Penicuik, the Right Hon'ble W. E. Gladstone referred to the opium question, and said that England's action towards China was a disgrace and a shame. He further said that he would gladly assist in ridding the connection of the Indian government revenue with the growth of opium.

A glacier became detached near Mont Blanc and swept Stgervais, a neighbouring hamlet, into the river Arve, causing the loss over 150 lives.

PASSENGERS.

ARRIVED.

- Per British steamer *China*, from San Francisco:—Miss Lanterbach, Mr. A. Lanterbach, Mr. Furukawa, Miss May Lee, Mrs. Mendelson and infant, Mr. Mendelson, Miss Mendelson, Miss B. Mendelson, Captain B. Luedholm, Dr. Hopendyl, Mrs. A. H. Kellogg, Master Earl Scott, Lieut.-Commander J. M. Miller, U.S.N., Mr. J. B. Livingstone, and Mr. L. B. Hillers in cabin. For Hongkong: Messrs. G. E. Miller, R. Thompson, and W. H. Seabury in cabin.
- Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Miss Mary E. Laning, Miss F. A. Gardiner, Miss L. E. Wimbish, Rev. and Mrs. R. B. Gimran and 2 children, Commander Yoshida, Major Kawakawa, Lieut. Ide, Rev. D. M. Lang, Mr. Obana, and Mr. J. Kaneko in cabin; Mrs. Kawakami and child, Mr. G. Rheese, and Mr. Ishisaka in second class, and 21 passengers in steerage.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—Mr. J. Nugent, Miss H. Asan, Mr. Loo Chee Jong and son, and Mrs. Orme in cabin. For San Francisco: Mr. K. P. Lee in cabin.

Per Japanese steamer *Miike Maru*, from Otaru and ports:—Rev. Booth, Mr. S. Thorne, Rev. and Mrs. Fuller and 3 children, and Mr. S. Hinata in cabin; 10 passengers in steerage. For Kobe: 2 passengers in steerage.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Commander and Mrs. Bartlett, Misses Bartlett (2), Commander and Mrs. F. W. Dickens, Commander F. McCurley, Mr. and Mrs. O. Mordhorst, Miss Beeliefield, Mr. P. H. McIntosh, Rev. and Mrs. O. E. Brown, Mr. and Mrs. M. Haight, Major-General Palmer, Rev. J. W. Demalce, Messrs. Ward, S. Yushiki, S. Ogawa, P. Staffa, and H. Marcus in cabin; Mr. and Mrs.

Kitadai, Messrs. K. Muraki, K. Noguchi, Mac-Millan, K. Noguchi, and Wong Tsou Ding in second class, and 59 passengers in steerage. For San Francisco: Rev. and Mrs. F. L. Polts and infant, and Rev. Young J. Allen in cabin.

DEPARTED.

Per British steamer *China*, for Hongkong:—Mrs. J. B. Glover, Mr. M. R. Ogilvie, and Mr. J. B. Livingstone in cabin.

Per Japanese steamer *Yokohama Maru*, for Kobe:—Mr. and Mrs. Beauchamp, Mrs. Kawachi and 3 children, Miss Forbes, and Mr. Meit in cabin; one Japanese Lady and Mr. Yamada in second class. For Nagasaki: Mr. W. H. Devine in cabin. For Shanghai: Lieut.-Commander Miller, U.S.N., Messrs. B. Lindholm, M. Muramatsu, K. Toshima, M. Yamamoto, and S. Tanaka in cabin. For Shimonoeki: Mr. T. Sogo in second class; and 71 passengers in steerage.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Miss Georgia Cayvan, Mrs. Edur Eddy, Miss Alice Cayvan, Miss Stockbridge, Mr. and Mrs. C. P. Low, Miss M. A. Crozier, Mr. E. Kwant, Mr. T. Blohm, Miss K. Southard, Mr. and Mrs. Merrill and 3 sons, Mrs. Fitzhugh, Mr. F. F. Simpson, Mr. E. Clifton Brown, Mr. K. Kato, and Mr. H. Berner in cabin.

CARGOES.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Treasure, \$100,000.00.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—

REPORTS.

The British steamer *China*, Captain Seabury, reports:—Left San Francisco the 9th July; had moderate S.W. winds and dense fog most of the passage; last 40 hours, fresh gale from S.W. to S.S.E. with very heavy swell; at 5.20 a.m. on the 13th met *City of Peking*; at 12.20 a.m. on the 21st passed a steamer bound west. Passage, 13 days and 18 minutes.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 15th July at 3.40 p.m.; had fine weather to Nagasaki, where arrived the 17th at 7.20 a.m. and left at 5 p.m. Arrived at Shimonoeki the 18th at 6.20 a.m. and left at 11 a.m. Arrived at Kobe the 19th at 8.50 a.m. and left the 21st at noon; the 22nd a.m. stood into Owari Bay and anchored. A hard easterly gale blew, with overcast rain; proceeded on voyage at 8 a.m. on the 24th, moderate easterly wind with rain. Arrived at Yokohama the 25th July at 5.30 a.m.

The American steamer *City of Rio de Janeiro*, Captain Cavarly, reports:—Left Hongkong the 19th July at 4.34 p.m. and arrived at Yokohama the 25th July at 1.22 p.m. Passage, 5 days, 19 hours, and 4 minutes. From Hongkong and throughout the Eastern Sea had strong N.E. winds and head sea with low barometer. On the Japan Coast overcast weather, detained off Rock Island four hours by dense fog.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 23rd July at 10.10 a.m.; had moderate N.E. winds and fine weather to the Goto; thence to Nagasaki, light easterly winds with heavy southerly swell. Arriving at Nagasaki the 25th at 4.15 a.m. and left the same day at 5.20 p.m.; had light easterly with heavy southerly swell to Takashima; thence to Shimonoeki, moderately fresh E.S.E. swell and dull cloudy weather. Arriving at Shimonoeki the 26th at 5.37 a.m. and left the same day at 11.25 a.m.; had moderate variable winds and showery weather to Northern Passage; thence to Kobe, moderate easterly wind and fair weather. Arriving at Kobe the 27th at 7.35 a.m. and left the 28th at noon; had strong S.S.W. winds to Oshima; moderate S.W. winds with heavy rain throughout the night; from Rock Island to port, moderate S.W. winds and fine weather. Arriving at Yokohama the 29th July at 3.25 p.m.

LATEST COMMERCIAL.

IMPORTS.

The volume of business for the week is again rather small, and with the exception of glb. Shirts which have continued in demand, the sales reported have been unimportant of Cotton Goods, and of Woollens nil, though enquiries have been afloat touching goods to arrive. There has been very little done in Yarns of any description. Prices are for the most part steady and holders generally are firmer since Sterling Exchange has declined to 2/10½ for Bank on demand. The recent storms are reported to have done considerable damage to the growing crops in certain districts, and caused a rise in the value of Rice. Sales for the week comprise 100 bales English Yarn, 25 bales Bombay, 11,250 pieces glb. Shirts, 2,500 pieces 7lb. T. Cloth, 650 pieces Washed Shirts, 150 pieces White Shirts, 1,000 pieces Dyed Shirts, 1,150 pieces Prints, 3,000 dozen Handkerchiefs, 750 pieces Turkey Reds, 450 pieces Velvets, and 1,600 pieces Victoria Lawns.

COTTON PIECE GOODS.

Sheet Iron	3.55 to 3.80
Galvanized iron sheets	6.60 to 6.90
Wire Nails, assorted	4.70 to 4.90
Flat Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Nothing new to report. A fair business continues at unchanged rates.

QUOTATIONS.

	PER PICUL.
Chester	— to 1.60
Comet	1.52 to 1.60
Devon	1.52 to 1.55
Russian Anchor	1.52 to 1.55
Russian Moon	1.50 to 1.52

SUGAR.

Market for Browns being very dull, prices have receded a little. Arrivals are not large, but sales have been few. Whites, on the contrary, show an improvement, prices obtained in some cases being even better than quotations given below.

	PER PICUL.
Brown Taka	\$4.10 to 4.20
Brown Daiton	3.20 to 3.30
Brown 1st cut	3.40 to 3.50
White Java and Penang	6.10 to 6.20
White Refined	5.50 to 7.50

EXPORTS.

RAW SILK.

Our last issue was of the 22nd instant, since which date settlements on this market are 811 piculs, divided thus:—*Hanks*, 28 piculs; *Pilates*, 420 piculs; *Re-reels*, 242 piculs; *Kakeda*, 91 piculs; *Oshu*, 30 piculs. In addition to these figures, direct shipments have been 135 bales, bringing the total business of the week up to 950 piculs.

Prices have not fluctuated very much, the amount of business done keeping them firm at full rates, and in some cases sellers have been able to get a slight advance. Reports from foreign markets, however, do not seem particularly good, and some buyers look for slightly lower prices in the near future.

During the coming month, we should see some very good quality, for this is the time of the year when the cream of the crop should put in an appearance.

Exchange has fluctuated somewhat, moving up and down in sympathy with the daily news from London silver market, but closes at about last week's rates. The position of this factor causes silk to lay down at favorable rates in the consuming market, although our dollar quotations are so much higher than they were last year.

There have been two shipping opportunities since we last wrote; the English mail *Ancona* on the 23rd instant carried 258 bales for Europe, and the American mail *City of Rio de Janeiro*, which left port yesterday, took 640 bales for the New York trade. These departures bring the present export figures up to 2,531 piculs, against 2,807 piculs last year and 1,463 piculs to the same date in the previous season.

Hanks.—Trade in these has fallen off a bit, sellers being rather too pretensions in their ideas. One parcel ordinary *Maibashi* was settled a few days ago at \$500, and some further parcels of *Huckaji* have been taken at \$472½. Beyond this nothing has been done, and the trade in old staple appears to have ceased for the present. No arrivals from *Shinshu* province as yet.

Filatures.—Fully one half the business of the week has been in this class, European buyers being the chief operators and taking, in some instances, full-sized silks such as are usually reserved for the American manufacturers. In fine sizes \$720 has again been freely paid for good silk, 10/12 deniers. Other qualities in *Mino*, *Bushu*, and *Kashu* sorts have brought from \$700 to \$650, according to grade. In full sizes suitable for America, business has continued to a good extent at last week's rates, several parcels of *Takosha* finding buyers at \$670, while \$680 is freely paid for anything approaching first quality.

Re-reels.—Our market has been lightened by one or two large buyers of medium grades, at \$617½ per picul; best marks are very strongly held, one parcel *Tengensha* being reported sold at \$650.

Kakeda.—About 100 bales have been settled, principally for Europe, at unchanged rates. Some few parcels, reported mixed in size, have been sold at a reduction, but for anything well up in grade, full prices must be paid.

Oshu.—Some few arrivals of new *Hamatsuki* are supposed to be here, and one sale of decent quality is entered at \$505, with some common quality at \$460.

WASTE SILK.

The market has been quiet the last few days, and the business done was at the beginning of the week. Settlements are reported to be 211 piculs, divided thus: *Noshi*, 107 piculs; *Kibiso*, 10 piculs; *Boseki-wata*, 34 piculs. In addition to these figures, the Japanese Kaisha have shipped 25 bales for Europe, making the total business for the week about 300 piculs.

There has only been one shipping opportunity during the interval, the English mail steamer *Ancona* taking 115 bales for European points. This brings the present export up to 1,082 piculs, against 115 piculs last year and 630 piculs to the same date in the previous season.

Pierced Cocoons.—These are beginning to arrive, but do not so far pan out very well. It is probable that during the coming month we may receive some better samples containing more silk and less chrysalis. Holders ask \$102½ for *Shinshu* cocoons, 75% yield, but this seems dear when compared with prices of other Waste, and buyers are not tempted to operate.

Noshi.—About 100 piculs of new *Foshu* were settled a week ago at \$64 per picul for ordinary assortment. Since this nothing has been done. A few parcels of *Oshu*, old crop, common quality, have passed the scales at from \$40 to \$60.

Kibiso.—A few more sample lots have been taken at prices ranging from \$84 to \$92.

Sundries.—The only business is another parcel *Boseki-wata*, for which the price is reported at \$24 per picul.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners, in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1 1/2 to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YOKOHAMA: SATURDAY, AUG. 6TH, 1892.

DEATH.

On the 5th instant, at Singapore General Hospital of Peritonitis, aged 14 years, MELLIE, elder daughter of William and Ellen Sophia Barrie.

SUMMARY OF NEWS.

COUNT MATSUKATA has been decorated by the Queen of Hawaii with the First Class Order of Kalakaua.

THEIR Imperial Highnesses Prince and Princess Kanin left the capital on the 22nd inst. for Hakone.

REPORTS received from the districts visited by the recent typhoon show that total of damage to life and property is very heavy.

THE re-organization of the Cabinet has not yet been effected, but conferences for the purpose are held daily by the Camera statesmen.

THE loss to the Sanyo Railway Company in consequence of the damage caused by the great inundations is estimated at yen 20,000.

DR. TAKAGI KANEHIRO and Mr. Nishimura Ryokichi were nominated by the Emperor as members of the House of Peers on the 2nd inst.

THE dividend of the Tokyo Cotton Spinning Company for the first half of this year has been declared at the rate of 10 per cent. per annum.

THEIR IMPERIAL HIGHNESSES PRINCE and PRINCESS KITASHIRAKAWA who were absent from Tokyo in the country, returned to the capital on the 31st ult.

THE following changes were effected in the time table of the Tokaido Railway on the 29th ult.:—The up-train which leaves Kobe at 12 noon, will pass Ogaki at 6.33 p.m. Gifu at 7

p.m., and Toyohashi at 10.31 p.m.; and the down-train which leaves Shinbashi at 6 a.m. will pass Ichinomiya at 6.37 p.m., and Kisogawa at 6.47 p.m.

MR. KAWASAKI KINSABURO has been elected President of the Kawasaki Bank, Nihombashi, Tokyo, in succession to Mr. Kawasaki Hachiyemon who resigned.

THE returns of the postal savings banks for June last were:—deposits, 193,853; amount deposited, yen 980,903; withdrawals, 30,592; amount withdrawn, yen 868,028.

H.E. WM. DE LANESSAN, Governor-General of Indo-China, accompanied by the French *Chargé d'Affaires*, Vicomte Labry, were admitted to an Imperial audience on the 1st inst. at 10 a.m.

THE tobacco crop in Kagoshima and Mito have been greatly damaged by the incessant rains of the past few days and it is said that the harvest will be reduced to half the ordinary gathering.

H.I.H. PRINCE ARISUGAWA TAKEHITO left the capital on the 30th ult. for Ozushi, where he intends to stay for about two weeks. Princess Iwakura proceeded to Kamakura the same day.

THE sudden death of Mr. Hara Tanzan, a distinguished scholar in the Buddhist circle, is announced to have taken place in the capital on the 27th ult. at 4 p.m. at the ripe age of 74 years.

EARLY on the morning of the 22nd ult. a fire broke out at Yeguniori-mura, Akika-gun Shimane Prefecture, and before the flames could be subdued 12 houses and 25 out-houses were destroyed.

SOME 136 students of the Nobles' School for Boys left the capital on Friday morning for Kamakura for sea-bathing during the summer vacation. Prince Iwakura, President of the school, accompanied them.

DURING the past 35 days the exhibition of valuable antiquities, now being held at Kamakura, was visited by 12,000 persons, of whom 136 were Europeans, 2 Chinese, and 5 Koreans, the remainder being Japanese.

THE inundations in Tokushima and elsewhere having created an idea that the crop will be short, there has been some wild speculation in the Tokyo Exchange, and the Exchange had to be suspended on the 3rd instant.

VICE-ADMIRAL ITO, Vice Minister for the Navy and Rear-Admiral Ito, Director of the Bureau of Personnel in the Naval Department, returned to the capital on Sunday from the Naval Academy at Etajima, Hiroshima.

H.I.H. THE CROWN PRINCE proceeded to Kamakura on the 1st inst., leaving Shinbashi by the 8 a.m. train. Several officials of the Imperial Household and a number of scholars of the Nobles' School for Boys accompanied him to the station.

THE net profits of the Fuji Paper Mills during the past half-year were yen 16,200; of which yen 3,300 was deducted for the reserve fund, yen 12,500 being distributed as a dividend among the shareholders at the rate of 5 per cent. per annum.

THE following are the returns of the number and value of postal money orders issued in June last:—Ordinary and small money orders, 220,953 (valued at yen 1,750,186); telegraphic money orders, 4,427 (valued at yen 67,006); total 225,380 orders (valued at yen 1,817,192).

THE values of goods, consisting of muslins, yarns, piece-goods, sugar, kerosene, iron, etc.,

purchased by Japanese merchants in Yokohama during last month amounted to \$1,245,976, and the values of raw silk, waste silk, and tea sold to foreign firms were \$2,539,721, showing an excess of \$1,293,745 in sales.

THE presentation of diplomas to some fifty-two graduates of the Naval Academy at Etajima, Hiroshima Prefecture, took place on the 26th ult. Amongst the distinguished guests present were Vice-Admiral Ito, Vice-Minister for the Navy; Vice-Admiral Nakamura, Commander of the Kure Admiralty Station; and a large number of officers of the Fifth Army Division and the Hiroshima Prefectural Government.

THE graduation ceremony of the institution of Sericulturists at Nishigahara, Oji, Tokyo, took place on the 30th ult., the certificates being distributed by Mr. Nishimura, Vice-Minister for Agriculture and Commerce, who also delivered an address. Afterwards Viscount Sano Minister of State for Agriculture and Commerce, spoke, and was replied to by Mr. Machida Takezo, on behalf of all the other graduates. Messrs. Uchida, a Private Secretary of the Minister, Seto, a secretary and Oka, Sawano, and Nerigi, engineers of the Agricultural and Commercial Department, were also present.

THE half-yearly general meeting of shareholders of the Yokohama Union Electric Light Company was held on the 28th ult., the chair being occupied by Mr. Tanuma Tayemon, Vice-President of the Company. The receipts during the past half-year amounted to yen 1,014,948, to which yen 886,473, brought over from last account, were added, making a total of yen 11,891,421. The expenditure was yen 13,736,302, the Company has therefore lost yen 1,834,881 on the half-year. The chief officers tendered their resignations, and the election of their successors will take place at a special general meeting to be held on the 11th inst.

A BETTER feeling is said to be evident in the Import trade as regards Manchester goods for Autumn consumption, though dealers are somewhat slow in making up their minds to the inevitable advance consequent upon small stocks and the condition of exchange. Some buyers, however, are equal to the occasion, and have taken 36,000 pieces Indigo Shirtings at a smart rise, while Heavy and Washed Shirtings have also been sold at an advance, and a variety of Fancy Cottons have been enquired after and improved offers are made. Woollens have not been dealt in largely, but the drawback to more extensive transactions seems largely due to the attitude of holders. Yarns are quiet, but steady and firm. The Metal trade continues small, though enquiries are made in view of future deals, the principal item in demand being Wire Nails. The Kerosene trade is also quiet, though prices are fully maintained, notwithstanding the fact that buyers remain so far in the background as they can consistently with keeping up the supply in the interior. A fair amount of business all round in Sugar, Browns being a little dearer, while Whites are firm and steady. Business in Silk is good, prices high, and purchases are nearly 1,300 piculs. Competition amongst buyers keeps up the rates demanded, and induces holders to try for a further rise. Only small transactions in Waste Silk, but stock rolls in and is rapidly increasing. No change in Tea. Buying continues on a fair scale, and shipping accordingly, settlements now nearly reaching those of last season at same date. Small fluctuations continue in exchange, the rate this day being down to 29. rod, silver 38½, the lowest on record.

EDITORIAL NOTES.

THE FUTURE OF RAILWAY STOCK.

THE *Yiji Shimpō* has a thoughtful article on the above subject, of which we give the gist. A rise in the price of shares of all kinds has recently taken place. This is no doubt partly the result of the undue depreciation of stock which prevailed during the past few years, the depreciation being a reaction from the Joint-stock Company fever that preceded it. But there is another cause for the upward tendency, which we now proceed to indicate. The price of all kinds of stock is no doubt at present regulated by the price of land and by the price of Government Stock. The average interest yielded by investments in shares in this country does not exceed 4 per cent. This applies to railway as well as Government Stock. It is true that we read of dividends of 10 per cent. being declared, but this implies that the price of shares is correspondingly high and hence the actual profit to be derived by any one desiring to purchase shares is unaltered. The interest realised by investments in land does not average over 4 per cent. The reason why so many Japanese prefer this form of investment is an old tradition that it is a duty to ancestors to retain the land bequeathed, and if possible to add to its extent. Land in Japan is exposed to the devastations of earthquakes and floods, and the crops which it yields depend on numerous uncertain factors. The extreme poverty of the tillers of the soil, to whom land is rented, is another drawback. Notwithstanding all this the mass of Japanese still regard land as the best form of investment. Next to land, Government Stock is recommended, as not subject to the influences which cause fluctuations in the value of ordinary shares. But there is no knowing when some great change in the political world or the development of commerce and the introduction of foreign capital may result in the depreciation of Government Stock by 50 per cent. Instances of this having taken place in other parts of the world are numerous. In our opinion railway stock, as a permanent investment, is far preferable to Government Bonds. Whatever may happen, trains will be kept running. Events that ruin other enterprises are sources of wealth to railway companies. War and famine impoverish States, but they enrich railway shareholders. The reverses which it is possible for this line of business to encounter are trifling compared with the steady profits which it yields. The trouble and expense of maintaining lines in a state of efficiency are slight, compared with the task of preserving the national independence and commercial credit, on which the value of Government Stock depends. There are signs that investors generally are beginning to realise the truth that there is no safer form of investment than railway bonds, and that hence the appreciation in value which this class of stock has undergone is connected with a healthy movement in the business world. If this be so, it speaks well for the future of railways in Japan. The movement, concludes the *Yiji*, has not yet assumed large proportions, but its existence is unmistakable.

PROPOSED IMPROVEMENT IN THE SANITARY CONDITION OF SHIMONOSEKI AND OF VARIOUS TOWNS IN KUSHU.

THE sanitary condition of Shimonoseki is far from being what it ought to be. Both drainage and water supply are very imperfect. A complete modern drainage system for the town was designed early this year at the College of Engineering, Imperial University, and it is proposed to begin the work next year. This will be the first example of sewerage on the "separate," or small pipe, system in Japan, and the result of carrying it out will be watched with special interest, as the conditions of the working of a sewerage system in Japan are obviously very considerably different from those of a Western town sewerage system. The difference is due to the disposal of a part of the sewerage on the rice-fields by hand, and to the facts that there are no sunk storeys in Japanese towns, that the fall and rise of tide is comparatively slight, and so forth.

The question of water-supply for Shimonoseki is more difficult than that of sewerage, the nearest really good source of supply appearing to be about 10 miles from the town and an impounding reservoir being necessary. The problem of a water supply for the new town growing up at Moji, on the other side of the Strait, has also come up for consideration, but appears to present no particular difficulty, as there is plenty of water flowing from the hills immediately behind the town. The case of Omuta in Fukuoka Ken is particularly interesting. On account of the fact that the coal from the Miike mine is all loaded on junks there which, in their turn, discharge it on board ships for Hongkong and Shanghai, there is nearly direct communication between these two last mentioned places and Omuta, and for years past cholera has regularly broken out in Omuta, particularly early this year. The sanitary condition of Omuta is such that every opportunity for the spread of the disease through the town is afforded, and from the town it is liable to be carried by the railway in two directions. It will thus be seen that the improvement of the condition of Omuta may be said to be of national rather than merely local importance. The insanitary condition of this town rises chiefly from its extreme lowness. A great part of it is built on ground that has been reclaimed by constructing sea walls without any filling in, and is considerably below high water level. The sewage lodges in these low parts of the town and is actually used, more or less diluted with rain that may fall, for all domestic purposes except actual drinking! The state of affairs may be imagined. There will be considerable difficulty in designing a sewerage system for Omuta, but it is hoped the difficulty may be overcome, although probably not without resort to pumping. Fortunately a supply of water that is good and likely to be plentiful is to be had by boring Artesian wells. A sewerage system designed for Hakata, also in Fukuoka Ken, some three years ago, is likely to be carried out within the next year or two. Modern sewerage systems have been designed for Kurume and other towns in Fukuoka Ken, but we do not hear of any immediate prospect of their being carried out.

THE BOMBS SENT TO COUNT OKUMA AND MR. KONO.

FURTHER particulars are published about the sending of bombs to Count Okuma and Mr. Kono, but no light is yet thrown upon the perpetrators of the outrage. In Count Okuma's case, the messenger bearing the box with the bomb arrived at 10.50 p.m., and handed in the parcel, saying that he had been desired to wait for an answer. The box was wrapped in white calico. It was 8½ inches long by 3½ inches wide and 3 inches deep, and presented the appearance of an ordinary *fumi-bako*, such as are used in Japan to carry letters. The superscription, written on paper pasted on the lid, was *Okuma Shigenobu dono mitsuyo shinten*, the last four characters signifying, "private business; to be opened by himself." The bearer announced himself as the messenger of Mr. Yano Fumio, a close friend of Count Okuma, and now an official of the Bureau of Imperial Private Records. The servant who received the box observed that the address was not in Mr. Yano's hand-writing, and thinking the matter somewhat strange, proceeded to examine the box more carefully. He drew out the lid, but found that it could be opened only about two-thirds, some obstacle presenting itself. Peering inside, he saw a tin cylinder, and being now more than ever suspicious, he left the box where it was and reported the matter to Count Okuma. The Count directed that inquiries should be made of Mr. Yano by telephone whether he had sent such a box. The answer was in the negative. Close queries were then addressed to the bearer of the box, and from him it was learned that, being a *jinrikisha* drawer, he had been waiting for a fare at the Yotsuya Gate when a man, dressed like a student and appearing to be 25 or 26 years old, accosted him, explaining that he was the bearer of a letter from Mr. Yano

Fumio to Count Okuma, but that he felt unable to proceed, being threatened with a return of an old malady, *kakke*. The *jinrikisha* drawer suggested that, if such were the case, the messenger had better ride the rest of the way, but the other replied that it would suffice if the letter was safely delivered. He therefore asked the *jinrikisha* coolie to carry it, and gave him 16 *sen* for his trouble, saying that he himself should wait at Yotsuya until the coolie brought a receipt for the letter. Beyond this, the man knew nothing. Information was then sent to the police, who came and took the coolie into custody, proceeding with him to Yotsuya, where the letter had been entrusted to him. There the constables learned that two youths had loitered about for some thirty minutes after the departure of the coolie, one of them being a stalwart person of about 27 or 28, the other a pallid, weak-looking man apparently a little younger. Meanwhile steps were taken to examine the letter-box. On removing the lid, it was found that, attached to the latter, were three strings, communicating with as many pins, horizontally arranged opposite three holes in one end of the tin cylinder. The intention of the designer had been that when the lid was drawn open, the tension on the strings should drive the three pins into the holes in the metal cylinder, where, coming into contact with a fulminant, they would cause an explosion. But the mechanism was obviously faulty in that it required the transfer of motion from one plane to another by means of an agent possessing no rigidity of direction. Just such an accident occurred as might have been anticipated under the circumstances. The horizontal pins, instead of entering the holes in the cylinder were dragged out of position, and served only to jam the lid. Within the cylinder was a quantity of violently explosive substance, but as to its precise nature nothing is published. The fact that a very small portion, when struck between two hard surfaces, exploded with a loud detonation, seems to point to nitro-glycerine. The box was a skilful piece of joinery, evidently the work of an expert; and was covered with vermilion lacquer (*shunuri*) of excellent quality.

In some respects the incident at the residence of Mr. Kono, Minister of State for Home Affairs, closely resembled that at Count Okuma's. The time, however, was more than an hour earlier, being about 9.30 p.m. The box in this case professed to come from Mr. Ito Miyoji, chief Secretary of the Privy Council. It was addressed in the same hand-writing as that in the superscription of the other box, and in all respects the similarity was exact, the words *mitsuyo shinten* being added in both cases. The box was immediately carried to the Minister, who proceeded to open it without suspicion, but again the lid jammed, and Mr. Kono prized it open. On seeing the cylinder inside, the Minister's first impression was that a wrong box had been sent by mistake. He was about to return it when the advisability of telephoning to Mr. Ito suggested itself, the result being that the messenger was arrested. He had been waiting quietly in the vestibule, and when questioned he explained that he had received the box from an old woman who kept a bird shop. The latter made no difficulty about admitting her share in the transaction. She said that a youth had come to her shop, calling himself a student in Mr. Ito's office, and explaining that, as the messenger usually employed was absent, he desired to have a substitute engaged by the old woman to carry the letter to Mr. Kono. The woman, being in the habit of performing commissions sent from the Chief Secretary, lost no time in doing what she was told.

There is a strong probability that the miscreants who planned this affair will be arrested. The police have three clues to guide them: first, the letter boxes, both of which are of new manufacture and evidently the work of a professional joiner; secondly, the vermilion lacquer covering the boxes, which must necessarily have been made by a lacquer expert, and being of

good quality, will probably be identified without great difficulty; thirdly, the handwriting of the superscriptions, which is the same in both cases, and shows no signs of disguise. Strong hopes are expressed that with these aids an arrest will be made ere long.

The attempt is evidently directed altogether against the *Kaishin-to*. Count Okuma is the leader of that Party, and Mr. Kono was formerly its Vice-President. No connection now exists, we believe, between the new Minister for Home Affairs and the *Kaishin-to*, but undoubtedly a section of the public does not think that the old relation has been entirely severed. The *Kaishin-to* at present stand in the very forefront of the Opposition. It is they who planned and gave backbone to the campaign against the Government in the last two sessions of the Diet. But it is not to be supposed that a mere attitude of implacable hostility to those in power would provoke such an attempt as that of last Thursday. The reason why the *Kaishin-to* are regarded with dislike and distrust by not a few Japanese is that they are considered to be the advocates of a political programme which would deprive the Emperor of much of the power retained by His Majesty under the Constitution, and would reconstruct Japanese institutions precisely on the models of a foreign country. Against that prospect some Japanese Conservatives doubtless rebel. Conservatism has been responsible for all the serious outrages committed in Japan during the last quarter of a century. They were Conservatives that cut down foreigners in the old days; it was a Conservative that stabbed Viscount Mori; a Conservative that attempted the life of Count Itagaki; a conservative that threw the bomb at Count Okuma. We have very little doubt that this last outrage also was planned and carried out by Conservatives, who imagine that they have a divine mission to check headlong innovation. The Radicals use *soshi* and are fond of clubs and even sword-canes; but the Conservative fanatic shows a degree of deadly earnestness which not only makes him much more dangerous, but also argues the greater strength of his convictions. Happily human ingenuity is seldom equal to the demands of human vindictiveness. If men could carry out their evil designs as readily as they conceive them, the world would be much harder to live in than it is. But some practical detail generally goes wrong. In the West men are so fond of their lives that they place their own escape among the first essentials of every deadly undertaking, and the result is that some vital element of coolness or deliberation is wanting at the supreme moment. This saving clause is less effectual in Japan, where fanatics are always ready to die in the successful prosecution of any deed of blood. But in Japan, on the other hand, there is as yet less mechanical ingenuity in the manipulation of explosives than in Europe. What problem could be easier to work out than that of exploding a charge of dynamite or nitroglycerine in a box by means of the power developed in pulling open the lid? Nevertheless, these Japanese assassins failed to work out the problem. Their device was so clumsy that, although all the circumstances contemplated by them were fulfilled, so far as the handling of the boxes was concerned, an explosion did not occur in either case.

VISCOUNT YENOMOTO'S EMIGRATION SCHEMES. The emigration projects of Viscount Yenomoto have often received brief notice from the vernacular press. The *Kokkai* now asserts that the Minister's principal objective points are Mexico and the Philippines, and that the information gradually collected with reference to these two places indicates them as satisfactory for the contemplated purpose. It is consequently expected that estimates to meet the expense of active measures will now be prepared, and included in the Budget for the approaching fiscal year. The Tokyo journals write upon this subject in a very indifferent strain, not recognising, apparently, that emigration is one of the only practicable safety-valves for the nation's feverish

state, and that Viscount Yenomoto's conception is dictated by genuine statesmanship. Could the time be thrust back two or three centuries to the era when lands suitable for the founding of new kingdoms and nations were still obtainable by a slight exercise of strength and daring, Japan's political fever might find a speedy medicine. But even now there are still fields for resolute enterprise, and Viscount Yenomoto's programme, if followed steadily, may prove of immense value.

MAGAZINE RIFLES FOR THE JAPANESE ARMY.

THE Supplementary Budget for the present fiscal year contains an appropriation for the manufacture of magazine rifles. The number of these to be manufactured is twenty-seven thousand, and the work is to be spread over five years. We read in the *Kokkai* that the cost of these rifles, when first made in Japan, was about twenty *yen* each, but that, owing to the gradual adoption of more economical methods, they are now manufactured for 16.20, which is certainly a very reasonable figure. During the current year about half a million *yen* will be expended for this purpose, says the *Kokkai*, but as half a million *yen* would suffice for the manufacture of some three thousand rifles only at the price named, it is evident that greater expedition will have to be employed if twenty-seven thousand are to be finished in five years. Another undertaking provided for in the estimates is the production of gun-cotton. A factory for that purpose has first to be built, and the *Kokkai* says that not until 1894 will the actual work of manufacture commence.

AN OLD VIKING WAR-VESSEL.

ABOUT twelve years ago, says an American exchange, the viking ship of Gogotod was exhumed from a mound near the little seaport of Sandefjord, in Norway, where, with the sea king who commanded her, she had lain buried for 1,000 years or more. The bulk, still in a good state of preservation, was carefully removed to the Archaeological Museum at Christiania, where it has been visited by thousands of interested spectators. Expert judges of naval architecture agree as to the beauty of its model, its great sharpness and fine shear, both fore and aft, bearing comparison with some of the best models of the present day, especially those designed for sailing in deep water; while the construction of its bottom, which is flattened amidships, give it much more steadiness. It is, in fact, a very singular type, something between the cutter and the center-board. In the symmetry of its proportions and the remarkable beauty of its lines is exhibited a perfection which is not to be found in the naval architecture between its time and the present century. From its method of construction and typical relics found in the hold, antiquarians infer that it was built A.D. 800 in the later Iron Age. The foregoing description has a peculiar and pertinent interest at the present time from the fact that a facsimile of this quaint sea craft of the old Norse pirates in model, size, and equipment is being constructed for exhibition at the World's Columbian Exposition in Chicago. It will be manned by Norwegian seamen and sailed across the Atlantic, and by way of the St. Lawrence River and lakes, the entire distance by water to the port of Chicago.

AÉRIAL NAVIGATION.

Most men, when they talk of travelling through space, think only of a balloon. But the science of aerial navigation by means of balloons has made little if any progress during the past fifty years. Evidently these clumsy contrivances will never enable us to make our way through the air from place to place. The true solution of the problem seems to be in the aeroplane. Beautiful experiments have recently been made and beautiful analyses worked out with regard to the forces which operate in the case of soaring birds. The result, briefly stated, is to demonstrate that the wings, tail and body of a bird act, to some extent, as an aeroplane, and are used both for propulsion and for support. What is meant by an aeroplane cannot be better ex-

plained than in the words of Mr. H. S. Maxim: "If a thin board, twenty feet long and two feet wide, with the edges well sharpened, the bottom side being slightly concave, and the top side slightly convex, be suspended in the air with the front edge one inch higher than the back edge, and be driven through the air with a two-bladed wooden propeller, twenty-eight inches in diameter, at the rate of fifty miles an hour, we should find that it would carry approximately a load of 240 lbs., including its own weight, and the weight of the propeller, and the power required would be 1.33 horse-power, to which would have to be added twenty per cent. for the slip of the screw. The screw and the board, collectively, need not weigh over twelve pounds." This carries us a long way towards the solution of the great problem, and shows, among other things, that the air is to be navigated by a machine heavier, not lighter, than air. The principle of the kite is to be adopted, not that of the balloon. But there is very much to be done still. Mr. Maxim states the questions now awaiting reply: "How is the screw to be attached to the plane? In what manner shall the surface of the plane be disposed so as to be easily guided or steered through the air? What manner of motor shall be employed for driving the screw?" and so forth.

THE CABINET.

It is evident that the Cabinet crisis continues. Count Matsukata, as already reported in these columns, agreed, on the night of the 29th ultimo, to re-consider his resignation, the Emperor being unwilling to accept it, and several of the Cabinet Ministers having strongly urged him to remain. But it was nevertheless found impossible to reconcile conflicting opinions, especially on the part of the Ministers of War and of the Navy, who maintained their obdurate attitude. In fact, ever since the appointment of Mr. Kono to the post of Minister of State for Home Affairs, there has been an emphatic revolt of the strong-policy section of the Cabinet against the change of front which this nomination is supposed to imply. That it does really indicate a change of front on Count Matsukata's part seems to be very improbable, but at any rate it is so interpreted by the "Stalwarts," and the Minister President has apparently failed to dispel the impression and restore a state of working harmony. He has therefore tendered his resignation again, and it is expected that nothing will induce him to withdraw it on the present occasion. But there is some probability that his example will not be followed by the majority of the Cabinet Ministers, as was originally anticipated. They are likely to remain in office until the basis of reconstruction is determined. The Emperor, on the receipt of Count Matsukata's resignation, tendered a second time, summoned to his presence Counts Ito, Kuroda, and Yamagata. Throughout Saturday a rumour prevailed that Count Goto would be asked to form a Ministry, but that idea was dispelled so soon as the action taken by the Emperor came to be known. Counts Kuroda and Yamagata immediately repaired to the Palace in obedience to the Imperial Summons, and had a long interview with the Emperor on Sunday. But Count Ito, being absent from Tokyo, could not comply at once. On Monday, however, his Excellency returned to the capital, and being met at Shimbashi by the Minister of the Imperial Household Department and by a carriage sent by the Emperor, proceeded forthwith to the Palace. There cannot be much doubt that Count Ito will undertake the task of forming a Ministry, but it is quite possible that the difficulties lying in his path may require a few days for adjustment. Count Matsukata has resigned not only the position of Minister President but also the portfolio of Finance. We trust, however, that he will remain in the reconstructed Cabinet, for the country has need of his abilities and resolution at this trying period of its political history.

ATTEMPTED WATCH LIFTING.

A NEAT attempt at watch lifting was practised on a young Englishman on Saturday evening.

He was strolling along Isezakicho in company with another of his countrymen, amusing himself with the many curious street sights there to be witnessed, when his attention was attracted by a crowd near a rifle-saloon. As he approached its outskirts he felt his coat plucked or brushed aside, and looked down just in time to see a brown hand holding his watch, while the guard hung loose. The thief, on being detected, hastily dropped the watch and disappeared down a side alleyway. The ring of the watch, it was afterwards discovered, had been neatly cut through and, when the watch fell, rolled away and could not be found.

THE BRITISH A.B. AND THE MURDERER CARSTENS.

We learn that the Japanese Minister for Foreign Affairs addressed to Her Britannic Majesty's Representative for transmission to the Admiral on this station a most complimentary despatch with reference to the remarkable bravery displayed by T. W. Griffiths, a Blue Jacket of H.B.M.'s S. *Archer*, on the occasion of the arrest of the murderer Carstens on the 7th ultimo. Carstens, it will be remembered, after murdering Beatty, was going down the street, carrying a loaded revolver, and behaving in such a desperate manner that no one dared to approach him. Griffiths, who had come ashore on leave, saw that a tragedy might occur at any moment. With admirable courage and quickness he leaped in and felled Carstens to the ground, thus enabling the police to come to close quarters with him. Carstens managed to wound the constables and himself also before he was arrested, but in all probability the plucky promptitude of Griffiths prevented more serious results. Such conduct deserved the recognition which the Japanese Government has extended to it, and Admiral Freemantle has emphasized the honour by reading the Foreign Minister's despatch from the quarter-deck of the flag-ship.

* * *

Admiral Freemantle, we regret to learn, has met with an accident in Hakodate. During the course of a paper hunt his pony fell with him on a hard road and broke one of his ribs. The injury has not proved sufficiently severe, however, to confine the Admiral to bed, and his complete recovery may soon be looked for.

COUNT ITO.

"LEAVING the region of dust and tumult, Count Ito has retired to his Blue-Waves Pavilion at Odawara. There, in a stream that ripples by, he laves his hot feet, hearing only the murmur of lapping waves borne across the evergreen pines. Thus sitting tranquilly, he looks with calm eyes on the political turmoil of the outer world." Such is the poetical exordium of a paragraph in the *Nippon* which professes to give an account of an interview recently held with Count Ito. The account proceeds thus:—

Visitor:—With whomsoever I converse now-a-days, I hear only sighs and lamentations that political affairs are daily going from bad to worse. Surely this unfortunate condition has not come upon us suddenly. It must be more or less the outcome of abuses accumulating during the past ten years. You Count are not entirely irresponsible. What do you think of it all?"

A gloomy expression settled upon the Count's face, and with frowning brow he said, as though meditating:—"I, indeed, was one of those who brought about the establishment of constitutional government. We devoted much time and energy to the work. Looking back now, I remember that it was some ten years ago when we began to consider the future of the country anxiously. The condition of European nations and of the world at large taught us that representative institutions are essential to the maintenance of a state. But the history of our own land and of neighbouring powers furnished no example of the kind, a fact which greatly increased our difficulties. We had no precedent to guide us, and, on the other hand, if we abandoned the idea, what would become of the empire? For a long time we considered and re-considered the subject; then finally we decided that without representative institutions it would be impossible for us to hold our own in the competition of nations, and that, judging by the standard of our civilization, the establishment of such a system was not inexcusable. Thus with our approval, an institution hitherto unknown was introduced. And now, before it has been in practice three years, some eminent men begin to declare that the system is not suited to the people of this empire. What a hasty conclusion!" At this

point the voice of the Count was stifled by heavy sighs. Thereupon the visitor broke in:—

"Count, you have witnessed the collisions between the Government and the Opposition during the past three years. Has not the country been thrown into a state of disorder because the opinions expressed by the Government, and the measures adopted by it savoured of absolutism, and because the people have begun to doubt whether they possess the reality of constitutional institutions? Is it not a fact that rumour attributes to the Government the intention of employing military force to interpret the Constitution?"

The Count's face grew darker as he heard the questions. He sighed deeply, and said:—"If these men would only recall their original intentions in supporting the innovation, it could not be possible that!" Here he broke off the sentence and meditated for a time, but presently resumed:—"Did those brave soldiers reflect more profoundly it would be happy for the country. But in this world nothing goes quite as smoothly as we could wish."

Thereupon the visitor drew closer, and said:—"It is surely time for you to come forward. You alone can settle these troubles."

But the only answer was the sound of the waves beating up the beach.

MYRTLE GROVE.

WHEN Sir John Pope Hennessy returned from service in the East, he became the proprietor of Myrtle Grove, once the residence of Sir Walter Raleigh. Sir John's death has brought the place again into the market, but apparently a purchaser is not easily found. The *Pall Mall Gazette* describes it thus:—

A fine old Elizabethan house of great historic interest is in the market. It was offered for sale by Messrs. Lumley the other day, but no sufficient offer being forthcoming the property was bought in. The house in question was the residence in Ireland of Sir Walter Raleigh. It was built by the great navigator in 1588 upon part of a large allotment of land granted to him for services in putting down the Desmond revolt. The house is situated in a rough, in the county of Cork.

It is impossible to tell how long the restless adventurer settled in this quiet retreat. He was Mayor of Youghal for two years, and he was certainly visited by his friend Spencer in this, his Irish home. "In this spot," writes Mrs. S. C. Hall of the garden at Myrtle Grove, "beyond question have been read portions of the 'Fœdus,' long before the world became familiar with the divine conception—

At whose approach the soul of Petrarch wept.
For here, certainly, the immortal bard held communion with his 'dear friend' and brother poet, whom he described as 'the sonner nightingale'—
Himself as skilful in that art as any.

In the garden there is group of four aged yew trees, which tradition states to have been planted by Raleigh; and where it requires no stretch of fancy to believe that he has many a time sat, read, and talked, or lolled in the summer time, dreaming of El Dorado, and in search of which he sacrificed his fortune, and ultimately his life."

The grounds appear to be remarkable for the luxurious growth of myrtles, bays, and other exotics. Some of the myrtles from which the place received its name exceed 20 feet in height. Here also the first potatoes ever planted in Ireland were grown; and also the first tobacco plant imported by Raleigh. Every one knows the story of the servant maid who emptied a pail of water over her master, thinking him to be on fire. Whatever truth there may be in the tradition, there can be no doubt that the first pipe of tobacco lit in Ireland was smoked here. The house will thus be seen to be of unique historic interest, and it is to be hoped that that it may fall into the hands of an owner who will deal as carefully with it as appears to have been the case in the past. The last proprietor was the late Sir John Pope Hennessy, whose widow is the present tenant.

DIVIDENDS.

THE total receipts of the following banks, exchanges, and other commercial companies in the Empire during the first half of this year, and the rates of dividend paid in that period, are given by the *Shogyo Shimpō*:—Kyoto Stock Exchange: receipts, yen 4,770,490; dividend, 3 per cent.; Niigata Rice Exchange: receipts, yen 10,672,751; dividend, 36 per cent.; Hirano Cotton Mills: receipts, yen 68,819,020; dividend, 20 per cent.; Tenma Cotton Mills: receipts, yen 50,773,264; dividend, 12 per cent.; Tokyo Stock Exchange: receipts, yen 24,296,197; dividend, 17.5 per cent.; Takaoaka Rice Exchange: receipts, yen 5,227,870; dividend, 22 per cent.; Miye Cotton Mills: receipts, yen 127,324,615; dividend, 15 per cent.; Ozaki Cotton Mills: receipts, yen 32,425,865; dividend, 34 per cent.; Wakaya Cotton Mills: receipts, yen 25,555,506; dividend, 18 per cent.; Second National Bank, Yokohama: receipts, yen 47,840,665; dividend, 15 per cent.; Third

National Bank, Tokyo: receipts, yen 72,251,736; dividend, 10 per cent.; Seventy-fourth National Bank, Yokohama: receipts, yen 50,208,752; dividend, 11 per cent.; Fourth National Bank, Niigata: receipts, yen 43,350,833; dividend, 13 per cent.; Tokyo Rice Exchange: receipts, yen 26,519,155; dividend, 29 per cent.; Nagoya Rice Exchange: receipts, yen 12,627,165; dividend, 26 per cent.; Kuwana Rice Exchange: receipts, yen 5,657,876; dividend, 20 per cent.; Omi Rice Exchange: receipts, yen 4,095,941; dividend, 17 per cent.; Kanazawa Rice Exchange: receipts, yen 6,717,107; dividend, 31.4 per cent.; Shimonoseki Rice Exchange: receipts, yen 5,054,261; dividend, 21 per cent.; Osaka Cotton Mills: receipts, yen 152,601,425; dividend, 15 per cent.; Osaka Stock Exchange: receipts, yen 21,048,486; dividend, 16 per cent.; Naniwa Cotton Mills: receipts, yen 52,631,677; dividend, 8 per cent.; Tokyo Cotton Mills: receipts, yen 38,645,638; dividend, 10 per cent.; First National Bank: receipts, yen 200,840,756; dividend, 14 per cent.; Kyoto Rice Exchange: receipts, yen 4,704,550; dividend, 13 per cent.; Miye Cotton Mills: receipts, yen 3,001,000; dividend, 10 per cent.

THE ALTHORP LIBRARY.

THE Althorp Library, the property of Lord Spencer, is the largest and finest private library in the world, containing as it does from 45,000 to 50,000 volumes of the rarest and most priceless books. The home papers announce with much regret that one of the effects of the great agricultural depression, and the prevalence of low prices, should be the compulsory sale of Lord Spencer's magnificent collection of books. The temptation to part with works possessing the value of many of those on Lord Spencer's shelves at a time of financial embarrassment must be very great. Few people have any notion of the enormous prices paid for copies of rare books. To cite only one instance, a copy of the *Mentz Psalter* of 1457, printed on vellum and handsomely illuminated, similar to one now possessed by Lord Spencer, not long ago was sold for close on £5,000. The chief interest of Lord Spencer's collection to connoisseurs is said to be the large number of books printed by Caxton which it contains. Five or six of such works are usually deemed sufficient to make a Library noted, but on the Althorp bookshelves are no less than 57 copies of Caxton's books, exceeding by one copy those treasured in the British Museum. From the comments of the home journals it is evident that no such sale of books has occurred in modern times.

METAL MARKET.

MESSRS. S. W. ROYSE & Co.'s Circular of June 25th says:—"The condition of affairs in the Pig Iron trade is anything but satisfactory, and the outlook is not encouraging. At Glasgow a fair business has been done for spot delivery only, and it is understood to be mainly speculative on account of the present low prices and decrease in stocks. Prices have fluctuated but little, but are latterly rather lower. At Middlesborough the demand, though not large, is rather in excess of the present restricted production; business, however, is strictly for prompt delivery, and prices are firm at present but are expected shortly to rule lower. Shipments from Middlesborough are small, but stocks in public stores there have, up to the 20th instant, decreased by over 20,000 tons since June 1st. Copper has fallen slowly but steadily, and is at present easy at about 30/ per ton less than at the beginning of the month. Tin, after advancing strongly, has lost ground again, and is now firm though quiet. Spelter is dull. Lead also is flat at lower prices."

THE "UPTON" STEAMERS.

A TELEGRAM published in a recent issue of the *San Francisco Examiner* says:—"It is generally understood in railroad circles that the Upton steamship line between the Orient and Portland, Oregon, in connection with the Union Pacific railroad, is to be discontinued after the arrival of the next steamer from Portland. It is stated that the service will cease on ac-

count of the recent understanding with President Huntington of the Southern Pacific. The agreement with Upton was made when Charles Francis Adams was president of the Union Pacific, and was for the establishment of monthly steamer service between the Orient and Portland, for a period of ten years, mainly for through transportation of tea. The *Examiner* intimates that the service has not been very successful, and that the Union Pacific was not unwilling to agree to the cancellation of the contract with Upton.

THE YOKOHAMA UNION ELECTRIC LIGHT COMPANY.

THE semi-annual meeting of the above Company was held on the 28th ult. The Vice-President of the Company, Mr. Tanuma Tayemon, took the chair. The statement of accounts presented to the meeting contained an item which caused a good deal of discussion. The sum of 3,300 yen was entered as *asuke-kin*, deposited money, and placed to the credit of the company. On inquiry, it was elicited from one of the officers of the Company that this sum had not been accounted for by the out-going officers when they handed over the affairs of the Company to the present staff; that, in point of fact, the Company was so much out of pocket, but that out of consideration for the feelings of the shareholders it had been thought advisable to enter the sum as a deposit. This statement caused a just stir. The directors and managers of the Company were accused of attempting to deceive the shareholders by falsifying the accounts. To these charges it was replied that the same item had appeared in the statement presented to the shareholders in January last, and that it had been allowed to pass without comment. The officers stated that they could not furnish any information as to the use to which the money had been put, but that they should institute inquiries and report the result at the next semi-annual meeting. Thus the matter ended. But at an extraordinary meeting of the Company, held the same day, the managing staff of officers resigned in a body. The announcement of their resignation evoked great excitement. Mr. Tanuma, who had been presiding at the meeting, was requested to vacate the chair and the meeting was called on to elect another Chairman. This the shareholders did not seem disposed to do. The greatest disorder prevailed, three or four speakers occupying the floor at one time, and eventually the meeting had to be postponed. Report says that the affairs of the company are managed very badly and that serious abuses exist.

BUILDING MATERIAL AND EARTHQUAKES.

A CORRESPONDENT signing himself "Architect" has written a long letter to the *Yoji Shimpō* expressing dissent from the views of Mr. Conder respecting the best material to be used in countries subject to earthquakes. "Architect" contends that wooden structures are preferable to brick or stone buildings, and he is of opinion that last October's earthquake afforded numerous proofs of this. He thinks that Mr. Conder has formed an opinion on the subject without weighing and comparing the statistics furnished by seismological societies and other learned bodies. Our own idea is that "Architect" is much more likely to have himself committed the sin of which he accuses Mr. Conder.

THE NIPPON YUSEN KAISHA.

THE *Nichi Nichi Shimbun* reports that at a meeting of the Directors of the Yusen Kaisha, held recently, it was resolved that the business of the Company be extended by the opening of several new lines. In order to show the position of the Company in the carrying trade, as compared with foreign companies, the *Nichi Nichi* furnishes the following table. During 1889, Exports were, by Japanese vessels, 39,768 tons, by foreign ships 962,817 tons; and Imports, by Japanese vessels, 90,822 tons, by foreign, 679,376 tons. The figures for 1890 were: Exports, by Japanese vessels, 383,704 tons, by foreign 978,320; Imports by Japanese vessels, 173,078 tons and by foreign, 972,611; and those for 1891, Exports by Japanese vessels, 361,801 tons, by foreign 1,175,392, Imports by Japanese

vessels, 170,623 tons and by foreign, 662,277 tons. Thus, says our contemporary, it will be seen that, speaking approximately, Japan is content with allowing 80 per cent. of her carrying trade to remain in the hands of foreigners. The money realized by foreign companies during the above period, according to the *Nichi Nichi*, did not fall short of \$10,800,000. According to the report of the meeting of the Directors, from which we quote, a line to Australia is the first that will be opened. Then will follow the despatch of a steamer to Europe once a month, and eventually the Company hopes to enter the list against the two companies running steamers across the Pacific. It is calculated that about \$5,000,000 will be required for the construction of new ships. The Directors are said to be fully bent on carrying out the above scheme and see no insurmountable difficulties in the way.

UNDERGROUND ELECTRIC RAILWAYS IN LONDON.

THE problem of how to deal with the ever growing traffic of the greatest city in the world seems to be near solution. It has been decided to ask the permission of parliament for the construction of an electric railway at a depth of 50 feet below the surface of the ground. It is said that by running the trains in iron cylinders the usual effects on the houses built over the railway will not be felt, and hence that remuneration to owners of the land under which the railway is to be constructed will be unnecessary; a right of way is all that parliament will be asked to grant. It will be a nice question for lawyers to decide whether, when a man purchases land, his ownership extends to a depth of 50 feet below the surface.

THE SHIPWRECKED TURKS.

THE case of the eleven Turkish sailors who are now destitute in Yokohama, has been taken up by influential men in Tokyo. Mr. Masuda Kenshi, of the Barristers' Association, Viscount Honda Masanori of the House of Peers, and Mr. Yebara Soroku of the House of Representatives, with ten others, have applied for and obtained permission to raise subscriptions for the purpose of sending home the shipwrecked men. The methods contemplated are to hold a great lecture meeting at the Kiuki-Kan, and to organize an entertainment at the Yuraku-Kan, the proceeds in both cases to be applied to the payment of passage money. The Turks are to be invited to be present.

THE KOBE CONFERENCE OF THE M.E. CHURCH, SOUTH.

A KOBE correspondent, writing on the 29th ult., says:—The Methodist Conference, South, has just closed at Kobe and proved to be of special interest in religious circles. This church which has previously had no regularly arranged conference body, was regularly organized into a separate Conference by Bishop Key, and in the future will be an independent body. By this action thirteen ordained ministers were transferred as permanent workers in Japan, besides two physicians and four ladies. At the time of the organization on the 20th inst. the members of the mission reported about 600 members and probationers, showing an increase during the last ten months of 120 members. Rev. Yoshioka was the first Japanese minister to be ordained, and there are four other Japanese ministers, regular graduates, who are on trial for ordination next year. The Conference inaugurated the "Epworth League," an organization for young people that has been very successful in Europe and America. The first League was lately started in Osaka. The Conference also appointed a committee to open an orphan asylum and to secure means for its maintenance. The Bible School for Women is located at Hiroshima, and Miss Mary F. Bice was appointed to take charge of that work. The Girl's School at Hiroshima, burned down last year, was reported nearly completed at a cost of about \$6,000. The Kansei Gakuin at Kobe reported in hand the sum of \$15,000 for a new building to be erected at once. Rev. W. B. Hawkins, of Vanderbilt University, a member of the Conference, was present. He is on his

way to teach in the Government Schools at Matsuyama. The presence of the Rev. J. S. Key, D.D., Bishop, proved very acceptable, and resolutions were passed asking his return next year. The Bishop will spend a few days at Arima before he leaves for China. The Conference was a long one, and adopted strong reports on Temperance, Education, Sabbath Observance, &c. &c. A new district was formed called the Osaka District, and plans were laid for an extension of work. The Conference showed a decided increase in every particular, in the strength of the mission, and the work of the several members is very encouraging.

ELECTRIC LIGHTING BY WATER POWER.

WE read, in one of the notes of the News Agency, that the water power in the Hakone district has been utilized to generate electricity with which the lighting of the well known watering places Yumoto and Tonosawa has been successfully effected. At Miyanoshta steam has hitherto been employed to drive the dynamo, but the cost of getting coal to a place comparatively so remote among the hills has been found almost prohibitive, and the example of Yumoto and Tonosawa is now about to be followed. We believe that when the enterprising proprietor of Fujiya at Miyanoshta was about to set up steam machinery for lighting purposes, the superior economy of electric lighting by means of water-power was pointed out to him. Apparently, however, the idea was too vivid just then.

SHARES AS SECURITY.

THERE has recently been a discussion, among Japanese bankers, as to the advisability of abolishing the system by which the Bank of Japan fixes the value of a Company's shares for purposes of security. According to present methods, the Bank of Japan is virtually omnipotent. It determines at what percentage of their face value the shares of any Company, commercial or industrial, shall be accepted as security for advances, and of course, all the other banks are guided by the ruling of the big institution. The system works excellently in many respects. It is especially useful as a complete check upon any attempt to "bull" or "bear" shares by a combination among lesser banks. But complaints are heard in some quarters that the methods of the Bank of Japan are too inflexible; that, having once fixed the value of any particular shares, it does not easily alter its estimate, and that although the market may vary considerably, the Bank continues to appraise the shares at the same figure. Others, again, assert that the Bank's judgment is not always infallible, and that it occasionally gives a fictitious value to shares by accepting them at a price which could not be obtained in the open market. Thus there is an agitation to break away from the Bank's control. But on the whole, the probability is that the system now in vogue will remain unaltered. Indeed, we do not immediately perceive how it can be readily changed, for the weight that naturally attaches to the Bank of Japan's decisions must always render them more or less imperative in financial circles. Moreover, the Bank certainly errs on the right side when it refrains from following all the market variations in the prices of shares. A margin is fixed in the first instance expressly with the object of placing the security beyond the range of ordinary fluctuations, and within the limits of that margin the Bank necessarily stands firm.

THE POLITICAL CRISIS.

LIKE so much of the recently threatened political crises, the present trouble in the Cabinet seems not unlikely to fall considerably short of the dimensions originally assigned to it by rumour. Count Matsukata tendered his resignation on the evening of the 27th instant, but the Emperor declined to accept it, and the Count being strongly urged by Count Goto, Viscount Yenomoto and Mr. Kono, is said to have agreed to reconsider his original determination. But there is no indication that the strong-policy section of the Cabinet, in other words, Viscounts Takashima and Viscount Kabayama, will abandon their position, and it would con-

sequently seem that either Mr. Kono will resume the portfolio of Home Affairs, or the two Viscounts will resign. The latter would appear to be the most logical outcome, but we do not venture to make any prediction.

NEW MEMBERS OF THE HOUSE OF PEERS.

AN election to fill three vacancies in the representation of Viscounts in the House of Peers was held on the 30th ultimo at the Nobles' Club. Out of 302 possible voters, 284 recorded their votes, with the following result:—

	Votes.
Viscount Tsutsumi Tsunaga (former Kuge).....	165
Viscount Abe Masanori (formerly Feudal Chief of Sanuki in Kazusa).....	154
Viscount Inagaki Motoyoshi (formerly Feudal Chief of Yamakami in Omi).....	145
The above three were declared duly elected, the next on the list being:—	
Viscount Takano Muneyoshi (former Kuge)....	98
Viscount Toda Tadayuki (former Feudal Chief of Ashikaga in Shimotsuke).....	95
Viscount Otawara Kazukyo (former Feudal Chief of Otawara in Shimotsuke).....	80

THE INUNDATIONS.

The *Kobe Herald* has the following with respect to the recent storm:—

Our special correspondent, who has just traversed a section of the lands in this Ken which have been devastated by flood during the last ten days, writes that one need go no farther than Kakogawa, the present temporary terminus of the Sanyo Line this side of the interrupted track, to see the effect of the storm of the 23rd and 24th ultimo. One is face to face with evidence of the heavy rains, indeed, almost immediately upon leaving the Railway Station. The long bridge over the Kakogawa has been for the most part swept away, and every one has now to cross in ferry boats, and as one nears the opposite shore a huge break in the river bank is noticed farther down stream. The force of the waters, almost incredible when in view of the river in its present state, is realized upon crossing over, as numbers of stones of immense weight with which the bridge on the Hiratsunomura side was constructed have been carried bodily away. How near the houses on the opposite bank were to being swept away, is apparent from the bags still in the position near the landing place where they were put to keep the water back; and that position is fully twenty feet above the normal level. A little beyond, one comes upon the first scene of desolation; two or three houses have been carried away, and the roadway destroyed for a distance of a quarter of a mile perhaps. At this point the railway line has been very badly damaged, the entire embankment having been washed away in two places for a stretch of fully a hundred yards. Between the track and the roadway, the fields are either under water or hidden by layers of sand or gravel, and near the roadway on lower levels are tons of heavy stones, roots of trees, and other debris. At Hiratsunomura the houses were flooded, and the water mark is evident on the houses high above the floor level. The people, however, with that wonderful submission to the unavoidable which characterizes the race, have already got things pretty much in order again. What is the state of things in Yoneda Mura, farther down river where the waters divide into two separate broad streams on their way to the sea, could not be seen, but the break before mentioned can scarcely have failed to cause some havoc. After passing Hiratsunomura, for some miles little is seen to call for notice until Amida is reached, just beyond which one or two small breaks on the line have been made. The same may be said for the stretch across the valley to the Ichikawa, save that many of the houses here and there bear traces of the flood, and that the small bridges have in place been damaged. At one insignificant stream, two heavy blocks of timber have been displaced and carried some distance off, proof of the terrific force of even mere streams at the height of the storm. The long bridge over the Ichikawa has been carried away and a break in the bank shows where the river rushed through, destroying the house, now overturned and in ruins, and rendering the usual road impassable. The railway bridge, built of iron on solid brick and granite piers, was not injured. From that point on to Himeji, things appear to be in much the usual order save that some of the houses are still propped up. At Igaramura, beyond the huge straggling garrison town, there are unmistakable signs of damage, but the storm was not at its worst in this part of the country, it would seem; and the bridge over the Aso-

gawa is intact. The Tennogawa is without a bridge, other than the long, solid Railway bridge, and the bed of the river still affords proof of the torrent of a week ago. Little damage was wrought at Anyama-mura, save by the wind. Not so reassuring is the state of things as one draws near the Ibogawa, where several houses have been wrecked and more or less damage done to the rice fields. The bridge over the Ibogawa is a wreck, though here too, fortunately, the Sanyo Company's bridge of thirteen long spans is intact and apparently quite uninjured. The Ibogawa was evidently a raging torrent on the 23rd and 24th, the long copestone of the more permanent part of the old bridge where the river bed is usually dry having been carried down stream, and the western end, which was built of heavy blocks of stone exclusively, having for the most part disappeared. Beyond this river a scene of desolation confronts one, and as one corresponds passed through Shoji village yesterday the roadway was still blocked with mats and household goods of all sorts stacked to dry. All the houses bear marks of the water just beneath the eaves, and the flood was certainly not less than six or seven feet deep. Several houses are level with the ground, and both here and beyond, many of the scenes all too forcibly remind the passer-by of distressing pictures in the earthquake district last year. Tatsuno also suffered severely, and a good deal of the young rice thereabouts has been ruined. Beyond Tatsuno the line sustained some damage. At Naba, a course was struck more towards the sea and for some miles one missed the track of the angry waters, but once across Takatori-yama, the ascent is a long, stiff pull—such a scene presented itself as fairly beggars description. The Chikusagawa as it nears the sea, flows or did flow along one side of a narrow but richly fertile valley not much more than half a mile wide, with lofty hills on either side, and in the valley stood numerous flourishing villages, Hamaichi Mura, Sunako Mura, Kitanonaka Mura, and on the island at the mouth of the river, were Minami Nonaka (south inside field) and Nakamura. Every one of these villages, has suffered terribly. The loss of life was heavier here than elsewhere in the province. The scene yesterday was bad enough, with houses inundated and thrown down, and the water flowing at will over rice fields and hamlet; what it was when the storm was at its worst it is impossible to imagine. With all its suffering and tragedy, it must have been a grand and appalling sight, and as one stood viewing the desolate scene yesterday, it was impossible to resist a wish that one might have been privileged to watch the boiling, maddened river on the fatal day. Actual acquaintance with the locality precludes surprise that so few of those borne sea-wards by the river were rescued. Probably but a small proportion were carried near the houses in Ako city, and as the island in front of the city and its suburbs was inundated, the river at Minami no Maki was probably scarcely distinguishable from an open arm of the sea. We have been once again reminded that Japan is a land of earthquake, fire, and flood; and as one is confronted with the most recent proof of the fact, the question naturally arises, when will the Government take in hand the improvement of the rivers and agree upon a feasible project for the prevention of extensive conflagrations. Thousands upon thousands of yen are wasted yearly, and though experts have demonstrated the preventability of some of the most improviding disasters the country periodically suffers from, the authorities continue year by year to regard the matter as so many helpless fatalists would. The work of constructing massive fortifications, of laying down costly modern war-ships proceeds merrily, whilst less showy but in every way more useful work which has so long emphasized its demands for something more than passing attention by repeated scourges of fire and water, is left exactly where it was when Perry appeared in the Bay of Yeddo.

The *Hyogo News*, writing on the same subject, says:—

It is astonishing with what apathy the recent terrible floods in Japan have been viewed. Had a deluge in Europe wrought such havoc the newspapers of the world would have been filled with columns of narratives of the dreadful sufferings, the appalling loss of life, the frightful destruction of property. But we doubt whether any of our readers have given a second thought to the tremendous devastation we have described in the meagre details which we have gleaned from the native papers. For this perhaps the system of passport regulations is chiefly responsible. Had not these existed, our reporter would by this time have something like a comprehensive view of the calamity, and sympathizers here would have been able to repair to the scene of ruin, which is only some 60 or 70 miles from their doors. But the news comes

second-hand, and as there were no proportionate disasters in their own midst, the native paper accounts do not elicit the slightest feeling of surprise or regret. We would undertake to assert that for one reader who has felt the slightest sentiment of pity for the unfortunate Japanese sent wholesale to their fate, or whose property and crops have been irretrievably ruined, there will be a hundred who will thrill with compassion for the unfortunate shipwrecked crew of the *North American*. Far be it from us to detract even the slightest atom of sympathy from the brave sailors who so marvellously escaped from a watery grave. But sad as their catastrophe was, it pales into insignificance compared with the magnificent ruin wrought on the very people who, in the midst of overwhelming misfortunes, exerted themselves to the utmost to befriend the shipwrecked crew whom the caprice of the winds had so rudely flung on their ironbound coasts. On the very island where the wreck took place, in the very town of Tokushima, where every hospitality was shown to them, a tidal wave had laid flat nearly one-half of the houses, and had immersed acres of tilled land in salt water, to the utter destruction of all tillage. Moreover, no fewer than fifty people were devoured by the angry sea which so suddenly inundated the town. A few miles away from the little hamlet where shelter was so generously afforded them, a landslip on a mountain occurred which dammed up a river, and turned it into a huge lake, drowning fifty people, wrecking numbers of houses and destroying acres of crops. A little farther away still, the earth had suddenly opened as a yawning chasm, into which 160 houses and over 100 persons were precipitately hurled. Yet even amidst all this chaos of ruin the people of Tokushima could sympathise with the wrecked foreigners, and over the devastated lands sent provisions, regardless of the fact that they could so ill afford to be generous. Captain Creelman came overland, and he states that the twenty-five miles was one awful scene of ruin. Not a single bridge in all the road from the village he had stayed at to Tokushima had been washed away. Some of the houses had been washed away by the torrent, others had had the water as high as the roof, and this had burst up the floors and mingled the parts of the house and the furniture into a mass of inextricable and muddy confusion. They had to be ferried in boats over the rivers where bridges once existed. The fields were coated with mud under which the ill-fated rice was buried, and the whole journey was through a scene of havoc and utter woe. A story such as this, of self sacrificing generosity and of thoughtfulness for others, even when in the midst of the most frightful desolation, deserves a meed of praise from every foreigner in Japan, and brings into vivid display those splendid qualities of the race which, although we are constantly accused of being a bitter enemy to them, we most willingly express our admiration of. So far as we know there has been no appeal for funds, but when this story comes to be known we feel sure that great has been depression in trade, and heavy as were the calls on their purses during that dreadful November of last year, yet should necessity arise the Europeans here will most readily assist the unfortunate people in the straits of their dire calamity.

The *Hyogo News* of the 2nd inst., continues its description of the damage done by the floods:

Kobe people were greatly inconvenienced by the rains of the 22nd, 23rd, and 24th July, when altogether a fall of some eight inches was recorded, but beyond the delay of business consequent thereon they gave the matter little thought. Less than forty miles away, however, and for a long distance further west, the heavy rain was productive of far more serious effects, ending in a most terrible record of disaster, damage to property, and loss of life. The rivers in the province of Harima take their rise in a range of mountains running almost parallel with the coast, and at a very short distance from it. They are fed by tributaries which drain the numerous ravines and valleys which abound in mountain ranges of volcanic formation. The mountains themselves, denuded of almost all the forests which in many countries tend to act as natural reservoirs for the absorption of heavy rains, are mere conduits for floods, and the slightest downpour leads to hill-side torrents. Hence, in the dry season many of the river courses are mere beds with a very small stream in a waste of pebble. Violent rain storms, however, quickly effect a transformation, and when the drainage of an extensive district, where eight inches of rain have fallen in two or three days, is suddenly compressed into one channel a raging torrent inevitably follows.

Such a torrent occurred on the 23rd and 24th July, and in the case of each of the three principal

the Kakogawa, the Ibigawa, and the Chikugawa, the volume of what proved too strong for the frail embankments which gave way in many places, and in consequence the surrounding country, which in each instance was of a lower level than the bed of the river, was inundated for many miles. Brief accounts, culled from articles in the native papers, have given a general idea of the extent of the ravages of the floods, but the full tale of their terrible destructiveness will never be told. On Sunday last two Kobe residents made a trip through some portions of the ruined districts, and one of them supplies us with the following account:—

We started from Kobe with the intention of taking the 6.34 a.m. train to Aoshiki, but on arriving at the station found that the train for the time being had ceased, and secondly that all communication west of Kakogawa was interrupted. The next train was at 7.35, which landed us at Kakogawa at about 9.15. As in the case of the earthquake district last year, no signs hardly were observable until one came into the midst of wholesale devastation, so in the journey to Kakogawa there was little to indicate the frightful ravages of the waters a little further on. Here and there the rice showed signs of having been submerged, and a culvert bore traces of heavy pressure, but this was no worse than might have followed ordinary rains. At Kakogawa we were informed that *kuruma* were obtainable, and as we decided to visit Aiko and Kariya, we determined to make the journey in two stages, one set of men to take us to Himeji and to bring us back at night, while at Himeji we were to engage *kuruma* to complete other portions of the journey. We soon made the arrangements and set out about 9.30. Kakogawa had been inundated, the floors of the houses were still muddy, and the street from the station into the town was serried with holes. These, however, were very faint fore-runners of what was to follow. The direst effects had been experienced on the other side of the river. On emerging from the winding little street which leads to the waterway we came upon the first serious traces. Those who have bicycled westward will remember that there are a few houses on the embankment, and that a long bridge, or rather a series of bridges connected in the centre by a pavement of huge granite blocks, formed the means of communication between the two banks. All of these houses had been washed out, one was in ruins, and another badly wrecked was shored up by poles, presenting a most dilapidated appearance. The first bridge, a wooden structure, had snapped in two, one portion had wholly disappeared, and the distorted planks in the remaining section told forcibly of the tremendous shock they had failed to withstand. We were ferried across the now narrow, and almost normal stream, and then walked to the centre bridge, which having more massive approaches had weathered the storm, though granite blocks and masses of concrete had been thrown about like straws where the river had made breaches. Coming to the third bridge close to the opposite shore, we found nothing remaining except the ending of granite slabs which had connected it with the shore. No vestige of the bridge proper was visible and the way in which the granite lengths were started and jumbled told its own story. The embankment here was intact, so also, as far as we could judge, was the long iron bridge, built on brick piles a couple of hundred yards further up the river, on which the Sanyo Railway trains cross. The houses on the bank, however, had all severely suffered, the flood leaving their sign manual far up on the sides of the mud walls.

Those who have used this road know that from this embankment there was a rather sharp gradient of some eighty yards or so in length which led to the paddy field level, and then the road curved round to where it crossed the line three-quarters of a mile or so further on. Now that once smooth plain is altogether unrecognizable. Not far up from the iron railway bridge, before referred to, the impetuous torrent, choked in the narrow compass of its two embankments sought to carve out a channel to thesea, and very nearly succeeded. Taking a sweep of nearly a quarter of a mile wide, it had swept away the railway line, torn up trees, brushed away two or three houses, and dug for itself a winding course through the once green paddy fields, and marked it by a deposit of pebbles and sand, and curving westward found itself balked by the white faced line of hills which end abruptly a couple of miles south west. There is no road—that has given place to a water course, and for acres around there is a mass of brown shingle under which lie the ruins of a promising rice crop. But even away apart from what was evidently the central rush, for miles onward the rice showed signs of prolonged submersion, leaving it a very poor colour. Under the embankment, and yet several feet up from the fields, was a small hamlet which has been immersed in some cases above the roofs,

while of some of the houses only a few broken tiles mark the spot, and just below a grove had been ruthlessly cut through, many of the trees being torn up bodily.

From there on to Amida traces of the disaster were continuous. Every paddy field culvert had undergone a strain. In every village there was that dark line on the walls, and in only too many instances, the floors and furniture were destroyed. The line too suffered severely, many small bridges being knocked to pieces. Amida itself had suffered little, but the road from there to the entrance to Himeji on this side of the Ichikawa had been shamefully served, though it was passable even for a bicycle, with due caution. The village just before reaching the sudden turn where the line crosses the road by a bridge, and within a hundred yards of the Ichikawa, had been deluged. A small stream runs through the village, and some of its surplus contents had poured through a few ill-fated houses, washing away walls, gouging up the roadway, and spoiling the rice. In one case between Amida and Himeji a small irrigation stream had torn away one of its banks right down to the level of its bed and made for itself another route.

The solid roadway under the railway bridge was no more. Its very foundations had been dug out, and there was nothing for it but to lug the *kuruma* over the broken embankment, and then carry them up the steep sides of the railway banks, an operation attended with no little difficulty, and one which attempted next morning by our jaded runners resulted in a very nasty fall for one of the men. The road from the other side to where the bridge had been was cut up badly, while the houses near the entrance to the bridge were many of them devastated. The railway bridge, a very solid structure, as at Kakogawa, appears to have escaped without injury, but the foot bridge, which was a repetition of the Kakogawa one on a much larger scale, was gone. A bit of it still abutted from the river, but the abutments on shore had all been dislodged. A central part of iron and wood still stood, minus only one or two of its railings, and the further end one, which had been a high bridge with granite paved approaches, had also disappeared, only a few of the blocks in some instances remaining to tell the tale. On the left bank looking towards the source, the river had dug out a new channel, but a breakwater, evidently built many years ago, had done good service, and had prevented that encroachment on the lower side which at Kakogawa had worked so much mischief. On the right bank, in one of the reaches, it had carried away the embankment and no doubt done much harm.

All the houses at the entrance to Himeji had been deluged, and the bridge crossing the stream a short distance from the Kencho was demolished, a temporary one of planks replacing it. Our passage through Himeji was a very disagreeable one. Our *kuruma* men quarrelled with our terms and demanded the most exorbitant rates, following us and preventing us getting other men, so that finally, and after we had collected a crowd of about 150 people, including many soldiers, had been harangued by a well meaning but exceedingly garrulous police official, we were compelled to pay them off by giving them for the single journey what we had promised for the double trip, and after much valuable time had thus been wasted we succeeded in getting some very willing men to take us the remaining eight or nine *ri* to Aiko and back, a distance of more than 40 miles altogether. These men proved very willing runners, and we had no further difficulties, as far as they were concerned. Still, it was at least 1.30 before we started, and it would be at least between five and six o'clock before we reached Aiko, so that the journey was by no means an inviting one.

Himeji had all been flooded, more or less, but the ravages were less distinct in the eastern than in the western portion. Nor was there much more to be observed until after descending from the hill which the Sanyo Railway tunnels we reached the Umisakagawa. The hamlets adjoining the river on either side had been immersed, and one or two of the houses had been partially demolished, but the wooden bridge over the river was still standing, though the approach to it from the western side had been completely broken up. From here a quiet run through a well cultivated plain brought us to the Asogawa. Here the footway was gone, and the waters spread knee deep all over the wide watercourse. On each side there was a certain amount of destruction, but no great damages worth recording, so that we did not delay but sped on to the Ibigawa, halting midway at the village of Aoyama at a very attractive little tea-house, the manners of whose inmates no globe trotters or residents of Treaty ports had tainted, and whose tiny garden at the back with its miniature waterfalls and general *ensemble* was a most artistic and de-

lightful display of landscape gardening compressed into the limits of about 6 ft. by 10 ft. Here the floods had done no harm, but they had plenty to tell us of the fearful havoc wrought at Uue, at Tanuho, at Aiko and Kariya, havoc which a couple of hours later we could imagine, but no pen could describe. Not all the villages, however, were so highly favoured as Oyama. As we neared the Ibigawa, and passed through the low lying plain through which it runs, ominous indications met our gaze at every turn. Some hamlets had their floors torn up, and godowns deluged. Here and there a dilapidated house or a shed collapsed, marked the insidious force of mighty waters. Heavy patches of mud lay in places on the rice fields, and bespattered furniture was frequently to be seen in the streets to dry. At length, through a mass of debris of some ill-fated tenements, we came on to the banks of the Ibigawa. It is a broad watercourse, with a very deep channel on the western side. Not ten miles up it can be seen winding its way through the most romantic mountain scenery. The hills there are diversified, some with sharp peaks, others with round cones, and not a few like huge spherical mounds, but all from base to summit are swathed in luxuriant verdure, with as many tints and shades of green as there are peaks, and it made in the shimmering glare of the July sun, a chastened picture such as one rarely sees outside a painter's canvas. But that this romance can change to tragedy was easily perceptible when once we forded the stream. From the bank running far away to the hills which shut in Naba was a level valley of perhaps two miles broad at its widest point, and tapering to a few hundred yards where the defile opened up between the opposite hills. Large sections of it were still under water, and Tatsuno viewed, even from that distance, looked like the reproduction of one of the scenes from the earthquake district. Standing partly on the river's bank, but stretching many hundred yards into the valley were the shattered remnants of a considerable town. The houses on the bank had fared best, but directly we began the declivity, far above our heads could be seen the yellow water mark. Throughout the entire length of that extensive street were spread soaking mats, and piles of mud-begrimed household belongings. Scarcely a floor had escaped wrecking. General shops had their contents sadly bemired. In some instances the structures had given way beneath the strain and lay in heaps, and all around was ruin. The people with cheerful faces, and apparently with the utmost good humour, were repairing their devastated homesteads, cleaning solid treasures, and one and all were working with a will to repair the mischief, showing in their resolution a superiority to the caprices of fortune, which is so characteristic of the race in nearly all the numerous calamities which periodically befall them.

THE NEW CABINET.

There are of course a great many conjectures about the new Cabinet. Here are two, which our readers may be interested to compare:—

The Kokkai.	The Choya Shimbun.
Minister President of State—Count Ito	Count Ito.
Minister for Foreign Affairs—Viscount Enomoto	Viscount Enomoto.
Minister for Home Affairs—Mr. Kono	Count Inouye or Count Yamagata.
Minister for Finance—Count Inouye	Count Matsukata or Count Inouye.
Minister for War—Count Oyama	Count Oyama or Viscount Takashima.
Minister for the Navy—Count Saigo	Viscount Kabayama.
Minister for Education—Viscount Taisho	Count Oki.
Minister for Justice—Count Oki	Mr. Kono.
Minister for Communications—Count Goto	Count Goto.
Minister for Agriculture and Commerce—Viscount Nomura	Count Yamagata or Viscount Sano.
President of Privy Council—Count Kuroda	Count Kuroda.

THE JAPAN SOCIETY.

We take the following from the *London and China Express*:—

The annual general meeting of this Society was held at the Society of Arts rooms, on the 23rd inst., Dr. Wm. Anderson (Chairman of the Council) presiding.

The minutes of the last general meeting having been duly confirmed, the Hon. Secretary (Mr. Arthur Diósy) read the report of the Council. It stated that they (the Council) viewed with the greatest satisfaction the progress of the Society, which had now a membership of 230, who were to be found in England, France, Germany, Hungary, Japan, and the United States of America. The average attendance at ordinary meetings had been 166, on which they had every right to congratulate themselves.

The Chairman proposed, and Mr. Hart seconded, that the report of the Council be adopted, which was agreed to.

The Treasurer read a statement on the financial affairs of the Society, the balance in hand being £71 6s. 4d., which was duly adopted.

Original from

The retiring members of the Council (Messrs. Farlie, Mutsu, Elgar, Hall, East, Hyde-Clarke and Reid) were unanimously re-elected.

Votes of thanks to the officers of the Society and a special vote to the hon. secretaries (Messrs. Diósy and Goh) were carried with acclamation.

THE ANNUAL DINNER.

The annual dinner was held the same evening at the Whitehall Rooms, Hôtel Métropole, the President of the Society, Viscount Kawasé, in the chair. Among the guests were the following:—Lord de Saumarez, Vice Admiral D'Arcy Irvine, C.B., Sir Trevor Lawrence, Sir E. J. Reed, K.C.B., M.P., General Raines, C.B., Capt. Rolleston, Capt. Kajiwara, I.J.N., Professor Wm. Anderson, Dr. Hickman, Mr. and Mrs. Bevan, Mr. and Mrs. Heron Allen, Mr. and Mrs. Bond, Mr. and Mrs. Nakai, Rev. H. Cart, Consul-General and Madame Okoski, Mr. K. Hecosawa, Mr. Inaba, Mr. H. Mutsu, Mr. J. Bell, LL.D., Dr. Phené, Mr. F. T. Pigott, Mr. Rokugo, Mr. Kiyoo Oka, Mr. Littleton, Mr. Wm. Stott, Mr. A. L. Liberty, Mr. J. T. Larkin, Mr. and Mrs. D'Ifanger, Mr. Reid, Mr. A. G. Angier, Mr. W. H. Taylor, Mr. A. C. Bruce, Mr. P. H. Bailey, Mr. J. R. Haslam, Mr. A. Santo, Mr. W. White, Mr. S. Akeha, Mr. A. C. Mitchell, Mr. J. P. Reed, Mr. R. G. E. Foster, Mr. Esbury, Mr. Alfred East, Mr. F. A. Satow, Dr. Elgar, Mr. J. H. Collis, Mr. W. S. White, Mr. W. S. Hall, Mr. F. Elgar, Mr. C. S. Grainger, Mr. H. Kraft, Mr. T. B. Harbottle, Mr. A. B. Walford, Mr. Scott Elliott, Mr. T. Watanabé, Mr. and Mrs. Jonas, Mr. W. Kaula, Mr. Breisch, Mr. A. Diósy, and Mr. Daigoro Goh.

The toast of "the Queen" having been duly honoured, Dr. Wm. Anderson proposed "the Emperor of Japan." He said he would like to remind them of a story of the days 1,400 years ago. At that time there was an assemblage of a number of princes of the different states into which China was then divided. They each brought specimens of the wealth of the country over which they ruled—all except one. That one was the most famous of all; he came empty-handed, and when they asked him why his country was so poor, he said that his country was richer than all that could be produced by all mines in the world, that his country was a happy, industrious, and law abiding people. All of them knew that less than thirty years ago—even in the decline of the nineteenth century—Japan remained a solitary survival of medieval feudalism, with all the picturesque, and all the evil that medievalism implied. Now within the compass of a single reign had been achieved what must always be regarded as one of the greatest and most peaceful revolutions in the history of the world. Class privileges and class disabilities had been absolutely abolished, and this had been done with the consent and assistance of the privileged.—(Hear, hear.) The laws had been made equal for great and small. Formerly there was one law for the rich and privileged and another for the poor and unprivileged, and it would startle many people if they were able to see how all that had been set right according to the eternal principles of justice. They had now the genius of a Parliament in Japan, and that with an absolute monarchy was a very remarkable point in history. All the resources of civilisation—science, telegraphs, and railways—now belonged as much to Japan as to Europe, and this, again, within a relatively short period. Japan's savants were now enlightening the world by new researches. Japan was, at the present time, producing works of art of which any nation of Europe might be proud. He would quote the highest opinion in Europe, that of the President of the Royal Academy, who said that they are equal to anything that has been produced by the ancient Greeks.—(Hear, hear.) Japan is now represented by its envoys in every Court in Europe, and its commerce is scattered all over the face of the globe. He considered that the happiness and the works of the Japanese people would always be the noblest monument to the reign of the Emperor of Japan.—(Applause.)

The toast having been received with the greatest enthusiasm,

Sir Trevor Lawrence, M.P., rose to propose the toast of the evening "The Japan Society." He said that during the whole of the dinner he had been racking his brains in an endeavour to ascertain why their very excellent Secretary had entrusted to him the very responsible duty of proposing this toast. He had not found the answer to that inquiry. Mr. Diósy had told him that the Society, which only came into existence in January, already possessed a membership of 230. Their members were scattered in various parts of the globe, and they had also corresponding members throughout the world. One of these latter, Mr. H. Kraft, of Paris, the author of some delightful narratives on Japan, had crossed the sea on purpose to attend the dinner. He thought he (Mr. Kraft) was the ideal man to propose

the toast of the Japan Society. He thought that the reasons for the existence of the Japan Society were not very difficult to understand. They, in this country, had been brought in a great many ways in connection with Japan, and they had learned to like the people of Japan, and a brighter and more engaging populace did not exist in any part of the world. He hoped that Japanese art would never be debased, for the tendency in these commercial days was to bring everything down to a commercial level. He thought that they should all do their very best to make the people of the two countries understand one another better. He begged to propose, with all the heartiness of which he was capable the toast of "Prosperity to the Japan Society," coupling with name of the Hon. Secretary, Mr. Arthur Diósy.

Mr. Arthur Diósy, who, on rising to reply, was greeted with cheers, said:—That it had been intended that his part in the orations of the evening should be confined to an official announcement. He asked those present to put themselves in his place, and to think what must be the feelings which were then passing through his heart. One of the many pictures stored away in the pigeon-holes of his brain was a picture which might be dated any day in the last winter. That picture would show his dear friend, Daigoro Goh, the best of friends and most trusty of colleagues, and as gallant a Japanese gentleman as any there that evening. It would also show him Mr. Francis Taylor Pigott, the vice-chairman of the Council, and it would show him a picture of himself. Those three men, none of whom were exactly hoary with age, seated in a small room in his small house on any raw and chilly evening during the last detestable winter. They were discussing—amending a scheme which had been in his mind for some time, that of the formation of the Japan Society of London. When he looked upon that picture, and then saw himself as he was that evening, surrounded by such an assembly, he thought the emotion under which he spoke might reasonably be excused. He had first to announce the receipt of a number of letters of regret from members of the society stating their reasons for not being present that evening. Among them was one from one of their Vice Presidents, Lord Armstrong, who said at his present age, 81, he found it difficult to attend. There was one word he (Mr. Diósy) would wish to add to the words of Sir Trevor Lawrence, who had been kind enough to introduce his name into his remarks and that was that wherever the name of Diósy had been mentioned he would ask them to couple with it the name of Daigoro Goh. The Japanese Society was doing a good work, as it helped to bind closer together the millions who inhabit the lands on which the sun rises and the teeming millions who inhabit the Empire on which the sun never sets. There were many there, no doubt, who were acquainted with the Japanese novel in its simplest form. He need hardly say that the Japanese mechanic was a novel reader, and one who could give points to the average British young lady in that respect. As the Japanese "cabman," the *Kinnmaya*, sits on the shafts of his hansom cab, of which he is both horse and driver, he may be poring over the pages of a novel. If they looked at the woodcuts with which the novel is illustrated, they would find that the hero and heroine were bound together by a red cord proceeding from heart to heart, so that the reader might make no mistake, and know, what is not easy to tell in the English or American novel, who were the people intended for each other. If the Japan Society should be able, in the course of years, to twist only one more silken thread into the red cord between the heart of the people of Japan and the heart of the people of England, then, he thought, they would not have existed in vain.

The Chairman proposed the toast of the "Army and Navy."

Vice-Admiral D'Arcy Irvine responded for the navy, which he said was as it always had been, ready to go anywhere and do its duty. Now they had a navy under the present Government, but the next time he might be called upon to respond for the navy they might not possess one. They heard of things being given away, and it might possibly be the case with the navy.

General Raines, C.B., responded on behalf of the army.

Sir Edward Reed, K.C.B., M.P., proposed the toast of "the health of the Chairman." He said they would judge of the esteem in which he held the idea of forming the Japan Society when he told them that on returning from a visit to Japan he waited on Lord Granville, the Foreign Secretary, and explained to him many things that he had become acquainted with in that interesting country, and asked of him better consideration for the Japanese Government and people than it was receiving and had received. He received from Lord Granville a positive and firm assurance that from that time the Japanese

Government should be treated with consideration. He was satisfied that nothing tended so much to secure a good understanding between two nations as the full and free interchange of their sentiments, their opinions, and their wishes, and he trusted that the Japan Society might help to bring about closer and better understanding between the two countries of England and Japan. He trusted that the chairman, who had lived some years in England, and had had some opportunity of appreciating the spirit of the English people, would believe that we, Englishmen, thanked him for placing himself at the head of the Japan Society. He hoped that it will fulfil its intentions. The toast was drunk with musical honours.

The Chairman in reply said that he tendered his sincere thanks for the hearty manner in which they had received the toast of his health. He thanked them not only on behalf of Japan, but for the Japan Society, and congratulated them on the measure of success which had attended the new Society.

THE HAKUBUNSHA AND MITSUI BANK.

Wx stated some days ago that the parties to whom the printing presses belonging to the Hakubunsha had been nominally or actually sold were taking legal measures for the recovery of their rights against the Mitsui Bank. The case has gone against the Bank. The verdict is based on a technicality which is of considerable interest from several points of view. It is contended that the presses in dispute are to be regarded as movable property and that in order to render them legal security the bank should have moved them from the Hakubunsha premises, and have stood them in its own buildings. From this judgment the bank will certainly appeal. In the new Civil Code, whose operation political agitators having few or many commercial interests at stake, are so anxious to postpone, there is a law which bears on this very point, according to which machines and appurtenances used in factories, shops, and other places of business are to be regarded as immovable property. Here is an instance where the laws now administered are said to contain no provision whatever for a case which must be of frequent occurrence. Hence any verdict given must be based solely on the individual judgment of the official before whom the case is tried.

WATERWORKS FOR KOBE.

On his way back from Moji and Omuta, where he was sent by the Home Department to design water and sewerage works, Professor W. K. Burton has stayed for some days in Kobe, and the opportunity has been taken by the Governor of Hyogo-ken to consult with him on the long-delayed waterworks for this town. It seems he has strongly urged that the plan proposed by Major-General H. Spencer Palmer, R.E., some four or five years ago, be carried out, with an addition proposed by Mr. S. Kasuya, Chief Engineer of the Kobe-shi. This addition has been found necessary because, after continuous gnawing of the water from the Nunobiki Waterfall, and from Futatabi-dani, it has been found that during about five months of the year the water falls below what was first looked for in quantity, whilst at times there has been only about half what was reckoned on. It therefore becomes necessary to store a reserve of water in the upper parts of the valleys. The additional work suggested consists in the repairing and enlarging of a number of impounding reservoirs that were made by the farmers of the district, at a considerable height, some century or so ago, to store a reserve of water for irrigation. It is a notable and interesting fact that, although the construction of these old reservoirs is very rough, and the means of controlling the outgoing water is crude in the extreme, their design is quite in accordance with modern engineering principles, whilst the sites have been selected with remarkable sagacity. In fact the most minute survey of the catchment areas of the two streams mentioned has resulted in the discovery of only one likely reservoir site that had been overlooked by the old farmers. The construction of these reservoirs will result in the storage of a quantity of water equivalent to about two months' consumption. This will be quite sufficient to tide over the dry season, even when the population of Kobe has very considerably increased,

Original from

the more especially as the season of drought is that of cold weather, when comparatively little water is consumed. We understand that the work is likely to begin shortly. We are sure that all citizens of Kobe, foreign or Japanese, will rejoice at the prospect of a plentiful supply of water that will be greatly above the average in purity.—*Kobe Chronicle*.

THE TOKYO MARINE INSURANCE COMPANY.

The first half of the current year seems to have proved very profitable to the Tokyo Marine Insurance Company. The semi-annual meeting was held on the 1st instant in Minami Kayabacho, when the chairman, Mr. Ikeda Mochimasa, in presenting the report and accounts, said that, although great sums had been paid by the Company abroad for losses at sea, the premia received on vessels and cargoes had also been exceptionally large, the total being 578,862 yen. The accounts were read and passed as follows:—

Total profits during the half-year	349,716
Carried to Reserve Fund	263,469
Rewards to officers of the Company	11,678
Dividend at the rate of 16 per cent.	
per annum	48,000
Carried to next account	26,567

It is evident that the Company is building up a very strong position when it carries to its Reserve more than two-thirds of its aggregate net gains.

BLAINE'S RESIGNATION.

THE Blaine-Harrison complications have caused no little speculation throughout the entire political world. Great men act in peculiar ways and seldom without cause. Blaine has been before the world for a number of years. His life has been a sort of open book—read by all interested in political affairs. The causes of some of his most important actions were published immediately such actions took place. The cause of his recent resignation, on the eve of a national convention, when, according to all apparent principles, he ought to have remained in office, was clothed in mystery until recently made known by Mr. T. C. Crawford, in a lengthy article in the *New York Sun*. If Mr. Crawford's statements are true—and he ought to know—we are not a little surprised that such a great man should have allowed such puerile motives to lead him astray. Admirers of the "Plumed Knight" will feel a sting of chagrin when they know the real condition of affairs. Mr. Crawford says, in substance, that Mrs. Blaine is the cause of her husband coming before the convention at Minneapolis as a candidate for President of the U.S. "She, exceedingly dislikes Mr. Harrison for his refusal to make Walter Blaine his father's first assistant secretary, and attributes his death to the consequent disappointment. Recently her son-in-law, Lieut.-Colonel Coppinger, was promoted Colonel by the President. But Mr. Blaine asked his further promotion to the vacant brigadier-generalship. As some thirty worthy and ranking officers would have had to be jumped for no other than personal reasons, the President courteously but firmly declined. Then came the out-break. Mrs. Blaine called on the President, and upon his persistence in his decision, she uncorked the vials of her wrath and told him that his decision would cost him a renomination, as she would force Mr. Blaine to take the field against him: the resignation came shortly after." It is further claimed that what precipitated the crisis, was an incident between Sec. Blaine and the Canadian Commissioner, Mr. Blaine was stating to the Commissioner what purported to be the views of the U.S. Government, when Secretary Forster interrupted by saying that the utterances of the Chief Secretary, did not represent the views of the President. Blaine became so irritated that he peremptorily closed the conference, and wrote his resignation the same day. It is a sad pass when the ire of a woman meddles in the affairs of any Government, and particularly so when the common sense of experienced men is made a servant to such ire. Not being satisfied by forcing her husband into a hopeless contest for the Presidency of the U.S., it is further stated that her son Emmons, impelled, no doubt, by the ner-

vousness of his mother, rushed into the convention to secure the nomination of his father, and, being disappointed, sickened and died. Probably all these stories must be largely discounted.

BOILED MILK.

THE *Révue Scientifique* contains an article which has much interest for all persons concerned in the rearing of children:—

A very important question, from the point of view of the nourishment of newly born children, is whether boiled milk retains a sufficiently nutritive value.

Formerly it was universally thought that milk ought to be used in a state as nearly like as possible to that in which it is when issuing from the breast, and uncooked milk was the only kind employed for feeding infants. Nowadays, however, since it has been clearly demonstrated that milk may be an agent for the transmission of various diseases, such as eruptive fevers, typhoid fever, and especially consumption, most authors and physicians agree in recommending that boiled milk only should be given to infants.

This practice is assuredly excellent from the point of view of prophylaxis against contagious diseases; but is it equally good from the point of view of alimentary hygiene, and, in feeding infants on boiled milk, do they get sufficient nourishment?

This question has been examined, with the aid of all the documents which could be collected, by Mr. Henry Drouet in a little book just published at Paris. From his researches, made from the various points of view of physiology, clinical treatment, and microbes, results the general conclusion that boiling does not at all diminish the digestibility of milk and consequently does not diminish its nutritive value.

It may even be said that most of the experiments of physiologists tend to show that boiled milk is more digestible than uncooked milk, and that, in fact, the infants who can digest the latter better than the former, are the exception and not the rule.

The mortality of children brought up on the bottle has lessened for some years past in considerable proportions. This mortality, which formerly reached the figure of 90 out of every 100, has been reduced to an average of 10 out of every 100 in all the departments in which the Roussel Law has been diligently enforced. In the department of the Eure, that mortality, a few years ago, was but 7 in a hundred. These happy results are plainly due in great part to the supervision of nurses required by the Roussel Law. Nevertheless, it must be noted that the superiority of boiled milk has been asserted to by most physicians, and that they more and more require the nurses whom they superintend to feed their charges with boiled milk. It is then allowable to suppose that the use of boiled milk is one factor in the diminution of mortality in infants brought up on the bottle.

The only case in which there would appear reason for not boiling the milk, is when the animal which furnishes the milk is well known, and there can be no doubt about its apparently perfect state of health. Even in this case however, the security is deceitful, for it is known that tuberculous animals have taken prizes in competitions of fat beasts, and that a diagnosis of tuberculosis limited to the test—a form of the disease especially dangerous from the point of view of the transmission of the malady—is an extremely difficult sort of diagnosis.

The conclusion to be drawn is that milk destined for food of infants should always be boiled, without any apprehension of any alteration in the liquid, from the point of view of the preservation of its nutritive value.

THE "KAISHIN TO" AND THE INUNDATION.

THE leaders of the *Kaishin-to* are displaying their usual cleverness in the matter of the inundations in Tokushima Prefecture. They have despatched Messrs. Kashima Hidemaro, Sato Bumpei, and five other members to the scene of the calamity for the purpose of conducting accurate investigations, their idea being to move the Authorities to make liberal payments out of the Famine Relief Fund and even to appropriate a portion of the Reserve Fund in aid of the sufferers. They talk also of a Special Session of the Diet, should such a course appear necessary. Doubtless this will gain some popularity for the *Kaishin-to*, but it amounts also to an indirect expression of opinion that the Government cannot be trusted to do its duty in such cases. We must confess that the story of the appropriations for the relief of Aichi and Gifu and of the attitude assumed by the Opposition towards them does not suggest that the initiative belongs to the *Kaishin-to* in these matters.

THE PRISONER MASON.

REFERRING to the prisoner Mason, who will be remembered as having been imprisoned for importing arms into China, the *Shanghai Mercury* of the 26th ult., says:—

This morning the cracked conspirator, Mason, whose term of imprisonment will expire on the 29th inst., was put forward in the Supreme Court to ascertain whether he was prepared to find the sureties he was ordered to provide for his future good behaviour.

Chief Justice Hannen, Mr. G. Jamieson, the Tantai and his Secretary occupied seats on the bench. There were only two or three people in the body of the Court, including Mr. Russell, Acting Commissioner of Customs, the fact of Mason's

appearance this morning having kept a profound secret by the authorities. Mason, who was clad in prison garb, and looked really better in health than on the day he was sentenced, was placed in the dock and addressed by the Chief Justice as follows:—

The Chief Justice—Prisoner Mason, you were sentenced to nine months' imprisonment and ordered to find two sureties of \$2,500 each for your good behaviour, on October 29th, 1891. Have you found these sureties, or are you prepared to find them?

Mason—No.

The Chief Justice—Then I order you to be deported to England and to pay the expenses of your deportation.

This concluded the proceedings, and Mason was shortly afterwards taken back to gaol by Mr. Burtenshaw.

We understand that arrangements are being made to have Mason sent home in some steamer, which sails on the 29th inst., and one of the Consular constables will probably accompany him as far as Hongkong.

THE "NICHU NICHU" ON THE SITUATION.

THE *Nichi Nichi Shimbun*, generally well informed on such subjects, writes as follows about the political situation:—

COUNT ITO.

COUNT Ito came to the capital some days ago for the purpose of obtaining audience of the Emperor and also settling some private affairs. But finding that a political crisis was in progress, he left hastily for Odawara. A telegram sent thither solicited his presence in Tokyo, but he replied that the *Kuromaku* Conference having definitely decided in favour of absolute abstention on the part of the Camera statesmen, he must decline the invitation. Soon afterwards, however, Viscount Hijikata received the Emperor's commands to go and summon the Count from Odawara. In spite of indisposition, Count Ito obeyed the summons at once. The great question is whether the Count will accept the post of Minister President. At the *Kuromaku* Conference he was asked by Count Matsukata whether he would accept. He replied that if no other resource presented itself, he might undertake the great responsibility, provided that the policy of the Government were materially changed and all the Cabinet Ministers replaced. These conditions were not acceptable, and the Conference separated without any distinct result, Count Ito leaving the capital and avowing his intention not to return unless compelled by a crisis to do so. He foresaw the present crisis at that time, and declared that, even though consulted again, he should decline to interfere. Hence it may safely be concluded that even though the majority of the present Cabinet as well as the leaders of the National Union seek to induce him to accept the Premiership, he will not do so without making a radical change in the Cabinet.

COUNT YAMAGATA.

Recently both Count Yamagata and Count Yamada have been very active. The former is said to have been engaged settling some affairs of the Army and Navy. He is understood to be willing to take any trouble in such a cause. There is another rumour, however, namely that the Local Governors belonging to the extreme section (*Yakki gumi*) and a number of the National Unionists are endeavouring to make him take the post of either Minister President or Minister of War.

COUNT KURODA.

Count Kuroda stands comparatively aloof: no one talks much of him. The only rumour is that he will probably become President of the Privy Council. This idea is based on the supposition of Count Ito accepting the Premiership. At the last *Kuromaku* Conference Count Ito is said to have proposed that position to Count Kuroda and to have received an assurance of the latter's willingness to occupy it. But unless Count Ito becomes Minister President, Count Kuroda will not accept the Presidency of the Council.

COUNT INOUE.

Count Inoue has been enjoying himself at Miyashita. He intended to return to Tokyo some days ago, but while he was packing his portmanteau news of a political crisis came, and he unpacked again with all expedition. He too attended the *Kuromaku* Conference and stated his conditions, so that, unless an entirely new Cabinet is organized, he will not accept office.

COUNTS MATSUKATA AND OYAMA.

On the 27th ultimo Count Oyama with some others repaired to Count Matsukata's to advise Original from

him. Count Oyama said that if the Minister President could not find a satisfactory solution, he had better resign. Count Matsukata replied that, having been commanded by the Emperor, he had sought to settle the difficulty, but finding unexpected difficulties in connection with the portfolios of War and the Navy, he had now definitely resolved to resign. While speaking he drew from his pocket his petition for leave to resign. Count Oyama read it, and then said jestingly:—"When you moved to this official residence I told you that Count Ito had occupied it for 2½ years, Count Kuroda and Count Yamagata for only a year each, and I asked you whether you could occupy it for 3 years. Do you remember? Well, you have remained here more than a year now, so you ought to be content." Thereat the two laughed heartily.

THE AUTUMN MANŌUVRES.

THE autumn manœuvres of the Tokyo Garrison, which are to take place next October, will be held, says the *Choya Shimbun*, in the district between Utsunomiya and Shirakawa. Where the actual fighting will come off, has not yet been announced, but as the headquarters are to be in Utsunomiya, between which place and Shirakawa there is no locality suitable for them, the battle will probably be in the neighbourhood of Utsunomiya. We mention this fact, though, owing to the circumstance that no facilities are given to foreigners to view the manœuvres of Japanese troops, the event has not much interest for our foreign readers. There is, of course, considerable difficulty in making arrangements for the presence of foreigners on such occasions, but it might be well worth while to stretch a point in their favour.

THE "JIJI SHIMPO" ON THE NEW CABINET.

THE *Jiji Shimpō*, discussing the present political situation, says that it is uncertain who will take the post of Minister President but that many of the *Kuromaku* statesmen will probably enter the Government, which is quite natural. The political world is like a gigantic stage. If Danjuro and Kikugoro do not take the leading parts in a new theatrical performance, however skillful the second-rate actors may play, the spectators feel dissatisfied. The well-known actors' names must not be left out of the programme. But, whoever assumes the reins, he ought to adopt Count Matsukata's policy of centralizing the administrative power in the person of the Prime Minister, and requiring the other members of the Cabinet to follow his counsels. Of course it is not easy to carry out such a system, because several of the *Kuromaku* statesmen being equally able and influential, no one is willing to follow the other. But if a system of several heads be adopted, the new play will receive no public applause. Perhaps the best way to get over this difficulty is illustrated by the drama of the Forty-seven Ronins: In that play Heizayemon's rôle is the most difficult; much more so than Yuranosuke's. Hence Heizayemon's part is generally taken by the best actor. Yet on the stage Yuranosuke is the master, and Heizayemon appears as a common servant. Should Heizayemon attempt to show his superiority on the stage the piece would be totally ruined. Similarly the Camera Statesmen, though they may be equally able and influential, must agree to serve under one head. Then they may count on public applause. They can afford to do so, since no Cabinet will remain unchanged more than 3 or 5 years at longest. If, then, they serve under their equal for a time, their turn will soon come to be served.

The *Jiji* goes straight to the heart of matters when it says that Count Matsukata's Cabinet was in very truth the Cabinet of Count Matsukata. There was no question of too many cooks. We believe that never before during the *Meiji* era were the members of any Cabinet induced to play such subordinate parts. If Count Matsukata's rule deserved to be well remembered for nothing else, this one thing should suffice to confer credit on it. It has seemed to the public that a noticeable feature, a flagrant blemish, of Japanese statesmanship during the past few years, has been want of disciplined

unity. The defect is well illustrated by the journals of the capital. Many a journal has been reputed a representative of the Government, but in every case it has been found that these journals were the organs of particular statesmen, and that they were always ready to attack the Government at the instance of their special patron. So, too, we hear of Ministers having an innings on their own account, or establishing certain relations quite independently, and perhaps contrary to the wishes, of their colleagues. In the face of a resolute foe, soldiers learn to work together. Count Matsukata's Cabinet learned the lesson under his leadership, when confronted by an implacable opposition, and the members were wise enough and loyal enough to practise what they had learned. Curiously enough, however, the Minister who introduced this salutary reform found himself at last in the presence of a revolt which he could not quell. Did he draw the reins too tightly?

THE "JIYU" ON THE POLITICAL SITUATION.

THE *Jiyu* alleges that recent collisions between the Government and the Diet, and friction among the members of the Cabinet, have caused much delay in the affairs of the State and obstructed national progress. But in establishing a perfect constitutional government, it is necessary to go through all these disagreeable ordeals. Therefore the sooner Japan gets the experience behind her, the better. No time-serving policy ought to be adopted. Count Matsukata has resigned, and it is undecided who will succeed him but the *Jiyu* hopes that the new Cabinet will adopt a decided policy instead of making compromises for the purpose of bringing the members into temporary harmony. It does not dislike the idea of a Cabinet headed by Count Yamagata, leader of the Military Party, as advocated by the National Union. For the country is still under a military despotism, and as soon as the representatives of that system collect together to form a Cabinet, the Popular Party will have no trouble in destroying them at one stroke. At present, however, such a wholesale measure is impossible, inasmuch as they are scattered about everywhere. If, on the other hand, a Military Cabinet is considered to be behind the age, then a Civil Cabinet will also be welcome to the Popular Party. That Cabinet might possess some elements essential to a constitutional Government, but it would still be a Conservative Cabinet, and therefore the Radical Party would be only too pleased to fight with it in the next session of the Diet. The one kind of Cabinet which the Popular Party is most desirous of seeing is a Cabinet of Renowned Statesmen. It would consist of Satsuma and Choshu men with others who are thoroughly loyal to them. Externally they would look strong, but being an assembly of men of totally different opinions they must always disagree. Thus the Popular Party would at once find an opportunity to abolish the old abuse of clan Government. Hence any of these different kinds of Cabinets is welcome, to the *Jiyu*. But above all things it hopes to see a Cabinet strong enough to accept its own responsibility, and to act as a Cabinet in a constitutional polity.

THE "MAINICHI" AND COUNT ITO.

THE *Mainichi Shimbun* alleges that since the close of the third session of the Diet, the working of the administrative machine has been suspended owing to troubles among the administrative engineers. What have the Government done since the 15th of June when the session closed? They have promulgated a few laws and the supplementary Budget to which the Diet gave its consent. But for the rest there has been nothing worth mentioning, except continual squabbles among the Cabinet Ministers themselves. At last Count Matsukata has presented his resignation, and retired to Tomioka. The great question is, who will succeed him. It is rumoured that Count Ito will probably accept the post. The Count is not perfect, but no man among the clan statesmen is better suited for the post than he. Some recommend Count Yamagata or Count Kuroda, but if the Emperor has commanded Count Ito

to form a Cabinet, he must take the responsibility without hesitation. If he accepts the offer, he knows that first, the world has grown tired of clan government; and secondly, that the resignation of Count Matsukata, though proximately caused by disagreements among his colleagues, is really due to the fact that the people of the empire are no longer willing to endure clan government, and have attacked it unsparingly. So the Count cannot accept without first determining his policy, and obtaining the concurrence of his colleagues. Otherwise, however able or experienced he may be, he cannot maintain the position long. According to the history of the past, Count Ito's usual plan is to emerge when the world is at peace, and when it shows signs of disorder to transfer his responsibilities to some one else's shoulders and calmly look on. But such a practice ought to be abandoned now, as a real statesman alone can settle the present troubles, and there is no man in the empire but Count Ito capable of the task.

WHEELED VEHICLES IN JAPAN.

THE *Statistician* gives some interesting figures about the number of wheeled vehicles in Japan and their value:—

Number of carriages for carrying people (<i>nori ai basha</i>).....	2,817
Value of above.....	777,492 yen
Number of passengers for carrying goods.....	25,635
Value of above.....	205,080 yen
Number of <i>jinrikisha</i>	181,664
Value of above.....	2,906,624 yen
Number of hand-carts.....	714,580
Value of above.....	2,858,320 yen
Number of ox carts.....	10,038
Value of above.....	403,520 yen
Total number of wheeled vehicles.....	934,784
Total value of wheeled vehicles.....	7,151,036 yen

It will be observed that the *Statistician* values each stage carriage (*nori-ai-basha*) at 276 yen, an astonishingly liberal estimate as it seems to us. Certainly forty or fifty yen would build the best of the terrible conveyances that ply in the suburbs of Tokyo and on some of the principal country roads. Doubtless the tram-cars and omnibuses raise the average, but then there are not many of them. The average value of a *jinrikisha*, we see, is put at 16 yen.

THE FIVE HUNDRED RAKAN PICTURES.
